Socrates:: You are aware, then, that the very house slaves of such men, if they are loyal and friendly, privately say the same sort of things to the sons, and if they observe a debtor or any other wrong-doer whom the father does not prosecute, they urge the boy to punish all such when he grows to manhood and prove himself more of a man than his father, and when the lad goes out he hears and sees the same sort of thing. Men who mind their own affairs in the city are spoken of as simpletons and are held in slight esteem, while meddlers who mind other people's affairs are honored and praised. Then it is that the youth, hearing and seeing such things, and on the other hand listening to the words of his father, and with a near view of his pursuits contrasted with those of other men, is solicited by both, his father watering and fostering the growth of the rational principle in his soul and the others the appetitive and the passionate; and as he is not by nature of a bad disposition but has fallen into evil communications, under these two solicitations he comes to a compromise and turns over the government in his soul to the intermediate principle of ambition and high spirit and becomes a man haughty of soul and covetous of honor.

Adeimantus:: You have, I think, most exactly described his origin.

Socrates:: Then, we have our second polity and second type of man.

Adeimantus:: We have.

Socrates:: Shall we then, as Aeschylus would say, tell of another champion before another gate, or rather, in accordance with our plan, the city first?

Adeimantus:: That, by all means.

Socrates:: The next polity, I believe, would be oligarchy.

Adeimantus:: And what kind of a regime, do you understand by oligarchy?

Socrates:: That based on a property qualification, wherein the rich hold office and the poor man is excluded.

Adeimantus:: I understand.

Socrates:: Then, is not the first thing to speak of how timocracy passes over into this?

Adeimantus:: Yes.

Socrates:: And truly, the manner of the change is plain even to the proverbial blind man.

Adeimantus:: How so?

Socrates:: That treasure house which each possesses filled with gold destroys that polity, for first they invent ways of expenditure for themselves and pervert the laws to this end, and neither they nor their wives obey them.

Adeimantus:: That is likely.

Socrates:: And then, I take it, by observing and emulating one another they bring the majority of them to this way of thinking.

Adeimantus:: That is likely.

Socrates:: And so, as time goes on, and they advance in the pursuit of wealth, the more they hold that in honor the less they honor virtue. May not the opposition of wealth and virtue be conceived as if each lay in the scale of a balance inclining opposite ways?

Adeimantus:: Yes, indeed.

Socrates:: So, when wealth is honored in a state, and the wealthy, virtue and the good are less honored.

Adeimantus:: Obviously.

Socrates:: And that which men at any time honor they practice, and what is not honored is neglected.

Adeimantus:: It is so.

Socrates:: Thus, finally, from being lovers of victory and lovers of honor they become lovers of gain getting and of money, and they commend and admire the rich man and put him in office but despise the man who is poor.

Adeimantus:: Quite so.

Socrates:: And is it not then that they pass a law defining the limits of an oligarchic polity, prescribing a sum of money, a larger sum where it is more of an oligarchy, where it is less a smaller, and proclaiming that no man shall hold office whose property does not come up to the required valuation? And this law they either put through by force of arms, or without resorting to that they establish their government by terrorization. Is not that the way of it?

Adeimantus:: It is.

Socrates:: The establishment then, one may say, is in this wise.

Adeimantus:: Yes, but what is the character of this constitution, and what are the defects that we said it had?

Socrates:: To begin with, consider the nature of its constitutive and defining principle. Suppose men should appoint the pilots of ships in this way, by property qualification, and not allow a poor man to navigate, even if he were a better pilot.

Adeimantus:: A sorry voyage they would make of it.

Socrates:: And is not the same true of any other form of rule?

Adeimantus:: I think so.

Socrates:: Except of a city, or does it hold for a city too?

Adeimantus:: Most of all, by as much as that is the greatest and most difficult rule of all.

Socrates:: Here, then, is one very great defect in oligarchy.

Adeimantus:: So it appears.

Socrates:: Well, and is this a smaller one?

Adeimantus:: What?

Socrates:: That such a city should of necessity be not one, but two, a city of the rich and a city of the poor, dwelling together, and always plotting against one another.

Adeimantus:: No, by Zeus, it is not a bit smaller.

Socrates:: Nor, further, can we approve of this—the likelihood that they will not be able to wage war, because of the necessity of either arming and employing the multitude, and fearing them more than the enemy, or else, if they do not make use of them, of finding themselves on the field of battle, oligarchs indeed, and rulers over a few. And to this must be added their reluctance to contribute money, because they are lovers of money.

Adeimantus:: No, indeed, that is not admirable.

Socrates:: And what of the trait we found fault with long ago—the fact that in such a state the citizens are busybodies and Jacks-of-all-trades, farmers, financiers, and soldiers all in one? Do you think that is right?

Adeimantus:: By no manner of means.

Socrates:: Consider now whether this polity is not the first that admits that which is the greatest of all such evils.

Adeimantus:: What?

Socrates:: The allowing a man to sell all his possessions, which another is permitted to acquire, and after selling them to go on living in the city, but as no part of it, neither a money-maker, nor a craftsman, nor a knight, nor a foot soldier, but classified only as a pauper and a dependent.

Adeimantus:: This is the first.

Socrates:: There certainly is no prohibition of that sort of thing in oligarchic states. Otherwise some of their citizens would not be excessively rich, and others out-and-out paupers.

Adeimantus:: Right.

Socrates:: But observe this. When such a fellow was spending his wealth, was he then of any more use to the state in the matters of which we were speaking, or did he merely seem to belong to the ruling class, while in reality he was neither ruler nor helper in the state, but only a consumer of goods?

Adeimantus:: It is so, He only seemed, but was just a spendthrift.

Socrates:: Shall we, then, say of him that as the drone springs up in the cell, a pest of the hive, so such a man grows up in his home, a pest of the state?

Adeimantus:: By all means, Socrates.

Socrates:: And has not God, Adimantus, left the drones which have wings and fly stingless one and all, while of the drones here who travel afoot he has made some stingless but has armed others with terrible stings? And from the stingless finally issue beggars in old age, but from those furnished with stings all that are denominated malefactors?

Adeimantus:: Most true.

Socrates:: It is plain, then, that wherever you see beggars in a city, there are somewhere in the neighborhood concealed thieves and cut-purses and temple robbers and similar artists in crime.

Adeimantus:: Clearly.

Socrates:: Well, then, in oligarchic cities do you not see beggars?

Adeimantus:: Nearly all are such, except the ruling class.

Socrates:: Are we not to suppose, then, that there are also many criminals in them furnished with stings, whom the rulers by their surveillance forcibly restrain?

Adeimantus:: We must think so.

Socrates:: And shall we not say that the presence of such citizens is the result of a defective culture and bad breeding and a wrong constitution of the state?

Adeimantus:: We shall.

Socrates:: Well, at any rate such would be the character of the oligarchic state, and these, or perhaps even more than these, would be the evils that afflict it.

Adeimantus:: Pretty nearly these.

Socrates:: Then, let us regard as disposed of the constitution called oligarchy, whose rulers are determined by a property qualification. And next we are to consider the man who resembles it—how he arises and what after that his character is.

Adeimantus:: Quite so.

Socrates:: Is not the transition from that timocratic youth to the oligarchic type mostly on this wise?

Adeimantus:: How?

Socrates:: When a son born to the timocratic man at first emulates his father, and follows in his footsteps, and then sees him suddenly dashed, as a ship on a reef, against the state, and making complete wreckage of both his possessions and himself—perhaps he has been a general, or has held some other important office, and has then been dragged into court by mischievous sycophants and put to death or banished or outlawed and has lost all his property—

Adeimantus:: It is likely.

Socrates:: And the son, my friend, after seeing and suffering these things, and losing his property, grows timid, I fancy, and forthwith thrusts headlong from his bosom's throne that principle of love of honor and that high spirit, and being humbled by poverty turns to the getting of money, and greedily and stingily and little by little by thrift and hard work collects property. Do you not suppose that such a one will then establish on that throne the principle of appetite and avarice, and set it up as the great king in his soul, adorned with tiaras and collars of gold, and girt with the Persian sword?

Adeimantus:: I do.

Socrates:: And under this domination he will force the rational and high-spirited principles to crouch lowly to right and left as slaves, and will allow the one to calculate and consider nothing but the ways of making more money from a little, and the other to admire and honor nothing but riches and rich men, and to take pride in nothing but the possession of wealth and whatever contributes to that?

Adeimantus:: There is no other transformation so swift and sure of the ambitious youth into the avaricious type.

Socrates:: Is this, then, our oligarchic man?

Adeimantus:: He is developed, at any rate, out of a man resembling the constitution from which the oligarchy sprang.

Socrates:: Let us see, then, whether he will have a like character.

Adeimantus:: Let us see.

Socrates:: Would he not, in the first place, resemble it in prizing wealth above everything?

Adeimantus:: Inevitably.

Socrates:: And also by being thrifty and laborious, satisfying only his own necessary appetites and desires and not providing for expenditure on other things, but subduing his other appetites as vain and unprofitable?

Adeimantus:: By all means.

Socrates:: He would be a squalid fellow, looking for a surplus of profit in everything, and a hoarder, the type the multitude approves. Would not this be the character of the man who corresponds to such a polity?

Adeimantus:: I certainly think so, Property, at any rate, is the thing most esteemed by that state and that kind of man.

Socrates:: That, I take it, is because he has never turned his thoughts to true culture.

Adeimantus:: I think not, else he would not have made the blind one leader of his choir and first in honor.

Socrates:: Well said. But consider this. Shall we not say that owing to this lack of culture the appetites of the drone spring up in him, some the beggarly, others the rascally, but that they are forcibly restrained by his general self-surveillance and self-control?

Adeimantus:: We shall indeed.

Socrates:: Do you know, then, to what you must look to discern the rascalities of such men?

Adeimantus:: To what?

Socrates:: To guardianships of orphans, and any such opportunities of doing injustice with impunity.

Adeimantus:: True.

Socrates:: And is it not apparent by this that in other dealings, where he enjoys the repute of a seeming just man, he by some better element in himself forcibly keeps down other evil desires dwelling within, not persuading them that it ‘is better not’ nor taming them by reason, but by compulsion and fear, trembling for his possessions generally.

Adeimantus:: Quite so.

Socrates:: Yes, by Zeus, my friend. In most of them, when there is occasion to spend the money of others, you will discover the existence of drone-like appetites.

Adeimantus:: Most emphatically.

Socrates:: Such a man, then, would not be free from internal dissension. He would not be really one, but in some sort a double man. Yet for the most part, his better desires would have the upper hand over the worse.

Adeimantus:: It is so.

Socrates:: And for this reason, I presume, such a man would be more seemly, more respectable, than many others, but the true virtue of a soul in unison and harmony with itself would escape him and dwell afar.

Adeimantus:: I think so.

Socrates:: And again, the thrifty stingy man would be a feeble competitor personally in the city for any prize of victory or in any other honorable emulation. He is unwilling to spend money for fame and rivalries of that sort, and, fearing to awaken his prodigal desires and call them into alliance for the winning of the victory, he fights in true oligarchic fashion with a small part of his resources and is defeated for the most part and—finds himself rich!

Adeimantus:: Yes indeed.

Socrates:: Have we any further doubt, then, as to the correspondence and resemblance between the thrifty and money-making man and the oligarchic state?

Adeimantus:: None.

Socrates:: We have next to consider, it seems, the origin and nature of democracy, that we may next learn the character of that type of man and range him beside the others for our judgment.

Adeimantus:: That would at least be a consistent procedure.

Socrates:: Then, is not the transition from oligarchy to democracy effected in some such way as this—by the insatiate greed for that which it set before itself as the good, the attainment of the greatest possible wealth?

Adeimantus:: In what way?

Socrates:: Why, since its rulers owe their offices to their wealth, they are not willing to prohibit by law the prodigals who arise among the youth from spending and wasting their substance. Their object is, by lending money on the property of such men, and buying it in, to become still richer and more esteemed.

Adeimantus:: By all means.

Socrates:: And is it not at once apparent in a state that this honoring of wealth is incompatible with a sober and temperate citizenship, but that one or the other of these two ideals is inevitably neglected.

Adeimantus:: That is pretty clear.

Socrates:: And such negligence and encouragement of licentiousness in oligarchies not infrequently has reduced to poverty men of no ignoble quality.

Adeimantus:: It surely has.

Socrates:: And there they sit, I fancy, within the city, furnished with stings, that is, arms, some burdened with debt, others disfranchised, others both, hating and conspiring against the acquirers of their estates and the rest of the citizens, and eager for revolution.

Adeimantus:: 'Tis so.

Socrates:: But these money-makers with down-bent heads, pretending not even to see them, but inserting the sting of their money into any of the remainder who do not resist, and harvesting from them in interest as it were a manifold progeny of the parent sum, foster the drone and pauper element in the state.

Adeimantus:: They do indeed multiply it.

Socrates:: And they are not willing to quench the evil as it bursts into flame either by way of a law prohibiting a man from doing as he likes with his own, or in this way, by a second law that does away with such abuses.

Adeimantus:: What law?

Socrates:: The law that is next best, and compels the citizens to pay heed to virtue. For if a law commanded that most voluntary contracts should be at the contractor's risk, the pursuit of wealth would be less shameless in the state and fewer of the evils of which we spoke just now would grow up there.

Adeimantus:: Much fewer.

Socrates:: But as it is, and for all these reasons, this is the plight to which the rulers in the state reduce their subjects, and as for themselves and their offspring, do they not make the young spoiled wantons averse to toil of body and mind, and too soft to stand up against pleasure and pain, and mere idlers?

Adeimantus:: Surely.

Socrates:: And do they not fasten upon themselves the habit of neglect of everything except the making of money, and as complete an indifference to virtue as the paupers exhibit?

Adeimantus:: Little they care.

Socrates:: And when, thus conditioned, the rulers and the ruled are brought together on the march, in wayfaring, or in some other common undertaking, either a religious festival, or a campaign, or as shipmates or fellow soldiers or, for that matter, in actual battle, and observe one another, then the poor are not in the least scorned by the rich, but on the contrary, do you not suppose it often happens that when a lean, sinewy, sunburned pauper is stationed in battle beside a rich man bred in the shade, and burdened with superfluous flesh, and sees him panting and helpless—do you not suppose he will think that such fellows keep their wealth by the cowardice of the poor, and that when the latter are together in private, one will pass the word to another, ‘our men are good for nothing’?

Adeimantus:: Nay, I know very well that they do.

Socrates:: And just as an unhealthy body requires but a slight impulse from outside to fall into sickness, and sometimes, even without that, all the man is one internal war, in like manner does not the corresponding type of state need only a slight occasion, the one party bringing in allies from an oligarchic state, or the other from a democratic, to become diseased and wage war with itself, and sometimes even apart from any external impulse faction arises?

Adeimantus:: Most emphatically.

Socrates:: And a democracy, I suppose, comes into being when the poor, winning the victory, put to death some of the other party, drive out others, and grant the rest of the citizens an equal share in both citizenship and offices—and for the most part these offices are assigned by lot.

Adeimantus:: Why, yes, that is the constitution of democracy alike whether it is established by force of arms or by terrorism resulting in the withdrawal of one of the parties.

Socrates:: What, then, is the manner of their life and what is the quality of such a constitution? For it is plain that the man of this quality will turn out to be a democratic sort of man.

Adeimantus:: It is plain.

Socrates:: To begin with, are they not free? And is not the city chock-full of liberty and freedom of speech? And has not every man license to do as he likes?

Adeimantus:: So it is said.

Socrates:: And where there is such license, it is obvious that everyone would arrange a plan for leading his own life in the way that pleases him.

Adeimantus:: Obvious.

Socrates:: All sorts and conditions of men, then, would arise in this polity more than in any other?

Glaucon:: Of course.

Socrates:: Possibly, this is the most beautiful of polities; as a garment of many colors, embroidered with all kinds of hues, so this, decked and diversified with every type of character, would appear the most beautiful. And perhaps many would judge it to be the most beautiful, like boys and women when they see bright-colored things.

Adeimantus:: Yes indeed.

Socrates:: Yes, and it is the fit place, my good friend, in which to look for a constitution.

Adeimantus:: Why so?

Socrates:: Because, owing to this license, it includes all kinds, and it seems likely that anyone who wishes to organize a state, as we were just now doing, must find his way to a democratic city and select the model that pleases him, as if in a bazaar of constitutions, and after making his choice, establish his own.

Adeimantus:: Perhaps at any rate, he would not be at a loss for patterns.

Socrates:: And the freedom from all compulsion to hold office in such a city, even if you are qualified, or again, to submit to rule, unless you please, or to make war when the rest are at war, or to keep the peace when the others do so, unless you desire peace, and again, the liberty, in defiance of any law that forbids you, to hold office and sit on juries nonetheless, if it occurs to you to do so, is not all that a heavenly and delicious entertainment for the time being?

Adeimantus:: Perhaps, for so long.

Socrates:: And is not the placability of some convicted criminals exquisite? Or have you never seen in such a state men condemned to death or exile who nonetheless stay on, and go to and fro among the people, and as if no one saw or heeded him, the man slips in and out like a revenant?

Adeimantus:: Yes, many.

Socrates:: And the tolerance of democracy, its superiority to all our meticulous requirements, its disdain for our solemn pronouncements made when we were founding our city, that except in the case of transcendent natural gifts no one could ever become a good man unless from childhood his play and all his pursuits were concerned with things fair and good—how superbly it tramples underfoot all such ideals, caring nothing from what practices and way of life a man turns to politics, but honoring him if only he says that he loves the people!

Adeimantus:: It is a noble polity, indeed!

Socrates:: These and qualities akin to these democracy would exhibit, and it would, it seems, be a delightful form of government, anarchic and motley, assigning a kind of equality indiscriminately to equals and unequals alike!

Adeimantus:: Yes, everybody knows that.

Socrates:: Observe, then, the corresponding private character. Or must we first, as in the case of the polity, consider the origin of the type?

Adeimantus:: Yes.

Socrates:: Is not this, then, the way of it? Our thrifty oligarchic man would have a son bred in his father's ways.

Adeimantus:: Why not?

Socrates:: And he, too, would control by force all his appetites for pleasure that are wasters and not winners of wealth, those which are denominated unnecessary.

Adeimantus:: Obviously.

Socrates:: And in order not to argue in the dark, shall we first define our distinction between necessary and unnecessary appetites?

Adeimantus:: Let us do so.

Socrates:: Well, then, desires that we cannot divert or suppress may be properly called necessary, and likewise those whose satisfaction is beneficial to us, may they not?

For our nature compels us to seek their satisfaction. Is not that so?

Adeimantus:: Most assuredly.

Socrates:: Then we shall rightly use the word ‘necessary’ of them?

Adeimantus:: Rightly.

Socrates:: And what of the desires from which a man could free himself by discipline from youth up, and whose presence in the soul does no good and in some cases harm? Should we not fairly call all such unnecessary?

Adeimantus:: Fairly indeed.

Socrates:: Let us select an example of either kind, so that we may apprehend the type.

Adeimantus:: Let us do so.

Socrates:: Would not the desire of eating to keep in health and condition and the appetite for mere bread and relishes be necessary?

Adeimantus:: I think so.

Socrates:: The appetite for bread is necessary in both respects, in that it is beneficial and in that if it fails we die.

Adeimantus:: Yes.

Socrates:: And the desire for relishes, so far as it conduces to fitness?

Adeimantus:: By all means.

Socrates:: And should we not rightly pronounce unnecessary the appetite that exceeds these and seeks other varieties of food, and that by correction and training from youth up can be got rid of in most cases and is harmful to the body and a hindrance to the soul’s attainment of intelligence and sobriety?

Adeimantus:: Nay, most rightly.

Socrates:: And may we not call the one group the spendthrift desires and the other the profitable, because they help production?

Adeimantus:: Surely.

Socrates:: And we shall say the same of sexual and other appetites?

Adeimantus:: The same.

Socrates:: And were we not saying that the man whom we nicknamed the drone is the man who teems with such pleasures and appetites, and who is governed by his unnecessary desires, while the one who is ruled by his necessary appetites is the thrifty oligarchic man?

Adeimantus:: Why, surely.

Socrates:: To return, then, we have to tell how the democratic man develops from the oligarchic type. I think it is usually in this way.

Adeimantus:: How?

Socrates:: When a youth, bred in the illiberal and niggardly fashion that we were describing, gets a taste of the honey of the drones and associates with fierce and cunning creatures who know how to purvey pleasures of every kind and variety and condition, there you must doubtless conceive is the beginning of the transformation of the oligarchy in his soul into democracy.

Adeimantus:: Quite inevitably.

Socrates:: May we not say that just as the revolution in the city was brought about by the aid of an alliance from outside, coming to the support of the similar and corresponding party in the state, so the youth is revolutionized when a like and kindred group of appetites from outside comes to the aid of one of the parties in his soul?

Adeimantus:: By all means.

Socrates:: And if, I take it, a counter-alliance comes to the rescue of the oligarchic part of his soul, either it may be from his father or from his other kin, who admonish and reproach him, then there arise faction and counter-faction and internal strife in the man with himself.

Adeimantus:: Surely.

Socrates:: And sometimes, I suppose, the democratic element retires before the oligarchic, some of its appetites having been destroyed and others expelled, and a sense of awe and reverence grows up in the young man's soul and order is restored.

Adeimantus:: That sometimes happens.

Socrates:: And sometimes, again, another brood of desires akin to those expelled are stealthily nurtured to take their place, owing to the father's ignorance of true education, and wax numerous and strong.

Adeimantus:: Yes, that is wont to be the way of it.

Socrates:: And they tug and pull back to the same associations and in secret intercourse engender a multitude.

Adeimantus:: Yes indeed.

Socrates:: And in the end, I suppose, they seize the citadel of the young man's soul, finding it empty and unoccupied by studies and honorable pursuits and true discourses, which are the best watchmen and guardians in the minds of men who are dear to the gods.

Adeimantus:: Much the best.

Socrates:: And then false and braggart words and opinions charge up the height and take their place and occupy that part of such a youth.

Adeimantus:: They do indeed.

Socrates:: And then he returns, does he not, to those lotus-eaters and without disguise lives openly with them. And if any support comes from his kin to the thrifty element in his soul, those braggart discourses close the gates of the royal fortress within him and refuse admission to the auxiliary force itself, and will not grant audience as to envoys to the words of older friends in private life. And they themselves prevail in the conflict, and naming reverence and awe 'folly' thrust it forth, a dishonored fugitive. And temperance they call 'want of manhood' and banish it with contumely, and they teach that moderation and orderly expenditure are 'rusticity' and 'illiberality,' and they combine with a gang of unprofitable and harmful appetites to drive them over the border.

Adeimantus:: They do indeed.

Socrates:: And when they have emptied and purged of all these the soul of the youth that they have thus possessed and occupied, and whom they are initiating with these magnificent and costly rites, they proceed to lead home from exile insolence and anarchy and prodigality and shamelessness, resplendent in a great attendant choir and crowned with garlands, and in celebration of their praises they euphemistically denominate insolence 'good breeding,' license 'liberty,' prodigality 'magnificence,' and shamelessness 'manly spirit.' And is it not in some such way as this that in his youth the transformation takes place from the restriction to necessary desires in his education to the liberation and release of his unnecessary and harmful desires?

Adeimantus:: Yes, your description is most vivid.

Socrates:: Then, in his subsequent life, I take it, such a one expends money and toil and time no more on his necessary than on his unnecessary pleasures. But if it is his good fortune that the period of storm and stress does not last too long, and as he grows older the fiercest tumult within him passes, and he receives back a part of the banished elements and does not abandon himself altogether to the invasion of the others, then he establishes and maintains all his pleasures on a footing of equality, forsooth, and so lives turning over the guardhouse of his soul to each as it happens along until it is sated, as if it had drawn the lot for that office, and then in turn to another, disdaining none but fostering them all equally.

Adeimantus:: Quite so.

Socrates:: And he does not accept or admit into the guardhouse the words of truth when anyone tells him that some pleasures arise from honorable and good desires, and others from those that are base, and that we ought to practice and esteem the one and control and subdue the others, but he shakes his head at all such admonitions and avers that they are all alike and to be equally esteemed.

Adeimantus:: Such is indeed his state of mind and his conduct.

Socrates:: And does he not, also live out his life in this fashion, day by day indulging the appetite of the day, now winebibbing and abandoning himself to the lascivious pleasing of the flute and again drinking only water and dieting, and at one time exercising his body, and sometimes idling and neglecting all things, and at another time seeming to occupy himself with philosophy. And frequently he goes in for politics and bounces up and says and does whatever enters his head. And if military men excite his emulation, thither he rushes, and if moneyed men, to that he turns, and there is no order or compulsion in his existence, but he calls this life of his the life of pleasure and freedom and happiness and cleaves to it to the end.

Adeimantus:: That is a perfect description, of a devotee of equality.

Socrates:: I certainly think, that he is a manifold man stuffed with most excellent differences, and that like that city he is the fair and many-colored one whom many a man and woman would count fortunate in his life, as containing within himself the greatest number of patterns of constitutions and qualities.

Adeimantus:: Yes, that is so.

Socrates:: Shall we definitely assert, then, that such a man is to be ranged with democracy and would properly be designated as democratic?

Adeimantus:: Let that be his place.

Socrates:: And now, the fairest polity and the fairest man remain for us to describe, the tyranny and the tyrant.

Adeimantus:: Certainly.

Socrates:: Come then, tell me, dear friend, how tyranny arises. That it is an outgrowth of democracy is fairly plain.

Adeimantus:: Yes, plain.

Socrates:: Is it, then, in a sense, in the same way in which democracy arises out of oligarchy that tyranny arises from democracy?

Adeimantus:: How is that?

Socrates:: The good that they proposed to themselves and that was the cause of the establishment of oligarchy—it was wealth, was it not?

Adeimantus:: Yes.

Socrates:: Well, then, the insatiate lust for wealth and the neglect of everything else for the sake of money-making were the cause of its undoing.

Adeimantus:: True.

Socrates:: And is not the avidity of democracy for that which is its definition and criterion of good the thing which dissolves it too?

Adeimantus:: What do you say its criterion to be?

Socrates:: Liberty, for you may hear it said that this is best managed in a democratic city, and for this reason that is the only city in which a man of free spirit will care to live.

Adeimantus:: Why, yes, you hear that saying everywhere.

Socrates:: Then, as I was about to observe, is it not the excess and greed of this and the neglect of all other things that revolutionizes this constitution too and prepares the way for the necessity of a dictatorship?

Adeimantus:: How?

Socrates:: Why, when a democratic city athirst for liberty gets bad cup-bearers for its leaders and is intoxicated by drinking too deep of that unmixed wine, and then, if its so-called governors are not extremely mild and gentle with it and do not dispense the liberty unstintedly, it chastises them and accuses them of being accursed oligarchs.

Adeimantus:: Yes, that is what they do.

Socrates:: But those who obey the rulers, it reviles as willing slaves and men of naught, but it commends and honors in public and private rulers who resemble subjects and subjects who are like rulers. Is it not inevitable that in such a state the spirit of liberty should go to all lengths?

Adeimantus:: Of course.

Socrates:: And this anarchic temper, my friend, must penetrate into private homes and finally enter into the very animals.

Adeimantus:: Just what do we mean by that?

Socrates:: Why, the father habitually tries to resemble the child and is afraid of his sons, and the son likens himself to the father and feels no awe or fear of his parents, so that he may be forsooth a free man. And the resident alien feels himself equal to the citizen and the citizen to him, and the foreigner likewise.

Adeimantus:: Yes, these things do happen.

Socrates:: They do, and such other trifles as these. The teacher in such case fears and fawns upon the pupils, and the pupils pay no heed to the teacher or to their overseers either. And in general the young ape their elders and vie with them in speech and action, while the old, accommodating themselves to the young, are full of pleasantry and graciousness, imitating the young for fear they may be thought disagreeable and authoritative.

Adeimantus:: By all means.

Socrates:: And the climax of popular liberty, my friend, is attained in such a city when the purchased slaves, male and female, are no less free than the owners who paid for them. And I almost forgot to mention the spirit of freedom and equal rights in the relation of men to women and women to men.

Adeimantus:: Shall we not, then, in Aeschylean phrase, say 'whatever rises to our lips'?

Socrates:: Certainly, so I will. Without experience of it no one would believe how much freer the very beasts subject to men are in such a city than elsewhere. The dogs literally verify the adage and 'like their mistresses become.' And likewise the horses and asses are wont to hold on their way with the utmost freedom and dignity, bumping into everyone who meets them and who does not step aside. And so all things everywhere are just bursting with the spirit of liberty.

Adeimantus:: It is my own dream you are telling me, for it often happens to me when I go to the country.

Socrates:: And do you note that the sum total of all these items when footed up is that they render the souls of the citizens so sensitive that they chafe at the slightest suggestion of servitude and will not endure it? For you are aware that they finally pay no heed even to the laws written or unwritten, so that forsooth they may have no master anywhere over them.

Adeimantus:: I know it very well.

Socrates:: This, then, my friend, is the fine and vigorous root from which tyranny grows, in my opinion.

Adeimantus:: Vigorous indeed, but what next?

Socrates:: The same malady, that, arising in oligarchy, destroyed it, this more widely diffused and more violent as a result of this license, enslaves democracy. And in truth, any excess is wont to bring about a corresponding reaction to the opposite in the seasons, in plants, in animal bodies, and most especially in political societies.

Adeimantus:: Probably.

Socrates:: And so the probable outcome of too much freedom is only too much slavery in the individual and the state.

Adeimantus:: Yes, that is probable.

Socrates:: Probably, then, tyranny develops out of no other constitution than democracy—from the height of liberty, I take it, the fiercest extreme of servitude.

Adeimantus:: That is reasonable.

Socrates:: That, however, I believe, was not your question, but what identical malady arising in democracy as well as in oligarchy enslaves it?

Adeimantus:: You say truly.

Socrates:: That then, was what I had in mind, the class of idle and spendthrift men, the most enterprising and vigorous portion being leaders and the less manly spirits followers. We were likening them to drones, some equipped with stings and others stingless.

Adeimantus:: And rightly too.

Socrates:: These two kinds, then, when they arise in any state, create a disturbance like that produced in the body by phlegm and gall. And so a good physician and lawgiver must be on his guard from afar against the two kinds, like a prudent apiarist, first and chiefly to prevent their springing up, but if they do arise to have them as quickly as may be cut out, cells and all.

Adeimantus:: Yes, by Zeus, by all means.

Socrates:: Then let us take it in this way, so that we may contemplate our purpose more distinctly.

Adeimantus:: How?

Socrates:: Let us in our theory make a tripartite division of the democratic state, which is in fact its structure. One such class, as we have described, grows up in it because of the license, no less than in the oligarchic state.

Adeimantus:: That is so.

Socrates:: But it is far fiercer in this state than in that.

Adeimantus:: How so?

Socrates:: There, because it is not held in honor, but is kept out of office, it is not exercised and does not grow vigorous. But in a democracy this is the dominating class, with rare exceptions, and the fiercest part of it makes speeches and transacts business, and the remainder swarms and settles about the speaker's stand and keeps up a buzzing and tolerates no dissent, so that everything with slight exceptions is administered by that class in such a state.

Adeimantus:: Quite so.

Socrates:: And so from time to time there emerges or is secreted from the multitude another group of this sort.

Adeimantus:: What sort?

Socrates:: When all are pursuing wealth the most orderly and thrifty natures for the most part become the richest.

Adeimantus:: It is likely.

Socrates:: Then they are the most abundant supply of honey for the drones, and it is the easiest to extract.

Adeimantus:: Why, yes, how could one squeeze it out of those who have little?

Socrates:: The capitalistic class is, I take it, the name by which they are designated—the pasture of the drones.

Adeimantus:: Pretty much so.

Socrates:: And the third class, composing the 'people,' would comprise all quiet cultivators of their own farms who possess little property. This is the largest and most potent group in a democracy when it meets in assembly.

Adeimantus:: Yes, it is, but it will not often do that, unless it gets a share of the honey.

Socrates:: Well, does it not always share, to the extent that the men at the head find it possible, in distributing to the people what they take from the well-to-do, to keep the lion's share for themselves?

Adeimantus:: Why, yes, it shares in that sense.

Socrates:: And so, I suppose, those who are thus plundered are compelled to defend themselves by speeches in the assembly and any action in their power.

Adeimantus:: Of course.

Socrates:: And thereupon the charge is brought against them by the other party, though they may have no revolutionary designs, that they are plotting against the people, and it is said that they are oligarchs.

Adeimantus:: Surely.

Socrates:: And then finally, when they see the people, not of its own will but through misapprehension, and being misled by the calumniators, attempting to wrong them, why then, whether they wish it or not, they become in very deed oligarchs, not willingly, but this evil too is engendered by those drones which sting them.

Adeimantus:: Precisely.

Socrates:: And then there ensue impeachments and judgments and lawsuits on either side.

Adeimantus:: Yes, indeed.

Socrates:: And is it not always the way of a demos to put forward one man as its special champion and protector and cherish and magnify him?

Adeimantus:: Yes, it is.

Socrates:: This, then, is plain, that when a tyrant arises he sprouts from a protectorate root and from nothing else.

Adeimantus:: Very plain.

Socrates:: What, then, is the starting point of the transformation of a protector into a tyrant? Is it not obviously when the protector’s acts begin to reproduce the legend that is told of the shrine of Lycaean Zeus in Arcadia?

Adeimantus:: What is that?

Socrates:: The story goes that he who tastes of the one bit of human entrails minced up with those of other victims is inevitably transformed into a wolf. Have you not heard the tale?

Adeimantus:: I have.

Socrates:: And is it not true that in like manner a leader of the people who, getting control of a docile mob, does not withhold his hand from the shedding of tribal blood, but by the customary unjust accusations brings a citizen into court and assassinates him, blotting out a human life, and with unhallowed tongue and lips that have tasted kindred blood, banishes and slays and hints at the abolition of debts and the partition of lands—is it not the inevitable consequence and a decree of fate that such a one be either slain by his enemies or become a tyrant and be transformed from a man into a wolf?

Adeimantus:: It is quite inevitable.

Socrates:: He it is, who becomes the leader of faction against the possessors of property.

Adeimantus:: Yes, he.

Socrates:: May it not happen that he is driven into exile and, being restored in defiance of his enemies, returns a finished tyrant?

Adeimantus:: Obviously.

Socrates:: And if they are unable to expel him or bring about his death by calumniating him to the people, they plot to assassinate him by stealth.

Adeimantus:: That is certainly wont to happen.

Socrates:: And thereupon those who have reached this stage devise that famous petition of the tyrant—to ask from the people a bodyguard to make their city safe for the friend of democracy.

Adeimantus:: They do indeed.

Socrates:: And the people grant it, I suppose, fearing for him but unconcerned for themselves.

Adeimantus:: Yes, indeed.

Socrates:: And when he sees this, the man who has wealth and with his wealth the repute of hostility to democracy, then in the words of the oracle delivered to Croesus, ‘By the pebble-strewn strand of the Hermus, swift is his flight; he stays not nor blushes to show the white feather.’

Adeimantus:: No, for he would never get a second chance to blush.

Socrates:: And he who is caught, methinks, is delivered to his death.

Adeimantus:: Inevitably.

Socrates:: And then obviously that protector does not lie prostrate, ‘mighty with far-flung limbs,’ in Homeric overthrow, but overthrowing many others towers in the car of state transformed from a protector into a perfect and finished tyrant.

Adeimantus:: What else is likely?

Socrates:: Shall we, then, portray the happiness, of the man and the state in which such a creature arises?

Adeimantus:: By all means let us describe it.

Socrates:: Then at the start and in the first days does he not smile upon all men and greet everybody he meets and deny that he is a tyrant, and promise many things in private and public, and having freed men from debts, and distributed lands to the people and his own associates, he affects a gracious and gentle manner to all?

Adeimantus:: Necessarily.

Socrates:: But when, I suppose, he has come to terms with some of his exiled enemies and has got others destroyed and is no longer disturbed by them, in the first place he is always stirring up some war so that the people may be in need of a leader.

Adeimantus:: That is likely.

Socrates:: And also that being impoverished by war taxes they may have to devote themselves to their daily business and be less likely to plot against him?

Adeimantus:: Obviously.

Socrates:: And if, I presume, he suspects that there are free spirits who will not suffer his domination, his further object is to find pretexts for destroying them by exposing them to the enemy? From all these motives a tyrant is compelled to be always provoking wars?

Adeimantus:: Yes, he is compelled to do so.

Socrates:: And by such conduct will he not the more readily incur the hostility of the citizens?

Adeimantus:: Of course.

Socrates:: And is it not likely that some of those who helped to establish and now share in his power, voicing their disapproval of the course of events, will speak out frankly to him and to one another—such of them as happen to be the bravest?

Adeimantus:: Yes, it is likely.

Socrates:: Then the tyrant must do away with all such if he is to maintain his rule, until he has left no one of any worth, friend or foe.

Adeimantus:: Obviously.

Socrates:: He must look sharp to see, then, who is brave, who is great-souled, who is wise, who is rich, and such is his good fortune that, whether he wishes it or not, he must be their enemy and plot against them all until he purge the city.

Adeimantus:: A fine purgation.

Socrates:: Yes, just the opposite of that which physicians practice on our bodies. For while they remove the worst and leave the best, he does the reverse.

Adeimantus:: Yes, for apparently he must, if he is to keep his power.

Socrates:: Blessed, then, is the necessity that binds him, which bids him dwell for the most part with base companions who hate him, or else forfeit his life.

Adeimantus:: Such it is.

Socrates:: And would he not, the more he offends the citizens by such conduct, have the greater need of more and more trustworthy bodyguards?

Adeimantus:: Of course.

Socrates:: Whom, then, may he trust, and whence shall he fetch them?

Adeimantus:: Unbidden, they will wing their way to him in great numbers if he furnish their wage.

Socrates:: Drones, by the dog, I think you are talking of again, an alien and motley crew.

Adeimantus:: You think rightly.

Socrates:: But what of the home supply, would he not choose to employ that?

Adeimantus:: How?

Socrates:: By taking their slaves from the citizens, emancipating them and enlisting them in his bodyguard.

Adeimantus:: Assuredly, since these are those whom he can most trust.

Socrates:: Truly, this tyrant business is a blessed thing on your showing, if such are the friends and ‘trusties’ he must employ after destroying his former associates.

Adeimantus:: But such are indeed those he does make use of.

Socrates:: And these companions admire him, and these new citizens are his associates, while the better sort hate and avoid him.

Adeimantus:: Why should they not?

Socrates:: Not for nothing, is tragedy in general esteemed wise, and Euripides beyond other tragedians.

Adeimantus:: Why, pray?

Socrates:: Because among other utterances of pregnant thought 'Tyrants are wise by converse with the wise.' He meant evidently that these associates of the tyrant are the wise.

Adeimantus:: Yes, he and the other poets, call the tyrant's power 'likest God's' and praise it in many other ways.

Socrates:: Wherefore, being wise as they are, the poets of tragedy will pardon us and those whose politics resemble ours for not admitting them into our polity, since they hymn the praises of tyranny.

Adeimantus:: I think, that the subtle minds among them will pardon us.

Socrates:: But going about to other cities, I fancy, collecting crowds and hiring fine, loud, persuasive voices, they draw the polities toward tyrannies or democracies.

Adeimantus:: Yes, indeed.

Socrates:: And, further, they are paid and honored for this, chiefly, as is to be expected, by tyrants, and secondly by democracy. But the higher they go, breasting constitution hill, the more their honor fails, as it were from lack of breath unable to proceed.

Adeimantus:: Quite so.

Socrates:: But this, is a digression. Let us return to that fair, multitudinous, diversified, and ever-changing bodyguard of the tyrant and tell how it will be supported.

Adeimantus:: Obviously, if there are sacred treasures in the city he will spend these as long as they last and the property of those he has destroyed, thus requiring smaller contributions from the populace.

Socrates:: But what when these resources fail?

Adeimantus:: Clearly, his father's estate will have to support him and his wassailers, his fellows and his she-fellows.

Socrates:: I understand, that the people which begot the tyrant will have to feed him and his companions.

Adeimantus:: It cannot escape from that.

Socrates:: And what have you to say, in case the people protests and says that it is not right that a grown-up son should be supported by his father, but the reverse, and that it did not beget and establish him in order that, when he had grown great, it, in servitude to its own slaves, should feed him and the slaves together with a nondescript rabble of aliens, but in order that, with him for protector, it might be liberated from the rule of the rich and the so-called 'better classes,' and that it now bids him and his crew depart from the city as a father expels from his house a son together with troublesome revelers?

Adeimantus:: The demos, by Zeus, will then learn to its cost what it is and what a creature it begot and cherished and bred to greatness, and that in its weakness it tries to expel the stronger.

Socrates:: What do you mean? Will the tyrant dare to use force against his father, and, if he does not yield, to strike him?

Adeimantus:: Yes, after he has once taken from him his arms.

Socrates:: A very parricide, you make the tyrant out to be, and a cruel nurse of old age, and, as it seems, this is at last tyranny open and avowed, and, as the saying goes, the demos trying to escape the smoke of submission to the free would have plunged into the fire of enslavement to slaves, and in exchange for that excessive and unseasonable liberty has clothed itself in the garb of the most cruel and bitter servile servitude.

Adeimantus:: Yes indeed, that is just what happens.

Socrates:: Well, then, shall we not be fairly justified in saying that we have sufficiently described the transformation of a democracy into a tyranny and the nature of the tyranny itself?

Adeimantus:: Quite sufficiently.

# Book 9.

Socrates:: There remains for consideration, the tyrannical man himself—the manner of his development out of the democratic type and his character and the quality of his life, whether wretched or happy.

Adeimantus:: Why, yes, he still remains.

Socrates:: Do you know, then, what it is that I still miss?

Adeimantus:: What?

Socrates:: In the matter of our desires I do not think we sufficiently distinguished their nature and number. And so long as this is lacking our inquiry will lack clearness.

Adeimantus:: Well, will our consideration of them not still be opportune?

Socrates:: By all means. And observe what it is about them that I wish to consider. It is this. Of our unnecessary pleasures and appetites there are some lawless ones, I think, which probably are to be found in us all, but which, when controlled by the laws and the better desires in alliance with reason, can in some men be altogether got rid of, or so nearly so that only a few weak ones remain, while in others the remnant is stronger and more numerous.

Adeimantus:: What desires do you mean?

Socrates:: Those, that are awakened in sleep when the rest of the soul, the rational, gentle and dominant part, slumbers, but the beastly and savage part, replete with food and wine, gambols and, repelling sleep, endeavors to sally forth and satisfy its own instincts. You are aware that in such case there is nothing it will not venture to undertake as being released from all sense of shame and all reason. It does not shrink from attempting to lie with a mother in fancy or with anyone else, man, god, or brute. It is ready for any foul deed of blood; it abstains from no food, and, in a word, falls short of no extreme of folly and shamelessness.

Adeimantus:: Most true.

Socrates:: But when, I suppose, a man’s condition is healthy and sober, and he goes to sleep after arousing his rational part and entertaining it with fair words and thoughts, and attaining to clear self-consciousness, while he has neither starved nor indulged to repletion his appetitive part, so that it may be lulled to sleep and not disturb the better part by its pleasure or pain, but may suffer that in isolated purity to examine and reach out toward and apprehend some of the things unknown to it, past, present, or future, and when he has in like manner tamed his passionate part, and does not after a quarrel fall asleep with anger still awake within him, but if he has thus quieted the two elements in his soul and quickened the third, in which reason resides, and so goes to his rest, you are aware that in such case he is most likely to apprehend truth, and the visions of his dreams are least likely to be lawless.

Adeimantus:: I certainly think so.

Socrates:: This description has carried us too far, but the point that we have to notice is this, that in fact there exists in every one of us, even in some reputed most respectable, a terrible, fierce, and lawless brood of desires, which it seems are revealed in our sleep. Consider, then, whether there is anything in what I say, and whether you admit it.

Adeimantus:: Well, I do.

Socrates:: Now recall our characterization of the democratic man. His development was determined by his education from youth under a thrifty father who approved only the acquisitive appetites and disapproved the unnecessary ones whose object is entertainment and display. Is not that so?

Adeimantus:: Yes.

Socrates:: And by association with more sophisticated men, teeming with the appetites we have just described, he is impelled toward every form of insolence and outrage, and to the adoption of their way of life by his hatred of his father's niggardliness. But since his nature is better than that of his corrupters, being drawn both ways he settles down in a compromise between the two tendencies, and indulging and enjoying each in moderation, forsooth, as he supposes, he lives what he deems a life that is neither illiberal nor lawless, now transformed from an oligarch to a democrat.

Adeimantus:: That was and is our belief about this type.

Socrates:: Assume, then, again, that such a man when he is older has a son bred in turn in his ways of life.

Adeimantus:: I so assume.

Socrates:: And suppose the experience of his father to be repeated in his case. He is drawn toward utter lawlessness, which is called by his seducers complete freedom. His father and his other kin lend support to these compromise appetites while the others lend theirs to the opposite group. And when these dread magi and kingmakers come to realize that they have no hope of controlling the youth in any other way, they contrive to engender in his soul a ruling passion to be the protector of his idle and prodigal appetites, a monstrous winged drone. Or do you think the spirit of desire in such men is aught else?

Adeimantus:: Nothing but that.

Socrates:: And when the other appetites, buzzing about it, replete with incense and myrrh and chaplets and wine, and the pleasures that are released in such revelries, magnifying and fostering it to the utmost, awaken in the drone the sting of unsatisfied yearnings, why then this protector of the soul has madness for his bodyguard and runs amuck, and if it finds in the man any opinions or appetites accounted worthy and still capable of shame, it slays them and thrusts them forth until it purges him of sobriety and fills and infects him with frenzy brought in from outside.

Adeimantus:: A perfect description, of the generation of the tyrannical man.

Socrates:: And is not this analogy, the reason why Love has long since been called a tyrant?

Adeimantus:: That may well be.

Socrates:: And does not a drunken man, my friend, have something of this tyrannical temper?

Adeimantus:: Yes, he has.

Socrates:: And again the madman, the deranged man, attempts and expects to rule over not only men but gods.

Adeimantus:: Yes indeed, he does.

Socrates:: Then a man becomes tyrannical in the full sense of the word, my friend, when either by nature or by habits or by both he has become even as the drunken, the erotic, the maniacal.

Adeimantus:: Assuredly.

Socrates:: Such, it seems, is his origin and character, but what is his manner of life?

Adeimantus:: As the wits say, you shall tell me.

Socrates:: I do, for, I take it, next there are among them feasts and carousals and reveling and courtesans and all the doings of those whose souls are entirely swayed by the indwelling tyrant Eros.

Adeimantus:: Inevitably.

Socrates:: And do not many and dread appetites shoot up beside this master passion every day and night in need of many things?

Adeimantus:: Many indeed.

Socrates:: And so any revenues there may be are quickly expended.

Adeimantus:: Of course.

Socrates:: And after this there are borrowings and levyings upon the estate?

Adeimantus:: Of course.

Socrates:: And when all these resources fail, must there not come a cry from the frequent and fierce nestlings of desire hatched in his soul, and must not such men, urged, as it were by goads, by the other desires, and especially by the ruling passion itself as captain of their bodyguard—to keep up the figure—must they not run wild and look to see who has aught that can be taken from him by deceit or violence?

Adeimantus:: Most certainly.

Socrates:: And so he is compelled to sweep it in from every source or else be afflicted with great travail and pain.

Adeimantus:: He is.

Socrates:: And just as the new, upspringing pleasures in him got the better of the original passions of his soul and robbed them, so he himself. though younger, will claim the right to get the better of his father and mother, and, after spending his own share, to seize and convert to his own use a portion of his father's estate.

Of course, what else?

Socrates:: And if they resist him, would he not at first attempt to rob and steal from his parents and deceive them?

Adeimantus:: Certainly.

Socrates:: And if he failed in that, would he not next seize it by force?

Adeimantus:: I think so.

Socrates:: And then, good sir, if the old man and the old woman clung to it and resisted him, would he be careful to refrain from the acts of a tyrant?

Adeimantus:: I am not without my fears, for the parents of such a one.

Socrates:: Nay, Adimantus, in heaven’s name, do you suppose that, for the sake of a newly found belle amie bound to him by no necessary tie, such a one would strike the dear mother, his by necessity and from his birth? Or for the sake of a blooming new-found bel ami, not necessary to his life, he would rain blows upon the aged father past his prime, closest of his kin and oldest of his friends? And would he subject them to those new favorites if he brought them under the same roof?

Adeimantus:: Yes, by Zeus.

Socrates:: A most blessed lot it seems to be, to be the parent of a tyrant son.

Adeimantus:: It does indeed.

Socrates:: And again, when the resources of his father and mother are exhausted and fail such a one, and the swarm of pleasures collected in his soul is grown great, will he not first lay hands on the wall of someone’s house or the cloak of someone who walks late at night, and thereafter he will make a clean sweep of some temple, and in all these actions the beliefs which he held from boyhood about the honorable and the base, the opinions accounted just, will be overmastered by the opinions newly emancipated and released, which, serving as bodyguards of the ruling passion, will prevail in alliance with it—I mean the opinions that formerly were freed from restraint in sleep, when, being still under the control of his father and the laws, he maintained the democratic constitution in his soul. But now, when under the tyranny of his ruling passion, he is continuously and in waking hours what he rarely became in sleep, and he will refrain from no atrocity of murder nor from any food or deed, but the passion that dwells in him as a tyrant will live in utmost anarchy and lawlessness, and, since it is itself sole autocrat, will urge the polity, so to speak, of him in whom it dwells to dare anything and everything in order to find support for himself and the hubbub of his henchmen, in part introduced from outside by evil associations, and in part released and liberated within by the same habits of life as his. Is not this the life of such a one?

Adeimantus:: It is this.

Socrates:: And if, there are only a few of this kind in a city, and the others, the multitude as a whole, are sober-minded, the few go forth into exile and serve some tyrant elsewhere as bodyguard or become mercenaries in any war there may be. But if they spring up in time of peace and tranquility they stay right there in the city and effect many small evils.

Adeimantus:: What kind of evils do you mean?

Socrates:: Oh, they just steal, break into houses, cut purses, strip men of their garments, plunder temples, and kidnap, and if they are fluent speakers they become sycophants and bear false witness and take bribes.

Adeimantus:: Yes, small evils indeed, if the men of this sort are few.

Socrates:: Why, yes, for small evils are relatively small compared with great, and in respect of the corruption and misery of a state all of them together, as the saying goes, don’t come within hail of the mischief done by a tyrant. For when men of this sort and their followers become numerous in a state and realize their numbers, then it is they who, in conjunction with the folly of the people, create a tyrant out of that one of them who has the greatest and mightiest tyrant in his own soul.

Adeimantus:: Naturally, for he would be the most tyrannical.

Socrates:: Then if the people yield willingly—’tis well, but if the city resists him, then, just as in the previous case the man chastised his mother and his father, so now in turn will he chastise his fatherland if he can, bringing in new boon companions beneath whose sway he will hold and keep enslaved his once dear motherland—as the Cretans name her—and fatherland. And this would be the end of such a man’s desire.

Adeimantus:: Yes, this, just this.

Socrates:: Then, is not this the character of such men in private life and before they rule the state—to begin with they associate with flatterers, who are ready to do anything to serve them, or, if they themselves want something, they themselves fawn and shrink from no contortion or abasement in protest of their friendship, though, once the object gained, they sing another tune.

Adeimantus:: Yes indeed.

Socrates:: Throughout their lives, then, they never know what it is to be the friends of anybody. They are always either masters or slaves, but the tyrannical nature never tastes freedom or true friendship.

Adeimantus:: Quite so.

Socrates:: May we not rightly call such men faithless?

Adeimantus:: Of course.

Socrates:: Yes, and unjust to the last degree, if we were right in our previous agreement about the nature of justice.

Adeimantus:: But surely, we were right.

Socrates:: Let us sum up, then, the most evil type of man. He is, I presume, the man who, in his waking hours, has the qualities we found in his dream state.

Adeimantus:: Quite so.

Socrates:: And he is developed from the man who, being by nature most of a tyrant, achieves sole power, and the longer he lives as an actual tyrant the stronger this quality becomes.

Glaucon taking up the argument interjected.

Glaucon:: Inevitably

Socrates:: And shall we find, that the man who is shown to be the most evil will also be the most miserable, and the man who is most of a tyrant for the longest time is most and longest miserable in sober truth? Yet the many have many opinions.

Glaucon:: That much, certainly, must needs be true.

Socrates:: Does not the tyrannical man, correspond to the tyrannical state in similitude, the democratic to the democratic and the others likewise?

Glaucon:: Surely.

Socrates:: And may we not infer that the relation of state to state in respect of virtue and happiness is the same as that of the man to the man?

Glaucon:: Of course.

Socrates:: What is, then, in respect of virtue, the relation of a city ruled by a tyrant to a royal city as we first described it?

Glaucon:: They are direct contraries, The one is the best, the other the worst.

Socrates:: I'll not ask which is which, because that is obvious. But again in respect of happiness and wretchedness, is your estimate the same or different? And let us not be dazzled by fixing our eyes on that one man, the tyrant, or a few of his court, but let us enter into and survey the entire city, as is right, and declare our opinion only after we have so dived to its uttermost recesses and contemplated its life as a whole.

Glaucon:: That is a fair challenge, and it is clear to everybody that there is no city more wretched than that in which a tyrant rules, and none more happy than that governed by a true king.

Socrates:: And would it not also be a fair challenge, to ask you to accept as the only proper judge of the two men the one who is able in thought to enter with understanding into the very soul and temper of a man, and who is not like a child viewing him from outside, overawed by the tyrants' great attendance, and the pomp and circumstance which they assume in the eyes of the world, but is able to see through it all? And what if I should assume, then, that the man to whom we ought all to listen is he who has this capacity of judgment and who has lived under the same roof with a tyrant and has witnessed his conduct in his own home and observed in person his dealings with his intimates in each instance where he would best be seen stripped of his vesture of tragedy, and who had likewise observed his behavior in the hazards of his public life—and if we should ask the man who has seen all this to be the messenger to report on the happiness or misery of the tyrant as compared with other men?

Glaucon:: That also would be a most just challenge.

Socrates:: Shall we, then, make believe, that we are of those who are thus able to judge and who have ere now lived with tyrants, so that we may have someone to answer our questions?

Glaucon:: By all means.

Socrates:: Come, then, examine it thus. Recall the general likeness between the city and the man, and then observe in turn what happens to each of them.

Glaucon:: What things?

Socrates:: In the first place, will you call the state governed by a tyrant free or enslaved, speaking of it as a state?

Glaucon:: Utterly enslaved.

Socrates:: And yet you see in it masters and free men.

Glaucon:: I see, a small portion of such, but the entirety, so to speak, and the best part of it, is shamefully and wretchedly enslaved.

Socrates:: If, then, the man resembles the state, must not the same proportion obtain in him, and his soul teem with boundless servility and illiberality, the best and most reasonable parts of it being enslaved, while a small part, the worst and the most frenzied, plays the despot?

Glaucon:: Inevitably.

Socrates:: Then will you say that such a soul is enslaved or free?

Glaucon:: Enslaved, I should suppose.

Socrates:: Again, does not the enslaved and tyrannized city least of all do what it really wishes?

Glaucon:: Decidedly so.

Socrates:: Then the tyrannized soul—to speak of the soul as a whole—also will least of all do what it wishes, but being always perforce driven and drawn by the gadfly of desire it will be full of confusion and repentance.

Glaucon:: Of course.

Socrates:: And must the tyrannized city be rich or poor?

Glaucon:: Poor.

Socrates:: Then the tyrant soul also must of necessity always be needy and suffer from unfulfilled desire.

Glaucon:: So it is.

Socrates:: And again, must not such a city, as well as such a man, be full of terrors and alarms?

Glaucon:: It must indeed.

Socrates:: And do you think you will find more lamentations and groans and wailing and anguish in any other city?

Glaucon:: By no means.

Socrates:: And so of man, do you think these things will more abound in any other than in this tyrant type, that is maddened by its desires and passions?

Glaucon:: How could it be so?

Socrates:: In view of all these and other like considerations, then, I take it, you judged that this city is the most miserable of cities.

Glaucon:: And was I not right?

Socrates:: Yes, indeed. But of the tyrant man, what have you to say in view of these same things?

Glaucon:: That he is far and away the most miserable of all.

Socrates:: I cannot admit, that you are right in that too.

Glaucon:: How so?

Socrates:: This one, I take it, has not yet attained the acme of misery.

Glaucon:: Then who has?

Socrates:: Perhaps you will regard the one I am about to name as still more wretched.

Glaucon:: What one?

Socrates:: The one, who, being of tyrannical temper, does not live out his life in private station but is so unfortunate that by some unhappy chance he is enabled to become an actual tyrant.

Glaucon:: I infer from what has already been said, that you speak truly.

Socrates:: Yes, but it is not enough to suppose such things. We must examine them thoroughly by reason and an argument such as this. For our inquiry concerns the greatest of all things, the good life or the bad life.

Glaucon:: Quite right.

Socrates:: Consider, then, if there is anything in what I say. For I think we must get a notion of the matter from these examples.

Glaucon:: From which?

Socrates:: From individual wealthy private citizens in our states who possess many slaves. For these resemble the tyrant in being rulers over many, only the tyrant's numbers are greater.

Glaucon:: Yes, they are.

Socrates:: You are aware, then, that they are unafraid and do not fear their slaves?

Glaucon:: What should they fear?

Socrates:: Nothing, but do you perceive the reason why?

Glaucon:: Yes, because the entire state is ready to defend each citizen.

Socrates:: You are right. But now suppose some god should catch up a man who has fifty or more slaves and waft him with his wife and children away from the city and set him down with his other possessions and his slaves in a solitude where no free man could come to his rescue. What and how great would be his fear, do you suppose, lest he and his wife and children be destroyed by the slaves?

Glaucon:: The greatest in the world, if you ask me.

Socrates:: And would he not forthwith find it necessary to fawn upon some of the slaves and make them many promises and emancipate them, though nothing would be further from his wish? And so he would turn out to be the flatterer of his own servants.

Glaucon:: He would certainly have to, or else perish.

Socrates:: But now suppose, that god established round about him numerous neighbors who would not tolerate the claim of one man to be master of another, but would inflict the utmost penalties on any such person on whom they could lay their hands.

Glaucon:: I think, that his plight would be still more desperate, encompassed by nothing but enemies.

Socrates:: And is not that the sort of prison house in which the tyrant is pent, being of a nature such as we have described and filled with multitudinous and manifold terrors and appetites? Yet greedy and avid of spirit as he is, he only of the citizens may not travel abroad or view any of the sacred festivals that other free men yearn to see, but he must live for the most part cowering in the recesses of his house like a woman, envying among the other citizens anyone who goes abroad and sees any good thing.

Glaucon:: Most certainly.

Socrates:: And does not such a harvest of ills measure the difference between the man who is merely ill governed in his own soul, the man of tyrannical temper, whom you just now judged to be most miserable, and the man who, having this disposition, does not live out his life in private station but is constrained by some ill-hap to become an actual tyrant, and while unable to control himself attempts to rule over others, as if a man with a sick and incontinent body should not live the private life but should be compelled to pass his days in contention and strife with other persons?

Glaucon:: Your analogy is most apt and true, Socrates.

Socrates:: Is not that then, dear Glaucon, a most unhappy experience in every way? And is not the tyrant's life still worse than that which was judged by you to be the worst?

Glaucon:: Precisely so.

Socrates:: Then it is the truth, though some may deny it, that the real tyrant is really enslaved to cringings and servitudes beyond compare, a flatterer of the basest men, and that, so far from finding even the least satisfaction for his desires, he is in need of most things, and is a poor man in very truth, as is apparent if one knows how to observe a soul in its entirety. And throughout his life he teems with terrors and is full of convulsions and pains, if in fact he resembles the condition of the city which he rules, and he is like it, is he not?

Glaucon:: Yes, indeed.

Socrates:: And in addition, shall we not further attribute to him all that we spoke of before, and say that he must needs be, and, by reason of his rule, come to be still more than he was, envious, faithless, unjust, friendless, impious, a vessel and nurse of all iniquity, and so in consequence be himself most unhappy and make all about him so?

Glaucon:: No man of sense will gainsay that.

Socrates:: Come then, now at last, even as the judge of last instance pronounces, so do you declare who in your opinion is first in happiness and who second, and similarly judge the others, all five in succession, the royal, the timocratic, the oligarchic, the democratic, and the tyrannical man.

Glaucon:: Nay, the decision is easy. For as if they were choruses I judge them in the order of their entrance, and so rank them in respect of virtue and vice, happiness and its contrary.

Socrates:: Shall we hire a herald, then, or shall I myself make proclamation that the son of Ariston pronounced the best man and the most righteous to be the happiest, and that he is the one who is the most kingly and a king over himself, and declared that the most evil and most unjust is the most unhappy, who again is the man who, having the most of the tyrannical temper in himself, becomes most of a tyrant over himself and over the state?

Glaucon:: Let it have been so proclaimed by you.

Socrates:: Shall I add the clause ‘alike whether their character is known to all men and gods or is not known’?

Glaucon:: Add that to the proclamation.

Socrates:: Very good. This, then, would be one of our proofs, but examine this second one and see if there is anything in it.

Glaucon:: What is it?

Socrates:: Since, corresponding to the three types in the city, the soul also is tripartite, it will admit, I think, of another demonstration also.

Glaucon:: What is that?

Socrates:: The following. The three parts have also, it appears to me, three kinds of pleasure, one peculiar to each, and similarly three appetites and controls.

Glaucon:: What do you mean?

Socrates:: One part, we say, is that with which a man learns, one is that with which he feels anger. But the third part, owing to its manifold forms, we could not easily designate by any one distinctive name, but gave it the name of its chief and strongest element, for we called it the appetitive part because of the intensity of its appetites concerned with food and drink and love and their accompaniments, and likewise the money-loving part, because money is the chief instrument for the gratification of such desires.

Glaucon:: And rightly.

Socrates:: And if we should also say that its pleasure and its love were for gain or profit, should we not thus best bring it together under one head in our discourse so as to understand each other when we speak of this part of the soul, and justify our calling it the money-loving and gain-loving part?

Glaucon:: I, at any rate, think so.

Socrates:: And, again, of the high-spirited element, do we not say that it is wholly set on predominance and victory and good repute?

Glaucon:: Yes, indeed.

Socrates:: And might we not appropriately designate it as the ambitious part and that which is covetous of honor?

Glaucon:: Most appropriately.

Socrates:: But surely it is obvious to everyone that all the endeavor of the part by which we learn is ever toward knowledge of the truth of things, and that it least of the three is concerned for wealth and reputation.

Glaucon:: Much the least.

Socrates:: Lover of learning and lover of wisdom would be suitable designations for that.

Glaucon:: Quite so.

Socrates:: Is it not also true, that the ruling principle of men's souls is in some cases this faculty and in others one of the other two, as it may happen?

Glaucon:: That is so.

Socrates:: And that is why we say that the primary classes of men also are three, the philosopher or lover of wisdom, the lover of victory, and the lover of gain.

Glaucon:: Precisely so.

Socrates:: And also that there are three forms of pleasure, corresponding respectively to each?

Glaucon:: By all means.

Socrates:: Are you aware, then, that if you should choose to ask men of these three classes, each in turn, which is the most pleasurable of these lives, each will chiefly commend his own? The financier will affirm that in comparison with profit the pleasures of honor or of learning are of no value except in so far as they produce money.

Glaucon:: True.

Socrates:: And what of the lover of honor? Does he not regard the pleasure that comes from money as vulgar and low, and again that of learning, save in so far as the knowledge confers honor, mere fume and moonshine.

Glaucon:: It is so.

Socrates:: And what, are we to suppose the philosopher thinks of the other pleasures compared with the delight of knowing the truth and the reality, and being always occupied with that while he learns? Will he not think them far removed from true pleasure, and call them literally the pleasures of necessity, since he would have no use for them if necessity were not laid upon him?

Glaucon:: We may be sure of that.

Socrates:: Since, then, there is contention between the several types of pleasure and the lives themselves, not merely as to which is the more honorable or the more base, or the worse or the better, but which is actually the more pleasurable or free from pain, how could we determine which of them speaks most truly?

Glaucon:: In faith, I cannot tell.

Socrates:: Well, consider it thus. By what are things to be judged, if they are to be judged rightly? Is it not by experience, intelligence, and discussion? Or could anyone name a better criterion than these?

Glaucon:: How could he?

Socrates:: Observe, then. Of our three types of men, which has had the most experience of all the pleasures we mentioned? Do you think that the lover of gain by study of the very nature of truth has more experience of the pleasure that knowledge yields than the philosopher has of that which results from gain?

Glaucon:: There is a vast difference, for the one, the philosopher, must needs taste of the other two kinds of pleasure from childhood, but the lover of gain is not only under no necessity of tasting or experiencing the sweetness of the pleasure of learning the true natures of things, but he cannot easily do so even if he desires and is eager for it.

Socrates:: The lover of wisdom, then, far surpasses the lover of gain in experience of both kinds of pleasure.

Glaucon:: Yes, far.

Socrates:: And how does he compare with the lover of honor? Is he more unacquainted with the pleasure of being honored than that other with that which comes from knowledge?

Glaucon:: Nay, honor, if they achieve their several objects, attends them all, for the rich man is honored by many and the brave man and the wise, so that all are acquainted with the kind of pleasure that honor brings, but it is impossible for anyone except the lover of wisdom to have savored the delight that the contemplation of true being and reality brings.

Socrates:: Then, so far as experience goes, he is the best judge of the three.

Glaucon:: By far.

Socrates:: And again, he is the only one whose experience will have been accompanied by intelligence.

Glaucon:: Surely.

Socrates:: And yet again, that which is the instrument, or ὁργανον, of judgment is the instrument, not of the lover of gain or of the lover of honor, but of the lover of wisdom.

Glaucon:: What is that?

Socrates:: It was by means of words and discussion that we said the judgment must be reached, was it not?

Glaucon:: Yes.

Socrates:: And they are the instrument mainly of the philosopher.

Glaucon:: Of course.

Socrates:: Now if wealth and profit were the best criteria by which things are judged, the things praised and censured by the lover of gain would necessarily be truest and most real.

Glaucon:: Quite necessarily.

Socrates:: And if honor, victory, and courage, would it not be the things praised by the lover of honor and victory?

Glaucon:: Obviously.

Socrates:: But since the tests are experience and wisdom and discussion, what follows?

Glaucon:: Of necessity, that the things approved by the lover of wisdom and discussion are most valid and true.

Socrates:: There being, then, three kinds of pleasure, the pleasure of that part of the soul whereby we learn is the sweetest, and the life of the man in whom that part dominates is the most pleasurable.

Glaucon:: How could it be otherwise?

At any rate the man of intelligence speaks with authority when he commends his own life.

Socrates:: And to what life and to what pleasure, does the judge assign the second place?

Glaucon:: Obviously to that of the warrior and honor-loving type, for it is nearer to the first than is the life of the money-maker.

Socrates:: And so the last place belongs to the lover of gain, as it seems.

Glaucon:: Surely.

Socrates:: That, then, would be two points in succession and two victories for the just man over the unjust. And now for the third in the Olympian fashion to the savior and to Olympian Zeus—observe that other pleasure than that of the intelligence is not altogether even real or pure, but is a kind of scene painting, as I seem to have heard from some wise man, and yet this would be the greatest and most decisive overthrow.

Glaucon:: Much the greatest. But what do you mean?

Socrates:: I shall discover it, if you will answer my questions while I seek.

Glaucon:: Ask, then.

Socrates:: Tell me, then, do we not say that pain is the opposite of pleasure?

Glaucon:: We certainly do.

Socrates:: And is there not such a thing as a neutral state?

Glaucon:: There is.

Socrates:: Is it not intermediate between them, and in the mean, being a kind of quietude of the soul in these respects? Or is not that your notion of it?

Glaucon:: It is that.

Socrates:: Do you not recall the things men say in sickness?

Glaucon:: What sort of things?

Socrates:: Why, that after all there is nothing sweeter than to be well, though they were not aware that it is the highest pleasure before they were ill.

Glaucon:: I remember.

Socrates:: And do you not hear men afflicted with severe pain saying that there is no greater pleasure than the cessation of this suffering?

Glaucon:: I do.

Socrates:: And you perceive, I presume, many similar conditions in which men while suffering pain praise freedom from pain and relief from that as the highest pleasure, and not positive delight.

Glaucon:: Yes, for this in such cases is perhaps what is felt as pleasurable and acceptable—peace.

Socrates:: And so, when a man’s delight comes to an end, the cessation of pleasure will be painful.

Glaucon:: It may be so.

Socrates:: What, then, we just now described as the intermediate state between the two—this quietude—will sometimes be both pain and pleasure.

Glaucon:: It seems so.

Socrates:: Is it really possible for that which is neither to become both?

Glaucon:: I think not.

Socrates:: And further, both pleasure and pain arising in the soul are a kind of motion, are they not?

Glaucon:: Yes.

Socrates:: And did we not just now see that to feel neither pain nor pleasure is a quietude of the soul and an intermediate state between the two?

Glaucon:: Yes, we did.

Socrates:: How, then, can it be right to think the absence of pain pleasure, or the absence of joy painful?

Glaucon:: In no way.

Socrates:: This is not a reality, then, but an illusion. In such case the quietude in juxtaposition with the pain appears pleasure, and in juxtaposition with the pleasure pain. And these illusions have no real bearing on the truth of pleasure, but are a kind of jugglery.

Glaucon:: So at any rate our argument signifies.

Socrates:: Take a look, then, at pleasures which do not follow on pain, so that you may not haply suppose for the present that it is the nature of pleasure to be a cessation from pain and pain from pleasure.

Glaucon:: Where shall I look, and what pleasures do you mean?

Socrates:: There are many others, and especially, if you please to note them, the pleasures connected with smell. For these with no antecedent pain suddenly attain an indescribable intensity, and their cessation leaves no pain after them.

Glaucon:: Most true.

Socrates:: Let us not believe, then, that the riddance of pain is pure pleasure or that of pleasure pain.

Glaucon:: No, we must not.

Socrates:: Yet, surely, the affections that find their way through the body to the soul and are called pleasures are, we may say, the most and the greatest of them, of this type, in some sort releases from pain.

Glaucon:: Yes, they are.

Socrates:: And is not this also the character of the anticipatory pleasures and pains that precede them and arise from the expectation of them?

Glaucon:: It is.

Socrates:: Do you know, then, what their quality is and what they most resemble?

Glaucon:: What?

Socrates:: Do you think that there is such a thing in nature as up and down and in the middle?

Glaucon:: I do.

Socrates:: Do you suppose, then, that anyone who is transported from below to the center would have any other opinion than that he was moving upward? And if he took his stand at the center and looked in the direction from which he had been transported, do you think he would suppose himself to be anywhere but above, never having seen that which is really above?

Glaucon:: No, by Zeus, I do not think that such a person would have any other notion.

Socrates:: And if he were borne back, he would both think himself to be moving downward and would think truly.

Glaucon:: Of course.

Socrates:: And would not all this happen to him because of his non-acquaintance with the true and real up and down and middle?

Glaucon:: Obviously.

Socrates:: Would it surprise you, then, if similarly men without experience of truth and reality hold unsound opinions about many other matters, and are so disposed toward pleasure and pain and the intermediate neutral condition that, when they are moved in the direction of the painful, they truly think themselves to be, and really are, in a state of pain, but, when they move from pain to the middle and neutral state, they intensely believe that they are approaching fulfillment and pleasure, and just as if, in ignorance of white, they were comparing gray with black, so, being inexperienced in true pleasure, they are deceived by viewing painlessness in its relation to pain?

Glaucon:: No, by Zeus, it would not surprise me, but far rather if it were not so.

Socrates:: In this way, then, consider it. Are not hunger and thirst and similar states inanitions or emptinesses of the bodily habit?

Glaucon:: Surely.

Socrates:: And is not ignorance and folly in turn a kind of emptiness of the habit of the soul?

Glaucon:: It is indeed.

Socrates:: And he who partakes of nourishment and he who gets wisdom fills the void and is filled?

Glaucon:: Of course.

Socrates:: And which is the truer filling and fulfillment, that of the less or of the more real being?

Glaucon:: Evidently that of the more real.

Socrates:: And which of the two groups or kinds do you think has a greater part in pure essence, the class of foods, drinks, and relishes and nourishment generally, or the kind of true opinion, knowledge and reason, and, in sum, all the things that are more excellent? Form your judgment thus. Which do you think more truly is, that which clings to what is ever like itself and immortal and to the truth, and that which is itself of such a nature and is born in a thing of that nature, or that which clings to what is mortal and never the same and is itself such and is born in such a thing?

Glaucon:: That which cleaves to what is ever the same far surpasses.

Socrates:: Does the essence of that which never abides the same partake of real essence any more than of knowledge?

Glaucon:: By no means.

Socrates:: Or of truth and reality?

Glaucon:: Not of that, either.

Socrates:: And if a thing has less of truth has it not also less of real essence or existence?

Glaucon:: Necessarily.

Socrates:: And is it not generally true that the kinds concerned with the service of the body partake less of truth and reality than those that serve the soul?

Glaucon:: Much less.

Socrates:: And do you not think that the same holds of the body itself in comparison with the soul?

Glaucon:: I do.

Socrates:: Then is not that which is fulfilled of what more truly is, and which itself more truly is, more truly filled and satisfied than that which being itself less real is filled with more unreal things?

Glaucon:: Of course.

Socrates:: If, then, to be filled with what befits nature is pleasure, then that which is more really filled with real things would more really and truly cause us to enjoy a true pleasure, while that which partakes of the less truly existent would be less truly and surely filled and would partake of a less trustworthy and less true pleasure.

Glaucon:: Most inevitably.

Socrates:: Then those who have no experience of wisdom and virtue but are ever devoted to feastings and that sort of thing are swept downward, it seems, and back again to the center, and so sway and roam to and fro throughout their lives, but they have never transcended all this and turned their eyes to the true upper region nor been wafted there, nor ever been really filled with real things, nor ever tasted stable and pure pleasure, but with eyes ever bent upon the earth and heads bowed down over their tables they feast like cattle, grazing and copulating, ever greedy for more of these delights, and in their greed kicking and butting one another with horns and hoofs of iron they slay one another in sateless avidity, because they are vainly striving to satisfy with things that are not real the unreal and incontinent part of their souls.

Glaucon:: You describe in quite oracular style, Socrates, the life of the multitude.

Socrates:: And are not the pleasures with which they dwell inevitably commingled with pains, phantoms of true pleasure, illusions of scene painting, so colored by contrary juxtaposition as to seem intense in either kind, and to beget mad loves of themselves in senseless souls, and to be fought for, as Stesichorus says the wraith of Helen was fought for at Troy through ignorance of the truth?

Glaucon:: It is quite inevitable, that it should be so.

Socrates:: So, again, must not the like hold of the high-spirited element, whenever a man succeeds in satisfying that part of his nature—his covetousness of honor by envy, his love of victory by violence, his ill temper by indulgence in anger, pursuing these ends without regard to consideration and reason?

Glaucon:: The same sort of thing, must necessarily happen in this case too.

Socrates:: Then, may we not confidently declare that in both the gain-loving and the contentious part of our nature all the desires that wait upon knowledge and reason, and, pursuing their pleasures in conjunction with them, take only those pleasures which reason approves, will, since they follow truth, enjoy the truest pleasures, so far as that is possible for them, and also the pleasures that are proper to them and their own, if for everything that which is best may be said to be most its ‘own’?

Glaucon:: But indeed, it is most truly its very own.

Socrates:: Then when the entire soul accepts the guidance of the wisdom-loving part and is not filled with inner dissension, the result for each part is that it in all other respects keeps to its own task and is just, and likewise that each enjoys its own proper pleasures and the best pleasures and, so far as such a thing is possible, the truest.

Glaucon:: Precisely so.

Socrates:: And so when one of the other two gets the mastery the result for it is that it does not find its own proper pleasure and constrains the others to pursue an alien pleasure and not the true.

Glaucon:: That is so.

Socrates:: And would not that which is furthest removed from philosophy and reason be most likely to produce this effect?

Glaucon:: Quite so.

Socrates:: And is not that furthest removed from reason which is furthest from law and order?

Glaucon:: Obviously.

Socrates:: And was it not made plain that the furthest removed are the erotic and tyrannical appetites?

Glaucon:: Quite so.

Socrates:: And least so the royal and orderly?

Glaucon:: Yes.

Socrates:: Then the tyrant's place, I think, will be fixed at the furthest remove from true and proper pleasure, and the king's at the least.

Glaucon:: Necessarily.

Socrates:: Then the tyrant's life will be least pleasurable and the king's most.

Glaucon:: There is every necessity of that.

Socrates:: Do you know, then, how much less pleasurably the tyrant lives than the king?

Glaucon:: I'll know if you tell me.

Socrates:: There being as it appears three pleasures, one genuine and two spurious, the tyrant in his flight from law and reason crosses the border beyond the spurious, cohabits with certain slavish, mercenary pleasures, and the measure of his inferiority is not easy to express except perhaps thus.

Glaucon:: How?

Socrates:: The tyrant, I believe, we found at the third remove from the oligarch, for the democrat came between.

Glaucon:: Yes.

Socrates:: And would he not also dwell with a phantom of pleasure in respect of reality three stages removed from that other, if all that we have said is true?

Glaucon:: That is so.

Socrates:: And the oligarch in turn is at the third remove from the royal man if we assume the identity of the aristocrat and the king.

Glaucon:: Yes, the third.

Socrates:: Three times three, then, by numerical measure is the interval that separates the tyrant from true pleasure.

Glaucon:: Apparently.

Socrates:: The phantom of the tyrant's pleasure is then by longitudinal mensuration a plane number.

Glaucon:: Quite so.

Socrates:: But by squaring and cubing it is clear what the interval of this separation becomes.

Glaucon:: It is clear, to a reckoner.

Socrates:: Then taking it the other way about, if one tries to express the extent of the interval between the king and the tyrant in respect of true pleasure he will find on completion of the multiplication that he lives seven hundred and twenty-nine times as happily and that the tyrant's life is more painful by the same distance.

Glaucon:: An overwhelming and baffling calculation, of the difference between the just and the unjust man in respect of pleasure and pain!

Socrates:: And what is more, it is a true number and pertinent to the lives of men if days and nights and months and years pertain to them.

Glaucon:: They certainly do.

Socrates:: Then if in point of pleasure the victory of the good and just man over the bad and unjust is so great as this, he will surpass him inconceivably in decency and beauty of life and virtue.

Glaucon:: Inconceivably indeed, by Zeus.

Socrates:: Very good. And now that we have come to this point in the argument, let us take up again the statement with which we began and that has brought us to this pass. It was, I believe, averred that injustice is profitable to the completely unjust man who is reputed just. Was not that the proposition?

Glaucon:: Yes, that.

Socrates:: Let us, then, reason with its proponent now that we have agreed on the essential nature of injustice and just conduct.

Glaucon:: How?

Socrates:: By fashioning in our discourse a symbolic image of the soul, that the maintainer of that proposition may see precisely what it is that he was saying.

Glaucon:: What sort of an image?

Socrates:: One of those natures that the ancient fables tell of, as that of the Chimera or Scylla or Cerberus, and the numerous other examples that are told of many forms grown together in one.

Glaucon:: Yes, they do tell of them.

Socrates:: Mold, then, a single shape of a manifold and many-headed beast that has a ring of heads of tame and wild beasts and can change them and cause to spring forth from itself all such growths.

Glaucon:: It is the task of a cunning artist, but nevertheless, since speech is more plastic than wax and other such media, assume that it has been so fashioned.

Socrates:: Then fashion one other form of a lion and one of a man and let the first be far the largest and the second second in size.

Glaucon:: That is easier, and is done.

Socrates:: Join the three in one, then, so as in some sort to grow together.

Glaucon:: They are so united.

Socrates:: Then mold about them outside the likeness of one, that of the man, so that to anyone who is unable to look within but who can see only the external sheath it appears to be one living creature, the man.

Glaucon:: The sheath is made fast about him.

Socrates:: Let us then say to the speaker who avers that it pays this man to be unjust, and that to do justice is not for his advantage, that he is affirming nothing else than that it profits him to feast and make strong the multifarious beast and the lion and all that pertains to the lion, but to starve the man and so enfeeble him that he can be pulled about whithersoever either of the others drag him, and not to familiarize or reconcile with one another the two creatures but suffer them to bite and fight and devour one another.

Glaucon:: Yes, that is precisely what the panegyrist of injustice will be found to say.

Socrates:: And on the other hand, he who says that justice is the more profitable affirms that all our actions and words should tend to give the man within us complete domination over the entire man and make him take charge of the many-headed beast—like a farmer who cherishes and trains the cultivated plants but checks the growth of the wild—and he will make an ally of the lion's nature, and caring for all the beasts alike will first make them friendly to one another and to himself, and so foster their growth.

Glaucon:: Yes, that in turn is precisely the meaning of the man who commends justice.

Socrates:: From every point of view, then, the panegyrist of justice speaks truly and the panegyrist of injustice falsely. For whether we consider pleasure, reputation, or profit, he who commends justice speaks the truth, while there is no soundness or real knowledge of what he censures in him who disparages it.

Glaucon:: None whatever, I think.

Socrates:: Shall we, then, try to persuade him gently, for he does not willingly err, by questioning him thus. Dear friend, should we not also say that the things which law and custom deem fair or foul have been accounted so for a like reason—the fair and honorable things being those that subject the brutish part of our nature to that which is human in us, or rather, it may be, to that which is divine, while the foul and base are the things that enslave the gentle nature to the wild? Will he assent or not?

Glaucon:: He will if he is counseled by me.

Socrates:: Can it profit any man in the light of this thought to accept gold unjustly if the result is to be that by the acceptance he enslaves the best part of himself to the worst? Or is it conceivable that, while, if the taking of the gold enslaved his son or daughter and that too to fierce and evil men, it would not profit him, no matter how large the sum, yet that, if the result is to be the ruthless enslavement of the divinest part of himself to the most despicable and godless part, he is not to be deemed wretched and is not taking the golden bribe much more disastrously than Eriphyle did when she received the necklace as the price of her husband’s life?

Glaucon:: Far more, for I will answer you in his behalf.

Socrates:: And do you not think that the reason for the old objection to licentiousness is similarly because that sort of thing emancipates that dread, that huge and manifold beast overmuch?

Glaucon:: Obviously.

Socrates:: And do we not censure self-will and irascibility when they foster and intensify disproportionately the element of the lion and the snake in us?

Glaucon:: By all means.

Socrates:: And do we not reprobate luxury and effeminacy for their loosening and relaxation of this same element when they engender cowardice in it?

Glaucon:: Surely.

Socrates:: And flattery and illiberality when they reduce this same high-spirited element under the rule of the mob-like beast and habituate it for the sake of wealth and the unbridled lusts of the beast to endure all manner of contumely from youth up and become an ape instead of a lion?

Glaucon:: Yes, indeed.

Socrates:: And why do you suppose that ‘base mechanic’ handicraft is a term of reproach? Shall we not say that it is solely when the best part is naturally weak in a man so that it cannot govern and control the brood of beasts within him but can only serve them and can learn nothing but the ways of flattering them?

Glaucon:: So it seems.

Socrates:: Then is it not in order that such a one may have a like government with the best man that we say he ought to be the slave of that best man who has within himself the divine governing principle, not because we suppose, as Thrasymachus did in the case of subjects, that the slave should be governed for his own harm, but on the ground that it is better for everyone to be governed by the divine and the intelligent, preferably indwelling and his own, but in default of that imposed from without, in order that we all so far as possible may be akin and friendly because our governance and guidance are the same?

Glaucon:: Yes, and rightly so.

Socrates:: And it is plain, that this is the purpose of the law, which is the ally of all classes in the state, and this is the aim of our control of children, our not leaving them free before we have established, so to speak, a constitutional government within them and, by fostering the best element in them with the aid of the like in ourselves, have set up in its place a similar guardian and ruler in the child, and then, and then only, we leave it free.

Glaucon:: Yes, that is plain.

Socrates:: In what way, then, Glaucon, and on what principle, shall we say that it profits a man to be unjust or licentious or do any shameful thing that will make him a worse man, but otherwise will bring him more wealth or power?

Glaucon:: In no way.

Socrates:: And how that it pays him to escape detection in wrongdoing and not pay the penalty? Or is it not true that he who evades detection becomes a still worse man, while in the one who is discovered and chastened the brutish part is lulled and tamed and the gentle part liberated, and the entire soul, returning to its nature at the best, attains to a much more precious condition in acquiring sobriety and righteousness together with wisdom, than the body does when it gains strength and beauty conjoined with health, even as the soul is more precious than the body?

Glaucon:: Most assuredly.

Socrates:: Then the wise man will bend all his endeavors to this end throughout his life; he will, to begin with, prize the studies that will give this quality to his soul and disprize the others.

Glaucon:: Clearly.

Socrates:: And then, he not only will not abandon the habit and nurture of his body to the brutish and irrational pleasure and live with his face set in that direction, but he will not even make health his chief aim, nor give the first place to the ways of becoming strong or healthy or beautiful unless these things are likely to bring with them soberness of spirit, but he will always be found attuning the harmonies of his body for the sake of the concord in his soul.

Glaucon:: By all means, if he is to be a true musician.

Socrates:: And will he not deal likewise with the ordering and harmonizing of his possessions? He will not let himself be dazzled by the felicitations of the multitude and pile up the mass of his wealth without measure, involving himself in measureless ills.

Glaucon:: No, I think not.

Socrates:: He will rather, keep his eyes fixed on the constitution in his soul, and taking care and watching lest he disturb anything there either by excess or deficiency of wealth, will so steer his course and add to or detract from his wealth on this principle, so far as may be.

Glaucon:: Precisely so.

Socrates:: And in the matter of honors and office too this will be his guiding principle. He will gladly take part in and enjoy those which he thinks will make him a better man, but in public and private life he will shun those that may overthrow the established habit of his soul.

Glaucon:: Then, if that is his chief concern, he will not willingly take part in politics.

Socrates:: Yes, by the dog, in his own city he certainly will, yet perhaps not in the city of his birth, except in some providential conjuncture.

Glaucon:: I understand, You mean the city whose establishment we have described, the city whose home is in the ideal, for I think that it can be found nowhere on earth.

Socrates:: Well, perhaps there is a pattern of it laid up in heaven for him who wishes to contemplate it and so beholding to constitute himself its citizen. But it makes no difference whether it exists now or ever will come into being. The politics of this city only will be his and of none other.

Glaucon:: That seems probable.

## Book 10.

Socrates:: And truly, many other considerations assure me that we were entirely right in our organization of the state, and especially, I think, in the matter of poetry.

Glaucon:: What about it?

Socrates:: In refusing to admit at all so much of it as is imitative, for that it is certainly not to be received is, I think, still more plainly apparent now that we have distinguished the several parts of the soul.

Glaucon:: What do you mean?

Socrates:: Why, between ourselves—for you will not betray me to the tragic poets and all other imitators—that kind of art seems to be a corruption of the mind of all listeners who do not possess as an antidote a knowledge of its real nature.

Glaucon:: What is your idea in saying this?

Socrates:: I must speak out, though a certain love and reverence for Homer that has possessed me from a boy would stay me from speaking. For he appears to have been the first teacher and beginner of all these beauties of tragedy. Yet all the same we must not honor a man above truth, but, as I say, speak our minds.

Glaucon:: By all means.

Socrates:: Listen, then, or rather, answer my question.

Glaucon:: Ask it.

Socrates:: Could you tell me in general what imitation is? For neither do I myself quite apprehend what it would be at.

Glaucon:: It is likely, then, that I should apprehend!

Socrates:: It would be nothing strange, since it often happens that the dimmer vision sees things in advance of the keener.

Glaucon:: That is so, but in your presence I could not even be eager to try to state anything that appears to me, but do you yourself consider it.

Socrates:: Shall we, then, start the inquiry at this point by our customary procedure? We are in the habit, I take it, of positing a single idea or form in the case of the various multiplicities to which we give the same name. Do you not understand?

Glaucon:: I do.

Socrates:: In the present case, then, let us take any multiplicity you please; for example, there are many couches and tables.

Glaucon:: Of course.

Socrates:: But these utensils imply, I suppose, only two ideas or forms, one of a couch and one of a table.

Glaucon:: Yes.

Socrates:: And are we not also in the habit of saying that the craftsman who produces either of them fixes his eyes on the idea or form, and so makes in the one case the couches and in the other the tables that we use, and similarly of other things? For surely no craftsman makes the idea itself. How could he?

Glaucon:: By no means.

Socrates:: But now consider what name you would give to this craftsman.

Glaucon:: What one?

Socrates:: Him who makes all the things that all handicraftsmen severally produce.

Glaucon:: A truly clever and wondrous man you tell of.

Socrates:: Ah, but wait, and you will say so indeed, for this same handicraftsman is not only able to make all implements, but he produces all plants and animals, including himself, and thereto earth and heaven and the gods and all things in heaven and in Hades under the earth.

Glaucon:: A most marvelous Sophist.

Socrates:: Are you incredulous? Tell me, do you deny altogether the possibility of such a craftsman, or do you admit that in a sense there could be such a creator of all these things, and in another sense not? Or do you not perceive that you yourself would be able to make all these things in a way?

Glaucon:: And in what way, I ask you.

Socrates:: There is no difficulty, but it is something that the craftsman can make everywhere and quickly. You could do it most quickly if you should choose to take a mirror and carry it about everywhere. You will speedily produce the sun and all the things in the sky, and speedily the earth and yourself and the other animals and implements and plants and all the objects of which we just now spoke.

Glaucon:: Yes, the appearance of them, but not the reality and the truth.

Socrates:: Excellent, and you come to the aid of the argument opportunely. For I take it that the painter too belongs to this class of producers, does he not?

Glaucon:: Of course.

Socrates:: But you will say, I suppose, that his creations are not real and true. And yet, after a fashion, the painter too makes a couch, does he not?

Glaucon:: Yes, the appearance of one, he too.

Socrates:: What of the cabinetmaker? Were you not just now saying that he does not make the idea or form which we say is the real couch, the couch in itself, but only some particular couch?

Glaucon:: Yes, I was.

Socrates:: Then if he does not make that which really is, he could not be said to make real being but something that resembles real being but is not that. But if anyone should say that being in the complete sense belongs to the work of the cabinetmaker or to that of any other handicraftsman, it seems that he would say what is not true.

Glaucon:: That would be the view, of those who are versed in this kind of reasoning.

Socrates:: We must not be surprised, then, if this too is only a dim adumbration in comparison with reality.

Glaucon:: No, we must not.

Socrates:: Shall we, then, use these very examples in our quest for the true nature of this imitator?

Glaucon:: If you please.

Socrates:: We get, then, these three couches, one, that in nature, which, I take it, we would say that God produces, or who else?

Glaucon:: No one, I think.

Socrates:: And then there was one which the carpenter made.

Glaucon:: Yes.

Socrates:: And one which the painter. Is not that so?

Glaucon:: So be it.

Socrates:: The painter, then, the cabinetmaker, and God, there are these three presiding over three kinds of couches.

Glaucon:: Yes, three.

Socrates:: Now God, whether because he so willed or because some compulsion was laid upon him not to make more than one couch in nature, so wrought and created one only, the couch which really and in itself is. But two or more such were never created by God and never will come into being.

Glaucon:: How so?

Socrates:: Because, if he should make only two, there would again appear one of which they both would possess the form or idea, and that would be the couch that really is in and of itself, and not the other two.

Glaucon:: Right.

Socrates:: God, then, I take it, knowing this and wishing to be the real author of the couch that has real being and not of some particular couch, nor yet a particular cabinetmaker, produced it in nature unique.

Glaucon:: So it seems.

Socrates:: Shall we, then, call him its true and natural begetter, or something of the kind?

Glaucon:: That would certainly be right, since it is by and in nature that he has made this and all other things.

Socrates:: And what of the carpenter? Shall we not call him the creator of a couch?

Glaucon:: Yes.

Socrates:: Shall we also say that the painter is the creator and maker of that sort of thing?

Glaucon:: By no means.

Socrates:: What will you say he is in relation to the couch.

Glaucon:: This, seems to me the most reasonable designation for him, that he is the imitator of the thing which those others produce.

Socrates:: Very good. The producer of the product three removes from nature you call the imitator?

Glaucon:: By all means.

Socrates:: This, then, will apply to the maker of tragedies also, if he is an imitator and is in his nature three removes from the king and the truth, as are all other imitators.

Glaucon:: It would seem so.

Socrates:: We are in agreement, then, about the imitator. But tell me now this about the painter. Do you think that what he tries to imitate is in each case that thing itself in nature or the works of the craftsmen?

Glaucon:: The works of the craftsmen.

Socrates:: Is it the reality of them or the appearance? Define that further point.

Glaucon:: What do you mean?

Socrates:: This. Does a couch differ from itself according as you view it from the side or the front or in any other way? Or does it differ not at all in fact though it appears different, and so of other things?

Glaucon:: That is the way of it, It appears other but differs not at all.

Socrates:: Consider, then, this very point. To which is painting directed in every case, to the imitation of reality as it is or of appearance as it appears? Is it an imitation of a phantasm or of the truth?

Glaucon:: Of a phantasm.

Socrates:: Then the mimetic art is far removed from truth, and this, it seems, is the reason why it can produce everything, because it touches or lays hold of only a small part of the object and that a phantom, as, for example, a painter, we say, will paint us a cobbler, a carpenter, and other craftsmen, though he himself has no expertness in any of these arts, but nevertheless if he were a good painter, by exhibiting at a distance his picture of a carpenter he would deceive children and foolish men, and make them believe it to be a real carpenter.

Glaucon:: Why not?

Socrates:: But for all that, my friend, this, I take it, is what we ought to bear in mind in all such cases. When anyone reports to us of someone, that he has met a man who knows all the crafts and everything else that men severally know, and that there is nothing that he does not know more exactly than anybody else, our tacit rejoinder must be a that he is a simple fellow, who apparently has met some magician or sleight-of-hand man and imitator and has been deceived by him into the belief that he is all-wise, because of his own inability to put to the proof and distinguish knowledge, ignorance, and imitation.

Glaucon:: Most true.

Socrates:: Then, have we not next to scrutinize tragedy and its leader Homer, since some people tell us that these poets know all the arts and all things human pertaining to virtue and vice, and all things divine? For the good poet, if he is to poetize things rightly, must, they argue, create with knowledge or else be unable to create. So we must consider whether these critics have not fallen in with such imitators and been deceived by them, so that looking upon their works they cannot perceive that these are three removes from reality, and easy to produce without knowledge of the truth. For it is phantoms, not realities, that they produce. Or is there something in their claim, and do good poets really know the things about which the multitude fancy they speak well?

Glaucon:: We certainly must examine the matter.

Socrates:: Do you suppose, then, that if a man were able to produce both the exemplar and the semblance, he would be eager to abandon himself to the fashioning of phantoms and set this in the forefront of his life as the best thing he had?

Glaucon:: I do not.

Socrates:: But, I take it, if he had genuine knowledge of the things he imitates he would far rather devote himself to real things than to the imitation of them, and would endeavor to leave after him many noble deeds and works as memorials of himself, and would be more eager to be the theme of praise than the praiser.

Glaucon:: I think so, for there is no parity in the honor and the gain.

Socrates:: Let us not, then, demand a reckoning from Homer or any other of the poets on other matters by asking them, if any one of them was a physician and not merely an imitator of a physician's talk, what men any poet, old or new, is reported to have restored to health as Asclepius did, or what disciples of the medical art he left after him as Asclepius did his descendants, and let us dismiss the other arts and not question them about them. But concerning the greatest and finest things of which Homer undertakes to speak, wars and generalship and the administration of cities and the education of men, it surely is fair to question him and ask, 'Friend Homer, if you are not at the third remove from truth and reality in human excellence, being merely that creator of phantoms whom we defined as the imitator, but if you are even in the second place and were capable of knowing what pursuits make men better or worse in private or public life, tell us what city was better governed owing to you, even as Lacedaemon was because of Lycurgus, and many other cities great and small because of other legislators. But what city credits you with having been a good legislator and having benefited them? Italy and Sicily say this of Charondas and we of Solon. But who says it of you?’ Will he be able to name any?

Glaucon:: I think not. At any rate none is mentioned even by the Homeridae themselves.

Socrates:: Well, then, is there any tradition of a war in Homer’s time that was well conducted by his command or counsel?

Glaucon:: None.

Socrates:: Well, then, as might be expected of a man wise in practical affairs, are many and ingenious inventions for the arts and business of life reported of Homer as they are of ‘Males the Milesian and Anacharsis the Scythian?

Glaucon:: Nothing whatever of the sort.

Socrates:: Well, then, if no public service is credited to him, is Homer reported while he lived to have been a guide in education to men who took pleasure in associating with him and transmitted to posterity a certain Homeric way of life just as Pythagoras was himself especially honored for this, and his successors, even to this day, denominating a certain way of life the Pythagorean, are distinguished among their contemporaries?

Glaucon:: No, nothing of this sort either is reported, for Creophylus, Socrates, the friend of Homer, would perhaps be even more ridiculous than his name as a representative of Homeric culture and education, if what is said about Homer is true. For the tradition is that Homer was completely neglected in his own lifetime by that friend of the flesh.

Socrates:: Why, yes, that is the tradition, but do you suppose, Glaucon, that, if Homer had really been able to educate men and make them better and had possessed not the art of imitation but real knowledge, he would not have acquired many companions and been honored and loved by them? But are we to believe that while Protagoras of Abdera and Prodicus of Ceos and many others are able by private teaching to impress upon their contemporaries the conviction that they will not be capable of governing their homes or the city unless they put them in charge of their education, and make themselves so beloved for this wisdom that their companions all but carry them about on their shoulders, yet, forsooth, that Homer's contemporaries, if he had been able to help men to achieve excellence, would have suffered him or Hesiod to roam about rhapsodizing and would not have clung to them far rather than to their gold, and constrained them to dwell with them in their homes, or failing to persuade them, would themselves have escorted them wheresoever they went until they should have sufficiently imbibed their culture?

Glaucon:: What you say seems to me to be altogether true, Socrates.

Socrates:: Shall we, then, lay it down that all the poetic tribe, beginning with Homer, are imitators of images of excellence and of the other things that they 'create,' and do not lay hold on truth, but, as we were just now saying, the painter will fashion, himself knowing nothing of the cobbler's art, what appears to be a cobbler to him and likewise to those who know nothing but judge only by forms and colors?

Glaucon:: Certainly.

Socrates:: And similarly, I suppose, we shall say that the poet himself, knowing nothing but how to imitate, lays on with words and phrases the colors of the several arts in such fashion that others equally ignorant, who see things only through words, will deem his words most excellent, whether he speak in rhythm, meter, and harmony about cobbling or generalship or anything whatever. So mighty is the spell that these adornments naturally exercise, though when they are stripped bare of their musical coloring and taken by themselves, I think you know what sort of a showing these sayings of the poets make. For you, I believe, have observed them.

Glaucon:: I have.

Socrates:: Do they not, resemble the faces of adolescents, young but not really beautiful, when the bloom of youth abandons them?

Glaucon:: By all means.

Socrates:: Come, then, consider this point. The creator of the phantom, the imitator, we say, knows nothing of the reality but only the appearance. Is not that so?

Glaucon:: Yes.

Socrates:: Let us not, then, leave it half said but consider it fully.

Glaucon:: Speak on.

Socrates:: The painter, we say, will paint both reins and a bit.

Glaucon:: Yes.

Socrates:: But the maker will be the cobbler and the smith.

Glaucon:: Certainly.

Socrates:: Does the painter, then, know the proper quality of reins and bit? Or does not even the maker, the cobbler, and the smith know that, but only the man who understands the use of these things, the horseman?

Glaucon:: Most true.

Socrates:: And shall we not say that the same holds true of everything?

Glaucon:: What do you mean?

Socrates:: That there are some three arts concerned with everything, the user's art, the maker's, and the imitator's.

Glaucon:: Yes.

Socrates:: Now do not the excellence, the beauty, the rightness of every implement, living thing, and action refer solely to the use for which each is made or by nature adapted?

Glaucon:: That is so.

Socrates:: It quite necessarily follows, then, that the user of anything is the one who knows most of it by experience, and that he reports to the maker the good or bad effects in use of the thing he uses. As, for example, the flute player reports to the flute maker which flutes respond and serve rightly in flute playing, and will order the kind that must be made, and the other will obey and serve him.

Glaucon:: Of course.

Socrates:: The one, then, possessing knowledge, reports about the goodness or the badness of the flutes, and the other, believing, will make them.

Glaucon:: Yes.

Socrates:: Then in respect of the same implement the maker will have right belief about its excellence and defects from association with the man who knows and being compelled to listen to him, but the user will have true knowledge.

Glaucon:: Certainly.

Socrates:: And will the imitator from experience or use have knowledge whether the things he portrays are or are not beautiful and right, or will he, from compulsory association with the man who knows and taking orders from him for the right making of them, have right opinion?

Glaucon:: Neither.

Socrates:: Then the imitator will neither know nor opine rightly concerning the beauty or the badness of his imitations.

Glaucon:: It seems not.

Socrates:: Most charming, then, would be the state of mind of the poetical imitator in respect of true wisdom about his creations.

Glaucon:: Not at all.

Socrates:: Yet still he will nonetheless imitate, though in every case he does not know in what way the thing is bad or good. But, as it seems, the thing he will imitate will be the thing that appears beautiful to the ignorant multitude.

Glaucon:: Why, what else?

Socrates:: On this, then, as it seems, we are fairly agreed, that the imitator knows nothing worth mentioning of the things he imitates, but that imitation is a form of play, not to be taken seriously, and that those who attempt tragic poetry, whether in iambics or heroic verse, are all altogether imitators.

Glaucon:: By all means.

Socrates:: In heaven's name, then, this business of imitation is concerned with the third remove from truth, is it not?

Glaucon:: Yes.

Socrates:: And now again, to what element in man is its function and potency related?

Glaucon:: Of what are you speaking?

Socrates:: Of this. The same magnitude, I presume, viewed from near and from far does not appear equal.

Glaucon:: Why, no.

Socrates:: And the same things appear bent and straight to those who view them in water and out, or concave and convex, owing to similar errors of vision about colors, and there is obviously every confusion of this sort in our souls. And so scene painting in its exploitation of s weakness of our nature falls nothing short of witchcraft, and so do jugglery and many other such contrivances.

Glaucon:: True.

Socrates:: And have not measuring and numbering and weighing proved to be most gracious aids to prevent the domination in our soul of the apparently greater or less or more or heavier, and to give the control to that which has reckoned and numbered or even weighed?

Glaucon:: Certainly.

Socrates:: But this surely would be the function of the part of the soul that reasons and calculates.

Glaucon:: Why, yes, of that.

Socrates:: And often when this has measured and declares that certain things are larger or that some are smaller than the others or equal, there is at the same time an appearance of the contrary.

Glaucon:: Yes.

Socrates:: And did we not say that it is impossible for the same thing at one time to hold contradictory opinions about the same thing?

Glaucon:: And we were right in affirming that.

Socrates:: The part of the soul, then, that opines in contradiction of measurement could not be the same with that which conforms to it.

Glaucon:: Why, no.

Socrates:: But, further, that which puts its trust in measurement and reckoning must be the best part of the soul.

Glaucon:: Surely.

Socrates:: Then that which opposes it must belong to the inferior elements of the soul.

Glaucon:: Necessarily.

Socrates:: This, then, was what I wished to have agreed upon when I said that poetry, and in general the mimetic art, produces a product that is far removed from truth in the accomplishment of its task, and associates with the part in us that is remote from intelligence, and is its companion and friend for no sound and true purpose.

Glaucon:: By all means.

Socrates:: Mimetic art, then, is an inferior thing cohabiting with an inferior and engendering inferior offspring.

Glaucon:: It seems so.

Socrates:: Does that, hold only for vision or does it apply also to hearing and to what we call poetry?

Glaucon:: Presumably, to that also.

Socrates:: Let us not, then, trust solely to the plausible analogy from painting, but let us approach in turn that part of the mind to which mimetic poetry appeals and see whether it is the inferior or the nobly serious part.

So we must.

Socrates:: Let us, then, put the question thus. Mimetic poetry, we say, imitates human beings acting under compulsion or voluntarily, and as a result of their actions supposing themselves to have fared well or ill and in all this feeling either grief or joy. Did we find anything else but this?

Glaucon:: Nothing.

Socrates:: Is a man, then, in all this of one mind with himself, or just as in the domain of sight there was faction and strife and he held within himself contrary opinions at the same time about the same things, so also in our actions there is division and strife of the man with himself? But I recall that there is no need now of our seeking agreement on this point, for in our former discussion we were sufficiently agreed that our soul at any one moment teems with countless such self-contradictions.

Glaucon:: Rightly.

Socrates:: Yes, rightly, but what we then omitted must now, I think, be set forth.

Glaucon:: What is that?

Socrates:: When a good and reasonable man, experiences such a stroke of fortune as the loss of a son or anything else that he holds most dear, we said, I believe, then too, that he will bear it more easily than the other sort.

Glaucon:: Assuredly.

Socrates:: But now let us consider this. Will he feel no pain, or, since that is impossible, shall we say that he will in some sort be moderate in his grief?

Glaucon:: That, is rather the truth.

Socrates:: Tell me now this about him. Do you think he will be more likely to resist and fight against his grief when he is observed by his equals or when he is in solitude alone by himself?

Glaucon:: He will be much more restrained, when he is on view.

Socrates:: But when left alone, I fancy, he will permit himself many utterances which, if heard by another, would put him to shame, and will do many things which he would not consent to have another see him doing.

Glaucon:: So it is.

Socrates:: Now is it not reason and law that exhorts him to resist, while that which urges him to give way to his grief is the bare feeling itself?

Glaucon:: True.

Socrates:: And where there are two opposite impulses in a man at the same time about the same thing we say that there must needs be two things in him.

Glaucon:: Of course.

Socrates:: And is not the one prepared to follow the guidance of the law as the law leads and directs?

Glaucon:: How so?

Socrates:: The law, I suppose, declares that it is best to keep quiet as far as possible in calamity and not to chafe and repine, because we cannot know what is really good and evil in such things and it advantages us nothing to take them hard, and nothing in mortal life is worthy of great concern, and our grieving checks the very thing we need to come to our aid as quickly as possible in such case.

Glaucon:: What thing, do you mean?

Socrates:: To deliberate, about what has happened to us, and, as it were in the fall of the dice, to determine the movements of our affairs with reference to the numbers that turn up, in the way that reason indicates would be the best, and, instead of stumbling like children, clapping one's hands to the stricken spot and wasting the time in wailing, ever to accustom the soul to devote itself at once to the curing of the hurt and the raising up of what has fallen, banishing threnody by therapy.

Glaucon:: That certainly, would be the best way to face misfortune and deal with it.

Socrates:: Then, we say, the best part of us is willing to conform to these precepts of reason.

Glaucon:: Obviously.

Socrates:: And shall we not say that the part of us that leads us to dwell in memory on our suffering and impels us to lamentation, and cannot get enough of that sort of thing, is the irrational and idle part of us, the associate of cowardice?

Glaucon:: Yes, we will say that.

Socrates:: And does not the fretful part of us present many and varied occasions for imitation, while the intelligent and temperate disposition, always remaining approximately the same, is neither easy to imitate nor to be understood when imitated, especially by a nondescript mob assembled in the theater? For the representation imitates a type that is alien to them.

Glaucon:: By all means.

Socrates:: And is it not obvious that the nature of the mimetic poet is not related to this better part of the soul and his cunning is not framed to please it, if he is to win favor with the multitude, but is devoted to the fretful and complicated type of character because it is easy to imitate?

Glaucon:: It is obvious.

Socrates:: This consideration, then, makes it right for us to proceed to lay hold of him and set him down as the counterpart of the painter, for he resembles him in that his creations are inferior in respect of reality, and the fact that his appeal is to the inferior part of the soul and not to the best part is another point of resemblance. And so we may at last say that we should be justified in not admitting him into a well-ordered state, because he stimulates and fosters this element in the soul, and by strengthening it tends to destroy the rational part, just as when in a state one puts bad men in power and turns the city over to them and ruins the better sort. Precisely in the same manner we shall say that the mimetic poet sets up in each individual soul a vicious constitution by fashioning phantoms far removed from reality, and by currying favor with the senseless element that cannot distinguish the greater from the less, but calls the same thing now one, now the other.

Glaucon:: By all means.

Socrates:: But we have not yet brought our chief accusation against it. Its power to corrupt, with rare exceptions, even the better sort is surely the chief cause for alarm.

Glaucon:: How could it be otherwise, if it really does that?

Socrates:: Listen and reflect. I think you know that the very best of us, when we hear Homer or some other of the makers of tragedy imitating one of the heroes who is in grief, and is delivering a long tirade in his lamentations or chanting and beating his breast, feel pleasure, and abandon ourselves and accompany the representation with sympathy and eagerness, and we praise as an excellent poet the one who most strongly affects us in this way.

Glaucon:: I do know it, of course.

Socrates:: But when in our own lives some affliction comes to us, you are also aware that we plume ourselves upon the opposite, on our ability to remain calm and endure, in the belief that this is the conduct of a man, and what we were praising in the theater that of a woman.

Glaucon:: I do note that.

Socrates:: Do you think, then, that this praise is rightfully bestowed when, contemplating a character that we would not accept but would be ashamed of in ourselves, we do not abominate it but take pleasure and approve?

Glaucon:: No, by Zeus, it does not seem reasonable.

Socrates:: Oh yes, if you would consider it in this way.

Glaucon:: In what way?

Socrates:: If you would reflect that the part of the soul that in the former case, in our own misfortunes, was forcibly restrained, and that has hungered for tears and a good cry and satisfaction, because it is its nature to desire these things, is the element in us that the poets satisfy and delight, and that the best element in our nature, since it has never been properly educated by reason or even by habit, then relaxes its guard over the plaintive part, inasmuch as this is contemplating the woes of others and it is no shame to it to praise and pity another who, claiming to be a good man, abandons himself to excess in his grief, but it thinks this vicarious pleasure is so much clear gain, and would not consent to forfeit it by disdaining the poem altogether. That is, I think, because few are capable of reflecting that what we enjoy in others will inevitably react upon ourselves. For after feeding fat the emotion of pity there, it is not easy to restrain it in our own sufferings.

Glaucon:: Most true.

Socrates:: Does not the same principle apply to the laughable, namely, that if in comic representations, or for that matter in private talk, you take intense pleasure in buffooneries that you would blush to practice yourself, and do not detest them as base, you are doing the same thing as in the case of the pathetic? For here again what your reason, for fear of the reputation of buffoonery, restrained in yourself when it fain would play the clown, you release in turn, and so, fostering its youthful impudence, let yourself go so far that often ere you are aware you become yourself a comedian in private.

Glaucon:: Yes, indeed.

Socrates:: And so in regard to the emotions of sex and anger, and all the appetites and pains and pleasures of the soul which we say accompany all our actions, the effect of poetic imitation is the same. For it waters and fosters these feelings when what we ought to do is to dry them up, and it establishes them as our rulers when they ought to be ruled, to the end that we may be better and happier men instead of worse and more miserable.

Glaucon:: I cannot deny it.

Socrates:: Then, Glaucon, when you meet encomiasts of Homer who tell us that this poet has been the educator of Hellas, and that for the conduct and refinement of human life he is worthy of our study and devotion, and that we should order our entire lives by the guidance of this poet, we must love and salute them as doing the best they can, and concede to them that Homer is the most poetic of poets and the first of tragedians, but we must know the truth, that we can admit no poetry into our city save only hymns to the gods and the praises of good men. For if you grant admission to the honeyed Muse in lyric or epic, pleasure and pain will be lords of your city instead of law and that which shall from time to time have approved itself to the general reason as the best.

Glaucon:: Most true.

Socrates:: Let us, then, conclude our return to the topic of poetry and our apology, and affirm that we really had good grounds then for dismissing her from our city, since such was her character. For reason constrained us. And let us further say to her, lest she condemn us for harshness and rusticity, that there is from of old a quarrel between philosophy and poetry. For such expressions as 'the yelping hound barking at her master and mighty in the idle babble of fools,' and 'the mob that masters those who are too wise for their own good,' and the subtle thinkers who reason that after all they are poor, and countless others are tokens of this ancient enmity. But nevertheless let it be declared that, if the mimetic and dulcet poetry can show any reason for her existence in a well-governed state, we would gladly admit her, since we ourselves are very conscious of her spell. But all the same it would be impious to betray what we believe to be the truth. Is not that so, friend? Do not you yourself feel her magic and especially when Homer is her interpreter?

Glaucon:: Greatly.

Socrates:: Then may she not justly return from this exile after she has pleaded her defense, whether in lyric or other measure?

Glaucon:: By all means.

Socrates:: And we would allow her advocates who are not poets but lovers of poetry to plead her cause in prose without meter, and show that she is not only delightful but beneficial to orderly government and all the life of man. And we shall listen benevolently, for it will be clear gain for us if it can be shown that she bestows not only pleasure but benefit.

Glaucon:: How could we help being the gainers?

Socrates:: But if not, my friend, even as men who have fallen in love, if they think that the love is not good for them, hard though it be, nevertheless refrain, so we, owing to the love of this kind of poetry inbred in us by our education in these fine polities of ours, will gladly have the best possible case made out for her goodness and truth, but so long as she is unable to make good her defense we shall chant over to ourselves as we listen the reasons that we have given as a countercharm to her spell, to preserve us from slipping back into the childish loves of the multitude, for we have come to see that we must not take such poetry seriously as a serious thing that lays hold on truth, but that he who lends an ear to it must be on his guard fearing for the polity in his soul and must believe what we have said about poetry.

Glaucon:: By all means, I concur.

Socrates:: Yes, for great is the struggle, dear Glaucon, a far greater contest than we think it, that determines whether a man prove good or bad, so that not the lure of honor or wealth or any office, no, nor of poetry either, should incite us to be careless of righteousness and all excellence.

Glaucon:: I agree with you, in view of what we have set forth, and I think that anyone else would do so too.

Socrates:: And yet, the greatest rewards of virtue and the prizes proposed for her we have not set forth.

Glaucon:: You must have in mind an inconceivable magnitude, if there are other things greater than those of which we have spoken.

Socrates:: What great thing, could there be in a little time? For surely the whole time from the boy to the old man would be small compared with all time.

Glaucon:: Nay, it is nothing.

Socrates:: What then? Do you think that an immortal thing ought to be seriously concerned for such a little time, and not rather for all time?

Glaucon:: I think so, but what is this that you have in mind?

Socrates:: Have you never perceived, that our soul is immortal and never perishes? And he, looking me full in the face in amazement, said;

Glaucon:: No, by Zeus, not I, but are you able to declare this?

Socrates:: I certainly ought to be, and I think you too can, for it is nothing hard.

Glaucon:: It is for me, and I would gladly hear from you this thing that is not hard.

Socrates:: Listen.

Glaucon:: Just speak on.

Socrates:: You speak of good and evil, do you not?

Glaucon:: I do.

Socrates:: Is your notion of them the same as mine?

Glaucon:: What is it?

Socrates:: That which destroys and corrupts in every case is the evil; that which preserves and benefits is the good.

Glaucon:: Yes, I think so.

Socrates:: How about this? Do you say that there is for everything its special good and evil, as for example for the eyes ophthalmia, for the entire body disease, for grain mildew, rotting for wood, rust for bronze and iron, and, as I say, for practically everything its congenital evil and disease?

Glaucon:: I do.

Socrates:: Then when one of these evils comes to anything does it not make the thing to which it attaches itself bad, and finally disintegrate and destroy it?

Glaucon:: Of course.

Socrates:: Then the congenital evil of each thing and its own vice destroys it, or if that is not going to destroy it, nothing else remains that could, for obviously the good will never destroy anything, nor yet again will that which is neutral and neither good nor evil.

Glaucon:: How could it?

Socrates:: If, then, we discover anything that has an evil which vitiates it, yet is not able to dissolve and destroy it, shall we not thereupon know that of a thing so constituted there can be no destruction?

Glaucon:: That seems likely.

Socrates:: Well, then, has not the soul something that makes it evil?

Glaucon:: Indeed it has, all the things that we were just now enumerating, injustice and licentiousness and cowardice and ignorance.

Socrates:: Does any one of these things dissolve and destroy it? And reflect, lest we be misled by supposing that when an unjust and foolish man is taken in his injustice he is then destroyed by the injustice, which is the vice of soul. But conceive it thus. Just as the vice of body which is disease wastes and destroys it so that it no longer is a body at all, in like manner in all the examples of which we spoke it is the specific evil which, by attaching itself to the thing and dwelling in it with power to corrupt, reduces it to nonentity. Is not that so?

Glaucon:: Yes.

Socrates:: Come, then, and consider the soul in the same way. Do injustice and other wickedness dwelling in it, by their indwelling and attachment to it, corrupt and wither it till they bring it to death and separate it from the body?

Glaucon:: They certainly do not do that.

Socrates:: But surely, it is unreasonable to suppose that the vice of something else destroys a thing while its own does not.

Glaucon:: Yes, unreasonable.

Socrates:: For observe, Glaucon, that we do not think it proper to say of the body either that it is destroyed by the badness of foods themselves, whether it be staleness or rottenness or whatever it is, but when the badness of the foods themselves engenders in the body the defect of body, then we shall say that it is destroyed owing to these foods, but by its own vice, which is disease. But the body being one thing and the foods something else, we shall never expect the body to be destroyed by their badness, that is by an alien evil that has not produced in it the evil that belongs to it by nature.

Glaucon:: You are entirely right.

Socrates:: On the same principle, if the badness of the body does not produce in the soul the soul's badness we shall never expect the soul to be destroyed by an alien evil apart from its own defect—one thing, that is, by the evil of another.

Glaucon:: That is reasonable.

Socrates:: Either, then, we must refute this and show that we are mistaken, or, so long as it remains unrefuted, we must never say that by fever or any other disease, or yet by the knife at the throat or the chopping to bits of the entire body, there is any more likelihood of the soul perishing because of these things, until it is proved that owing to these affections of the body the soul itself becomes more unjust and unholy. But when an evil of something else occurs in a different thing and the evil that belongs to the thing is not engendered in it, we must not suffer it to be said that the soul or anything else is in this way destroyed.

Glaucon:: But you may be sure, that nobody will ever prove this, that the souls of the dying are made more unjust by death.

Socrates:: But if anyone, dares to come to grips with the argument and say, in order to avoid being forced to admit the soul's immortality, that a dying man does become more wicked and unjust, we will postulate that, if what he says is true, injustice must be fatal to its possessor as if it were a disease, and that those who catch it die because it kills them by its own inherent nature, those who have most of it quickest, and those who have less more slowly, and not, as now in fact happens, that the unjust die owing to this but by the action of others who inflict the penalty.

Glaucon:: Nay, by Zeus, injustice will not appear a very terrible thing after all if it is going to be fatal to its possessor, for that would be a release from all troubles. But I rather think it will prove to be quite the contrary, something that kills others when it can, but renders its possessor very lively indeed, and not only lively but wakeful, so far, I ween, does it dwell from deadliness.

Socrates:: You say well, for when the natural vice and the evil proper to it cannot kill and destroy the soul, still less will the evil appointed for the destruction of another thing destroy the soul or anything else, except that for which it is appointed.

Glaucon:: Still less indeed, in all probability.

Socrates:: Then since it is not destroyed by any evil whatever, either its own or alien, it is evident that it must necessarily exist always, and that if it always exists it is immortal.

Glaucon:: Necessarily.

Socrates:: Let this, then, be assumed to be so. But if it is so, you will observe that these souls must always be the same. For if none perishes they could not, I suppose, become fewer nor yet more numerous. For if any class of immortal things increased you are aware that its increase would come from the mortal and all things would end by becoming immortal.

Glaucon:: You say truly.

Socrates:: But, we must not suppose this, for reason will not suffer it, nor yet must we think that in its truest nature the soul is the kind of thing that teems with infinite diversity and unlikeness and contradiction in and with itself.

Glaucon:: How am Ito understand that?

Socrates:: It is not easy, for a thing to be immortal that is composed of many elements not put together in the best way, as now appeared to us to be the case with the soul.

Glaucon:: It is not likely.

Socrates:: Well, then, that the soul is immortal our recent argument and our other proofs would constrain us to admit. But to know its true nature we must view it not marred by communion with the body and other miseries as we now contemplate it, but consider adequately in the light of reason what it is when it is purified, and then you will find it to be a far more beautiful thing and will more clearly distinguish justice and injustice and all the matters that we have now discussed. But though we have stated the truth of its present appearance, its condition as we have now contemplated it resembles that of the sea god Glaucus whose first nature can hardly be made out by those who catch glimpses of him, because the original members of his body are broken off and mutilated and crushed and in every way marred by the waves, and other parts have attached themselves to him, accretions of shells and seaweed and rocks, so that he is more like any wild creature than what he was by nature—even such, I say, is our vision of the soul marred by countless evils. But we must look elsewhere, Glaucon.

Glaucon:: here?

Socrates:: To its love of wisdom. And we must note the things of which it has apprehensions, and the associations for which it yearns, as being itself akin to the divine and the immortal and to eternal being, and so consider what it might be if it followed the gleam unreservedly and were raised by this impulse out of the depths of this sea in which it is now sunk, and were cleansed and scraped free of the rocks and barnacles which, because it now feasts on earth, cling to it in wild profusion of earthy and stony accretion by reason of these feastings that are accounted happy. And then one might see whether in its real nature it is manifold or single in its simplicity, or what is the truth about it and how. But for the present we have, I think, fairly well described its sufferings and the forms it assumes in this human life of ours.

Glaucon:: We certainly have.

Socrates:: Then, we have met all the other demands of the argument, and we have not invoked the rewards and reputes of justice as you said Homer and Hesiod do, but we have proved that justice in itself is the best thing for the soul itself, and that the soul ought to do justice whether it possess the ring of Gyges or not, or the helmet of Hades to boot.

Glaucon:: Most true.

Socrates:: Then, Glaucon, there can no longer be any objection, can there, to our assigning to justice and virtue generally, in addition, all the various rewards and wages that they bring to the soul from men and gods, both while the man still lives and after his death?

Glaucon:: There certainly can be none.

Socrates:: Will you, then, return to me what you borrowed in the argument?

Glaucon:: What, pray?

Socrates:: I granted to you that the just man should seem and be thought to be unjust and the unjust just, for you thought that, even if the concealment of these things from gods and men was an impossibility in fact, nevertheless it ought to be conceded for the sake of the argument, in order that the decision might be made between absolute justice and absolute injustice. Or do you not remember?

Glaucon:: It would be unjust of me, if I did not.

Socrates:: Well, then, now that they have been compared and judged, I demand back from you in behalf of justice the repute that she in fact enjoys from gods and men, and I ask that we admit that she is thus esteemed in order that she may gather in the prizes which she wins from the seeming and bestows on her possessors, since she has been proved to bestow the blessings that come from the reality and not to deceive those who truly seek and win her.

Glaucon:: That is a just demand.

Socrates:: Then, will not the first of these restorations be that the gods certainly are not unaware of the true character of each of the two, the just and the unjust?

Glaucon:: We will restore that.

Socrates:: And if they are not concealed, the one will be dear to the gods and the other hateful to them, as we agreed in the beginning.

Glaucon:: That is so.

Socrates:: And shall we not agree that all things that come from the gods work together for the best for him that is dear to the gods, apart from the inevitable evil caused by sin in a former life?

Glaucon:: By all means.

Socrates:: This, then, must be our conviction about the just man, that whether he fall into poverty or disease or any other supposed evil, for him all these things will finally prove good, both in life and in death. For by the gods assuredly that man will never be neglected who is willing and eager to be righteous, and by the practice of virtue to be likened unto God so far as that is possible for man.

Glaucon:: It is reasonable, that such a one should not be neglected by his like.

Socrates:: And must we not think the opposite of the unjust man?

Glaucon:: Most emphatically.

Socrates:: Such then are the prizes of victory which the gods bestow upon the just.

Glaucon:: So I think, at any rate.

Socrates:: But what, does he receive from men? Is not this the case, if we are now to present the reality? Do not your smart but wicked men fare as those racers do who run well from the scratch but not back from the turn? They bound nimbly away at the start, but in the end are laughed to scorn and run off the field uncrowned and with their ears on their shoulders. But the true runners when they have come to the goal receive the prizes and bear away the crown. Is not this the usual outcome for the just also, that toward the end of every action and association and of life as a whole they have honor and bear away the prizes from men?

Glaucon:: So it is indeed.

Socrates:: Will you, then, bear with me if I say of them all that you said of the unjust? For I am going to say that the just, when they become older, hold the offices in their own city if they choose, marry from what families they will, and give their children in marriage to what families they please, and everything that you said of the one I now repeat of the other, and in turn I will say of the unjust that the most of them, even if they escape detection in youth, at the end of their course are caught and derided, and their old age is made miserable by the contumelies of strangers and townsfolk. They are lashed and suffer all things which you truly said are unfit for ears polite. Suppose yourself to have heard from me a repetition of all that they suffer. But, as I say, consider whether you will bear with me.

Glaucon:: Assuredly, for what you say is just.

Socrates:: Such then while he lives are the prizes, the wages, and the gifts that the just man receives from gods and men in addition to those blessings which justice herself bestowed.

Glaucon:: And right fair and abiding rewards.

Socrates:: Well, these, are nothing in number and magnitude compared with those that await both after death. And we must listen to the tale of them, in order that each may have received in full what is due to be said of him by our argument.

Glaucon:: Tell me, since there are not many things to which I would more gladly listen.

Socrates:: It is not, let me tell you, the tale to Alcinous told that I shall unfold, but the tale of a warrior bold, Er, the son of Armenius, by race a Pamphylian. He once upon a time was slain in battle, and when the corpses were taken up on the tenth day already decayed, was found intact, and having been brought home, at the moment of his funeral, on the twelfth day as he lay upon the pyre, revived, and after coming to life related what, he had seen in the world beyond. He said that when his soul went forth from his body he journeyed with a great company and that they came to a mysterious region where there were two openings side by side in the earth, and above and over against them in the heaven two others, and that judges were sitting between these, and that after every judgment they bade the righteous journey to the right and upward through the heaven with tokens attached to them in front of the judgment passed upon them, and the unjust to take the road to the left and downward, they too wearing behind signs of all that had befallen them, and that when he himself drew near they told him that he must be the messenger to mankind to tell them of that other world, and they charged him to give ear and to observe everything in the place. And so he said that here he saw, by each opening of heaven and earth, the souls departing after judgment had been passed upon them, while, by the other pair of openings, there came up from the one in the earth souls full of squalor and dust, and from the second there came down from heaven a second procession of souls clean and pure, and that those which arrived from time to time appeared to have come as it were from a long journey and gladly departed to the meadow and encamped there as at a festival, and acquaintances greeted one another, and those which came from the earth questioned the others about conditions up yonder, and those from heaven asked how it fared with those others. And they told their stories to one another, the one lamenting and wailing as they recalled how many and how dreadful things they had suffered and seen in their journey beneath the earth—it lasted a thousand years—while those from heaven related their delights and visions of a beauty beyond words. To tell it all, Glaucon, would take all our time, but the sum, was this. For all the wrongs they had ever done to anyone and all whom they had severally wronged they had paid the penalty in turn tenfold for each, and the measure of this was by periods of a hundred years each, so that on the assumption that this was the length of human life the punishment might be ten times the crime—as for example that if anyone had been the cause of many deaths or had betrayed cities and armies and reduced them to slavery, or had been participant in any other iniquity, they might receive in requital pains tenfold for each of these wrongs, and again if any had done deeds of kindness and been just and holy men they might receive their due reward in the same measure. And other things not worthy of record he said of those who had just been born and lived but a short time, and he had still greater requitals to tell of piety and impiety toward the gods and parents and of self-slaughter. For he said that he stood by when one was questioned by another, 'Where is Ardiaeus the Great?' Now this Ardiaeus had been tyrant in a certain city of Pamphylia just a thousand years before that time and had put to death his old father and his elder brother, and had done many other unholy deeds, as was the report. So he said that the one questioned replied, 'He has not come,' 'nor will he be likely to come here. For indeed this was one of the dreadful sights we beheld; when we were near the mouth and about to issue forth and all our other sufferings were ended, we suddenly caught sight of him and of others, the most of them, I may say, tyrants. But there were some of private station, of those who had committed great crimes. And when these supposed that at last they were about to go up and out, the mouth would not receive them, but it bellowed when any one of the incurably wicked or of those who had not completed their punishment tried to come up. And thereupon,’ ‘savage men of fiery aspect who stood by and took note of the voice laid hold on them and bore them away. But Ardiaeus and others they bound hand and foot and head and flung down and flayed them and dragged them by the wayside, carding them on thorns and signifying to those who from time to time passed by for what cause they were borne away, and that they were to be hurled into Tartarus.’

And then, though many and manifold dread things had befallen them, this fear exceeded all—lest each one should hear the voice when he tried to go up, and each went up most gladly when it had kept silence. And the judgments and penalties were somewhat after this manner, and the blessings were their counterparts.

But when seven days had elapsed for each group in the meadow, they were required to rise up on the eighth and journey on, and they came in four days to a spot whence they discerned, extended from above throughout the heaven and the earth, a straight light like a pillar, most nearly resembling the rainbow, but brighter and purer. To this they came after going forward a day’s journey, and they saw there at the middle of the light the extremities of its fastenings stretched from heaven, for this light was the girdle of the heavens like the undergirders of triremes, holding together in like manner the entire revolving vault. And from the extremities was stretched the spindle of Necessity, through which all the orbits turned. Its staff and its hook were made of adamant, and the whorl of these and other kinds was commingled. And the nature of the whorl was this. Its shape was that of those in our world, but from his description we must conceive it to be as if in one great whorl, hollow and scooped out, there lay enclosed, right through, another like it but smaller, fitting into it as boxes that fit into one another, and in like manner another, a third, and a fourth, and four others, for there were eight of the whorls in all, lying within one another, showing their rims as circles from above and forming the continuous back of a single whorl about the shaft, which was driven home through the middle of the eighth. Now the first and outmost whorl had the broadest circular rim, that of the sixth was second, and third was that of the fourth, and fourth was that of the eighth, fifth that of the seventh, sixth that of the fifth, seventh that of the third, eighth that of the second. And that of the greatest was spangled, that of the seventh brightest, that of the eighth took its color from the seventh, which shone upon it. The colors of the second and fifth were like one another and more yellow than the two former. The third had the whitest color, and the fourth was of a slightly ruddy hue; the sixth was second in whiteness. The staff turned as a whole in a circle with the same movement, but within the whole as it revolved the seven inner circles revolved gently in the opposite direction to the whole, and of these seven the eighth moved most swiftly, and next and together with one another the seventh, sixth, and fifth, and third in swiftness, as it appeared to them, moved the fourth with returns upon itself, and fourth the third and fifth the second. And the spindle turned on the knees of Necessity, and up above on each of the rims of the circles a Siren stood, borne around in its revolution and uttering one sound, one note, and from all the eight there was the concord of a single harmony. And there were three others who sat round about at equal intervals, each one on her throne, the Fates, daughters of Necessity, clad in white vestments with filleted heads, Lachesis, and Clotho, and Atropos, who sang in unison with the music of the Sirens, Lachesis singing the things that were, Clotho the things that are, and Atropos the things that are to be. And Clotho with the touch of her right hand helped to turn the outer circumference of the spindle, pausing from time to time. Atropos with her left hand in like manner helped to turn the inner circles, and Lachesis alternately with either hand lent a hand to a each.

Now when they arrived they were straightway bidden to go before Lachesis, and then a certain prophet first marshaled them in orderly intervals, and thereupon took from the lap of Lachesis lots and patterns of lives and went up to a lofty platform and spoke, ‘This is the word of Lachesis, the maiden daughter of Necessity, “Souls that live for a day, now is the beginning of another cycle of mortal generation where birth is the beacon of death. No divinity shall cast lots for you, but you shall choose your own deity. Let him to whom falls the first lot first select a life to which he shall cleave of necessity. But virtue has no master over her, and each shall have more or less of her as he honors her or does her despite. The blame is his who chooses. God is blameless. ”‘ So saying, the prophet flung the lots out among them all, and each took up the lot that fell by his side, except himself; him as they did not permit. And whoever took up a lot saw plainly what number he had drawn. And after this again the prophet placed the patterns of lives before them on the ground, far more numerous than the assembly. They were of every variety, for there were lives of all kinds of animals and all sorts of human lives, for there were tyrannies among them, some uninterrupted till the end and others destroyed midway and issuing in penuries and exiles and beggaries, and there were lives of men of repute for their forms and beauty and bodily strength otherwise and prowess and the high birth and the virtues of their ancestors, and others of ill repute in the same things, and similarly of women. But there was no determination of the quality of soul, because the choice of a different life inevitably determined a different character. But all other things were commingled with one another and with wealth and poverty and sickness and health and the intermediate conditions.

And there, dear Glaucon, it appears, is the supreme hazard for a man. And this is the chief reason why it should be our main concern that each of us, neglecting all other studies, should seek after and study this thing—if in any way he may be able to learn of and discover the man who will give him the ability and the knowledge to distinguish the life that is good from that which is bad, and always and everywhere to choose the best that the conditions allow, and, taking into account all the things of which we have spoken and estimating the effect on the goodness of his life of their conjunction or their severance, to know how beauty commingled with poverty or wealth and combined with what habit of soul operates for good or for evil, and what are the effects of high and low birth and private station and office and strength and weakness and quickness of apprehension and dullness and all similar natural and acquired habits of the soul, when blended and combined with one another, so that with consideration of all these things he will be able to make a reasoned choice between the better and the worse life, with his eyes fixed on the nature of his soul, naming the worse life that which will tend to make it more unjust and the better that which will make it more just. But all other considerations he will dismiss, for we have seen that this is the best choice, both for life and death. And a man must take with him to the house of death an adamantine faith in this, that even there he may be undazzled by riches and similar trumpery, and may not precipitate himself into tyrannies and similar doings and so work many evils past cure and suffer still greater himself, but may know how always to choose in such things the life that is seated in the mean and shun the excess in either direction, both in this world so far as may be and in all the life to come, for this is the greatest happiness for man.

And at that time also the messenger from that other world reported that the prophet spoke thus. ‘Even for him who comes forward last, if he make his choice wisely and live strenuously, there is reserved an acceptable life, no evil one. Let not the foremost in the choice be heedless nor the last be discouraged.’ When the prophet had thus spoken he said that the drawer of the first lot at once sprang to seize the greatest tyranny, and that in his folly and greed he chose it without sufficient examination, and failed to observe that it involved the fate of eating his own children, and other horrors, and that when he inspected it at leisure he beat his breast and bewailed his choice, not abiding by the forewarning of the prophet. For he did not blame himself for his woes, but fortune and the gods and anything except himself. He was one of those who had come down from heaven, a man who had lived in a well-ordered polity in his former existence, participating in virtue by habit and not by philosophy, and one may perhaps say that a majority of those who were thus caught were of the company that had come from heaven, inasmuch as they were unexercised in suffering. But the most of those who came up from the earth, since they had themselves suffered and seen the sufferings of others, did not make their choice precipitately. For which reason also there was an interchange of good and evil for most of the souls, as well as because of the chances of the lot. Yet if at each return to the life of this world a man loved wisdom sanely, and the lot of his choice did not fall out among the last, we may venture to affirm, from what was reported thence, that not only will he be happy here but that the path of his journey thither and the return to this world will not be underground and rough but smooth and through the heavens. For he said that it was a sight worth seeing to observe how the several souls selected their lives. He said it was a strange, pitiful, and ridiculous spectacle, as the choice was determined for the most part by the habits of their former lives. He saw the soul that had been Orpheus', selecting the life of a swan, because from hatred of the tribe of women, owing to his death at their hands, it was unwilling to be conceived and born of a woman. He saw the soul of Thamyras choosing the life of a nightingale, and he saw a swan changing to the choice of the life of man, and similarly other musical animals. The soul that drew the twentieth lot chose the life of a lion; it was the soul of Ajax, the son of Telamon, which, because it remembered the adjudication of the arms of Achilles, was unwilling to become a man. The next, the soul of Agamemnon, likewise from hatred of the human race because of its sufferings, substituted the life of an eagle. Drawing one of the middle lots the soul of Atalanta caught sight of the great honors attached to an athlete's life and could not pass them by but snatched at them. After her, he saw the soul of Epeus, the son of Panopeus, entering into the nature of an arts and crafts woman. Far off in the rear he saw the soul of the buffoon Thersites clothing itself in the body of an ape. And it fell out that the soul of Odysseus drew the last lot of all and came to make its choice, and, from memory of its former toils having flung away ambition, went about for a long time in quest of the life of an ordinary citizen who minded his own business, and with difficulty found it lying in some corner disregarded by the others, and upon seeing it said that it would have done the same had it drawn the first lot, and chose it gladly. And in like manner, of the other beasts some entered into men and into one another, the unjust into wild creatures, the just transformed to tame, and there was every kind of mixture and combination.

But when, to conclude, all the souls had chosen their lives in the order of their lots, they were marshaled and went before Lachesis.

And she sent with each, as the guardian of his life and the fulfiller of his choice, the genius that he had chosen, and this divinity led the soul first to Clotho, under her hand and her turning of the spindle to ratify the destiny of his lot and choice, and after contact with her the genius again led the soul to the spinning of Atropos to make the web of its destiny irreversible, and then without a backward look it passed beneath the throne of Necessity. And after it had passed through that, when the others also had passed, they all journeyed to the Plain of Oblivion, through a terrible and stifling heat, for it was bare of trees and all plants, and there they camped at eventide by the River of Forgetfulness, whose waters no vessel can contain. They were all required to drink a measure of the water, and those who were not saved by their good sense drank more than the measure, and each one as he drank forgot all things. And after they had fallen asleep and it was the middle of the night, there was a sound of thunder and a quaking of the earth, and they were suddenly wafted thence, one this way, one that, upward to their birth like shooting stars. Er himself, was not allowed to drink of the water, yet how and in what way he returned to the body he said he did not know, but suddenly recovering his sight he saw himself at dawn lying on the funeral pyre.

And so, Glaucon, the tale was saved, as the saying is, and was not lost. And it will save us if we believe it, and we shall safely cross the River of Lethe, and keep our soul unspotted from the world. But if we are guided by me we shall believe that the soul is immortal and capable of enduring all extremes of good and evil, and so we shall hold ever to the upward way and pursue righteousness with wisdom always and ever, that we may be dear to ourselves and to the gods both during our sojourn here and when we receive our reward, as the victors in the games go about to gather in theirs. And thus both here and in that journey of a thousand years, whereof I have told you, we shall fare well.

# Republic.

Translated by H. Spens. 1763

Socrates, Glauco, Polemarchus, Thrasymachus,
Adimantus, Cephalus.

## THE FIRST BOOK

Socrates:: I went down yesterday to the Piraeum, with Glauco, the son of Aristo, to pay my devotion to the goddess; and desirous, at the same time, to observe in what manner they would celebrate the festival, as they were now to do it for-the first time. The procession of our own country-men seemed to me to be indeed beautiful; yet that of the Thracians appeared no less proper.

After we had paid our devotion, and seen the solemnity, we were on our way to the city, when Polemarchus, the Son of Cephalus, observing us at a distance, hurrying home; ordered his boy to run and desire us to wait for him; and the boy, taking hold of my robe behind;

Boy:: Polemarchus, desires you to wait.

Socrates:: I turned about and asked where he was.

Boy:: He is coming up, after you; but do you wait for him.

Glaucon:: We will wait.

Socrates:: Soon afterwards-came Polemarchus, and Adimantus the brother of Glauco, and Niceratus the son of Nicias, and some others as from the procession.

Polemarchus:: Socrates, you seem to me to be hurrying to the city.

Socrates:: You judge, not amiss.

Polemarchus:: You see us, then, how many there are of us.

Socrates:: Why do I not?

Polemarchus:: Therefore, now, you must either be stronger than these, or you must stay here.

Socrates:: Is there not, one way still remaining? May we not persuade you that you must let us go?

Polemarchus:: Can you be able to persuade, such as will not hear?

Glaucon:: By no means.

Polemarchus:: Then, as we are not to hear, determine accordingly.

Adeimantus:: But you do not know, that there is to be an illumination, in the evening, on horseback to the goddess.

Socrates:: On horseback! that is new. Are they to have torches, and give them to one another, contending together with their horses? or how do you mean?

Polemarchus:: Just so. And besides, they will perform a nocturnal solemnity worth seeing. For we shall rise after supper and see the nocturnal festival, and shall be there with many of the youth, and converse together. But do you stay, and do not do otherwise.

Glaucon:: It seems proper, then, we should stay.

Socrates:: Nay, if it seem so, we ought to do it.

We went home therefore to Polemarchus's house; and there we found both Lysias and Euthydemus, brothers of Polemarchus; likewise Thrasymachus the Chalcedonian, and Charmantides the Paeoneian, and Clitipho the son of Aristonimus. Cephalus the father of Polemarchus was likewise in the house; he seemed to me to be pretty well advanced in years, for I had not seen him of a long time. He was sitting crowned, on a certain couch and seat, for he Shad been offering sacrifice in the hall. So we sate down by him, for some seats were placed there in a circle. Immediately, then, when Cephalus saw me he saluted me and said;

Cephalus:: Socrates, you do not often come down to us to the Piraeum; nevertheless you ought to do it, for were I still able easily to go up to the city, you should not need to come hither, but we would be with you. But now you should come hither more frequently; for I assure you, that with relation to myself, as the pleasures respecting the body become insipid, the desire and pleasure of conversation increase. Do not fail, then, to make a party often with these youths, and come hither to us as to your friends and old acquaintance.

Socrates:: And, truly, Cephalus, I take pleasure in conversing with those who are well advanced in years; for it appears to me proper that we learn from them, as from persons who have gone before us, what the road is which it is likely we have to travel, whether rough and difficult or plain and easy. And I would gladly learn from you, as you are now arrived at that time of life which the poets call the threshold of old-age, what your opinion of it is; whether you look on it, as the most grievous part of life or what you think of it?

Cephalus:: And I will tell you, Socrates, what is really my opinion; for we frequently meet together in one place, several of us, who are of the same age, observing the old proverb. Now, most of us, when assembled, lament their state, when they feel a want of the pleasures of youth, and call to their remembrance the pleasures of love, those of drinking and feasting, and some others akin to these, and they express indignation, as if they were bereaved of some mighty things. In those days, they say, they lived well, but now they do not live at all. Some of them, too, bemoan the contempt which old-age meets with from their acquaintance, and on this account also they lament old-age, which is to them the cause of so many ills. But these men, Socrates, seem not to me to blame the real cause; for if this were the cause, I likewise should have suffered the same things on account of old-age, and all others, even as many as have come to these years: whereas I have met with several who are not thus affected, and particularly was once with Sophocles the poet when he was asked by one, How, Sophocles, are you affected towards the pleasures of love; are you still able to enjoy them? Softly, friend, most gladly, indeed, have I escaped from these pleasures, as from some furious and savage master. He seemed to me to speak well at that time, and no less so now, for certainly there is in old age a deal of peace and freedom from such things; for when the appetites cease to be vehement, and are become easy, what Sophocles said certainly happens: we are delivered from very many, and those, too, furious masters. But with relation to these things, and those likewise respecting our acquaintance, there is one and the same cause, which is not old-age, Socrates, but manners; for, if indeed they are discreet and moderate, even old-age is but moderately burdensome: if not, both old-age, Socrates, and youth are grievous to such.

Socrates:: Being delighted to hear him say these things, and wanting him to discourse further, I urged him and said; I fancy, Cephalus, the generality will not agree with you in those things, but will imagine that you bear old-age easily, not from manners, but from possessing much wealth; for the rich, say they, have many consolations.

Cephalus:: You say true, they do not agree with me; and there is something in what they say, but, however, not so much as they imagine.. But the saying of Themistocles was just; who, when the Seriphian reviled him, and said that he was honored not on his own account,’ but on that of his country, replied that neither would himself have been renowned had he been a Seriphian, nor would he, had he been an Athenian. The same saying is justly applicable to those who are not rich and who bear old-age with uneasiness: that neither would the worthy man, were he poor, bear old-age quite easily, nor would he who is unworthy, though enriched, ever be agreeable to himself.

Socrates:: But whether, Cephalus, was the greater part of what you possess left you, or have you acquired it?

Cephalus:: Somewhat, Socrates, I have acquired. As to money-getting, I am in a medium between my grandfather and my father: for my grandfather of the same name with me, who was left almost as much substance as I possess at present, made it many times as much again; but my father Lysanias made it yet less than it is now. I am satisfied if I leave my sons here no less, but some little more, than I received.

Socrates:: I asked you, for this reason, because you seem to me to love riches moderately, and those generally do so who have not acquired them: but those who have acquired them are doubly fond of them; for as poets love their own poems, and as parents love their children, in the same manner those who have enriched themselves value their riches as a work of their own, as well as for the utilities they afford; for which riches are valued by others.

Cephalus:: You say true.

Socrates:: It is entirely so. But further, tell me this: what do you imagine is the greatest good derived from the possession of much substance?

Cephalus:: What, probably, I shall not persuade the generality of. For, be assured, Socrates, that after a man begins to think he is soon to die, he feels a fear and concern about things which before gave him no uneasiness: for those stories concerning a future state, which represent that the man who has done injustice here must there be punished, though formerly ridiculed, do then trouble his soul with apprehensions that they may be true; and the man, either through the infirmity of old-age, or as being now more near those things, views them more attentively. He becomes therefore full of suspicion and dread, and considers and reviews whether he has in any thing injured any one. He then who finds in his life a great deal of iniquity, and is wakened from sleep as children by repeated calls, is afraid and lives in miserable hope. But the man who is not conscious of any iniquity;

> Still pleasing hope, sweet nourisher of age!
> Attends,—

as Pindar says. This, Socrates, he has beautifully expressed: that whoever lives a life of justice and holiness;

> Sweet hope, the nourisher of age, his heart
> Delighting, with him lives; which most of all
> Governs the many veering thoughts of man.

So that he says well and very admirably; wherefore, for this purpose I deem the possession of riches to be chiefly valuable, not to every man, but to the man of worth: for the possession of riches contributes considerably to free us from being tempted to cheat or deceive, and from being obliged to depart thither in a terror, when either indebted in sacrifices to God, or in money to man. It has many other advantages besides; but, for my part, Socrates, I deem riches to be most advantageous, to a man of understanding, chiefly in this respect.

Socrates:: You speak most handsomely, Cephalus. But with respect to this very thing, Justice, whether shall we call it truth, simply, and the restoring of what one has received from another? Or shall we say that the very same things may sometimes be done justly and sometimes unjustly? My meaning is this: Every one would some how own, that if a man should receive arms from his friend who was of a sound mind, it would not be proper to restore such things if he should demand them when mad; nor would the restorer be just: as little would he who, to a man in such a condition, should willingly tell all the truth.

Cephalus:: You say right.

Socrates:: This, then, to speak the truth and restore what one has received, is not the definition of justice?

Polemarchus:: It is not, Socrates, if at least we may give any credit to Simonides.

Cephalus:: However that be, I give up, this conversation to you; for I must now go to take care of the sacred rites.

Socrates:: Is not Polemarchus, your heir?

Cephalus:: Certainly.

Socrates:: Smiling, he went off to the sacred rites.—

Tell me, then, you who are heir in the conversation, what is it which, according to you, Simonides says so well concerning justice?

Polemarchus:: That to give every one his due is just; in saying this, he seems to me to say well.

Socrates:: It is, indeed, not easy to disbelieve Simonides, for he is a wise and divine man. But what his meaning may be in this, you, Polemarchus, probably know it, but I do not; for it is plain he does not mean what we were saying just now: that when one deposits with another any thing, it is to be given back to him when he asks for it again in his madness, yet what has been deposited is in some respect, at least, due. Is it not?

Polemarchus:: It is.

Socrates:: But yet it is not at all, by any means, then, to be restored when any one asks for it in his madness?

Polemarchus:: It is not.

Socrates:: Simonides then, as it should seem, says something different from this, that to deliver up what is due is just?

Polemarchus:: Something different, truly; for he thinks that friends ought to do their friends some good, but no ill..

Socrates:: I understand. He who restores gold deposited with him, if to restore and receive it be hurtful, and the restorer and receiver be friends, does not give what is due. Is not this what you allege Simonides says?

Polemarchus:: Surely.

Socrates:: But what? are we to give our enemies, too, what may chance to be due to them?

Polemarchus:: By all means,—what is due to them; and from an enemy to an enemy there is due, I imagine, what is fitting, that is, some evil.

Socrates:: Simonides, then, as it should seem, expressed what is just enigmatically, and after the manner of the poets; for he well understood, as it appears, that this was just, to give every one what was fitting for him, and this he called his due. But what, is your opinion? Truly, if any one should ask him thus: Simonides, what is the art which, dispensing to certain persons something fitting and due, is called Medicine? What would he answer us, do you think?

Polemarchus:: That art, surely, which dispenses drugs and prescribes regimen of meats and drinks to bodies.

Socrates:: And what is the art which, dispensing to certain things something fitting and due, is called Cookery?

Polemarchus:: The art which gives seasonings to victuals.

Socrates:: Be it so. What then is that art which, dispensing to certain persons something fitting and due, may be called Justice?

Polemarchus:: If we ought to be any way directed, Socrates, by what is said above, the art which dispenses good offices to friends and injuries to enemies.

Socrates:: To do good, then, to friends, and ill to enemies, he calls justice?

Polemarchus:: It seems so.

Socrates:: Who, then, is most able to do good to his friends when they are diseased, and ill to his enemies, with respect to sickness and health?

Polemarchus:: The Physician.

Socrates:: And who, when they fail, with respect to the danger of the sea?

Polemarchus:: The Pilot.

Socrates:: But as to the just man, in what business, and with respect to what action, is he most able to serve his friends and to harm his enemies?

Polemarchus:: It seems to me, in fighting in alliance with the one, and against the other.

Socrates:: Be it so. But surely the physician is useless, Polemarchus, to those, at least, who are not sick?

Polemarchus:: It is true.

Socrates:: And the pilot to those who do not fail?

Polemarchus:: He is.

Socrates:: And is the just man, in like manner, useless to those who are not at war?

Polemarchus:: I can by no means think that.

Socrates:: Justice, then, is useful likewise in time of peace.

Polemarchus:: It is.

Socrates:: And so is agriculture, is it not?

Polemarchus:: It is.

Socrates:: Towards the possession of grain?

Polemarchus:: Certainly.

Socrates:: And is not shoe-making likewise useful?

Polemarchus:: It is.

Socrates:: Towards the possession of shoes, you will say, I imagine.

Polemarchus:: Certainly.

Socrates:: But what, now? For the use or possession of what would you say that justice were useful in time of peace?

Polemarchus:: For co-partnerships, Socrates.

Socrates:: You call co-partnerships joint companies, or what else?

Polemarchus:: Joint companies, certainly.

Socrates:: Whether, then, is the just man or the dice-player a good •and useful co-partner for playing at dice.

Polemarchus:: The dice-player.

Socrates:: But, in the laying of tiles or stones, is the just man a more useful and a better partner than the mason?

Polemarchus:: By no means.

Socrates:: In what joint company, now, is the just man a better copartner than the harper, as the harper is better than the just man for touching the strings of a harp?

Polemarchus:: In a partnership about money, as I imagine.

Socrates:: And yet it is likely, Polemarchus, that with regard to the making use of money, when it is necessary jointly to buy or sell a horse, the jockey, as I imagine, is then the better co-partner. Is he not?

Polemarchus:: He would appear so.

Socrates:: And with respect to a ship, the shipwright or shipmaster?

Polemarchus:: It would seem so.

Socrates:: When then is it, with respect to the joint application of money, that the just man is more useful than others?

Polemarchus:: When it is to be deposited and be safe, Socrates!

Socrates:: Do you not mean, when there is no need to use it, but to let it lye?

Polemarchus:: Certainly.

Socrates:: When, then, money is useless, justice is then useful with regard to it?

Polemarchus:: It seems so.

Socrates:: And when a pruning-hook is to be kept, justice is useful both for a community and for a particular person; but when it is to be used, the art of vine-dressing is useful.

Polemarchus:: It appears so.

Socrates:: And you will say, that when a buckler, a harp, is to be kept, and not to be used, then justice is useful; but when they are to be used, then the military and the musical art.

Polemarchus:: Of necessity.

Socrates:: And with reference to all other things, when they are to be used, justice is useless, but when they are not to be used, it is useful.

Polemarchus:: It seems so.

Socrates:: Justice, then, my friend, can be no very important matter, if it is useful only in respect of things which are not to be used. But let us consider this matter. Is not he who is the most dexterous at striking, whether in battle or in boxing, the same likewise in defending himself?

Polemarchus:: Certainly.

Socrates:: And is not he who is dexterous in warding off and shunning a distemper most dexterous too in bringing it on?

Polemarchus:: So I imagine.

Socrates:: And he too the best guardian of a camp who can steal the councils and the other operations of the enemy?

Polemarchus:: Certainly.

Socrates:: Of whatever, then, any one is a good guardian, of that likewise he is a dexterous thief.

Polemarchus:: It seems so.

Socrates:: If, therefore, the just man be dexterous in guarding money, he is dexterous likewise in stealing.

Polemarchus:: So it would appear, from this reasoning.

Socrates:: The just man, then, has appeared to be a sort of thief; and you seem to have learned this from Homer, for he admires Autolycus, the grandfather of Ulysses by his mother, and says that he was distinguished beyond all men for thefts and oaths. It seems then, according to you, and according to Homer and Simonides, that justice is a sort of thieving, for the profit, indeed, of friends and for the hurt of enemies. Did not you say so?

Polemarchus:: No, by no means—nor, indeed, do I know any longer what I said; yet I still think that justice profits friends and hurts enemies.

Socrates:: But whether do you pronounce such to be friends as seem to be honest? or such as are so, though they do not seem; and in the same way as to enemies?

Polemarchus:: It is reasonable, to love those whom a man deems to be honest, and to hate those whom he deems to be wicked.

Socrates:: But do not men mistake in this, so as that many who are not honest appear so to them, and many contrary wise?

Polemarchus:: They do mistake.

Socrates:: To such, then, the good are enemies and the bad are friends.

Polemarchus:: Certainly.

Socrates:: But, however, it is then just for them to profit the bad and to hurt the good.

Polemarchus:: It appears so.

Socrates:: But the good are likewise just, and such as do no ill.

Polemarchus:: True.

Socrates:: But, according to your speech, it is just to do ill to those who do no ill.

Polemarchus:: By no means, Socrates; for the speech seems to be wicked.

Socrates:: It is just, then, to hurt the unjust and to profit the just.

Polemarchus:: This speech appears more handsome than the other.

Socrates:: Then it will happen, Polemarchus, to many, to as many indeed of mankind as have misjudged, that it shall be just to hurt their friends who are really bad, and to profit their enemies, who are really good; and so we shall say the very reverse of what we affirmed Simonides said.

Polemarchus:: It does, indeed, happen so. But let us define again, for we seem not to have rightly defined a friend and an enemy.

Socrates:: How were they defined, Polemarchus?

Polemarchus:: That he who seems honest is a friend.

Socrates:: But how shall we now define?

Polemarchus:: That he who seems, and likewise is honest, is a friend; but he who seems honest, yet is not, seems, yet is not a friend. And the distinction about an enemy to be the very same.

Socrates:: The good man, according to this speech, will, as it seems, be the friend, and the wicked man the enemy.

Polemarchus:: Yes.

Socrates:: Do you now require us to describe what is just, as we did before, when we said it was just to do good to a friend and ill to an enemy? Or shall we add to the definition and now say that it is just to do good to a friend when he is good, and hurt to an enemy when he is ill?

Polemarchus:: This last, seems to me to be perfectly well expressed.

Socrates:: Is it, then, the part of a just man to hurt any man?

Polemarchus:: By all means, he ought to hurt the wicked and his enemies.

Socrates:: But do’ horses, when they are hurt, become better or worse?

Polemarchus:: Worse.

Socrates:: Whether in the virtue of dogs or of horses?

Polemarchus:: In that of horses.

Socrates:: And do not dogs, when they are hurt, become worse in the virtue of dogs, and not of horses?

Polemarchus:: Of necessity.

Socrates:: And shall we not in like manner, my friend, say that men, when they are hurt, become worse in the virtue of a man?

Polemarchus:: Certainly.

Socrates:: But is not justice the virtue of a man?

Polemarchus:: Of necessity this likewise.

Socrates:: Of necessity then, friend, those men who are hurt must become more unjust.

Polemarchus:: It seems so.

Socrates:: But can musicians, by music, make men unmusical?

Polemarchus:: It is impossible.

Socrates:: Or horsemen, by horsemanship, make men unskilled in horsemanship?

Polemarchus:: It cannot be.

Socrates:: Or can the just, by justice, make men unjust; or in general can the good, by virtue, make men wicked?

Polemarchus:: It is impossible.

Socrates:: For it is not, as I imagine, the effect of heat to make cold, but of its contrary.

Polemarchus:: Yes.

Socrates:: Nor is it the effect of drought to make moist, but its contrary.

Polemarchus:: Certainly.

Socrates:: Neither is it the part of a good man to hurt, but of his contrary.

Polemarchus:: It appears so.

Socrates:: But the just is good?

Polemarchus:: Certainly.

Socrates:: Neither, then, is it the part of a just man, Polemarchus, to hurt either friend, or any other, but the part of his contrary, the unjust man.

Polemarchus:: In all respects, you seem to me, Socrates, to say true.

Socrates:: If, then, any one says that it is just to give every one his due, and thinks this with himself, that hurt is due to enemies from a just man, and profit to his friend, he was not wise who said so, for he spoke not the truth. For it has no where appeared to us that any just man hurts any one.

Polemarchus:: I agree.

Socrates:: Let us jointly contend, then, if any one shall say that Simonides, a Bias, a Pittacus, said so, or any other of those wise and happy men.

Polemarchus:: I am ready, to join in the fight.

Socrates:: But do you know, whose saying I fancy it is, that it is just to profit friends and hurt enemies?

Polemarchus:: Whose?

Socrates:: I fancy it is the saying of Periander, or Perdiccas, or Xerxes, or Ismenius the Theban, or some other rich man who thought himself able to do a great deal.

Polemarchus:: You say most true.

Socrates:: Be it so. But as this has not appeared to be justice, nor just, what else may one say that it is?

Thrasymachus frequently, during our reasoning, rushed in the midst to lay hold of the discourse, but was hindered by those who sate by, who wanted to hear the conversation to an end. But when we paused, and I had said these things, he was no longer quiet, but, collecting himself, as a wild beast he came upon us, as if he would have torn us in pieces. Both Polemarchus and I, being frightened, were thrown into the utmost consternation; but he, roaring out in the midst;

Thrasymachus:: What trifling, Socrates, is this, which long ago possessed you? and why do you thus play the fool together, yielding mutually to one another? But if you truly want to know what is just, ask not questions only and value yourself in confuting when any one answers you any thing (knowing this, that it is easier to ask than to answer), but answer yourself, and tell what it is you call just. And you are not to tell me that it is what is fit, nor what is due, nor what is profitable, nor what is gainful, nor what is advantageous; but what you mean, tell plainly and accurately; for I will not allow it, if you speak such trifles as these.

Socrates:: When I heard this, I was astonished, and looking at him, was frightened; and I should have become speechless, I imagine, if I had not perceived him before he perceived me. But I had observed him first, when he began to grow fierce at our reasoning, so that I was now able to answer him, and said, trembling: Thrasymachus, be not hard on us, for if we mistake in our inquiries, Polemarchus and I, be well assured that we mistake unwittingly: For think not that, in searching for gold, we would never wittingly yield to one another in the search, and mar the finding it; but that, searching for justice, an affair far more valuable than a great deal of gold, we should yet foolishly yield to each other, and not labor, friend, with the utmost ardor that we may discover what it really is. But I am afraid we are not able to discover it. It is more reasonable, then, that we be pitied than be used hardly by you who are men of ability!

Having heard this, he laughed aloud in a very coarse manner, and said:

Thrasymachus:: By Hercules! this is Socrates's wonted irony. This I both knew and foretold to these here, that you never incline to answer if any one ask you anything.

Socrates:: You are a wise man, therefore, Thrasymachus; for you knew well that if you asked any one, How many is twelve, and, when you ask should tell him before: You are not, friend, to tell me that twelve is twice six, nor that it is three times four, nor that it is four times three, for I will not admit it if you trifle in such a manner—I fancy it is plain to you that no man would answer one asking in such a way. But if he should say to you: Wonderful Thrasymachus, how do you mean? May I answer in none of those ways you have told me—not even though the real and true answer happen to be one of them? but I am to say something else than the truth? or how is it you mean? What would you say to him in answer to these things?

Thrasymachus:: If they were alike, I should give an answer; but how are they alike?

Socrates:: Nothing hinders it. But though they were not alike, but should appear so to him who was asked, would he the less readily answer what appeared to him, whether we forbad him or not?

Thrasymachus:: And will you do so now? Will you say in answer some of these things which I forbid you to say?

Socrates:: I should not wonder if I did, if it should appear so to me on inquiry.

Thrasymachus:: What then, if I shall show you another and a better answer, besides all these about justice; what will you deserve to suffer?

Socrates:: What else, but what is proper for the ignorant to suffer; and it is proper for them to learn some where from a wise man. I shall therefore deserve to suffer this.

Thrasymachus:: You are pleasant now, but together with the learning, do you pay money likewise.

Socrates:: Shall it not be after I have got it?

Glaucon:: There is for you. so, as to money, Thrasymachus, say on, for all of us will advance for Socrates.

Thrasymachus:: I truly imagine so, that Socrates may go on in his wonted manner—not answer himself, but when another answers, he may take up the discourse and confute.

Socrates:: How, most excellent Thrasymachus, can one answer? In the first place, when he neither knows, nor says he knows, and then, if he have any opinion about these matters, he is forbid by no mean man to advance any of his opinions. But it is more reasonable that you speak, as you say you know, and can tell us. Do not decline, then, but oblige me in answering, and do not grudge to instruct Glauco here and the rest of the company.

When I had said this, both Glauco and the rest of the company in treated him not to decline it. And Thrasymachus appeared plainly desirous to speak, in order to gain applause, reckoning he had a very fine answer to make, yet pretended to be earnest that I should be the answerer; but at last he agreed, and then:

Thrasymachus:: This, is the wisdom of Socrates: unwilling himself to teach, he goes about learning from others, and gives no thanks for it.

Socrates:: That indeed I learn from others, Thrasymachus, is true; but in saying that I do not give thanks for it you are mistaken. I pay as much as I am able; and I am only able to commend them, for money I have not. And how readily I do this, when any one appears to me to speak well, you shall perfectly know this moment, when you make an answer: for I imagine you are to speak well.

Thrasymachus:: Hear, then, for I say that what is just is nothing else but the advantage of the more powerful. But why do not you commend? You are unwilling.

Socrates:: Let me learn first, what you say, for as yet I do not understand it. The advantage of the more powerful, you say, is what is just. What at all is this you say now, Thrasymachus? for you certainly do not mean such a thing as this: If Polydamus, the wrestler, be more powerful than we, and if beef be beneficial for his body, that this food is likewise both just and advantageous for us who are weaker than he.

Thrasymachus:: You are most impudent, Socrates, and lay hold of my speech on that side where you may do it the greatest hurt.

Socrates:: By no means, most excellent Thrasymachus: but tell more plainly what is your meaning.

Thrasymachus:: Do not you then know, that with reference to states, some are tyrannical, others democratical, and others aristocratical?

Socrates:: Why are they not?

Thrasymachus:: And is not the governing part in each state the more powerful?

Socrates:: Certainly.

Thrasymachus:: And every government makes laws for its own advantage: a democracy, democratic laws; a tyranny, tyrannic; and others the same way. And when they have made them, they give out that to be just for the governed which is advantageous for themselves; and they punish the transgressor of this as one acting contrary both to law and justice. This, then, most excellent Socrates, is what I say, that, in all states, what is just and what is advantageous for the established government are the same; it has the power. So that it appears to him who reasons rightly that, in all cases, what is the advantage of the more powerful, the same is just.

Socrates:: Now I have learned, what you say; but whether it be true or not, I shall endeavor to learn. What is advantageous, then, Thrasymachus, you yourself have affirmed to be likewise just, though you forbid me to give this answer; but, indeed, you have added to it that of the more powerful.

Thrasymachus:: Probably, but a small addition.

Socrates:: It is not yet manifest whether it is small or great; but it is manifest that this is to be considered, whether you speak, the truth, since I too acknowledge that what is just is somewhat that is advantageous: but you add to it, and say that it is that of the more powerful. This I do not know, but it is to be considered.

Thrasymachus:: Consider then.

Socrates:: That, shall be done. And, tell me, do not you say that it is just to obey governors?

Thrasymachus:: I say so.

Socrates:: Whether are the governors in the several states infallible, or are they capable of erring?

Thrasymachus:: Certainly, they are liable to err.

Socrates:: Do they not, then, when they attempt to make laws, make some of them right, and some of them not right?

Thrasymachus:: I imagine so.

Socrates:: To make them right, is it not to make them advantageous for themselves; and to make them not right, disadvantageous? Or what is it you mean?

Thrasymachus:: Entirely so.

Socrates:: And what they enact is to be observed by the governed, and this is what is just?

Thrasymachus:: Why not?

Socrates:: It is, then, according to your reasoning, not only just to do what is advantageous for the more powerful, but also to do the contrary, what is not advantageous.

Thrasymachus:: What do you say,?

Socrates:: The same, I imagine, that you say yourself. But let us consider better. Have we not acknowledged that governors, in enjoining the governed to do certain things, may sometimes mistake what is best for themselves; and that what the governors enjoin is just for the governed to do? Have not these things been acknowledged?

Thrasymachus:: I think so.

Socrates:: Think, also, then, that you have acknowledged that it is just to do what is disadvantageous to governors and the more powerful, since governors unwillingly enjoin what is ill for themselves, and you say that it is just for the others to do what these enjoin. Must it not then, most wise Thrasymachus, necessarily happen that, by this means, it may be just to do the contrary of what you say? For that which is the disadvantage of the more powerful is sometimes enjoined the inferiors to do?

Polemarchus:: Yes, indeed, Socrates; these things are most manifest.

Clitophon:: Yes, if you bear him witness.

Polemarchus:: What need, of a witness? For Thrasymachus himself acknowledges that governors do indeed sometimes enjoin what is ill for themselves, but that it is just for the governed to do these things.

Clitophon:: For it has, Polemarchus, been established by Thrasymachus to be just to do what is enjoined by the governors.

Polemarchus:: And he has likewise, Clitipho, established that to be just which is the advantage of the more powerful. And having established both these things, he has acknowledged likewise that the more powerful sometimes enjoin the inferiors and governed to do what is disadvantageous for themselves; and, from these concessions, the advantage of the more powerful can no more be just than the disadvantage.

Clitophon:: But, he said the advantage of the more powerful—that is, what the more powerful judged to be advantageous to himself—that this was to be done by the inferior; and this he established as just.

Polemarchus:: But, it was not said so.

Socrates:: There is no difference, Polemarchus. But if Thrasymachus says so now, we shall allow him to do it. And tell me, Thrasymachus, was this what you meant to> say was just: the advantage of the more powerful, such as appeared so to the more powerful, whether it is advantageous or is not? Shall we say that you spoke thus?

Thrasymachus:: By no means: for do you imagine I call him the more powerful who misjudges at the time he misjudges?

Socrates:: I imagined, you said this, when you acknowledged that rulers were not infallible, but that in some things they even erred.

Thrasymachus:: You are a sycophant, in reasoning, Socrates: for do you now call him who mistakes about the management of the sick a physician, as to that very thing in which he mistakes? or him who mistakes in reasoning a reasoner, when he errs, and with reference to that very error? But, I imagine, we say in common language that the physician erred, that the reasoner erred, and the grammarian: thus, however, I imagine that each of these, as far as he is what we call him, errs not at any time. So that, according to accurate discourse (since you discourse accurately) none of the artists errs: for he who errs, errs by departing from science, and in this he is no artist; so that no artist, or wise man, or governor, errs, in so far as he is a governor. Yet any one may say the physician erred, the governor erred. Imagine, then, it was in this way I now answered you. But the most accurate answer is this: that the governor, in as far as he is governor, errs not; and as he does not err, he enacts that which is left for himself, and this is to be observed by the governed. So that what I said from the beginning, I maintain, is just: to do what is the advantage of the more powerful.

Socrates:: Be it so, Thrasymachus. Seem I to act the sycophant?

Thrasymachus:: Certainly, indeed.

Socrates:: For you imagine that I spoke as I did insidiously, and to abuse you?

Thrasymachus:: I know it well, but you shall gain nothing by it; for whether you abuse me in a concealed manner, or otherwise, you shall not be able to overcome me by your reasoning.

Socrates:: I shall not attempt it, happy Thrasymachus! But, that nothing of this kind may happen to us again, define whether you speak of a governor and the more powerful according to common talk, or according to accurate discourse, as you now said, whose advantage, as he is the more powerful, it shall be just for the inferior to observe.

Thrasymachus:: I speak of him, who, in the most accurate discourse, is governor. For this, now, abuse me and act the sycophant, if you are able: I do not shun you. But you cannot do it.

Socrates:: Do you imagine me, to be so mad as to attempt to shave a lion and act the sycophant with Thrasymachus?

Thrasymachus:: You have now, attempted it, but with no effect.

Socrates:: Enough, of this. But tell me, with reference to him who, accurately speaking, is a physician, whom you now mentioned, whether is he a gainer of money, or one who takes care of the sick? and speak of him who is really a physician.

Thrasymachus:: One who takes care, of the sick.

Socrates:: But what of the pilot, who is a pilot truly? Whether is he the governor of the sailors, or a sailor?

Thrasymachus:: The governor of the sailors.

Socrates:: That, I imagine, is not to be minded, that he sails in the ship, nor that he is called a sailor; for it is not for his sailing that he is called pilot, but for his art and his governing the sailors.

Thrasymachus:: True.

Socrates:: Is there not, then, something advantageous to each of these?

Thrasymachus:: Certainly.

Socrates:: And is it not for this purpose, that art has had its rise, to seek out and afford to each thing its advantage?

Thrasymachus:: For this purpose.

Socrates:: Is there, now, any thing else advantageous to each of the arts but to be the most perfect possible?

Thrasymachus:: How ask you this?

Socrates:: As if you asked me, whether it sufficed the body to be body, or if it stood in need of anything? I would say that it stood in need of something else. For this reason is the medicinal art invented, because the body is infirm, and is not sufficient for itself in such a state. In order therefore to afford it things for its advantage, for this purpose art has been provided. Do I seem to you, to say right or not in speaking in this manner?

Thrasymachus:: Right.

Socrates:: But what now? This medicinal art itself, or any other, is it imperfect so long as it is wanting in a certain virtue—as the eyes when they want seeing, and the ears hearing; and, for these reasons, have they need of a certain art to perceive and afford them what is advantageous for these purposes? And is there, still, in art itself some imperfection; and does every art stand in need of another art to perceive what is advantageous to it, and this stand in need of another in like manner, and so on to infinity? Or shall each art perceive what is advantageous to itself, and stand in need neither of itself nor of another to perceive what is for its advantage, with reference to its own imperfection. For there is no imperfection nor error in any art, nor does it belong to it to seek what is advantageous to any thing but to that of which it is the art; but it is, itself, infallible, pure, being in the right, so long as each art is an accurate whole, whatever it is. And consider now, according to that accurate discourse, whether it be thus or otherwise.

Thrasymachus:: Thus, it appears.

Socrates:: The medicinal art, then, does not consider what is advantageous to the medicinal art, but to the body.

Thrasymachus:: Yes.

Socrates:: Nor the art of managing horses what is advantageous for that art, but what is advantageous for horses. Nor does any other art consider what is advantageous for itself (for it has no need), but what is advantageous for that of which it is the art?

Thrasymachus:: So, it appears.

Socrates:: But, Thrasymachus, the arts rule and govern that of which they are the arts.

He yielded this, but with great difficulty.

No science, then, considers the advantage of the more powerful, nor enjoins it, but that of the inferior and of what is governed.

He consented to these things at last, though he attempted to contend about them, but afterwards he consented. Why, no physician, so far as he is a physician, considers what is advantageous for the physician, nor enjoins it, but what is advantageous for the sick; for it has been agreed that the accurate physician is one who takes care of sick bodies, and not an amasser of wealth. Has it not been agreed?

He assented.

And likewise that the accurate pilot is the governor of the sailors, and not a sailor?

Thrasymachus:: It has been agreed.

Socrates:: Such a pilot, then, and governor will not consider and enjoin what is the advantage of the pilot, but what is advantageous to the sailor and the governed.

He consented, with difficulty.

Nor yet, Thrasymachus, does any other in any government, as far as he is a governor, consider or enjoin his own advantage, but that of the governed and of those to whom he ministers; and with an eye to this, and to what is advantageous and suitable to this, he both says what he says, and does what he does.

When we were at this part of the discourse, and it was evident to all the definition of what was just stood now on the contrary side, Thrasymachus, instead of making answer:

Thrasymachus:: Tell me, Socrates, have you a nurse?

Socrates:: What: ought you not rather to answer than ask such things?

Thrasymachus:: Because, she neglects you when your nose is stuffed, and does not wipe it when it needs it, you who understand neither what is meant by sheep nor by shepherd.

Socrates:: For what now is all this?

Thrasymachus:: Because you think that shepherds and neatherds ought to consider the good of the sheep or oxen, to fatten them and to minister to them, having in their eye something other than their master's good and their own. And you fancy that those who govern in cities, those who govern truly, are somehow otherwise affected towards the governed than one is towards sheep; and that they are attentive, day and night, to somewhat else than this, how they shall be gainers themselves. And so far are you from the notion of just and of justice, and of unjust and injustice, that you do not know that both justice and just are, in reality, a foreign good, the advantage of the more powerful and of the governor, but, properly, the hurt of the subject and inferior; and injustice is the contrary. And justice governs such as are truly simple and just; and the governed do what is for the governor's advantage, he being more powerful, and ministering to him, promote his happiness, but by no means their own. You must thus consider it, most simple Socrates, that, on all occasions, the just man gets less than the unjust. First, in copartnerships with one another, where the one joins in company with the other, you never can find, on the dissolving of the company, the just man gets more than the unjust, but less. Then, in civil affairs, where there are taxes to be paid from equal substance, the just man pays more, the other less; but when there is any thing to be gained, the one gains nothing, the other a' great deal, for when each of them governs in any public magistracy, this, if no other loss, befalls the just man, that his domestic affairs, at least, are in a worse situation through his neglect, and that he gains nothing from the public, because he is just; add to this, that he comes to be hated by his domestics and acquaintance, when at no time he will serve them beyond what is just. But all these things are quite otherwise with the unjust, such an one, I mean, as I now mentioned, one who has it greatly in his power to become rich. Consider him, then, if you would judge, how much more it is for his private advantage to be unjust than just, and you will most easily understand it if you come to the most finished injustice, such as renders the unjust man most happy, but the injured, and those who are unwilling to do injustice, most wretched; and that is tyranny, which takes away the goods of others, both by secret fraud and by open violence, both things sacred and holy, both private and public, and these not by degrees, but all at once. In all particular cases of such crimes, when one committing injustice is not concealed, he is punished, and suffers the greatest ignominy; for according to the several kinds of the wickedness they commit, they are called sacrilegious, robbers, housebreakers, pilferers, thieves. But when any one, besides these thefts of the substance of his citizens, shall steal and enslave the citizens themselves, instead of those ugly names he is called happy and blest, not by his citizens alone, but likewise by others, as many as are informed that he has committed the most consummate wickedness. For such as revile wickedness revile it not because they are afraid of doing, but because they are afraid of suffering, unjust things. And thus, Socrates, injustice, when in sufficient measure, is both more powerful, more free, and has more absolute command than justice: and (as I said at the beginning) the advantage of the more powerful is justice; but injustice is the profit and advantage of one’s self.

Socrates:: Thrasymachus, having said these things, inclined to go away, like the bath-keeper after he had poured into our ears this rapid and long discourse. These, however, who were present would not suffer him, but forced him to stay and give account of what he had said I too, myself, earnestly entreated him, and said: Divine Thrasymachus, after throwing in upon us so strange a discourse, do you intend to go away before you teach us sufficiently, or learn yourself, whether the case be as you say or otherwise? Do you imagine you attempt to determine a small matter, and not the guide of life by which each of us, being conducted, may lead the most happy life?

Thrasymachus:: But I imagine, that this is otherwise.

Socrates:: You seem, truly, to care nothing for us, nor to be any way concerned whether we shall live well or ill, whilst we are ignorant of what you say you know. But, good Thrasymachus, be readily disposed to show it also to us: nor will the favor be ill placed, whatever you shall bestow on so many as are of us. And I, for my own part, tell you that I am not persuaded, nor do I think that injustice is more profitable than justice, not although it should be permitted to exert itself, and be no way hindered from doing whatever it should incline. But, good Thrasymachus, let him be unjust, let him be able to do unjustly, either in secret or by force, yet will you not persuade me at least that injustice is more profitable than justice; and probably some other of us here is of the same mind, and I not single. Convince us, then, blest Thrasymachus! that we imagine wrong when we value justice more than injustice.

Thrasymachus:: But how, shall I convince you? For if I have not convinced you by what I have said already, what shall I further do for you? Shall I enter into your soul and put my reasoning within you?

Socrates:: God forbid! you shall not do that. But, first of all, whatever you have said, abide by it or, if you do change, change openly and do not deceive us. For now you see, Thrasymachus (for let us still consider what is said above), that when you first defined the true physician, you did not afterwards think it needful that the true shepherd should, strictly, upon the like principles, keep his flock; but you fancy, that as a shepherd, he may feed his flock, not regarding what is best for the sheep, but as some glutton who is going to feast on them at some entertainment, or yet to dispose of them as a merchant, and not a shepherd. But the shepherd-art has certainly no other care but of that for which it is ordained, to afford it what is best: for its own affairs are already sufficiently provided for, so as to be in the very best state while it needs nothing of the shepherd-art. In the same manner I, at least, imagined there was a necessity for agreeing with us in this, that every government, in as far as it is government, considers what is best for nothing else but for the governed and those under its charge, both in political and private government. But do you imagine that governors in cities, such as are truly governors, govern willingly?

Thrasymachus:: Truly, as for that, I not only imagine it, but am quite certain.

Socrates:: Why now, Thrasymachus, do you not perceive, as to all other governments, that no one undertakes them willingly, but they ask a reward, as the profit arising from governing is not to be to themselves, but to the governed? Or tell me this now: Do not we say that every particular art is in this distinct, in having a distinct power? And now, blest Thrasymachus! answer not differently from your sentiments, that we may make some progress.

Thrasymachus:: In this, it is distinct.

Socrates:: And does not each of them afford us a certain distinct advantage, and not a common one? as the medicinal affords health, the pilot-art preservation in sailing, and the others in like manner.

Thrasymachus:: Certainly.

Socrates:: And does not the mercenary art afford a reward, for this is its power? Or do you call both the medicinal art and the pilot art one and the same? Or, rather, if you will define them accurately, as you proposed, though one in piloting recover his health, because sailing agrees with him, you will not the more, on this account, call it the medicinal art?

Thrasymachus:: No, indeed.

Socrates:: Nor will you, I imagine, call the mercenary art the medicinal, though one, in gaining a reward, recover his health.

Thrasymachus:: No, indeed.

Socrates:: What now? Will you call the medicinal the mercenary art, if one, in performing a cure, gains a reward?

Thrasymachus:: No.

Socrates:: Have we not acknowledged, then, that there is a distinct advantage of every art?

Thrasymachus:: Be it so.

Socrates:: What is that advantage, then, with which all artists in common are advantaged? It is plain it must be in using something common to all that they are advantaged by it.

Thrasymachus:: It seems so.

Socrates:: Yet we say that artists are profited in receiving a reward arising to them from the increase of a lucrative art.

He agreed, with difficulty.

Has not, then, every one this advantage in his art, the receiving a reward. Yet, if we are to consider accurately, the medicinal art produces health, and the mercenary art a reward, masonry a house, and the mercenary art accompanying it a reward; and all the others in like manner—every one produces its own work, and advantages that for which it was ordained. But if it meet not with a reward, what is the artist advantaged by his art?

Thrasymachus:: It does not appear.

Socrates:: But does he then no service when he works without reward?

Thrasymachus:: I think he does.

Socrates:: Is not this, then, now evident, Thrasymachus, that no art nor government provides what is advantageous for itself, but as I said, long ago, provides and enjoins what is advantageous for the governed, having in view the profit of the inferior, and not that of the more powerful. And for these reasons, friend Thrasymachus, I likewise said now, that no one is willing to govern, and to undertake to rectify the ills of others, but asks a reward for it; because whoever will perform the art handsomely, never acts what is best for himself, in ruling according to art, but what is best for the governed; and on this account, it seems, a reward must be given to those who shall be willing to govern, either money or honour, or punishment if they will not govern.

Glaucon:: How say you so, Socrates? Two of the rewards I understand; but this punishment you speak of, and here you mention it in place of a reward, I know not.

Socrates:: You know not, then, the reward of the best of men, on account of which the most worthy govern, when they consent to govern. Or, do you not know that to be ambitious and covetous is both deemed a reproach, and really is so?

Glaucon:: I know.

Socrates:: For those reasons, then, good men are not willing to govern, neither for money nor for honour; for they are neither willing to be called mercenary, in openly receiving a reward for governing, nor to be called thieves, in taking clandestinely from those under their government; as little are they willing to govern for honour, for they are not ambitious. Of necessity, then, there must be laid on them a fine, that they may consent to govern; and hence, it seems, it has been accounted dishonorable to enter on government willingly, and not by constraint. And the greatest part of the punishment is to be governed by a naughty person, if one himself is not willing to govern: and the good seem to me to govern from a fear of this, when they do govern; and then they enter on the government, not as on any thing good, or as what they are to reap advantage by, but as on a necessary task, and finding none better than themselves, nor like them to entrust with the government—since it would appear that if there was a city of good men, the contest would be not to be in the government, as at present it is to govern. And hence it would be manifest that he who is indeed the true governor does not aim at his own advantage, but at that of the governed; so that every understanding man would rather choose to be served than to have trouble in serving another. This, therefore, I, for my part, will never yield to Thrasymachus, that justice is the advantage of the more powerful; but this we shall consider afterwards. What Thrasymachus says now seems to me of much more importance, when he says that the life of the unjust man is better than that of the just. You, then, Glauco, which side do you choose? and which seems to you most agreeable to truth?

Glaucon:: The life of the just, I, for my part, deem to be the more profitable.

Socrates:: Have you heard, how many good things Thrasymachus just now enumerated in the life of the unjust?

Glaucon:: I heard, but am not persuaded.

Socrates:: Are you willing, then, that we should persuade him (if we be able any how to find arguments) that there is no truth in what he says?

Glaucon:: Why not.

Socrates:: If then, pulling on the other side, we advance argument for argument, how many good things there are in being just, and then again, he on the other side, we shall need a third person to compute and estimate what each shall have said on either side, and likewise need some judges to determine the matter. But if, as now, assenting to one another, we consider these things, we shall be both judges and pleaders ourselves.

Glaucon:: Certainly.

Socrates:: Which way, then, do you choose?

Glaucon:: This way.

Socrates:: Come then, Thrasymachus, answer us from the beginning. Do you say that complete injustice is more profitable than complete justice?

Thrasymachus:: Yes, indeed, I say so; and the reasons for it I have told.

Socrates:: Come now, do you ever affirm any thing of this kind concerning them? Do you call one of them virtue, and the other vice?

Thrasymachus:: Why not?

Socrates:: Is not then justice virtue, and injustice vice?

Thrasymachus:: Very likely, most pleasant Socrates, after I say that injustice is profitable, but justice is not.

Socrates:: What then?

Thrasymachus:: The contrary.

Socrates:: Is it justice you call vice?

Thrasymachus:: No, but I call it altogether genuine simplicity.

Socrates:: Do you, then, call injustice cunning?

Thrasymachus:: No, but I call it sagacity.

Socrates:: Do the unjust seem to you, Thrasymachus, to be both prudent and good?

Thrasymachus:: Such, at least, as are able to do injustice in perfection; such as are able to subject to themselves states and nations. But you probably imagine I speak of those who cut purses: even such things as these, are profitable if concealed; but such only as I now mentioned are of any worth.

Socrates:: I understand, what you want to say: but this I have wondered at, that you should deem injustice to be a part of virtue and of wisdom, and justice among their contraries.

Thrasymachus:: But I do deem it altogether so.

Socrates:: Your meaning, is now more determined, friend, and it is no longer easy for one to find what to say against it: for if, when you had set forth injustice as profitable, you had still allowed it to be vice, or ugly, as some others do, we should have had something to say, speaking according to the received opinions; but now it is plain you will call it beautiful and powerful, and all those other things you will attribute to it which we attribute to the just man, since you have dared to class it with virtue and wisdom.

Thrasymachus:: You conjecture, most true.

Socrates:: But, however, I must not grudge, to pursue our inquiry, so long as I imagine you speak as you think; for to me you plainly seem now, Thrasymachus, not to be in irony, but to speak what you think concerning the truth.

Thrasymachus:: What is the difference to you, whether I think so or not, if you do not confute my reasoning?

Socrates:: None at all. But endeavor, further, to answer me this likewise: Does a just man seem to you desirous to have more than another just man?

Thrasymachus:: By no means; for otherwise he should not be courteous and simple, as we now supposed him.

Socrates:: But what? will he not desire it in a just action?

Thrasymachus:: Not even in a just action.

Socrates:: But whether would he deem it proper to exceed the unjust man, and count it just, or would he not?

Thrasymachus:: He would, both count it just and deem it proper, but would not be able for it.

Socrates:: That, I do not ask; but whether a just man would neither deem it proper, nor incline to exceed a just man, but would deem it proper to exceed the unjust?

Thrasymachus:: This last, is what he would incline, to do.

Socrates:: But what would the unjust man do? Would he deem it proper to exceed the just man, even in a just action?

Thrasymachus:: Why not?—he who deems it proper to exceed all others.

Socrates:: Will not, then, the unjust man desire to exceed the unjust man likewise, and in an unjust action, and contend that he himself receive more than all others?

Thrasymachus:: Certainly.

Socrates:: Thus we say, then: The just man does not desire to exceed one like himself, but one unlike; but the unjust man desires to exceed both one like and one unlike himself.

Thrasymachus:: You have spoke, perfectly well.

Socrates:: But, the unjust man is both wise and good, but the just man is neither.

Thrasymachus:: This, too, is well said.

Socrates:: Is not then, the unjust man like the wise and the good, and the just man unlike?

Thrasymachus:: Must he not, be like them, being such an one as we have supposed, and he who is otherwise be unlike them?

Socrates:: Excellently. Each of them is indeed such as those he resembles.

Thrasymachus:: What else?

Socrates:: Be it so, Thrasymachus. Call you one musical, and another unmusical?

Thrasymachus:: I do.

Socrates:: Which of the two call you wise, and which unwise?

Thrasymachus:: I call the musical wise, and the unmusical unwise.

Socrates:: Is he not good in as much as he is wise, and ill in as much as he is unwise?

Thrasymachus:: Yes.

Socrates:: And what as to the physician? Is not the case the same?

Thrasymachus:: The same.

Socrates:: Do you imagine then, most excellent Thrasymachus, that any musician, in tuning a harp, wants to exceed, or deems proper to have more skill, than a man who is a musician, with reference to the intention or remission of the strings?

Thrasymachus:: I am not of that opinion.

Socrates:: But what say you of exceeding a man who is no musician?

Thrasymachus:: Of necessity, he will deem it proper to exceed him.

Socrates:: And what as to the physician? In presenting a regimen of meats or drinks, does he want to exceed another physician in medical cases?

Thrasymachus:: No indeed.

Socrates:: But to exceed one who is no physician?

Thrasymachus:: Yes.

Socrates:: And as to all science and ignorance, does any one appear to you intelligent who wants to grasp at, or do, or say more than another intelligent in the art, and not to do the same things, in the same affair, which one equally intelligent with himself does?

Thrasymachus:: Probably there is a necessity, it be so.

Socrates:: But what as to him who is ignorant? will not he want to exceed the intelligent and the ignorant both alike?

Thrasymachus:: Probably.

Socrates:: But the intelligent is wise?

Thrasymachus:: I say so.

Socrates:: And the wise is good?

Thrasymachus:: I say so.

Socrates:: But the good and the wise will not want to exceed one like himself, but the unlike and contrary?

Thrasymachus:: It seems so.

Socrates:: But the evil and the ignorant wants to exceed both one like himself and his opposite?

Thrasymachus:: It appears so.

Socrates:: Why then, Thrasymachus, the unjust desires to exceed both one unlike and one like himself. Do not you say so?

Thrasymachus:: I do.

Socrates:: But the just man will not desire to exceed one like himself, but one unlike?

Thrasymachus:: Yes.

Socrates:: The just man, then, resembles the wise and the good, and the unjust resembles the evil and the ignorant.

Thrasymachus:: It appears so.

Socrates:: But we acknowledged that each of them was such as that which they resembled.

Thrasymachus:: We acknowledged so, indeed.

Socrates:: The just man, then, has appeared to us to be good and wise, and the unjust to be ignorant and ill.

Thrasymachus, now, confessed all these things, not easily, as I now narrate them, but dragged and with difficulty, and prodigious sweat, it being now summer season; and I then saw, but never before, Thrasymachus blush. After we had acknowledged that justice was virtue and wisdom, and injustice was vice and ignorance:

Well, let this remain so. But we said, likewise, that injustice was powerful. Do not you remember, Thrasymachus?

Thrasymachus:: I remember. But what you now say does not please me, and I have somewhat to say concerning it, which I well know you would call declaiming, if I should advance it. Either, then, suffer me to say what I incline, or if you incline to ask, do it: and I shall answer you, "be it so," as to old women telling stories, and shall assent and dissent.

Socrates:: By no means, contrary to your own opinion.

Thrasymachus:: Just to please you, since you will not allow me to speak. But do you want any thing further?

Socrates:: Nothing, truly; but if you are to do thus, do: I shall ask.

Thrasymachus:: Ask then.

Socrates:: This, then, I ask, which I did just now (that we may in an orderly way see through our discourse): Of what kind is justice, compared with injustice; for it was surely said that injustice was more powerful and stronger than justice.

Thrasymachus:: It was so said, just now.

Socrates:: But if justice be both virtue and wisdom, it will easily, I imagine, appear to be likewise more powerful than injustice, since injustice is ignorance; of this, now, none can be ignorant. But I am willing, for my own part, Thrasymachus, to consider it not simply in this manner, but somehow thus: Might you not say that a state was unjust, and attempted to enslave other states unjustly, and did enslave them, and had many states in slavery under itself?

Thrasymachus:: Why not?: and the best state will chiefly do this, and such as is most completely unjust.

Socrates:: I understand, that this was your speech. But I consider this in it: Whether this state, which becomes more powerful than the other state, shall hold this power without justice, or must it of necessity be with justice?

Thrasymachus:: With justice, if indeed, as you now said, justice be wisdom; but if as I said, with injustice.

Socrates:: I am much delighted, Thrasymachus, that you do not merely assent and dissent, but that you answer so handsomely.

Thrasymachus:: I do it, to gratify you.

Socrates:: That is obliging in you. But gratify me in this, likewise, and tell me, do you imagine that a city, or camp, or robbers, or thieves, or any other community, such as jointly undertakes to do any thing unjustly, is able to effectuate any thing if they injure one another?

Thrasymachus:: No, indeed.

Socrates:: But what if they do not injure one another? will they not do better?

Thrasymachus:: Certainly.

Socrates:: For injustice, somehow, Thrasymachus, brings seditions, and hatreds, and fighting among them; but justice affords harmony and friendship. Does it not?

Thrasymachus:: Be it so, that I may not differ from you.

Socrates:: You are very obliging, most excellent Thrasymachus. But tell me this: If this be the work of injustice, wherever it is, to create hatred, will it not then, when happening among free men and slaves, make them hate one another, and grow seditious, and become impotent to do anything together in company?

Thrasymachus:: Certainly.

Socrates:: But what in the case of injustice between any two men? Will they not differ and hate, and become enemies to one another, and to just men?

Thrasymachus:: They will become so.

Socrates:: If, now, wonderful Thrasymachus, injustice be in one, whether does it lose its power, or will it no less retain it?

Thrasymachus:: Let it, no less retain it.

Socrates:: Does it not, then, appear to have such a power as this: That, wherever it is, whether in a city, or tribe, or camp, or wherever else, in the first place it renders it unable for action in itself, through seditions and differences, and, besides, makes it an enemy to itself and to every opponent, and to the just? Is it not thus?

Thrasymachus:: Certainly.

Socrates:: And when injustice is in one man, it will have, I imagine, all these effects which it is natural for it to produce. In the first place, it will render him unable for action, whilst he is in sedition and disagreement with himself; and, next, as he is an enemy both to himself and to the just. Is it not so?

Thrasymachus:: Yes.

Socrates:: But the Gods, friend, are likewise just.

Thrasymachus:: Let them be so.

Socrates:: The unjust man, then, Thrasymachus, shall be an enemy also to the Gods, and the just man a friend.

Thrasymachus:: Feast yourself, with the reasoning boldly; for I will not oppose you, that I may not render myself odious to these Gods.

Socrates:: Come then, and complete to me this feast, answering as you was doing just now: for the just already appear to be wiser, and better, and more powerful to act; but the unjust are not able to act any thing with one another. And what we said with reference to those who are unjust, that they are ever at any time able strenuously to act jointly together, this we spoke not altogether true, for they would not spare one another being thoroughly unjust; but it is plain that there was in them justice, which made them refrain from injuring one another and those of their party, and by this justice they performed what they did. And they rushed on unjust actions through injustice, being half wicked, since those who are completely wicked and perfectly unjust are likewise perfectly unable to act. This, then, I understand, is the case with reference to these matters, and not as you were establishing at first. But whether the just live better than the unjust, and are more happy (which we proposed to consider afterwards), is now to be considered: and they appear to do so even at present, as I imagine, at least from what has been said. Let us, however, consider it further; for the discourse is not about an accidental thing, but about this: in what manner we ought to live.

Thrasymachus:: Consider, then.

Socrates:: I am considering. And tell me, does there any thing seem to you to be the work of a horse?

Thrasymachus:: Yes.

Socrates:: Would you not call that the work of a horse, or of any one else, which one does with him only, or in the best manner?

Thrasymachus:: I do not understand.

Socrates:: Thus, then: Do you see with any thing else but the eyes?

Thrasymachus:: No, indeed.

Socrates:: What now, could you hear with any thing but the ears?

Thrasymachus:: By no means.

Socrates:: Do we not justly, then, call these things the works of these?

Thrasymachus:: Certainly.

Socrates:: But what, could not you with a sword, a knife, and many other things, cut off a branch of a vine?

Thrasymachus:: Why not.

Socrates:: But with nothing, at least, I imagine, so handsomely as with a pruning hook, which is made for that purpose: Shall we not then settle this to be its work?

Thrasymachus:: We shall then settle it.

Socrates:: I imagine, then, you may now understand better what I was asking, when I enquired whether the work of each thing were not that which it alone performs, or performs in the best manner.

Thrasymachus:: I understand you, and this does seem to me to be the work of each thing.

Socrates:: Be it so. And is there not likewise a virtue belonging to every thing to which there is a certain work assigned? But let us go over, again, the same things: we say there is a work belonging to the eyes?

Thrasymachus:: There is.

Socrates:: And is there not a virtue also belonging to the eyes?

Thrasymachus:: A virtue also.

Socrates:: Well then, was there any work of the ears?

Thrasymachus:: Yes.

Socrates:: Is there not then a virtue also?

Thrasymachus:: A virtue also.

Socrates:: And what as to all other things? Is it not thus?

Thrasymachus:: It is.

Socrates:: But come, could the eyes ever handsomely perform their work, not having their own proper virtue—but, instead of virtue, having vice?

Thrasymachus:: How could they?, for you probably mean their having blindness instead of sight.

Socrates:: Whatever, be their virtue; for I do not ask this, but whether it be with their own proper virtue they handsomely perform their own proper work, whatever things are performed, and by their vice unhandsomely?

Thrasymachus:: In this at least, you say true.

Socrates:: And will not the ears likewise, when deprived of their virtue, perform their work ill?

Thrasymachus:: Certainly.

Socrates:: And do we settle all other things according to the same reasoning?

Thrasymachus:: So I imagine.

Socrates:: Come then, after these things, consider this: Is there belonging to the soul a certain work which with no one other being whatever you can perform? such as this—to care for, to govern, to consult, and all such things; is there any other than the soul to whom we may justly ascribe them and say they properly belong to it?

Thrasymachus:: No other.

Socrates:: But what of this—to live: shall we say it is the work of the soul?

Thrasymachus:: Most especially.

Socrates:: Do not we say, then, that there is some virtue of the soul likewise?

Thrasymachus:: We say so.

Socrates:: And shall, then, the soul ever at all, Thrasymachus! perform her works handsomely whilst deprived of her proper virtue, or is this impossible?

Thrasymachus:: It is impossible.

Socrates:: Of necessity, then, an ill soul must in a bad manner govern and take care of things, and a good soul perform all these things well.

Thrasymachus:: Of necessity.

Socrates:: But did not we agree that justice was the virtue of the soul, and injustice its vice?

Thrasymachus:: We did agree.

Socrates:: Why then, the just soul and the just man shall live well, and the unjust ill.

Thrasymachus:: It appears so, according to your reasoning.

Socrates:: But surely he who lives well is both blessed and happy, and he who does not is the opposite.

Thrasymachus:: Why not?

Socrates:: The just, then, is happy, and the unjust miserable.

Thrasymachus:: Let them be so.

Socrates:: But it is not advantageous to be miserable, but to be happy.

Thrasymachus:: Certainly.

Socrates:: At no time, then, blest Thrasymachus, is injustice more advantageous than justice.

Thrasymachus:: Thus now, Socrates, have you been feasted in Diana’s festival.

Socrates:: By you, truly I have, Thrasymachus, since you are grown meek and have ceased to be troublesome. I have not feasted handsomely, owing to myself, and not to you: but as voracious guests, snatching still what is bringing before them, taste of it before they have sufficiently enjoyed what went before, so I, as I imagine, before I have found what we first enquired into, what justice is, have left this, hurrying to enquire concerning it whether it be vice and ignorance, or wisdom and virtue: And a discourse afterwards falling in, that injustice was more profitable than justice, I could not refrain from coming to this from the other, so that from the dialogue I have now come to know nothing: for whilst I do not know what justice is, I shall hardly know whether it be some virtue or not, and whether he who possesses it be unhappy or happy.

THE END OF THE FIRST BOOK

## THE SECOND BOOK

Socrates:: When I had said these things, I imagined that the debate was over; but this it seems was only the introduction. For Glauco, as he is on all occasions most courageous, so truly at that time did not approve of Thrasymachus in giving up the debate, but said:

Glaucon:: Socrates, desire you to seem to have persuaded us, or to have persuaded us in reality, that in every respect it is better to be just than unjust?

Socrates:: I would choose, to do it in reality, if it depended on me.

Glaucon:: You do not, then, do what you desire. For, tell me, does there appear to you any good of this kind, such as we would choose to have, not regarding the consequences, but embracing it for its own sake—as joy, and such pleasures as are harmless, though nothing else arises afterwards from these pleasures than that the possession gives us delight.

Socrates:: There seems to me, to be something of this kind.

Glaucon:: But what? is there something, too, which we both love for its own sake, and also for what arises from it?—as wisdom, sight, and health: for we somehow embrace these things on both accounts.

Socrates:: Yes.

Glaucon:: But do you perceive, a third species of good, among which is bodily labor, to be healed when sick, to practice physic, or other lucrative employment; for we say those things are troublesome but that they profit us and we should not choose these things for their own sake, but on account of the rewards and those other advantages which arise from them.

Socrates:: There is then, indeed, likewise this third kind.

Glaucon:: But what now? in which of these, do you place justice?

Socrates:: I imagine, in the most handsome; which, both on its own account, and account of what arises from it, is desired by the man who is in pursuit of happiness.

Glaucon:: It does not, however, seem so to the generality, but to be of the troublesome kind, which is pursued for the sake of glory, and on account of rewards and honors, but, on its own account, is to be shunned as being difficult.

Socrates:: I know, that it seems so; and it was in this view that Thrasymachus a while ago despised it and commended injustice; but, it seems, I am one of those who are dull in learning.

Glaucon:: Come then, hear me likewise, if this be agreeable to you: for Thrasymachus seems to me to have been charmed by you, like an adder, sooner than was proper; but with respect to myself, the proof has not come out hitherto to my satisfaction in reference to neither of the two, for I desire to hear what each is, and what power it has, by itself, when in the soul, letting alone the rewards and the consequences arising from them. I will proceed, therefore, in this manner, if it seem proper to you: I will renew the speech of Thrasymachus, and, first of all, I will tell you what they say justice is and whence it arises; and, secondly, that all those who pursue it, pursue it unwillingly as necessary, but not as good; thirdly, that they do this reasonably, for, as they say, the life of an unjust man is much better than that of the just, although, for my own part, to me, Socrates, it does not yet appear so; I am, however, in doubt, having my ears stunned in hearing Thrasymachus and innumerable others. But I have never hitherto heard from any one, as I incline, a discourse concerning justice as being better than injustice: I want, then, to hear it commended as it is in itself, and I most especially imagine I shall hear this from you: wherefore, pulling oppositely, I shall speak in commendation of an unjust life, and, in speaking, shall show you in what manner I want to hear you condemn injustice and commend justice. But see if what I say be agreeable to you.

Socrates:: Extremely so; for what would any man of understanding delight more to speak and to hear of frequently?

Glaucon:: You speak most handsomely. And hear what I said I was first to speak of: what justice is, and whence it arises; for they say that, according to nature, to do injustice is good, but to suffer injustice is bad, but that the ‘evil which arises from suffering injustice is greater than the good which arises from doing it. So that after men had done one another injustice, and likewise suffered it, and had experienced both, it seemed proper to those who were not able to shun the one and choose the other to agree among themselves neither to do injustice nor to be injured, and that hence laws begun to be established, and their compacts; and that which was enjoined by law they denominated lawful and just, and that this is the origin and essence of justice. Being in the middle between what is best, when he who does injustice is not punished; and of what is worst, when the injured person is unable to punish; and that justice, being thus in the middle of both these, is desired, not as good, but is held in honor from an imbecility in doing injustice. For the man who had ability to do so would never, if really a man, agree with any one either to injure or to be injured, for otherwise he were mad. This, then, Socrates, and of such a kind as this, is the nature of justice, and this, as they say, is its origin. And we shall best perceive that these who pursue it, pursue it unwillingly and from an impotence to injure, if we imagine in our mind such a case as this: Let us give liberty to each of them, both to the just and to the unjust, to do whatever they incline, and then let us follow them, observing how their inclination will lead each of them. We should then find the just man, with full inclination, going the same way with the unjust, through a desire of having more than others. This, every nature is made to pursue as good, but by law is forcibly led to an equality. And the liberty which I speak of may be chiefly of this kind, if they happened to have such a power as they say happened once to Gyges, the progenitor of Lydus: for they say that he was the hired shepherd of the then governor of Lydia, and that a prodigious rain and earthquake happening, part of the earth was rent, and an opening made in the place where he pastured his flocks; that when he beheld, and wondered, he went down, and saw many other wonders, handed down to us in way of tradition, and a brazen horse likewise, hollow and with doors: and on looking in he saw within, a dead body larger in appearance, than that of a man, which had nothing else upon it but a gold ring on its hand, which ring he took off and came up again. That when there was a convention of the shepherds, as usual, for reporting to the king what related to their flocks, he also came, having the ring. And whilst he sate with the others, he happened to turn the stone of the ring to the inner part of his hand, and when this was done, he became invisible to those who sate by, and they talked of him as absent. That he wondered, and again handling his ring, turned the stone outward; and on this became visible: And that having observed this, he made trial of the ring, whether it had this power, and that it happened that on turning the stone inward he became invisible, and on turning it outward he became visible. That perceiving this, he instantly got himself made one of the embassy to the king, and that on his arrival he debauched his wife, and, with her, assaulting the king, killed him and possessed the kingdom. If, now, there were two such rings, and the just man had the one, and the unjust the other, none, it seems, would be so adamantine as to persevere in justice, and dare to refrain from the things of others, and not to touch them, whilst it was in his power to take, even from the Forum, without fear, whatever he pleased, to enter into houses and embrace any one he pleased, to kill and to loose from chains whom he pleased, and to do all other things with the same power as a God among men. Acting in this manner he is no way different from the other, but both of them go the same road. This, now, one may say, is a strong proof that no one is just from choice, but by constraint, as it is not a good merely in itself, since every one does injustice, wherever he imagines he is able to do it; for every man imagines that injustice is, to the particular person, more profitable than justice; and he imagines justly, according to this way of reasoning: since if any one with such a liberty would never do any injustice, nor touch the things of others, he would be deemed by men of sense to be the most wretched and most void of understanding; yet would they commend him before one another, imposing on each other, from a fear of being injured. Thus much, then, concerning these things. But with reference to the difference of their lives whom we speak of, we shall be able to discern aright, if we set apart by themselves the most just man and the most unjust, and not otherwise. And, now, what is this separation? Let us take from the unjust man nothing of injustice, nor of justice from the just man, but let us make each of them perfect in his own profession. And, first, as to the unjust man, let him act as the able artist: as a complete pilot or physician he comprehends the possible and the impossible in the art; the one he attempts, and the other he lets alone, and if he fail in any thing, he is able to rectify it. So, in like manner, the unjust man, attempting pieces of injustice in a dexterous manner, let him be concealed, if he want to be exceedingly unjust; but if he be caught, let him be deemed worthless; for the most complete injustice is to seem just, not being so. We must give, then, to the completely unjust the most complete injustice, and not take from him, but allow him, whilst doing the greatest injustice, to procure to himself the highest reputation for justice; and if in any thing he fail, let him be able to rectify it: And let him be able to speak so as to persuade, if any thing of his injustice be spread abroad: Let him be able to do by force, what requires force, through his courage and strength, and by means of his friends and his wealth. And having set him up such an one as this, let us place the just man beside him, in our reasoning, a simple and ingenuous man, desiring, according to Aeschylus, not the appearance, but the reality of goodness. Let us take from him the appearance of goodness; for if he shall appear to be just, he shall have honors and rewards, and thus it may be uncertain whether he be such for the sake of justice, or on account of the rewards and honors. Let him be striped of everything but justice, and be made quite contrary to the other. Whilst he does no injustice, let him have the reputation of doing the greatest, that he may be tortured for justice, not yielding to reproach, and such things as arise from it, but may be immoveable 'till death—appearing, indeed, to be unjust' through life, yet being really just, that so, both of them arriving at the utmost pitch, the one of justice, and the other of injustice, we may judge which of them is the happier.

Socrates:: Strange! friend Glauco, how strenuously you clean up each of the men as a statue which is to be judged of.

Glaucon:: As much, as I am able. Whilst, then, they continue to be such, there will not, as I imagine, be any further difficulty to observe what kind of life remains to each of them. It must, therefore, be told. And, if possibly it should be told with greater rusticity, imagine not, Socrates, that it is I who tell it, but those who commend injustice preferably to justice; and they will say these things: That the just man, being of this disposition, will be scourged, tormented, fettered, have his eyes burnt, and, lastly, having suffered all manner of evils, will be crucified; and he shall know that he should not desire the reality, but the appearance of justice: And that it is much more proper to pronounce that saying of Aeschylus concerning the unjust man: For they will in reality say that the unjust man, as being in pursuit of what is real, and living not according to the opinion of men, wants not to have the appearance, but the reality, of injustice;

> Reaping the hollow furrow of his mind,
> Whence all his glorious councils blossom forth.

In the first place, he holds the magistracy in the state, being thought to be just; next, he marries wherever he inclines, and matches his children with whom he pleases, he joins in partnership and company with whom he inclines, and, besides all this, he will succeed in all his projects for gain, as he does not scruple to do injustice. When, then, he engages in competitions, he will, both in private and in public, surpass and exceed his adversaries, and by this means he will be rich, and serve his friends and hurt his enemies; and he will amply and magnificently render sacrifices and offerings to the Gods, and will honor the Gods, and such men as he chooses, much better than the just man: from whence they reckon that it is likely he will be more beloved of the Gods than the just man. Thus they say, Socrates, that both with Gods and men there is a better life prepared for the unjust man than for the just.

Socrates:: When Glauco had said these things, I had a design to say something in reply. But his brother Adimantus said:

Adeimantus:: Socrates, you do not imagine there is yet enough said on the argument.

Socrates:: What further then?

Adeimantus:: That has not yet been spoken, which ought most especially to have been mentioned.

Socrates:: Why, then, the proverb is, A brother is help at hand: so do you assist, if he has failed in any thing—though what has been said by him is sufficient to throw me down and make me unable to succor justice.

Adeimantus:: You say nothing. But hear this further, for we must go through all the arguments opposite to what he has said, which commend justice and condemn injustice, that what Glauco seems to me to intend may be more manifest. Now, parents surely tell and exhort their sons, as do all those who have the care of any, that it is necessary to be just, not commending justice in itself, but the honors arising from it; that whilst a man is reputed to be just, he may get by this reputation magistracies, and marriages, and whatever Glauco just now enumerated as the consequence of being reputed just. But these men carry this matter of reputation somewhat further; for, throwing in the approbation of the Gods, they have unspeakable blessings to enumerate to holy persons, which, they say, the Gods bestow. As the generous Hesiod and Homer say; the one, that the Gods cause the oaks to produce to just men

Acorns at top, and in the middle bees;
Their woolly sheep are laden with their fleece;

and a great many other good things of the same nature. In like manner the other;

The blameless king, who holds a godlike name,
Barley and wheat his black mold brings him forth;
With fruit his trees are laden; and his flocks
Bring forth with ease; the sea affords him fish.

But Musaeus and his son tell us that the Gods give just men more splendid blessings than these; for, carrying them, in his poem, into the other world, and setting them down in company with holy men at a feast prepared for them, they crown them, and make them pass the whole of their time in drinking, deeming eternal inebriation the finest reward of virtue. But some carry the rewards from the Gods still further; for they say that the offspring of the holy and the faithful, and their children's children, still remain. With these things, and such as these, they commend justice. But the unholy and unjust they bury in the other world, in a kind of mud, and compel them to carry water in a sieve, and making them, even whilst alive, to live in infamy. Whatever punishments were assigned by Glauco to the just, whilst they were reputed unjust, these they assign to the unjust, but no others they mention. This, now, is the way in which they commend and discommend them severally.

But besides this, Socrates, consider another kind of reasoning concerning justice and injustice, mentioned both privately and by the poets; for all of them, with one mouth, celebrate temperance and justice as indeed excellent, but yet difficult and laborious, and intemperance and injustice as indeed pleasant and easy to attain, but by opinion only and by law abominable. And they say, that for the most part, unjust actions are more profitable than just. And they are gladly willing, both in public and private, to pay honor to wicked rich men, and such as have power of any kind, and to pronounce them happy, but to contemn and overlook those who are anyhow weak and poor, even whilst they acknowledge them to be better than the others. But of all these speeches, the most marvelous are those concerning the Gods and virtue: as if even the Gods gave to many good men misfortunes and an evil life, and to contrary persons a contrary fate. And mountebanks and prophets, frequenting the gates of the rich, persuade them that they have a power, granted them by the Gods, of expiating by sacrifices and songs, with pleasures and with feastings, if any injustice has been committed by any one or his forefathers; and if he want to blast any enemy, at a small expense he shall injure the just, in the same manner as the unjust, by certain blandishments and bonds, as they say, persuading the Gods to succor them. And to all these discourses they bring the poets, as witnesses, who, mentioning the proneness to vice, say:

How vice at once and easily is got;
The way is smooth, and very nigh it dwells;
Sweat, before virtue, by the Gods is placed.

and a certain long and steep way. Others make Homer witness how the Gods are prevailed on by men, because he says;

——The Gods themselves are turn’d
With sacrifices and appeasing vows;
Libation and with fat, men them persuade,
Praying when one transgresses and offends.

They show, likewise, a great many books of Musaeus and Orpheus, the offspring, as they say, of the moon and of the Muses, according to which they perform their sacred rites, persuading not only private persons, but states likewise, that there are absolutions and purgations from iniquities, by means of sacrifices and sportive pleasures, and this for the benefit both of the living and of the dead: these they call the Mysteries, which absolve us from evils there, but that dreadful things await such who do not offer sacrifice.

All these, and so many things of the kind, friend Socrates, being said of virtue and vice, and their reward both with men and Gods, what do we imagine the souls of our youth do when they hear them; such of them as are of good birth, and able as it were to rush into all these things which are said, and from all to deliberate in what sort of character, and in what sort of road one may best pass through life? He might likely say to himself, according to that of Pindar;

Whether shall I the lofty wall
Of justice try to scale;
Or, hedged within the winding maze
Of vice, still shall I dwell?

For, according to what is said, though I be just, if I be not reputed so, there shall be no profit, but manifest troubles and punishments; but the unjust man, who procures to himself the character of justice, is said to have a divine life. Since, then, the appearance surpasses the reality, as wise men demonstrate to me, and is the primary part of happiness, ought I not to turn wholly to it, and to draw round myself as a covering and picture the image of virtue, but to draw after me the cunning and versatile fox of the most wise Archilochus? But, says one, it is not easy, being wicked, always to be concealed. Neither is any thing else easy (will we say) which is great. But, however, if we would be happy, thither let us go, where the steps of the reasonings lead us. For, in order to be concealed, we will make conjurations and associations together; and there are masters of persuasion, who teach a popular and political wisdom, by which means, whilst partly by persuasion and partly by force, we seize more than our due, we shall not be punished. But, surely, to be concealed from the Gods, or to overpower them, is impossible.

If then they be not at all, or care not about human affairs, we need not have any concern about being concealed. But if they really are, and care for us, we neither know nor have heard of them otherwise than from traditions, and from the poets who write their genealogies; and these very persons tell us that they are to be moved and persuaded by sacrifices and appeasing vows and offerings—both of which we are to believe, or neither. If, then, we are to believe both, we may do injustice, and of the fruits of our injustice offer sacrifice; if we be just, we shall indeed be unpunished by the Gods, but then we shall not have the gains of injustice: but if we be unjust, we shall make gain; and after we have transgressed and offended, we shall appease them by offerings, and come off unpunished: but we shall be punished in the other world for our unjust doings here, either we ourselves, or our children's children. But, friend, will the reasoner say, the Mysteries can do much; the Gods are exorable, as say the mightiest states, and the children of the Gods, the poets, who are also their prophets, who declare that these things are so.

For what reason, then, should we still prefer justice before the greatest injustice? which if we shall attain to, with any deceiving appearance, we shall fare according to our mind, both with reference to Gods and men, both living and dying, according to the speech now mentioned of many and excellent men. From all which has been said, by what means shall one incline to honor justice who has any ability of fortune or of wealth, of body, or of birth, and not laugh when he hears it commended? So that, though one were able even to show what we have said to be false, and fully understood that justice is better, he has, however, great allowance surely to give, and is not angry at the unjust; for he knows, that unless one from a divine temper abhors to do injustice, or from acquired knowledge abstain from it, of others no one is willingly just, but either through cowardice, old age, or some other weakness condemns the doing injustice, when unable to do it. That it is so, is plain; for the first of these who gets it in his power is the first to do injustice, as far as he is able.

And the reason of all this is no other than that from whence all this discourse proceeded, Socrates, because, rare friend, of you all, as many as call yourselves the commenders of justice, beginning from those ancient heroes of whom any accounts are left to the men of the present time, no one has at any time condemned injustice, nor commended justice, otherwise than regarding the reputations, honors, and rewards arising from them: but no one has hitherto sufficiently examined, neither in poetry nor in prose-discourse, either of them in itself, and subsisting by its own power in the soul of him who has it, and concealed from both Gods and men, how that the one is the greatest of all the evils which the soul has within it, and justice the greatest good. For if it had thus from the beginning been spoken of by you all, and you had so persuaded us from our youth, we would not need to watch over our neighbor lest he should do us injustice, but every man would have been the best guardian over himself, afraid lest in doing injustice he should dwell with the greatest evil.

These things, now, Socrates, and probably much more than these, Thrasymachus or some other might say of justice and injustice, inverting their power, disagreeably as I imagine, for my own part. But I (for I want to conceal nothing from you), being desirous to hear you on the opposite side, speak the best I am able, pulling the contrary way. Do not, therefore, only show us in your reasoning that justice is better than injustice, but in what manner each of them by itself, affecting the mind, is, the one evil, and the other good. And take away all opinions, as Glauco likewise enjoined; for if you do not take away the false opinions on both sides, and add the true ones, we will say you do not commend justice, but the appearance, nor condemn being unjust, but the appearance; and that you give it as your advice to be unjust when concealed; and that you assent to Thrasymachus, that justice is a foreign good, the profit of the more powerful; and that injustice is the profit and advantage of one's self, but unprofitable to the inferior. Wherefore, now, after that you have acknowledged that justice is among the greatest goods, such as are worthy to be possessed for what arises from them, and much more in themselves, and for their own sake, such as, sight, hearing, wisdom, health, and such other goods as are real in their own nature, and not merely in opinion, in the same manner commend justice, how in itself it profits the owner, and injustice hurts him. And leave to others to commend the rewards and opinions; for I could bear with others in this way commending justice, and condemning injustice, celebrating and reviling their opinions and rewards; but not with you (unless you desire me), because you have passed the whole of life considering nothing else but this. Show us, then, in your discourse, not only that justice is better than injustice, but in what manner each of them by itself affecting the owner, whether he be concealed or not concealed from Gods and men, is, the one good, and the other evil.

Socrates:: On hearing these things, as I always indeed liked the disposition of Glauco and Adimantus, so, at that time, I was perfectly delighted, and said: It was not ill said concerning you, sons of that worthy man, by the lover of Glauco, who wrote the beginning of the Elegies, when, celebrating your behavior at the battle of Megara, he said:

> Aristo’s sons, of an illustrious man
> The race divine——

This, friends, seems to be well said; for you are truly affected in a divine manner, if you are not persuaded that injustice is better than justice, and yet are able to speak thus for it. And to me you seem truly not to be persuaded; and I reason from the whole of your other behavior, since, according to your present speeches at least, I should distrust you. But the more I can trust you, the more I am in doubt what argument I shall use; for I can neither think of any assistance I have to give (for I seem to be unable, and my mark is, that you do not accept of what I said to Thrasymachus, when I imagined I showed that justice was better than injustice); nor yet can I think of giving no assistance, for I am afraid lest it be an unholy thing to desert justice when I am present and see it accused, and not assist it whilst I breathe and amiable to speak. It is best then to succor it in such a manner as I can.

Hereupon Glauco and the rest entreated me by all means to assist, and not give over the discourse, but to search thoroughly what each of them is, and which way the truth lies as to their respective advantage. I, then, said what appeared to me: That the inquiry we were attempting, was not contemptible, but was that of one who was sharp-sighted, as I imagined. Since, then, we are not very expert, it seems proper to make the inquiry concerning this matter in such a manner as if it were ordered those who are not very sharp-sighted to read small letters at a distance, and one should afterwards understand that the same letters are greater somewhere else, and in a larger field: it would appear eligible, I imagine, first to read these, and thus come to consider the lesser if they happen to be the same.

Adeimantus:: Perfectly right. But what of this kind, Socrates, do you perceive in the inquiry concerning justice?

Socrates:: I shall tell you. Do not we say there is justice in one man, and there is likewise justice in a whole state?

Adeimantus:: It is certainly so.

Socrates:: Is not a state a greater object than one man?

Adeimantus:: Greater.

Socrates:: It is likely, then, that justice should be greater in what is greater, and be more easy to be understood? We shall first, then, if you incline, inquire what it is in states, and then, after the same manner, we shall consider it in each individual, contemplating the similitude of the greater in the idea of the lesser.

Adeimantus:: You seem to me, to say right.

Socrates:: If then, we contemplate in our discourse a state existing, shall we not perceive its justice and injustice existing?

Adeimantus:: Perhaps.

Socrates:: And, is there not ground to hope, if this exists, that we shall more easily find what we seek for?

Adeimantus:: Most certainly.

Socrates:: It seems, then, we ought to attempt to succeed, for I imagine this to be a work of no small importance. Consider then.

Adeimantus:: We are considering, and do you no otherwise.

Socrates:: A city, then, as I imagine, takes its rise from this, that none of us happens to be self-sufficient, but is indigent of many things; or do you imagine there is any other origin of building a city?

Adeimantus:: None other.

Socrates:: Thus then, one taking in one person for one indigence, and another for another, as they stand in need of many things, they assemble into one habitation many companions and assistants, and to this joint-habitation we give the name city. Do not we?

Adeimantus:: Certainly.

Socrates:: And they mutually exchange with one another, each judging that if he either gives or takes in exchange, it will be for his advantage.

Adeimantus:: Certainly.

Socrates:: Come then, let us in our discourse make a city from the beginning. And, it seems, our indigence has made it.

Adeimantus:: Why not?

Socrates:: But the first and the greatest of wants is the preparation of food, in order to subsist and live.

Adeimantus:: By all means.

Socrates:: The second is of lodging, the third, of clothing and such like.

Adeimantus:: It is so.

Socrates:: But come, how shall the city be able to make so great a provision? Shall not one be a husbandman, another a mason, some other a weaver? or shall we add to them a shoemaker, or some other of those who minister to the necessaries of the body?

Adeimantus:: Certainly.

Socrates:: So that the most indigent city might consist of four or five men?

Adeimantus:: It seems so.

Socrates:: But what now? must each of those do his work for them all in common? as the husbandman, being one, shall he prepare food for four, and consume quadruple time and labor in preparing food, and sharing it with others; or, neglecting them, shall he for himself alone make the fourth part of this food, in the fourth part of the time; and, of the other three parts of time, shall he employ one in the preparation of a house, the other in that of clothing, the other of shoes, and not give himself trouble in sharing with others, but do his own affairs by himself?

Adeimantus:: And probably, Socrates, this way is more easy than the other.

Socrates:: No, certainly, it were absurd; for whilst you are speaking, I consider that we are born not perfectly resembling one another, but differing in disposition, one being fitted for doing one thing, and another for doing another. Does it not seem so to you?

Adeimantus:: It does.

Socrates:: But what now? Whether will one do better if, being one, he works in many arts or in one?

Adeimantus:: When in one.

Socrates:: But this, I imagine, is also plain, that if one miss the season of any work, it is ruined.

Adeimantus:: That is plain.

Socrates:: For, I imagine, the work will not wait upon the leisure of the workman, but, of necessity, the workman must attend close upon the work, and not in way of a by-job.

Adeimantus:: Of necessity.

Socrates:: And hence it appears, that more will be done, and better and with greater ease, when every one does but one thing, according to their genius, and in proper season, and freed from other things.

Adeimantus:: Most certainly.

Socrates:: But we need certainly, Adimantus, more citizens than four for those provisions we mentioned. For the husbandman, it would seem, will not make a plough for himself, if it is to be handsome, nor yet a spade, nor other instruments of agriculture; as little will the mason, for he likewise needs many things; and in the same way the weaver and the shoemaker likewise. Is it not so?

Adeimantus:: True.

Socrates:: Joiners, then, and smiths, and other such workmen being admitted into our little city, make it throng.

Adeimantus:: Certainly.

Socrates:: But it would be no very great matter neither, if we did not give them neatherds likewise, and shepherds, and those other herdsmen, in order that both the husbandmen may have oxen for ploughing, and that the masons, with the help of the husbandmen, may use the cattle for their carriages, and that the weavers, likewise, and the shoemakers may have hides and wool.

Adeimantus:: Nor yet, would it be a very small city, having all these.

Socrates:: But, it is almost impossible to set down such a city in any such place as that it shall need no importations.

Adeimantus:: It is impossible.

Socrates:: It shall then certainly want others still who may import from another state what it needs.

Adeimantus:: It shall want them.

Socrates:: And surely this service would be empty if it carry out nothing which these want from whom they import what they need themselves. It goes out empty in such a case, does it not?

Adeimantus:: To me it seems so.

Socrates:: But the city ought not only to make what is sufficient for itself, but such things, and so much also, as may answer for those things they need.

Adeimantus:: It ought.

Socrates:: Our city, then, certainly wants a great many more husbandmen and other workmen?

Adeimantus:: A great many more.

Socrates:: And other servants besides, to import and export the several things: and these are merchants, are they not?

Adeimantus:: Yes.

Socrates:: We shall then want merchants likewise?

Adeimantus:: Yes, indeed.

Socrates:: And if the merchandise is by sea, it will want many others, such as are skilful in sea affairs.

Adeimantus:: Many others, truly.

Socrates:: But what as to the city within itself? How will they exchange with one another the things which they have each of them worked, and for the sake of which, making a community, they have built a city?

Adeimantus:: It is plain, in selling and buying.

Socrates:: Hence we must have a mercat-place, and money, as a symbol, for the sake of exchange.

Adeimantus:: Certainly.

Socrates:: If now the husbandman, or any other workman, bring any of his work to the mercat, but come not at the same time with those who want to make exchange with him, must he not be set idle from his work, sitting in the mercat?

Adeimantus:: By no means. But there are some who, observing this, set themselves to this service; and in well-regulated cities they are mostly such as are weakest in their body, and unfit to do any other work. There they are to attend about the mercat, to give money in exchange for such things as any may want to sell, and things in exchange for money to such as want to buy.

Socrates:: This indigence, procures our city a race of shopkeepers; for do not we call shop-keepers those who, fixed in the mercat, serve both in selling and buying, but such as travel to other cities we call merchants?

Adeimantus:: Certainly.

Socrates:: There are still, as I imagine, certain other ministers who, though unfit to serve the public in things which require understanding, have yet strength of body sufficient for labor, who, selling the use of their strength, and calling the reward of it hire, are called, as I imagine, hirelings: are they not?

Adeimantus:: Yes, indeed.

Socrates:: Hirelings, then, are, it seems, the complement of the city?

Adeimantus:: It seems so.

Socrates:: Has our city now, Adimantus, already so increased upon us as to be complete?

Adeimantus:: Perhaps.

Socrates:: Where, now, at all, should justice and injustice be in it? and in which of the things that we have considered does it appear to exist?

Adeimantus:: I do not know, Socrates, if it be not in a certain use, somehow, of these things with one another.

Socrates:: Perhaps, you say right. But we must consider it, and not weary. First, then, let us consider after what manner those who are thus procured shall be supported. Is it any other way than by making bread and wine, and cloths and shoes, and building houses? In summer, indeed, they will work for the most part without cloths and shoes, and in winter they will be sufficiently furnished with cloths and shoes. They will be nourished, partly with barley, making meal of it, and partly with wheat, making loaves, boiling part, and toasting part, putting fine loaves and cakes over a fire of stubble, or over dried leaves, and resting themselves on couches strawed with smilax and myrtle leaves, they and their children will feast, drinking wine, and crowned, and singing to the Gods, they will pleasantly live together, begetting children not beyond their substance, guarding against poverty or war.

Glauco, replying, says;

Glaucon:: You make the men to feast, as it appears, without meats.

Socrates:: You say true; for I forget that they shall have meats likewise. They shall have salt and olives and cheese, and they shall boil bulbous roots and herbs of the field; and we set before them deserts of figs and vetches and beans; and they will toast at the fire myrtle berries and the berries of the beech-tree, drinking in moderation. And thus passing their life in peace and health, and dying, as is likely, in old age, they will leave to their children another such life.

Glaucon:: If you had been making, Socrates, a city of hogs, what else would you have fed them with but with these things?

Socrates:: But how should we do, Glauco?

Glaucon:: What is usually done. They must, as I imagine, have their beds and tables, and meats and deserts, as we now have, if they are not to be miserable.

Socrates:: Be it so: I understand you. We consider, it seems, not only how a city may exist, but how a luxurious city: and perhaps it is not amiss; for in considering such an one we may probably see how justice and injustice have their origin in cities. But the true city seems to me to be such an one as we have described, like one who is healthy; but if you incline that we likewise consider a city that is corpulent, nothing hinders it. For these things will not, it seems, please some, nor this sort of life satisfy them; but there shall be beds and tables and all other furniture, seasonings, ointments, and perfumes, mistresses, and confections: and various kinds of all these. And we must no longer consider as alone necessary what we mentioned at the first, houses and cloths and shoes, but painting, too, and all the curious arts must be set a-going, and carving, and gold, and ivory; and all these things must be got, must they not?

Glaucon:: Yes.

Socrates:: Must not the city, then, be larger? For that healthy one is no longer sufficient, but is already full of luxury, and of a crowd of such as are no way necessary to cities; such as-all kinds of sportsmen, and the imitative artists, many of them imitating in figures, and colors; and others in music; poets, too, and their ministers, rhapsodists, actors, dancers, undertakers, workmen of all sorts of instruments, and what has reference to female ornaments, as well as other things. We shall need likewise many more servants. Do not you think they will need pedagogues, and nurses, and tutors, hair-dressers, barbers, victualer too, and cooks? And further still, we shall want swine-herds likewise; of these there were none in the other city (for there needed not), but in this we shall want these, and many other sorts of herds likewise, if any eats the several animals, shall we not?

Glaucon:: Why not?

Socrates:: Shall we not, then, in this manner of life be much more in need of physicians than formerly?

Glaucon:: Much more.

Socrates:: And the country, which was then sufficient to support the inhabitants, will, instead of being sufficient, become too little; or how shall we say?

Glaucon:: In this way.

Socrates:: Must we not then encroach upon the neighboring country, if we want to have sufficient for plough and pasture, and they in like manner on us, if they likewise suffer themselves to accumulate wealth to infinity, going beyond the boundary of necessaries?

Glaucon:: There is great necessity for it, Socrates.

Socrates:: Shall we afterwards fight, Glauco, or how shall we do?

Glaucon:: We shall certainly.

Socrates:: But we say nothing, whether war does any evil or any good, but this much only, that we have found the origin of war, from whence most especially arise the greatest mischiefs to states, both private and public.

Glaucon:: Yes, indeed.

Socrates:: We shall need then, friend, still a larger city, not for a small, but for a large army, who in going out may fight with those who assault them for their whole substance, and every thing we have now mentioned.

Glaucon:: What, are not these sufficient to fight?

Socrates:: No, if you, at least, and all of us, have rightly agreed when we formed our city: and we agreed, if you remember, that it was impossible for one to perform many arts handsomely.

Glaucon:: You say true.

Socrates:: What then, as to that contest of war; does it not appear to require art?

Glaucon:: Very much.

Socrates:: Ought we then to take more care of the art of shoe-making than of the art of making war?

Glaucon:: By no means.

Socrates:: But we charged the shoemaker neither to undertake, at the same time, to be a husbandman, nor a weaver, nor a mason, but a shoemaker, that the work of that art may be done for us handsomely. And in like manner we allotted to every one of the rest one thing, to which the genius of each led him, and what each took care of, freed from other things, to do it well, applying to it the whole of his life, and not neglecting the seasons of working. And now, as to the affairs of war, whether is it of the greatest importance that they be well performed? Or is this so easy a thing, that one may be a husbandman and likewise a soldier and shoemaker, or be employed in any other art; but not even at chess or dice can one ever play skillfully unless he study this very thing from his childhood, and not make it a by work. Or shall one, taking a spear or any other of the warlike arms and instruments, become instantly an expert combatant in an encounter in arms, or in any other relating to war? And shall the taking up of no other instrument make a workman or a wrestler, nor be useful to him, who has neither the knowledge of that particular thing, nor has bestowed the study sufficient for it?

Glaucon:: Such instruments, would truly be very valuable.

Socrates:: By how much then, this work of guards is one of the greatest importance, by so much it should require the greatest leisure from other things, and likewise the greatest art and study.

Glaucon:: I imagine so.

Socrates:: And shall it not likewise require a competent genius for this profession?

Glaucon:: Why not?

Socrates:: It should surely be our business, as it seems, if we be able to choose who and what kind of geniuses are competent for the guardianship of the city.

Glaucon:: Ours, indeed.

Socrates:: We have, truly, undertaken no mean business; but, however, we are not to despair, so long at least as we have any ability.

Glaucon:: No indeed.

Socrates:: Do you think then, that the genius of a generous whelp differs any thing, for guardianship, from that of a generous youth?

Glaucon:: What is it you say?

Socrates:: It is this. Must not each of them be acute in the perception, swift to pursue what they perceive, and strong likewise if there is need to conquer what they shall catch?

Glaucon:: There is need, of all these.

Socrates:: And surely he must be brave likewise if he fight well.

Glaucon:: Why not?

Socrates:: But will he be brave who is not spirited, whether it is a horse, a dog, or any other animal? Or have you not observed that the spirit is somewhat insurmountable and invincible, by the presence of which every soul is, in respect of all things whatever, unterrified and unconquerable?

Glaucon:: I have observed it.

Socrates:: It is plain then what sort of a guard we ought to have with reference to his body.

Glaucon:: Yes.

Socrates:: And with reference to his soul, that he should be spirited.

Glaucon:: This, likewise, is plain.

Socrates:: How then, Glauco, will they not be savage towards one another, and the other citizens, being of such a temper?

Glaucon:: No, truly, not easily.

Socrates:: But yet, it is necessary that towards their friends they be meek, and fierce towards their enemies; for otherwise they will not wait till others destroy them, but they will prevent them doing it themselves.

Glaucon:: True.

Socrates:: What then, shall we do? Where shall we find, at once, the meek and the magnanimous temper? For the meek disposition is somehow opposite to the spirited.

Glaucon:: It appears so.

Socrates:: But, however, if he be deprived of either of these, he cannot be a good guardian, for it seems to be impossible; and thus it appears that a good guardian is an impossible thing.

Glaucon:: It seems so.

Socrates:: After hesitating and considering what had past: Justly, friend, are we in doubt, for we have departed from that image which we first established.

Glaucon:: How say you?

Socrates:: Have we not observed that there are truly such tempers as we were not imagining, who have these opposite things?

Glaucon:: Where then?

Socrates:: One may see it in other animals, and not a little in that one with which we compared our guardian. For this, you know, is the natural temper of generous dogs, to be most mild towards the domestics and their acquaintance, but the reverse to those they know not.

Glaucon:: It is so.

Socrates:: This, then, is possible; and it is not against nature, that we require our guardian to be such an one.

Glaucon:: It seems not.

Socrates:: Are you, further, of this opinion, that he who is to be our guardian should, besides being spirited, be a philosopher likewise?

Glaucon:: How?, for I do not understand you.

Socrates:: This, likewise, you will observe in the dogs, and it is worthy of admiration in the brute.

Glaucon:: As what?

Socrates:: He is angry at whatever unknown person he sees, though he has never got any harm from him before; but he is fond of whatever acquaintance he sees, though he has never at any time received any good from him. Have you not wondered at this?

Glaucon:: I never, much attended to it before; but that he does this is plain.

Socrates:: But indeed this affection of his nature seems to be an excellent disposition and truly philosophical.

Glaucon:: As how?

Socrates:: As, it distinguishes between a friendly and unfriendly aspect by nothing else but this, that it knows the one, but is ignorant of the other. How, now, should not this be deemed the love of learning, which distinguishes what is friendly and what is foreign by knowledge and ignorance?

Glaucon:: It can no way be shown why it should not.

Socrates:: But however, to be a lover of learning and a philosopher are the same.

Glaucon:: The same.

Socrates:: May we not then boldly settle it, that in man too, if any one is to be of a mild disposition towards his domestics and acquaintance, he must be a philosopher and a lover of learning?

Glaucon:: Let us settle it.

Socrates:: He then, who is to be a good and worthy guardian, for us, of the city, shall be a philosopher, and spirited, and swift, and strong in his disposition.

Glaucon:: By all means.

Socrates:: Let then our guardian, be such an one. But in what manner shall these be educated for us and instructed? And will the consideration of this be of any assistance in perceiving that for the sake of which we consider all else: in what manner justice and injustice arise in the city; that we may not omit a necessary part of the discourse, nor consider what is superfluous?

The brother of Glauco, said

Adeimantus:: I, for my part, greatly expect that this inquiry will be of assistance to that.

Socrates:: Truly, friend Adimantus, it is not to be omitted, though it should happen to be somewhat tedious.

Adeimantus:: No, truly.

Socrates:: Come then, let us, as if we were talking in the way of fable and at our leisure, educate these men in our reasoning.

Adeimantus:: It must be done.

Socrates:: What, then, is the education?—or is it difficult to find a better than that which was found long ago, which is, exercise for the body, and music for the mind?

Adeimantus:: It is, indeed.

Socrates:: Shall we not then, first, begin with instructing them in music, rather than in exercise?

Adeimantus:: Why not?

Socrates:: When you say music you mean discourses, do you not?

Adeimantus:: I do.

Socrates:: But of discourses there are two kinds, the one true, and the other false.

Adeimantus:: There are.

Socrates:: And they must be educated in them both, and first in the false.

Adeimantus:: I do not understand, what you mean.

Socrates:: Do not you understand, that we first of all tell children fables? And this part of music, somehow, to speak in the general, is false, yet there is truth in them; and we accustom children to fables before their exercises.

Adeimantus:: We do so.

Socrates:: This, then, is what I meant, when I said that children were to begin music before their exercises.

Adeimantus:: Right.

Socrates:: And do you not know that the beginning of every work is of the greatest importance, especially to any one young and tender; for then, truly, in the easiest manner is formed and taken on the impression which one inclines to imprint on every individual?

Adeimantus:: It is entirely so.

Socrates:: Shall we then suffer the children to hear any kind of fables composed by any kind of persons, and to receive for the most part into their minds opinions contrary to those we judge they ought to have when they are grown up?

Adeimantus:: We shall by no means suffer it.

Socrates:: First of all, then, we must preside over the fable-makers, and whatever beautiful fable they make must be chosen, and what are otherwise must be rejected; and we shall persuade the nurses and mothers to tell the children such fables as shall be chosen, and to fashion their minds by fables, much more than their bodies by their hands. But the most of what they tell them at present must be thrown out.

Adeimantus:: As what?

Socrates:: In the greater ones we shall see the lesser likewise; for the fashion of them must be the same, and both the greater and the lesser must have the same kind of power. Do not you think so?

Adeimantus:: I do: but I do not at all understand which you call the greater ones.

Socrates:: Those, which Hesiod and Homer tell us, and the other poets; for they composed false fables to mankind, and told them as they do still.

Adeimantus:: Which, do you mean, and what is it you blame in them?

Socrates:: That, which first of all and most especially ought to be blamed: when one does not falsify handsomely.

Adeimantus:: What is that?

Socrates:: When one in his composition gives ill representations of the nature of Gods and heroes—as a painter drawing a picture no way resembling what he wanted to paint.

Adeimantus:: It is right, to blame such things as these. But how have they failed, say we, and as to what?

Socrates:: First of all, with reference to that greatest lye and matters of the greatest importance, he did not lye handsomely who told how Uranus did what Hesiod says he did; and then again how Saturn punished him, and then what Saturn did, and what he suffered from his son. Although they were true, yet I should not imagine they ought to be so plainly told to the unwise and the young, but ought much rather to be concealed; but if there were a necessity to tell them, they should be heard in secrecy by as few as possible, after they had sacrificed, not a hog, but some great and wonderful sacrifice, that thus the fewest possible might chance to hear them.

Adeimantus:: These fables, are indeed truly hurtful.

Socrates:: And not to be mentioned, Adimantus, in our city. Nor is it to be said in the hearing of a youth, that he who does the most extreme wickedness does nothing strange; nor he who in every shape punishes his unjust father, but does the same as the first and the greatest of the Gods.

Adeimantus:: No, truly, these things do not seem to me proper to be said.

Socrates:: Nor, in the general, how Gods war with Gods, and plot and fight against one another (for they are not true), if, at least, those who are to guard the city for us ought to account it the most shameful thing to hate one another on slight grounds; as little ought we to tell in fables, and embellish to them, the fights of the giants, and many other various feuds both of the Gods and heroes with their own kindred and relations. But if we are at all to persuade them that at no time does one citizen hate another, and that it is unholy, such things as these are rather to be said to them immediately when they are children, by the old men and women, and by those well advanced in life; and the poets are to be obliged to compose agreeably to these things. Juno fettered by her son, and Vulcan thrown down from heaven by his father, for going to assist his mother when beaten, and all those fights of the Gods which Homer has composed, must not be admitted into the city, whether they be composed in way of allegory or without allegory. For the young person is not able to judge what is allegory and what is not; but whatever opinions he receives at such an age are difficult to be washed out, and are immoveable. On these accounts one would imagine that, of all things, we should endeavor that what they are first to hear be composed in the most handsome manner for exciting them to virtue.

Adeimantus:: There is reason for it. But if any one now should ask us concerning these, what they are, and what kind of fables they are, which should we name?

Socrates:: Adimantus, you and I are not poets at present, but founders of a city; and it belongs to the founders to know the models according to which the poets are to compose their fables, contrary to which if they compose they are not to be tolerated; but it belongs not to us to make fables for them.

Adeimantus:: Right. But as to this very thing, the models concerning theology, which are they?

Socrates:: Some such as these. God is always to be represented such as he is, whether one represent him in epic, in song, or in tragedy.

Adeimantus:: This ought to be done.

Socrates:: Is not God essentially good, and is he not to be described as such?

Adeimantus:: Without doubt.

Socrates:: But nothing which is good is hurtful, is it?

Adeimantus:: It does not appear to me.

Socrates:: Does, then, that which is not hurtful ever do hurt?

Adeimantus:: By no means.

Socrates:: Does that which does no hurt do any evil?

Adeimantus:: Nor this neither.

Socrates:: And what does no evil cannot be the cause of any evil.

Adeimantus:: How can it?

Socrates:: But what? Good is beneficial.

Adeimantus:: Yes.

Socrates:: It is then the cause of welfare?

Adeimantus:: Yes.

Socrates:: Good, therefore, is not the cause of all things, but the cause of those things which are in a right state; but is not the cause of those things which are in a wrong.

Adeimantus:: Entirely so.

Socrates:: Neither then can God, since he is good, be the cause of all things, as the generality say, but he is the cause of a few things to men; but of many things he is not the cause: for our good things are much fewer than our evil, and no other is the cause of our good things; but of our evils we must not make God the cause, but seek for some other.

Adeimantus:: You seem to me, to speak most true.

Socrates:: We must not then, take it, neither from Homer nor any other poet trespassing so foolishly, with reference to the Gods, and saying how;

Two coffers on Jove's threshold stand, and both
Are full of lots: one good, the other ill;
The man whose lot Jove mingles out of both,
Sometimes by ill is rul'd, sometimes by good.
Whose lot is otherwise, of ill unmix'd,
Him o'er the sacred earth dire famine drives.

Nor that Jupiter is the dispenser of our good and evil. Nor if any one say that the violation of oaths and treaties, violated by Pandarus, was done by Minerva and Jupiter, shall we commend it; nor that dissension among the Gods and judgment by Themis and Jupiter; nor yet must we suffer the youth to hear what Aeschylus says, how;

Whenever God inclines to raze
A house, himself contrives a cause.

But if any one make poetical compositions, in which are these iambics, the sufferings of Niobe, of the Pelopides, or the Trojans, or others of a like nature, we must either not suffer them to say they are the works of God; or, if of God, we must find that reason of them which we now require, and we must say that God did what was just and good; and that they were bettered by being chastised: but we must not suffer a poet to say, that they are miserable who are punished, and that it is God who does these things. But if they say that the wicked, as being miserable, needed correction, and that in being punished they were profited by God, we may suffer them. But to say that God, who is good, is the cause of ill to any one, this we must by all means oppose, nor suffer any one to say so in his city, if he want to have it well-regulated; nor suffer any one, neither young nor old, to hear such things told in fable, neither in verse nor prose, as they are neither agreeable to holiness to be told, nor profitable to us, nor consistent together.

Adeimantus:: I vote along with you, in this law, and it pleases me.

Socrates:: This then, may be one of the laws and models with reference to the Gods: by which it shall be necessary that those who speak and who compose shall compose and say that God is not the cause of all things, but of good.

Adeimantus:: Yes, indeed, it is necessary.

Socrates:: But what as to this second law? Think you that God is a buffoon, and insidiously appears, at different times, in different shapes, sometimes like himself, and at other times changing his appearance into many shapes, sometimes deceiving us and making us conceive false opinions of him; or do you imagine him to be simple, and, of all, the least departing from his proper appearance?

Adeimantus:: I cannot, at present at least, say so.

Socrates:: But what as to this: If anything be changed from its appearance, is there not a necessity that it be changed by itself or by another?

Adeimantus:: Undoubtedly.

Socrates:: Are not these things which are in the best state least of all changed and moved by any other thing?—as the body, by meats and drinks and labors, and every vegetable by tempests and winds, and such like accidents: is not the most sound and vigorous least of all changed?

Adeimantus:: Why not?

Socrates:: And as to the soul itself, will not any perturbation from without least of all disorder and change the most brave and wise?

Adeimantus:: Yes.

Socrates:: And surely, somehow, all vessels which are made, and buildings, and vestments, according to the same reasoning, such as are properly worked and in a right state, are least changed by time or other accidents?

Adeimantus:: They are so, indeed.

Socrates:: Every thing, then, which is in a good state, either by nature or art, or both, receives the smallest change from any thing else.

Adeimantus:: It seems so.

Socrates:: But God and all the divine conduct are in the best state.

Adeimantus:: Why not?

Socrates:: In this way then, God should least of all have many shapes.

Adeimantus:: Least of all, truly.

Socrates:: But should he change and alter himself?

Adeimantus:: It is plain, if he be changed at all.

Socrates:: Whether then should he change himself to the better and to the more handsome, or to the worse and the more deformed?

Adeimantus:: Of necessity, to the worse, if he be changed at all; for we shall never at any time say that God is any way deficient with respect to beauty or excellence.

Socrates:: You say most right. And this being so, do you imagine, Adimantus, that any one, either of Gods or men, would willingly make himself any way worse?

Adeimantus:: It is impossible.

Socrates:: It is impossible then, for a God to desire to change-himself; but each of them, being most fair and good, continues always, to the utmost of his power, invariably in his own form.

Adeimantus:: This appears to me, at least, wholly necessary.

Socrates:: Let not then, most excellent Adimantus, any of the’ poets tell us how the Gods;

——Like various foreign travellers drest,
And various forms assuming, visit states.

Nor let any one belye Proteus and Thetis, nor bring in’ Juno, in tragedies or other poems, as having transformed herself like a priestess, and collecting for the gracious sons of Inachus the Argive River;, nor let them tell us many other such lies. Nor let the mothers, persuaded by them, affright their children, telling the stories wrong, how that certain Gods go about all night;

Resembling various guests of various climes.

that they may not, at one and the same time, blaspheme against the Gods and render their children more dastardly.

Adeimantus:: By no means.

Socrates:: But are the Gods, such as, though in themselves they never change, yet make us imagine they appear in various forms, deceiving us and playing the mountebanks?

Adeimantus:: Perhaps.

Socrates:: But what, can a God cheat, holding forth a phantasm, either in word or deed?

Adeimantus:: I do not know.

Socrates:: Do not you know, that what is truly a cheat, if one can speak so, all, both Gods and men, abhor?

Adeimantus:: How do you say.

Socrates:: Thus, that to offer a cheat to the chiefest part of themselves, and that about their chiefest interests, is what none willingly incline; but of all things every one is most afraid of having got a cheat there.

Adeimantus:: Neither as yet, do I understand you.

Socrates:: Because, you fancy I am saying some great matter: but I am saying, that to cheat the soul concerning realities, and to be so cheated, and to be ignorant, and there to have got and to keep a cheat, is what every one would least of all choose; and a cheat in the soul is what they most especially hate.

Adeimantus:: Most especially.

Socrates:: But this, as I was now saying, might most justly be called a true cheat, ignorance in the soul of the cheated person: since a cheat in words is but a kind of imitation of what the soul feels, and an image afterwards arising, and not altogether a pure cheat. Is it not so?

Adeimantus:: Entirely.

Socrates:: But this real lye is not only hated of the Gods, but of men likewise.

Adeimantus:: So it appears.

Socrates:: But, what now? The cheat in words, when has it something of utility, so as not to deserve hatred? Is it not when employed towards our enemies, and some even of those called our friends, when, in madness or other distemper they attempt to do some mischief? in that case, for a dissuasive, as a drug it is useful. And in those fables we were now mentioning, as we know not how the truth stands concerning ancient things, making a lye resembling the truth we render it useful as much as possible.

Adeimantus:: It is, perfectly so.

Socrates:: In which then of these cases is a lye useful to God? Whether does he make a lye resembling the truth, as being ignorant of ancient things?

Adeimantus:: That were ridiculous.

Socrates:: God is not, then, a lying poet.

Adeimantus:: I do not think it.

Socrates:: But should he make a lye from fear of his enemies?

Adeimantus:: Far from it.

Socrates:: But on account of the folly or madness of his kindred?

Adeimantus:: But, none of the foolish and mad are the friends of God.

Socrates:: There is then no occasion at all for God to make a lye.

Adeimantus:: There is none.

Socrates:: The divine and Godlike nature is then, in all respects, without a lye?

Adeimantus:: Altogether.

Socrates:: God then is simple and true, both in word and deed; neither is he changed himself nor does he deceive others, neither by visions, nor by discourse, nor by the pomp of signs, neither when we are awake nor when we sleep.

Adeimantus:: So it appears, to me at least, whilst you are speaking.

Socrates:: You agree then, that this shall be the second model by which we are to speak and to compose concerning the Gods: that they are neither mountebanks to change themselves, nor to mislead us by lies either in word or deed?

Adeimantus:: I agree.

Socrates:: Whilst then we commend many other things in Homer, this we shall not commend, the dream sent by Jupiter to Agamemnon; neither shall we commend Aeschylus, when he makes Thetis say that Apollo had sung at her marriage that;

A comely offspring she shou’d raise,
From sickness free, of lengthen’d days:
Apollo, singing all my fate,
And praising high my Godlike state,
Rejoic’d my heart; and ‘twas my hope,
That all was true Apollo spoke:
But he who at my marriage feast
Extoll’d me thus, and was my guest;
He who did thus my fate explain
Is he who now my son has slain.

When any one says such things as these of the Gods, we shall show displeasure, and not afford the chorus: nor shall we suffer teachers to make use of such things in the education of the youth, if our guardians are to be godly and divine men as far as it is possible for man to be.

Adeimantus:: I agree with you, perfectly, as to these models, and we may use them as laws.

THE END OF THE SECOND BOOK

## THE THIRD BOOK

Socrates:: These things indeed then, and such as these, are, as seems, what are to be heard and not heard, concerning the Gods, immediately from childhood, by those who are to honor the Gods and their parents, and who are not to despise friendship with one another.

Adeimantus:: And I imagine, that these things have appeared aright.

Socrates:: But what now? If they are to be brave, must not these things be narrated to them, and such other likewise as may render them least of all afraid of death? or do you imagine that any one can ever be brave whilst he has this fear within him?

Adeimantus:: Not I, truly.

Socrates:: But what? do you imagine that any one can be void of a fear of death whilst he imagines that there is another world, and that it is dreadful, and that in battles he will choose death before defeat and slavery?

Adeimantus:: By no means.

Socrates:: We ought then, as appears, to give orders likewise to those who undertake to discourse about fables of this kind, and to entreat them not to reproach thus in general the things of the other world, but rather to commend them, as they say neither what is true, nor what is profitable to those who are to be soldiers.

Adeimantus:: We ought, indeed.

Socrates:: Beginning then, at this verse, we shall leave out all of such kind as this:

> I'd rather, as a rustic slave, submit
> To some mean man, who had but scanty fare,
> Than govern all the wretched shades below.

And that;

The house, to mortals and immortals, seems
Horrible and squalid, and what Gods abhor.

And;

O wretched! in the mansions of the grave
Is there a soul and shape, but ne’er a mind.

And;

Alone are wise—the shades all flutter round.

And;

The soul fled from the body to the grave,
And, leaving youth and manhood, wail’d its fate.

And;

The soul, like smoke, down to the shades
Went howling.

And;

As when, in hollow of a spacious cave,
The owls fly, screaming if one chance to fall
Down from the rock, they all confusedly fly,
So these together howling went.

We shall beg Homer and the other poets not to take it amiss if we raze these things, and such as these, not that they are not poetical, and pleasant to many to be heard, but the more poetical they are, the less ought they to be heard by children, and men who ought to be free and more afraid of slavery than of death.

Adeimantus:: By all means, truly.

Socrates:: Further, are not all dreadful and frightful names about these things likewise to be rejected? Cocytus, and Styx, those below, and the dead, and such other appellations in this style, such as terrify all who hear them. These may perhaps serve some other purpose; but we are afraid for our guardians, lest by such a terror they be rendered more effeminate and soft than they ought to be.

Adeimantus:: We are rightly afraid of it.

Socrates:: Are these then to be taken away?

Adeimantus:: They are.

Socrates:: And they must speak and compose on a contrary model.

Adeimantus:: That is plain.

Socrates:: We shall take away likewise the bewailings and lamentations of illustrious men?

Adeimantus:: This is necessary, if what is above be so.

Socrates:: Consider then, whether we rightly take away or not. And do not we say, that the worthy man will imagine that to die is not a dreadful thing to the worthy man whose companion he is?

Adeimantus:: We say so.

Socrates:: Neither then will he lament over him, at least, as if his friend suffered something dreadful.

Adeimantus:: No, indeed.

Socrates:: And we say this likewise, that such an one is most of all sufficient in himself, for to live happily and in a distinguished manner from others is least of all indigent.

Adeimantus:: True.

Socrates:: It is to him, then, the least dreadful to be deprived of a son, a brother, wealth, or any other of those things.

Adeimantus:: Least of all, indeed.

Socrates:: So that he will least of all lament, but endure in the mildest manner when any such misfortune befalls him.

Adeimantus:: Certainly.

Socrates:: We shall rightly then take away the lamentations of famous men, and assign them to the women, but not to the better sort, and to such of the men as are dastardly, that so those whom we propose to educate for the guardianship of the country may disdain to make lamentations of this kind.

Adeimantus:: Right.

Socrates:: We shall again then entreat Homer and the other poets not to say in their compositions that Achilles the son of a Goddess;

> Lay sometimes on his side, and then anon
> On back supine, then prone; then rising up,
> Lamenting wander'd on the barren shore.

Nor how;

> ——With both his hands,
> He pour'd the burning dust upon his head;

nor the rest of his lamentation and bewailing, such and so great as he has composed. Nor that Priamus, so near to the Gods, so meanly supplicated and rolled himself in the dirt:

> Calling on every soldier by his name.

But still much more must we entreat them not to make the Gods, at least, to bewail and say:

> Oh! wretched I, in bearing worthiest son.

And if they are not thus to bring in the Gods, far less should they dare to represent the greatest of the Gods in so unbecoming a manner as this:

> How dear a man, around the town pursu'd,
> Mine eyes behold! and grieved is my heart.
> Ah me! 'tis fated that Patroclus kill
> Sarpedon, whom, of all men, most I love.

For if, friend Adimantus, our youth should seriously hear such things as these, and not laugh at them as spoken most unsuitably, hardly should any one think it unworthy of himself, of himself being a man, or check himself if he should happen either to say or to do any thing of the kind; but without any shame or endurance would, on small sufferings, sing many lamentations and moans.

Adeimantus:: You say most true.

Socrates:: They must not, therefore, do in this manner, as our reasoning now has showed us—which we must believe, till some one persuade us by some better.

Adeimantus:: They must not, indeed.

Socrates:: But surely neither ought we to be given to excessive laughter; for where one gives himself to violent laughter, such a disposition commonly requires a violent change.

Adeimantus:: It seems so.

Socrates:: Nor, if any one shall represent worthy men as overcome of laughter, must we allow it: much less if he thus represent the Gods.

Adeimantus:: Much less, indeed.

Socrates:: Neither then shall we receive such things as these from Homer, concerning the Gods:

> Excessive laughter rose among the Gods,
> When they beheld lame Vulcan hurrying round.

This is not to be admitted, according to your reasoning.

Adeimantus:: If you incline, to call it my reasoning; this, indeed, is not to be admitted.

Socrates:: But surely the truth is much more to be valued. For if lately we reasoned aright, and if indeed a lye be unprofitable to the Gods, but useful to men in way of a drug, it is plain that such a thing is to be entrusted only to the physicians, but not to be touched by private persons.

Adeimantus:: It is plain.

Socrates:: It belongs then to the governors of the city, if to any others, to make a lye, with reference either to enemies or citizens, for the good of the city; but none of the rest must venture on such a thing. But for a private person to tell a lye to such governors, we will call it the same, and even a greater offence, than for the patient to tell a lye to the physician, or for the man who learns his exercises not to tell his master the truth as to the indispositions of his body; or for one not to tell the pilot the real state of things respecting the ship and sailors, in what condition himself and the other sailors are.

Adeimantus:: Most true.

Socrates:: But if you find in the city any one else making a lye;

> ——Of those who artists are,
> Or prophet, or physician, or who make
> The shafts of spears.

you shall punish them, as introducing a practice subversive and destructive of the city, as of a ship.

Adeimantus:: We must do so, if indeed it is upon speech that actions are completed.

Socrates:: But what? shall not our youth have need of temperance?

Adeimantus:: Certainly.

Socrates:: And are not such things as these the principal parts of temperance: that they be obedient to their governors; that the governors themselves be temperate in drinking, feasting, and in venereal pleasures? And we shall say, I imagine, that such things as these are well spoken, which Diomed says in Homer:

> Sit thou in silence, and obey my speech.

And what follows; thus:

> The Greeks went on in silence, breathing force,
> Revering their commanders,—

and such like.

Adeimantus:: Well spoken.

Socrates:: But what as to these: Thou drunkard with dogs eyes and heart of deer, and all of this kind; are these, or such other juvenile things, which any private person may say against their governors, spoken handsomely?

Adeimantus:: Not handsomely.

Socrates:: For I do not imagine, that when they are heard, they are fit to promote temperance in the youth; and though they may afford a pleasure of a different kind, it is no wonder. But what do you think?

Adeimantus:: Just the same way.

Socrates:: But what say you of this: to make the wisest man say that he thinks it the most handsome thing of all;

----When tables are all full
Of meats and fleshes, and the butler bears
The wine in flagons, and fills up the cups;

Is the hearing of this proper for the youth towards having the command of himself? Or yet this:

Most miserable it is,
To die of famine and have adverse fate.

Or that Jupiter, through desire of love-pleasures, easily forgetting all those things which he alone awake revolved in his mind, whilst other Gods and men were asleep, was so struck on seeing Juno as not to choose to come into the house, but wanted to embrace her in the field, telling he is possessed with such desire as exceeded what he felt on their first coming together;

——Hid from their parents dear.

Nor yet how Mars and Venus were bound by Vulcan, and other such things?

Adeimantus:: No, truly; these things do not seem fit.

Socrates:: But if any instances of self-denial, with respect to all these things be told, and practiced by eminent men, these are to be beheld and heard. Such as this:

> He beat his breast, and thus he chid his heart:
>
> Bear up, my heart! who heavier fate hast borne.

Adeimantus:: By all means, we should do thus.

Socrates:: Neither must we suffer men to receive bribes nor to be covetous.

Adeimantus:: By no means.

Socrates:: Nor must we sing to them that;

> Gifts gain the Gods and venerable Kings.

Nor must we commend Phoenix, the tutor of Achilles, as if he spoke in moderation in counseling him to accept of presents and assist the Greeks, but without presents not to desist from his wrath. Neither shall we commend Achilles, nor approve of his being so covetous as to receive presents from Agamemnon, and likewise a ransom to give up the dead body of Hector, but not to incline to do it otherwise.

Adeimantus:: It is not right, to commend such things as these.

Socrates:: I grudge, for Homer's sake, to say it, that neither is it lawful that these things, at least, be said against Achilles, nor that they be believed when said by others: how that he spoke thus to Apollo:

> Me thou hast injur'd—thou, far-shooting God!
> Of all the most destructive: but reveng'd
> I sure shou'd be, were I possess'd of power.

And how disobedient he was to the river, though a divinity, and was ready to fight; and again, he says to the river Sperchius, with his sacred locks:

> Thy lock to great Patroclus I cou'd give,
> Who now is dead.

Nor are we to believe he did this. And the dragging Hector round the sepulcher of Patroclus, and the slaughtering the captives at his funeral pile, that all these things are true we will not say; nor will we suffer our people to be persuaded that Achilles, the son of a Goddess and of Peleus, the most temperate of men and the third from Jupiter, and educated by the most wise Chiron, was full of such disorder as to have within him two distempers opposite to one another: the illiberal and covetous disposition, and a contempt both of Gods and of men.

Adeimantus:: You say right.

Socrates:: Neither, let us be persuaded of these things, nor suffer any to say, that Theseus the son of Neptune, and Perithous the son of Jupiter, rushed so upon horrible rapines; nor that any child of other deity, nor any hero, would dare to do horrible and impious deeds, such as the lies of the poets ascribe to them: but let us compel the poets, either to say that these are not the actions of these persons, or that these persons are not the children of the Gods, and not to say both. Nor let us suffer them to attempt to persuade our youth that the Gods create evil, and that heroes are no way better than men: for, as we said formerly, these things are neither holy nor true: for we have elsewhere shown that it is impossible that evil should proceed from the Gods.

Adeimantus:: Why not?

Socrates:: And these things are truly hurtful, to the hearers at least; for everyone will forgive himself his own naughtiness when he is persuaded that even the near relations of the gods do and have done things of the same kind: such as are near to Jupiter;

> Who, on the top of Ida, have up-rear'd
> To parent Jupiter an altar;

And;

> Whose Godlike blood is not yet quite extinct.

On which accounts, all such fables must be suppressed, lest they create in our youth a powerful habit of wickedness.

Adeimantus:: We must do so, by all means.

Socrates:: What other species of discourses, have we still remaining, now whilst we are determining what ought to be spoken and what not? We have already mentioned in what manner we ought to speak of the Gods, and likewise of daemons and heroes, and likewise of what relates to another world.

Adeimantus:: Yes, indeed.

Socrates:: Should not then what yet remains seem to be concerning men?

Adeimantus:: It is plain.

Socrates:: But it is impossible for us, friend, to regulate this at present.

Adeimantus:: How?

Socrates:: Because, I imagine, we will say that the poets and orators speak amiss concerning the greatest affairs of men—how that the most of men are unjust, and, notwithstanding, they are happy; and that the just are miserable; and that it is profitable for one to do unjustly when he is concealed; and that justice is gain indeed to others, but the loss of the just man himself—these, and innumerable other such things, we will forbid them to say, and enjoin them to sing and compose in- fable the contrary to these. Do not you think so?

Adeimantus:: I know it well.

Socrates:: If. then, you acknowledge that I say right, shall I not say that you have acknowledged what all along we seek for?

Adeimantus:: You judge right.

Socrates:: Shall we not then acknowledge that such discourses are to be spoken concerning men, whenever we shall have found out what justice is, and how in its nature it is profitable to the just man to be such, whether he appear to be such or not?

Adeimantus:: Most true.

Socrates:: Concerning the discourses, then, let this suffice. We must now consider, as I imagine, the manner of discourse, and then we shall have completely considered both what is to be spoken, and the manner how.

Here Adimantus said;

Adeimantus:: But I do not understand what you say.

Socrates:: But, it is needful you should, and perhaps you will rather understand it in this way: Is not everything told by the mythologists or poets a narrative of the past, present, or future?

Adeimantus:: What else?

Socrates:: And do not they execute it, either by simple narration, or imitation, or by both?

Adeimantus:: This, too, I want to understand more plainly.

Socrates:: I seem, to be a ridiculous and obscure instructor; therefore, like those who are unable to speak, I will endeavor to explain, not the whole, but taking up a particular part, show my meaning by this particular. And tell me, do not you know the beginning of the Iliad—where the poet says that Chryses entreated Agamemnon to set free his daughter, but that he was displeased, that Chryses, when he did not succeed, prayed against the Greeks to the God.

Adeimantus:: I know.

Socrates:: You know then that down to these verses;

—The Grecians all he pray'd.

But chief the two commanders, Atreus' sons, the poet himself speaks, and does not attempt to divert our attention elsewhere as if any other person were speaking: but what he says after this he says as if he himself were Chryses, and endeavors as much as possible to make us imagine that the speaker is not Homer, but the priest, an old man; and that in this manner he has composed almost the whole narrative of what happened at Troy and in Ithaca, and all the adventures in the whole Odyssey.

Adeimantus:: It is certainly so.

Socrates:: Is it not then narration when he tells the several speeches, and likewise when he tells what intervenes between the speeches?

Adeimantus:: Why not?

Socrates:: But when he makes any speech in the person of another, do not we say that then he assimilates his speech as much as possible to each person he introduces as speaking?

Adeimantus:: We say so, why do not we?

Socrates:: And is not the assimilating one's self to another, either in voice or figure, the imitating him to whom one assimilates himself?

Adeimantus:: Why not?

Socrates:: In such a manner as this then, it seems, both he and the other poets perform the narrative by means of imitation.

Adeimantus:: Certainly.

Socrates:: But if the poet did not at all conceal himself, his whole action and narrative would be without imitation: And that you may not say you do not again understand how this should be, I shall tell you. If Homer—after telling how Chryses came with his daughter’s ransom, beseeching the Greeks, but chiefly the kings—had spoken afterwards, not as Chryses, but still as Homer, you know it would not have been imitation, but simple narration. And it would have been somehow thus (I shall speak without meter, for I am no poet): The priest came and prayed that the Gods might grant they should take Troy, and return safe, and begged them to restore him his daughter, accepting the presents, and revering the God. When he had said this, all the rest showed respect, and consented; but Agamemnon was enraged, charging him now to be gone, and not to return again, lest his scepter and the garlands of the God should be of no avail; and told him, that before he would restore his daughter, she should grow old with him in Argos, but ordered him to be gone, and not to irritate him, that he might get home in safety. The old man, upon hearing this, was afraid, and went away in silence. And when he was retired from the camp he made many supplications to Apollo, rehearsing the names of the God, and putting him in mind, and beseeching him, that if ever he had made any acceptable donation, in the building of temples or the offering of sacrifices, in return of these to avenge his tears upon the Greeks with his arrows. Thus, friend, the narration is simple without imitation!

Adeimantus:: I understand.

Socrates:: Understand then, that the opposite of this happens when one, taking away the poet’s part between the speeches, leaves the speeches themselves.

Adeimantus:: This, I likewise understand, that the manner of tragedies is of such a kind.

Socrates:: You apprehend perfectly well. And, I imagine, I now make plain to you what I could not before, that in poetry, and likewise in mythology, one kind is wholly by imitation, such as you say tragedy and comedy are; and another kind by the narration of the poet himself, and you will find this kind most especially in the Dithyrambus; and another again by both, as in Epic poetry, and in many other cases besides, if you understand me.

Adeimantus:: I understand now, what you meant before.

Socrates:: And remember too that, before that, we were saying that we had already mentioned what things were to be spoken, but that it yet remained to be considered in what manner they were to be spoken.

Adeimantus:: I remember, indeed.

Socrates:: This then is what I was saying: that it were necessary we agreed whether we shall suffer the poets to make narratives to us in the way of imitation, or partly in the way of imitation and partly not (and what in each way), or if they are not to use imitation at all.

Adeimantus:: I conjecture, you are to consider whether we shall receive tragedy and comedy into our city, or not.

Socrates:: Perhaps, and something more too, for I do not as yet know, indeed; but wherever our reasoning, as a gale, bears us, there we must go.

Adeimantus:: And truly, you say well.

Socrates:: Consider this, now, Adimantus, whether our guardians ought to practice imitation, or not. Or does this follow from what is above: that each one may handsomely perform one business, but many he cannot; or if he shall attempt it, in grasping at many things he shall fail in all, so as to be remarkable in none?

Adeimantus:: Why shall he not?

Socrates:: And is not the reason the same concerning imitation: that one man is not so able to imitate many things well, as one.

Adeimantus:: He is not.

Socrates:: Hardly then shall he perform any part of the more eminent employments, and at the same time imitate many things, and be an imitator, since the same persons are not able to perform handsomely imitations of two different kinds, which seem to resemble each other; as, for instance, they cannot succeed both in comedy and tragedy: or did you not lately call these two imitations?

Adeimantus:: I did; and you say true that the same persons cannot succeed in them.

Socrates:: Nor can they, at the same time, be rhapsodists and actors.

Adeimantus:: True.

Socrates:: Nor can the same persons be actors in comedies and in tragedies: and all these are imitations, are they not?

Adeimantus:: Imitations.

Socrates:: The genius of man seems to me, Adimantus, to be shut up within still lesser bounds than these, so that it is unable to imitate handsomely many things, or do these very things of which even the imitations are the resemblances.

Adeimantus:: Most true.

Socrates:: If therefore we are to hold to our first reasoning, that our guardians, unoccupied in any manufacture whatever, ought to be the most accurate manufacturers of the liberty of the city, and to mind nothing but what has some reference to this, it were surely proper they neither did nor imitated any thing else; but if they shall imitate at all, to imitate immediately from their childhood such things as are correspondent to these—brave, temperate, holy, free men, and all such things as these—but neither to do, nor to be desirous in imitating, things illiberal or base, lest from imitating they come to be really such. Or have you not observed that imitations, if from earliest youth they be continued onwards for a long time, are established into the manners and natural temper, both with reference to the body and voice, and likewise the understanding?

Adeimantus:: Very much so.

Socrates:: We will not surely allow, those we profess to take care of, and who ought to be good men, to imitate a woman, either young or old, either reviling her husband, or quarreling with the Gods, or speaking boastingly, when she imagines herself happy; nor yet to imitate her in her misfortunes, sorrows, and lamentations, when sick, or in love, or in child-bed labor. We shall be far from permitting this.

Adeimantus:: By all means.

Socrates:: Nor to imitate man or maidservants in doing what belongs to servants.

Adeimantus:: Nor this, neither.

Socrates:: Nor yet to imitate naughty men, as it seems, such as are dastardly and do the contrary of what we have now been mentioning; reviling and railing at one another and speaking abominable things either drunk or sober, or any other things such as persons of this sort are guilty of, either in words or actions, either with respect to themselves or one another. Neither must they accustom themselves to resemble madmen, in words or actions. Even the mad and wicked are to be known, both the men and the women, but none of their actions are to be done or imitated.

Adeimantus:: Most true.

Socrates:: But what?  are they to imitate such as work in brass or any other handicrafts, or such as are employed in rowing boats, or such as command these, or any thing else appertaining to these things?

Adeimantus:: How can they, as they are not to be allowed to give application to any of those things?

Socrates:: But what? shall they imitate horses neighing, or bulls lowing, or rivers murmuring, or the sea roaring, or thunder, and all such like things?

Adeimantus:: We have forbidden them, to be mad, or to resemble madmen.

Socrates:: If then I understand, what you say, there is a certain kind of speech and of narration in which he who is truly a good and worthy man expresses himself when it is necessary for him to say any thing, and another kind again, unlike to this, which he who has been born and educated in an opposite manner always possesses, and in which he expresses himself.

Adeimantus:: But of what kind are these?

Socrates:: I imagine, that the worthy man, when he comes in his narrative to any speech or action of a good man, will willingly tell it as if he were himself the man, and will not be ashamed of such an imitation, most especially when he imitates a good man acting prudently and without a slip, and failing seldom, and but little, through diseases, or love, drunkenness, or any other misfortune. But when he comes to anything unworthy of himself, he will not be studious to resemble himself to that which is worse, unless I for a short time when it produces some good, but will be I ashamed, both as he is unpracticed in the imitation of such characters as these, and likewise, as he grudges to degrade himself and stand among the models of baser characters, disdaining it in his mind, and doing it only for amusement.

Adeimantus:: It is likely.

Socrates:: He will, not then make use of such a narrative as we lately mentioned with reference to the compositions of Homer, but his composition will participate of both imitation and the other narrative, and but a small part of it imitation in a great deal of plain narrative. Do I seem to say anything, or nothing at all?

Adeimantus:: You express, perfectly well what ought to be the model of such an orator.

Socrates:: And on the other hand, will not the man, who is not such an one, the more naughty he is, be the readier to rehearse everything whatever, and shall not think anything unworthy of him, so that he shall undertake to imitate everything in earnest, and likewise in presence of many and such things likewise as we now mentioned—thunderings and noises of winds and tempests, and of axles and wheels, and trumpets and pipes and whistles, and sounds of all manner of instruments, and voices of dogs too, and of sheep, and of birds; and the whole expression of all these things shall be by imitation in voices and gestures, having but a small part of it narration.

Adeimantus:: This too, must happen of necessity.

Socrates:: These now, I called the two kinds of diction.

Adeimantus:: They are so.

Socrates:: But has not the one of these small variations; and if the orator afford the becoming harmony and measure to the diction, where he speaks with propriety, the discourse is almost upon one and the same manner, and in one harmony, for the variations are but small, and in a measure which accordingly is somehow familiar?

Adeimantus:: It is indeed, entirely so.

Socrates:: But what as to the other kind? Does it not require the contrary, all kinds of harmony, all kinds of measure, if it be to be naturally expressed, as it has all sorts of variations?

Adeimantus:: It is perfectly so.

Socrates:: Do not, now, all the poets, and such as speak in any kind, make use of either one or other of these models of diction] or of one compounded of both?

Adeimantus:: Of necessity.

Socrates:: What then shall we do? Whether shall we admit into our city all of these, or one of the unirked, or the one compounded?

Adeimantus:: If my opinion, prevail, that uncompounded one which is imitative of what is worthy.

Socrates:: But, surely, Adimantus, the mixed is pleasant at least; and the opposite of what you choose is by far the most pleasant to children and pedagogues and the crowd.

Adeimantus:: It is most pleasant.

Socrates:: But you will not likely, think it suitable to our government, because with us no man is to mind two or more employments, but to be quite simple, as every one does one thing.

Adeimantus:: It is not indeed suitable.

Socrates:: Shall we not then find, that in such a city alone, a shoemaker is only a shoemaker, and not a pilot along with shoemaking, and that the husbandman is only a husbandman, and not a judge along with husbandry, and that the soldier is a soldier, and not a money-maker besides; and all others in the same way?

Adeimantus:: True.

Socrates:: And it would appear that if a man who through wisdom were able to become everything, and to imitate everything, should come into our city, and should want to show us his poems, we should revere him as a sacred, admirable and pleasant person, but we should tell him that there is no such person with us in our city, nor is there any such allowed to be, and we should send him out to some other city, pouring oil on his head and crowning him with wool; but we use a more austere poet and mythologist for our advantage, who may imitate to us the diction of the worthy manner, and may say whatever he says according to those models which we established by law at first, when we undertook the education of our soldiers.

Adeimantus:: So we should do, if it depended on us.

Socrates:: It appears, friend, that we have now thoroughly discussed that part of music respecting oratory and fable, for we have already told what is to be spoken, and in what manner.

Adeimantus:: It appears so to me likewise.

Socrates:: Does it not yet remain, that we speak of the manner of song and of melodies?

Adeimantus:: It is plain.

Socrates:: May not any one find out what we must say of these things, and of what kind these ought to be, if we are to be consistent with what is above-mentioned?

Here Glauco, laughing, said:

Glaucon:: But I appear, Socrates, to be a stranger to all these matters; for I am not able at present to guess at what we ought to say: I suspect, however.

Socrates:: You are certainly, fully able to say this in the first place, that melody is made up of three things, of sentiment, harmony, and measure.

Glaucon:: Yes, this I can say.

Socrates:: And that the part which consists in the sentiment differs in nothing from that sentiment which is not sung, in this respect, that it ought to be done upon the same models as we just now said, and in the same manner.

Glaucon:: True.

Socrates:: And surely, then, the harmony and measure ought to correspond to the sentiment.

Glaucon:: Why not?

Socrates:: But we observed there was no occasion for wailings and lamentations in compositions.

Glaucon:: No occasion, truly.

Socrates:: Which then are the wailing harmonies? Tell me, for you are a musician.

Glaucon:: The mixt Lydian, and the sharp Lydian, and some others of this kind.

Socrates:: Are not these then, to be rejected, for they are unprofitable even to women, such as are worthy, and much more to men?

Glaucon:: Certainly.

Socrates:: But drunkenness is most unbecoming our guardians, and effeminacy and idleness.

Glaucon:: Why not?

Socrates:: Which then are the effeminate and gossiping harmonies?

Glaucon:: The Ionic, and the Lydian, which are called relaxing.

Socrates:: Can you make any use of these, my friend, for military men?

Glaucon:: By no means,: but, it seems, you have yet remaining the Doric and the Phrygian.

Socrates:: I do not know, the harmonies; but leave that harmony which may in a becoming manner imitate the voice and accents of a truly brave man going on in a military action, and every rough adventure, and bearing his fortune in a determinate and persevering manner when he fails of success, goes against wounds or deaths, or falls into any other distress; and that kind of harmony, likewise, which is suited to what is peaceable, where there is no violence, but all voluntary—where one either persuades or beseeches any one about anything, either God by prayer, or man by instruction and admonition; or, on the other hand, where one submits himself to another who beseeches, instructs, and persuades, and, upon all these things, acts according to intelligence, and does not behave haughtily, demeaning himself soberly and moderately, gladly embracing whatever befalls. Leave then these two harmonies, the vehement and the gentle, which in the most handsome manner imitate the voice of the misfortunate and of the fortunate, of the moderate and of the brave.

Glaucon:: You desire, to leave no others but those I now mentioned.

Socrates:: We shall not then, have any need of a great many strings, nor a variety of harmony in our songs and melodies.

Glaucon:: It appears to me, we shall not.

Socrates:: We shall not breed, then, such workmen as make harps and spinets, and all those instruments which have many strings and a variety of harmony.

Glaucon:: No, as appears.

Socrates:: But what? Will you admit into your city such workmen as make pipes, or pipers? for are not the instruments which consist of the greatest number of strings, and have all sorts of harmony, imitations of the pipe?

Glaucon:: It is plain.

Socrates:: There is left you still, the lyre and the harp, as useful for your city, and there might likewise be some reed for shepherds in the fields.

Glaucon:: Thus reason, shows us.

Socrates:: We then, do nothing strange if we prefer Apollo and Apollo's instruments, to Marsyas and the instruments of that eminent musician.

Glaucon:: Truly, we do not appear to do it.

Socrates:: And I swear, we have unawares cleansed again our city, which we said was become luxurious.

Glaucon:: And we have wisely done it.

Socrates:: Come then, and let us cleanse what remains; for what concerns the measure, should be suitable to our harmonies, that our citizens pursue not such measures as are diversified and have a variety of cadencies, but observe what are the measures of a decent and manly life, and whilst they observe these, to make the foot and the melody subservient to sentiment of such a kind, and not the sentiment subservient to the foot and melody. But what these measures are is your business to tell, as you have done the harmonies.

Glaucon:: But truly, I cannot tell. That there are three species of which the notes are composed, as there are four in sounds, whence the whole of harmony, I can say, as I have observed it; but which are the imitations of one kind of life, and which of another, I am not able to tell.

Socrates:: But these things, we must consider with Damon's assistance, what notes are suitable to illiberality and insolence, to madness or other ill disposition, and what notes are proper for their opposites. And I remember, but not distinctly, to have heard him calling a certain warrior, composite, a dactyle, and heroic measure, ornamenting him I do not know how, making him equal above and below, in breadth and length, and called one, as I imagine, Iambus, and another Trochaeus. He adapted, besides, the lengths and shortnesses, and in some of these, I believe, he blamed and commended the measure of the foot no less than the numbers themselves, or something compounded of both, for I cannot speak of these things; for these things, as I said, are to be thrown over upon Damon: to speak distinctly on these matters, would require no small discourse; do not you think so?

Glaucon:: Not a small one, truly.

Socrates:: But can you determine this, that the propriety and impropriety corresponds to the good or ill measure?

Glaucon:: Why not?

Socrates:: But with respect to the good or ill measure, the one corresponds to handsome expression, conforming itself to it, and the other to the reverse. And, in the same way as to the harmonious and the discordant, since the measure and harmony are subservient to the sentiment, as has been now said, and not the sentiment to these.

Glaucon:: These indeed, are to be subservient to the sentiment.

Socrates:: But what, as to the manner of expression, and as to the sentiment itself? must it not correspond to the temper of the soul?

Glaucon:: Why not?

Socrates:: And all other things correspond to the expression?

Glaucon:: Yes.

Socrates:: So that the beauty of expression, fine consonancy, and propriety and excellence of numbers, are subservient to the good disposition—not that stupidity which in complaisant language we call good temper, but an understanding truly adorned with a beautiful and fine temper.

Glaucon:: By all means.

Socrates:: Must not these things be always pursued by the youth if they are to mind their business?

Glaucon:: They are indeed to be pursued.

Socrates:: But painting too is, somehow, full of these things, and every other workmanship of the kind; and weaving is full of these, and carving, and architecture, and all workmanship of every kind of vessels—as is, moreover, the nature of bodies and of all vegetables: for in all these there is propriety and impropriety; and the impropriety, discord and dissonance are the sisters of ill expression and ill sentiment, and their opposites are the sisters and imitations of sober and good sentiment.

Glaucon:: 'Tis entirely so.

Socrates:: Are we then to give injunctions to the poets alone, and oblige them to work into their poems the image of the good sentiment, otherwise not to compose at all with us; or are we to enjoin all other workmen likewise, and restrain this ill, undisciplined, illiberal, indecent manner, that they exhibit it neither in the representations of animals, in buildings, nor in any other workmanship; or that he who is not able to do this be not suffered to work with us, lest our guardians, being educated in the midst of ill representations, as in an ill pasture, whereby every day plucking and eating a deal of different things, by little and little they contract imperceptibly some mighty evil in their soul. But we must seek out such workmen as are able by the help of a good natural genius to trace the nature of the beautiful and the decent, that our youth, dwelling as it were in a healthful place, may be profited at all hands; whence from the beautiful works something will be conveyed to the sight and hearing, as a breeze bringing health from salutary places, imperceptibly leading them on directly from childhood to the resemblance, friendship, and harmony with right reason.

Glaucon:: They should thus, be educated in the most handsome manner by far.

Socrates:: On these accounts therefore, Glauco, is not education in music of the greatest importance, because that the measure and harmony enter in the strongest manner into the inward part of the soul, and most powerfully affect it, introducing decency along with it into the mind, and making every one decent if he is properly educated, and the reverse if he is not. And, moreover, because the man who has here been educated as he ought, perceives in the quickest manner whatever workmanship is defective, and whatever execution is unhandsome, or whatever productions are of that kind; and being disgusted in a proper manner, he will praise what is beautiful, rejoicing in it, and receiving it into his soul, be nourished by it, and become a worthy and good man; but whatever is ugly, he will in a proper manner despise and hate, whilst yet he is young, and before he is able to understand reason; and when reason comes, such an one as has been thus educated will embrace it, recognizing it perfectly well from its intimate familiarity with him.

Glaucon:: It appears to me, that education in music is for the sake of such things as these.

Socrates:: Just as with reference to letters, we are then sufficiently instructed when we are not ignorant of the elements, which are but few in number, wherever they are concerned, and when we do not despise them more or less as unnecessary to be observed, but by all means give diligence to understand them thoroughly, as it is impossible for us to be men of letters till we do thus.

Glaucon:: True.

Socrates:: And if the images of letters appeared anywhere, either in water or in mirrors, should we not know them before we knew the letters themselves? or does this belong to the same art and study?

Glaucon:: By all means.

Socrates:: Is it indeed then according as I say, that we shall never become musicians, neither we ourselves nor those guardians we say we are to educate, before we understand the images of temperance, fortitude, liberality, and magnificence, and the other sister virtues; and on the other hand again, what is the reverse of these, which are everywhere to be met with, and observe them wheresoever they are, both the virtues themselves and the images of them, and despise them neither in small nor in great instances, but let us believe that this belongs to the same art and study?

Glaucon:: There is, great necessity for it.

Socrates:: Must not then, the person who shall have in his soul fine dispositions, and in his appearance whatever is proportionable and corresponding to these, partaking of the same impression, be the most beautiful spectacle to any one who is able to behold it?

Glaucon:: Exceedingly so.

Socrates:: But what is most beautiful is most desirable.

Glaucon:: Why not?

Socrates:: He who is musical should surely love those men who are most eminently of this kind, but if one be unharmonious he shall not love him.

Glaucon:: He shall not, if the person be any way defective as to his soul; if, indeed, it were in his body, he would bear with it, so as to be willing to associate with him.

Socrates:: I understand, that your favorites are, or have been of this kind; and I agree to it. But tell me this: is there any communion between temperance and excessive pleasure?

Glaucon:: How can there, for this pleasure discomposes no less than grief?

Socrates:: But has it communion with any other virtue?

Glaucon:: By no means.

Socrates:: But what, has it communion with insolence and intemperance?

Glaucon:: Most of all.

Socrates:: Can you mention a greater and more vehement pleasure than that respecting sensual love?

Glaucon:: I cannot, nor yet one that is more furious.

Socrates:: But the right love is of such a nature as to love the beautiful and the handsome in a temperate and a musical manner?

Glaucon:: Certainly.

Socrates:: Nothing then which is furious, or akin to intemperance, is to approach to a right love. Neither must pleasure approach to it, nor must the lover and the persons he loves have communion with it, where they love and are beloved in a right manner.

Glaucon:: No, truly, they must not, Socrates, approach to these.

Socrates:: Thus then, as appears, you will establish by law in the city which is to be settled that the lover is to love, to converse, and associate with his loves, as with his son, for the sake of virtue, if he gain the consent; and as to every thing besides, that every one so converse with him whose love he solicits, as never at all to appear to associate for any thing beyond what is now mentioned, and that otherwise he shall undergo the reproach of being unmusical and unacquainted with the beautiful.

Glaucon:: It must be thus.

Socrates:: Does then, the discourse concerning music seem to you to be finished? for it has terminated where it ought to terminate, as the affairs of music ought, somehow, to terminate in the love of the beautiful.

Glaucon:: I agree.

Socrates:: But after music, our youth are to be educated in exercise.

Glaucon:: But what?

Socrates:: It is surely necessary that in this likewise they be accurately disciplined, from their infancy, through the whole of life. For the matter, as I imagine, is somehow thus; but do you also consider. For I indeed do not imagine that whatever body is found does by its own virtue render the soul good, but contrariwise, that a good soul, by its virtue, renders the body the best which is possible. But how does it appear to you?

Glaucon:: In the same manner to me, likewise.

Socrates:: If then, when we have sufficiently cultivated the understanding, we shall commit to it the accurate management of the concerns of the body, shall not we, as we are only laying down models (that we may not enlarge), act in a right manner?

Glaucon:: Entirely so.

Socrates:: We say then that they are to abstain from drunkenness; for it is more allowable to any than to a guardian to be drunk and not to know where he is.

Glaucon:: It were ridiculous, that the guardian should stand in need of a guardian.

Socrates:: But what as to meats—for these men are wrestlers in the noblest combat, are they not?

Glaucon:: They are.

Socrates:: Would not then the bodily plight of the wrestlers be proper for such as these?

Glaucon:: Probably.

Socrates:: But, it is of a drowsy kind, and ticklish as to health: or do you not observe that they sleep out their life, and if they depart but a little from their appointed diet, such wrestlers become greatly and extremely sick?

Glaucon:: I perceive it.

Socrates:: But some more elegant exercise, is requisite for our military wrestlers, who, as dogs, ought to be wakeful, and to see and to hear in the most acute manner, and in their expeditions to put up with many changes of water and of food, of heat and of cold, that so they may not have a ticklish state of health.

Glaucon:: To me it appears so.

Socrates:: Is not then the best exercise a kind of sister to the simple music which we a little ago described?

Glaucon:: How do you say?

Socrates:: That the exercise is to be simple and moderate, and of that kind most especially which pertains to war.

Glaucon:: Of what kind?

Socrates:: Even from Homer, one may learn these things; for you know, that in their warlike expeditions, at the entertainments of their heroes, he never feasts them with fishes—and that even whilst they were by the sea at the Hellespont—nor yet with boiled fleshes, but only with roast, as what soldiers can most easily get; for, in short, one can everywhere more easily make use of fire than carry vessels about with them.

Glaucon:: Yes. indeed.

Socrates:: Neither does Homer, as I imagine, any where make mention of seasonings: and this is what the other wrestlers understand, that the body which is to be in good habit must abstain from all these things.

Glaucon:: They rightly understand, and abstain.

Socrates:: You do not then, friend, as appears, approve of the Syracusian table and the Sicilian variety of meats, since this other appears to you to be right?

Glaucon:: I do not, as appears.

Socrates:: You will likewise disapprove of a Corinthian girl, as a mistress, for them who are to be of a good habit of body.

Glaucon:: By all means, truly.

Socrates:: And likewise of those delicacies, as they are reckoned, of Attic confections.

Glaucon:: Of necessity.

Socrates:: For all feeding and dieting of this kind, if we compare it to melody and song, which are composed in a harmony and measure diversified all manner of ways, shall not the comparison be just?

Glaucon:: Why not?

Socrates:: And does not the diversity in that case create intemperance, and here disease; but simplicity as to music creates in the soul temperance, and, as to exercise, creates health in the body.

Glaucon:: Most true.

Socrates:: And when intemperance and diseases multiply in the city, shall we not have many halls of justice and of medicine opened, and the arts of justice and of medicine be in request, when many free persons shall earnestly apply to them?

Glaucon:: Why not?

Socrates:: But can you pitch upon any greater mark of an ill and base education in a city than that there should be need of physicians and supreme magistrates, and that not only for the contemptible and low handicrafts, but for those who boast of having been educated in a liberal manner? Or does it not appear to be base, and a great sign of want of education, to be obliged to observe justice pronounced on us by others, as our masters and judges, and to have no sense of it in ourselves?

Glaucon:: Of all things, this, is the most base.

Socrates:: And do you not, deem this to be more base still, when one not only spends a great part of life in courts of justice, as defendant and plaintiff, but from his ignorance of the beautiful imagines that he becomes renowned for this very thing, as being dexterous in doing injustice, and able to turn himself through all sorts of windings, and using every sort of subterfuge, thinks to get off, so as to evade justice, and all this for the sake of small and contemptible things, being ignorant how much better and more handsome it were so to regulate his life as not to stand in need of a sleepy judge?

Glaucon:: This, is still more base than the other.

Socrates:: And to stand in need of the medicinal art, not on account of wounds, or some epidemical distempers incident, but through sloth and such a diet as we mentioned, filled with rheums and wind, like lakes, obliging the skilful sons of Aesculapius to invent new names to diseases, such as dropsies and catarrhs—do not you think this abominable?

Glaucon:: These are truly, very new and strange names of diseases.

Socrates:: Such, as were not, I imagine, in the days of Aesculapius. And I conjecture so from this, that when Eurypylus was wounded at Troy, and was getting Pramnian wine to drink with a deal of flour in it, with cheese added to it (all which seem to be phlegmatic), the sons of Aesculapius neither blamed the woman who presented it, nor reprehended Patroclus who had presented the cure.

Glaucon:: And surely the potion, is absurd for one in such a case.

Socrates:: No, if you consider that, as they tell us, the descendants of Aesculapius did not, before the days of Herodicus, practice this method of cure, now in use, which puts the patient on a regimen. But Herodicus, being a teacher of youth, and at the same time infirm in his health, mixing exercise and medicine together he made himself most uneasy, in the first place, and afterwards many others besides.

Glaucon:: As how?

Socrates:: In procuring to himself, a lingering death; for whilst he was constantly attentive to his disease, which was mortal, he was not able, as I imagine, to cure himself, though, neglecting every thing besides, he was still using medicines. And thus he passed his life, still in the greatest uneasiness if he departed in the least from his accustomed diet, and through this wisdom of his, struggling long with death, he arrived at old-age.

Glaucon:: A mighty reward, he reaped of his art!

Socrates:: Such as became one, who did not understand that it was not from ignorance or inexperience of this method of cure that Aesculapius did not discover it to his descendants, but because that he knew, that in all well regulated states there was some certain work enjoined every one in the city, which was necessary to be done, and no one allowed to have the leisure of being sick the whole of life, and attentive only to the taking of medicines. This we may pleasantly observe in the case of laboring people, but we do not observe it in the case of the rich, and such as are counted happy.

Glaucon:: How?

Socrates:: A smith, when he falls sick, thinks it fit to take from the physician some potion, to throw up his disease or purge it downwards, or by means of caustic or amputation to get quit of the trouble; but if any one prescribe for him a long regimen, putting caps on his head, and other such things, he quickly tells him that he has not leisure to lye sick, nor does it avail him to live in this manner, attentive to his trouble and negligent of his proper work; and so, bidding such a physician farewell, he returns to his ordinary diet, and, if he recovers his health, he continues to manage his own affairs; but if his body be not able to support, he dies, and is freed from troubles.

Glaucon:: It seems proper, for such an one to use the medicinal art in this manner.

Socrates:: Is it not, because he has a certain business, which, if he does not perform, it is not for his advantage to live?

Glaucon:: It is plain.

Socrates:: But the rich man, as we say, has no such work allotted him, from which, if he be obliged to refrain, life is not worth the having.

Glaucon:: He is surely said at least to have none.

Socrates:: For you do not, attend to what Phocylides says, that one ought still, whilst there is life, to practice virtue!

Glaucon:: I think, we attended to that formerly.

Socrates:: Let us by no means, differ from him in this, but let us inform ourselves whether this excessive attention to one's disease is to be the business of the rich, and that life is not worth keeping if he does not give this attention; for that such a life is indeed a hindrance of the mind's application to masonry and other arts, but with respect to the exhortation of Phocylides it is no hindrance.

Glaucon:: Yes, truly it is, and that in the greatest degree, when this excessive care of the body goes beyond proper exercise.

Socrates:: Neither does it agree with attention to private economy, or military expeditions, or sedentary magistracies in the city. But what is of the greatest moment is, that such application to health is ill-fitted for any sort of learning, and enquiry, and study by one's self, whilst one is perpetually dreading certain pains and swimmings of the head, and blaming philosophy as occasioning them; so that where there is this attention to health, it is a great obstacle to the practice of virtue and improvement in it, for it makes us always imagine that we are ill, and always complain of the body.

Glaucon:: That is likely.

Socrates:: And shall we not say that Aesculapius too understood these things, when, to persons of a healthful constitution, and such as used a wholesome diet, but were afflicted by some particular disease, to these and to such a constitution he prescribed medicine, repelling their diseases by drugs and incisions, and enjoined them their accustomed diet, that the public might suffer no damage? But he did not attempt, by extenuating or nourishing diet, to cure such constitutions as were wholly diseased within, as it would but afford a long and miserable life to the man himself, and the descendants which would spring from him would probably be of the same kind; for he did not imagine the man ought to be cured who could not live in the ordinary course, as he would be neither profitable to himself nor to the state.

Glaucon:: You make Aesculapius, a politician.

Socrates:: It is plain, and his sons may show that he was so. Or do you not see that at Troy they excelled in war, and likewise practiced medicine in the way I mention? Or do not you remember, that when Menelaus was wounded by Pandarus, they

> Wash'd off the blood, and soft'ning drugs applied.

But as to what was necessary for him to eat or drink afterwards, they prescribed for him no more than for Eurypylus, deeming external applications sufficient to heal men who before they were wounded were healthful and moderate in their diet, whatever mixture they happened to have drunk at the time; but they judged, that to have a diseased constitution, and to live an intemperate life, was neither profitable to the men themselves nor to others, and that their art ought not to be employed on these, nor to minister to them, not even though they were richer than Midas.

Glaucon:: You make, the sons of Aesculapius truly ingenious.

Socrates:: It is proper,—though, in opposition to us, the writers of tragedy, and Pindar, call indeed Aesculapius the son of Apollo, but say that he was prevailed on by gold to undertake the cure of a rich man who was already in a deadly state, for which, truly, he was even struck with a thunderbolt. But we, agreeably to what has been formerly said, will not believe them as to both these things, but will aver, that if he was the son of the God, he was not given to filthy lucre; or if he were given to filthy lucre, he was not a son of the God.

Glaucon:: These things, are most right. But what do you say, Socrates, as to this: Is it not necessary to provide good physicians for the state? and must not these, most likely, be such who have been conversant with the greatest number of healthy and of sickly people? and these, in like manner, be the best judges who have been conversant with all sorts of dispositions?

Socrates:: I mean now, those who are very good. But do you know whom I deem to be such?

Glaucon:: If you tell me.

Socrates:: I shall endeavor to do it; but you enquire in one question about two different things.

Glaucon:: As how?

Socrates:: Physicians, would become most expert if, beginning from their infancy, they would in learning the art be conversant with the greatest number of bodies, and these the most sickly, and labored themselves under all manner of diseases, and by natural constitution were not quite healthful; for it is not by the body, I imagine, that they cure the body (else their own bodies could at no time be admitted to be of an ill constitution), but they cure the body by the soul, which, whilst it is of an ill constitution, is not capable to perform well any cure.

Glaucon:: Right.

Socrates:: But the judge, friend, governs the soul by the soul; which, if from its childhood it has been educated with bad souls, and has been conversant with them, and has itself done all manner of evil, it is not able to come out from among them so as accurately by itself to judge of the evils of others, as happens in the diseases of the body; but it must in its youth be inexperienced and unpolluted with evil manners, if it means to be good and beautiful itself, and to judge soundly of what is just. And hence the virtuous in their youth appear simple and easily deceived by the unjust, as they have not within themselves dispositions similar to those of the wicked.

Glaucon:: And surely this at least, they do often suffer extremely.

Socrates:: For which reason, the good judge is not to be a young man, but an old, having been late in learning wickedness what it is; perceiving it not as a kindred possession residing in his own soul, but as a foreign one in the souls of others, which he has for a long time studied, and has understood what sort of an evil it is, by the help of science, rather than by proper experience.

Glaucon:: Such an one, is like to be the most able judge.

Socrates:: And likewise a good one, which was what you required, for he who has a good soul is good. But the other notable and suspicious man, who has committed many pieces of iniquity himself, when indeed he converses with his like, being thought to be subtle and wise, he appears a notable man, being extremely cautious, having an eye to those models which he has within himself; but when he approaches the good and the more aged, he appears foolish, suspicious out of season, and ignorant of integrity of manners, as having within no models of such a kind. But, however, being more frequently conversant with the wicked than with the wise, he appears, both to himself and others, to be more wise rather than more ignorant.

Glaucon:: This, is perfectly true.

Socrates:: We must not, therefore, look for such an one to be a wise and good judge, but the former one; for indeed vice can never at all know both itself and virtue; but virtue, where the temper is instructed by time, shall attain to the knowledge of both itself and vice. This one, then, and not the wicked, as it appears to me, is the wise man.

Glaucon:: And I, am of the same opinion.

Socrates:: Will you not then establish in the city such a method of medicine as we have mentioned, along with such a method of judicature as shall carefully preserve for you those of your citizens who are of goodly constitutions both in mind and in body; and with respect to those who are otherwise, such as are so in their bodies, they shall suffer to die, but such as are of naughty and incurable constitutions in their soul, these they shall themselves put to death.

Glaucon:: This, has appeared to be best, both for those who suffer it, and for the city.

Socrates:: And it is plain, that your youth will be afraid of needing this judiciary, whilst they are employed in that simple music which, we say, generates temperance.

Glaucon:: Why will they not?

Socrates:: And according to the very same steps of reasoning, the musician who takes a fancy to perform exercises will choose to do it so as not to require any medicine unless there be necessity.

Glaucon:: I imagine so.

Socrates:: And he will perform his exercises and his labors, studying the sprightliness of his temper and the animating it, rather as bodily vigor, and not as the other wrestlers, who take meats and drinks to promote bodily strength.

Glaucon:: Most right.

Socrates:: Why then, Glauco, they who propose to teach music and exercise, propose these things, not for what the generality imagine, to cure the body by the one, and the soul by the other.

Glaucon:: What then?

Socrates:: They seem, to propose them both chiefly on the soul's account.

Glaucon:: As how?

Socrates:: Do not you perceive, how these are affected as to their understanding who have all their life been conversant in exercises, but have never applied to what is musical? or how these are affected who have lived in a method the reverse of this?

Glaucon:: Whom, do you speak of?

Socrates:: Of rusticity, and fierceness, and again of softness and mildness.

Glaucon:: I know, that these who are conversant in nothing but mere exercises turn out to be more rustic than is becoming; and they, again, who mind music alone are more soft than is for their honor.

Socrates:: And surely, this rusticity, at least, may generate a sprightliness of temper, and, when rightly disciplined, may turn to fortitude; but when carried further than is becoming, may, as is likely, be both more fierce and troublesome.

Glaucon:: So I imagine.

Socrates:: But what, does not the philosophic temper partake of the mild? and when this disposition is carried too far, may it not prove more soft than is becoming, but when rightly disciplined, be really mild and comely?

Glaucon:: These things are so.

Socrates:: But we say that our guardians ought to have both these dispositions.

Glaucon:: They ought.

Socrates:: Ought not then these to be adapted to one another?

Glaucon:: Why not?

Socrates:: And the soul in which they are thus adapted is temperate and brave.

Glaucon:: Certainly.

Socrates:: But the soul in which they are not adapted is cowardly and savage.

Glaucon:: Extremely so.

Socrates:: And when one yields up himself to be soothed with the charms of music, and pours into his soul through his ears, as through a pipe, those we denominated the soft, effeminate, and plaintive harmonies, and spends the whole of his life chanting and ravished with melody, such an one, at the first, if he have any thing high spirited, softens it like iron, and from being useless and fierce, renders it profitable. But when he, still persisting, does not desist, but enchants his soul, after this it melts and dissolves him, till it thoroughly soften his spirit and cut out, as it were, the nerves of his soul, and render him an effeminate warrior.

Glaucon:: It is certainly so indeed.

Socrates:: But if, he had from the beginning a spiritless temper, this he quickly effectuates, but if high spirited, it renders the mind weak and easily turned, so as instantly to be enraged at trifles, and again the rage is extinguished: so that from being high spirited, they become outrageous and passionate, full of the morose.

Glaucon:: So indeed it happens.

Socrates:: But what now, if one labor much in exercises, and feast extremely well, but apply not to music and philosophy, shall he not, in the first place, being in good plight of body, be filled with courage and spirit, and become more courageous than he was before?

Glaucon:: Certainly so.

Socrates:: But what? When he does nothing else, nor participates in any thing which is music like, though there were any love of learning in his soul, as it neither tastes of any study, nor bears a share in any inquiry nor reasoning, nor any thing besides which is musical, must it not become feeble and deaf and blind, as his perceptions are neither awakened nor nourished nor refined?

Glaucon:: Just so.

Socrates:: Such an one then becomes, as I imagine, a reason-hater, and unmusical, and by no means can be persuaded to any thing by reasoning, but is carried to everything by force and savageness, as a wild beast; and thus he lives in ignorance and barbarity, out of measure and unpolished.

Glaucon:: It is, entirely so.

Socrates:: Corresponding then to these two tempers, I would say that some God, as appears, has given men two arts, those of music and exercise, in reference to the sprightly and the philosophic temper, not for the soul and body, otherwise than as a by-work, but for that other purpose, that those two tempers might be adapted to one another, being stretched and slackened to the proper pitch.

Glaucon:: So indeed it appears.

Socrates:: Whoever then shall in the most handsome manner mingle exercise with music, and have these in the justest measure in his soul, him we shall most properly call the most completely musical and of the best harmony, far more than the man who adjusts to one another musical strings.

Glaucon:: Most reasonably, Socrates.

Socrates:: Shall we not then, Glauco, always have need of such a president for our state, if our government is to be preserved?

Glaucon:: We shall most especially have need of this.

Socrates:: Those then may be the models of education and discipline. For why should one go over the dances, the hunting of wild beasts, both with dogs and with nets, the wrestlings and the horse-races proper for such persons, for it is quite manifest that these naturally follow of course, and it is no difficult matter to find them out.

Glaucon:: It is indeed, not difficult.

Socrates:: Be it so; but what follows next? What was next to be determined by us? Was it which of these shall govern, and be governed?

Glaucon:: What else?

Socrates:: Is it not plain that the elder ought to be governors, and the younger to be the governed?

Glaucon:: It is plain.

Socrates:: And is it not likewise plain that the best of them are to govern?

Glaucon:: This too is plain.

Socrates:: But are not the best husbandmen the most assiduous in agriculture?

Glaucon:: They are.

Socrates:: If now our guardians are the best, will they not be most vigilant over the city?

Glaucon:: They will.

Socrates:: Must we not, for this purpose, make them prudent, and able, and careful likewise of the city?

Glaucon:: We must do so.

Socrates:: But one would seem to be most careful of that which he happens to love?

Glaucon:: Undoubtedly.

Socrates:: And one shall most especially love that to which he thinks the same things are profitable which are so to himself, and with whose good estate he thinks his own connected; and where he is of a contrary opinion he will be contrary-wise affected.

Glaucon:: Just so.

Socrates:: We must choose then from the other guardians such men as shall most of all others appear to us, on observation, to do with the greatest chearfulness, through the whole of life, whatever they think advantageous for the state, and what appears to be disadvantageous they will not do by any means.

Glaucon:: These are the most proper.

Socrates:: It truly appears to me that they ought to be observed through every stage of their life, if they be tenacious of this opinion, so as that neither fraud nor force make them inconsiderately throw out this opinion: that they ought to do what is best for the state.

Glaucon:: What throwing out do you mean?

Socrates:: I will tell you. An opinion seems to me to go out of the understanding voluntarily or involuntarily: a false opinion goes voluntarily from the mind which unlearns it, but every true opinion goes involuntarily.

Glaucon:: The case of the voluntary one, I understand, but that of the involuntary I want to learn.

Socrates:: What now? Do not you think, that men are involuntarily deprived of good things, but voluntarily of evil things? Or is it not an evil to miss of the truth, and a good to form true opinion? Or does it not appear to you that to conceive of things as they really are is to form true opinion?

Glaucon:: You say rightly indeed; they do seem to me to be deprived unwillingly of true opinion.

Socrates:: Do not they then suffer this, either in the way of theft, flattery, or force?

Glaucon:: I do not now, understand you.

Socrates:: I seem, to speak theatrically. But, I say, those have their opinions stolen away who are persuaded to change their opinions, and those who forget them: in the one case they are imperceptibly taken away by time, and in the other by reasoning. Do you now understand in any measure?

Glaucon:: Yes.

Socrates:: And those, I say, have their opinions forced from them whom grief or agony obliges to change them.

Glaucon:: This, I understand, and you say right.

Socrates:: And those, I imagine you will say, are beguiled out of their opinions, who change them, being bewitched by pleasure or seduced by fear, being afraid of something.

Glaucon:: It seems, that everything beguiles which deceives us.

Socrates:: That then which I was now mentioning must be sought for: who are the best guardians of this opinion—that that is to be done which is best for the state—and they must be observed immediately from their childhood, setting before them such pieces of work in which they may most readily forget such a principle and be deluded; and he who is mindful and hard to be deluded is to be chosen, and he who is otherwise is to be rejected. Is it not so?

Glaucon:: Yes.

Socrates:: And we must appoint them trials of labors and of pains, in which we must observe the same things.

Glaucon:: Right.

Socrates:: Must we not, appoint them a third contest, that of the mountebank kind, and observe them as those do who, when they lead on young horses against noises and tumults, observe whether they are frightened. So must they, whilst young, be led into dreadful things, and again be thrown into pleasures, trying them more than gold in the fire, whether one is hard to be beguiled with mountebank tricks, and appear composed amidst all, being a good guardian of himself and of that music which he learned, showing himself in all these things to be in just measure and harmony. Being of such a kind as this, he would truly be of the greatest advantage both to himself and to the state. And the man who in childhood, in youth, and in manhood has been thus tried, and has come out pure, is to be appointed governor and guardian of the state, and honors are to be paid him whilst alive, and when dead he should receive the highest rewards of public funeral and other memorials; and he who is not such an one is to be rejected. Of such a kind, Glauco, as it appears to me, is to be the choice and establishment of our governors and guardians, as in a sketch and not accurately.

Glaucon:: And I, am of the same opinion.

Socrates:: Is it not then truly most just to call these the most complete guardians, both with reference to enemies abroad and to friends at home, so as that the one shall not have the will, nor the other have the power, to do any mischief? And the youth (whom we now called guardians) will be allies and auxiliaries to the decrees of the governors.

Glaucon:: I imagine so.

Socrates:: What now, may be the contrivance of those lies, which are made on occasion, and of which we were lately saying that it is a most generous part in making lies, to persuade the governors themselves most especially, or if not these, the rest of the state?

Glaucon:: What sort do you mean?

Socrates:: Nothing new, but somewhat Phoenician, which has frequently happened heretofore, as the poets tell us, and have persuaded us, but has not happened in our times, nor do I know if ever it shall happen: to persuade one of it surely requires a subtle persuasion.

Glaucon:: How like you are, to one who grudges to speak out!

Socrates:: I shall appear, to grudge with very good reason after I tell it.

Glaucon:: Speak, and do not fear.

Socrates:: I speak then, though I know not with what courage, and using what expressions, I shall tell it. And I shall attempt, first of all, to persuade the governors themselves and the soldiers, and afterwards the rest of the state, how that whatever things we educated and instructed them in seemed to happen to them, and to befall them all as dreams, but that they were in truth at that time formed and educated within the earth, both they themselves, and their armor, and their other utensils likewise fabricated, and after that they were completely fashioned, the earth, who is their mother, brought them forth; and now they ought to be affected towards the country where they are, as to their mother and nurse, to defend her if any invade her, and to consider the rest of the citizens as being their brothers and sprung from their mother earth.

Glaucon:: It was not without reason, that a while ago you was ashamed to tell this falsehood.

Socrates:: I had truly reason: but hear, however, the rest of the fable. All of you now in the state are brothers (as we shall tell them in way of fable), but the God, when he formed you, mixed gold in the formation of such of you as are able to govern, therefore are they the most honorable; and silver in such as are auxiliaries, and iron and brass in the husbandmen and other handicrafts. As you are all of the same kind, you for the most part resemble one another, and it sometimes happens that of the gold is generated the silver, and of the silver there is a golden descendant, and thus every different way are they generated of one another. The God gives in charge, first of all, and chiefly to the governors, that of nothing are they to be so good guardians, nor are they so strongly to keep watch over any thing as over their children, to know what of those principles is mixed in their souls; and if their descendant shall be of the brazen or iron kind, they shall by no means have compassion, but assigning him honor proportioned to his natural temper, they shall push him down to the craftsmen or husbandmen. And if, again, any from among these shall be born of a golden or silver kind, they shall pay them honor and prefer them, those to the guardianship, and these to the auxiliary rank—it being pronounced by the oracle that the state is then to perish, when iron or brass shall have the guardianship of it. Have you now any contrivance to persuade them of this fable?

Glaucon:: None, to persuade these men themselves; but I can contrive how that their sons and posterity, and all mankind afterwards, shall believe it.

Socrates:: Even this, would do well towards making them more concerned about the state and one another; for I almost understand what you say, and this truly will lead the same way as the oracle. But let us, having armed these earth-born sons, lead them forwards under their leaders, and when they are come into the city, let them consider where it is best to place their camp, so as best to keep in order those who are within, if any one should want to disobey the laws, and likewise defend against those without, if any enemy, as a wolf, should come upon the fold. And when they have marked out their camp, and performed sacrifices to the proper Divinities, let them erect their tents—or how are they to do?

Glaucon:: Just so.

Socrates:: Shall they not be such as may be sufficient to defend them both from winter and summer?

Glaucon:: Why not? for you seem, to mean houses.

Socrates:: Yes, but military ones, not such as are costly.

Glaucon:: What do you say, is the difference between the one and the other?

Socrates:: I will endeavor, to tell you; for of all things it is the most dreadful, and the most shameful to shepherds, to breed such kind of dogs, and in such a manner, as auxiliaries of the flocks, as either through intemperance or famine, or some other ill disposition, the dogs themselves should attempt to hurt the sheep, and, instead of dogs, resemble wolves.

Glaucon:: That is dreadful; why, is it not?

Socrates:: Must we not then, by all means, take care lest our allies do such a thing towards our citizens, as they are more powerful, and instead of generous allies resemble savage lords?

Glaucon:: We must take care.

Socrates:: Would they not be prepared, as to the greatest part of the care, if they were really well educated?

Glaucon:: But they are so at least.

Socrates:: That is not proper to be confidently affirmed, friend Glauco, but that is proper which we were now saying, that they ought to have good education, whatever it is, if they are to have what is of the greatest consequence towards rendering them mild, both among themselves and towards those who are guarded by them.

Glaucon:: Very right.

Socrates:: Besides then this education, any one of understanding would say that their houses, and all their other substance, ought to be so contrived as not to hinder their guardians from being the very best of men, and not to stir them up to injure the other citizens.

Glaucon:: And he will say true.

Socrates:: If then they intend to be such, consider, whether they ought to live and dwell in some such manner as this: First then, let none possess any substance privately, unless there be the greatest necessity for it; next, let none have any dwelling or store-house into which whoever inclines may not enter; as for necessaries, let them be such as temperate and brave warriors may require, and as they are instituted by the other citizens, let them receive such a reward of their guardianship as to have neither overplus nor deficiency at the year's end. Let them have public meals, as in encampments, and live in common. They must be told that they have from the Gods a divine gold and silver at all times in their souls, and have no need of the human, and that it were profane to pollute the possession of the divine kind by mixing it with the possession of this mortal gold, because the money of the vulgar has produced many wicked deeds, but that of these men is incorruptible. And of all the men in the city, they alone are not allowed to handle nor to touch gold nor silver, nor to bring it under their roof, nor carry it about with them, nor to drink out of silver or gold, and that thus they are to preserve themselves and the state. But whenever they shall possess lands, and houses, and money in a private way, they shall become stewards and farmers instead of guardians, hateful lords instead of allies to the other citizens, hating and being hated, plotting and being plotted against, they shall pass the whole of their life, much oftener, and more afraid of the enemies from within than from without, they and the rest of the state hastening speedily to destruction. For all which reasons, let us affirm that our guardians are thus to be constituted, with reference both to their houses and to other things. And let us settle these things by law. Shall we?

Glaucon:: By all means.

THE END OF THE THIRD BOOK

## THE FOURTH BOOK

Socrates:: Adimantus hereupon replying;

Adeimantus:: What now, Socrates, will you say in your own defense, if one shall say that you do not make these men very happy, though it is owing to these men that the city really exists, yet they enjoy no advantage in the city, such as others do who possess lands, build beautiful and large houses, purchase suitable furniture, offer sacrifices at their own expense, give public entertainments to strangers, and possess what you was now mentioning, gold and silver, and every thing which is reckoned to contribute towards the rendering men happy; but one may readily say that, like hired auxiliaries, they seem to possess nothing in the city but the employment of keeping guard.

Socrates:: Yes, and that too only for their maintenance, without receiving, as all others do, any reward besides. So that they are not allowed so much as to travel privately anywhere abroad, though they should incline it, nor to bestow money on others, nor to spend it in such other methods as these do who are counted happy. These and many such things you leave out of the accusation.

Adeimantus:: But let these things too, be charged against them.

Socrates:: You ask then what we shall say in our defense?

Adeimantus:: I do.

Socrates:: Whilst we go on in the same road, we shall find, as I imagine, what may be said; for we shall say that it were nothing strange if these men, even in these circumstances, should be the happiest possible; yet it was not with an eye to this that we established the city, to have any one tribe in it remarkably happy beyond the rest, but that the whole city might be in the happiest condition. For we judged that in such an one we should most especially find justice, and injustice in the city the worst established, and that upon thoroughly examining these we should determine what we have for some time been in quest of. Now then, as I imagine, we are forming a happy state, not picking out some few persons to make them alone happy, but are establishing the universal happiness of the whole; and we shall next consider a state which is the reverse. As if, then, we were painting human figures, and one approaching should blame us, saying that we do not put the most beautiful colors on the most beautiful parts of the creature, for that the eyes, the most beautiful part, were not painted with purple, but with black, would not we seem to say tolerably well, in our defense to him, when we said, Wonderful critic! do not imagine that we ought to paint the eyes beautiful, in such a way as that they would not appear to be eyes, and so with reference to all other parts, but consider whether in giving each particular part its due we make the whole beautiful. And so now, do not oblige us to confer such a happiness on our guardians as shall make them any thing rather than guardians. For we know too how to array the husbandmen in rich and costly robes, and to enjoin them to cultivate the ground only with a view to pleasure; and in like manner those who make earthen ware, to lye at their ease by the fire, to drink and feast, neglecting the wheel, and working only so much as they incline; and we know how to confer a felicity of this nature on every individual, in order to render the whole state happy. But do not advise us to act after this manner, since, if we obey you, neither would the husbandman really be a husbandman, nor the potter be a potter, nor would any other really be of any of those professions of which the city is composed. But as to others it is less matter; for when shoe-makers become bad, and are degenerate, and profess to be shoemakers when they are not, no great mischief happens to the state; but when the guardians of the law and of the state are not so in reality, but only in appearance, you see how they entirely destroy the whole constitution, if they alone shall have the privilege of an affluent and happy life. If we then are for appointing men who shall be really guardians of the city, the least of all hurtful to it, and he who makes the objection, is for having them rather as certain farmers, and as in a festival-meeting, not in a city, certain public entertainers indulging in jollity, he must mean something else than a city. We must then consider whether we establish guardians with this view, that they may have the greatest happiness; or if we establish them with a view to the happiness of the whole city. Let us see whether this takes place, and let us oblige these allies and guardians to do this, and we must persuade them they shall thus become the best performers of their own particular work; and we must deal with all others in the same manner. And thus the whole city being increased and well constituted, let us allow the several tribes to participate of happiness as their natures admit.

Adeimantus:: You seem to me, to say well.

Socrates:: Shall I appear to you, to speak right in what is akin to this?

Adeimantus:: What is that?

Socrates:: Consider whether other artificers are corrupted by these things, so as to be made bad workmen.

Adeimantus:: What things do you mean?

Socrates:: Riches, and poverty.

Adeimantus:: As how?

Socrates:: Thus: does the potter after he becomes rich seem still to mind his art?

Adeimantus:: By no means.

Socrates:: But will he not become more idle and careless than formerly?

Adeimantus:: Much more so.

Socrates:: Shall he not then become a more unskillful potter?

Adeimantus:: Much more so likewise.

Socrates:: And surely, being unable through poverty to furnish himself with tools, or any thing else requisite to his art, his workmanship shall be more imperfectly executed, and his sons or those others whom he instructed shall be inferior artists.

Adeimantus:: How should they not?

Socrates:: Through both these now, poverty and riches, the workmanship in the arts is rendered less perfect, and the artists themselves become less expert.

Adeimantus:: It appears so.

Socrates:: We have then, it seems, discovered other things, which our guardians must by all means watch against, that they may nowise escape their notice and steal into the city.

Adeimantus:: What kind of things are these?

Socrates:: Riches, and poverty: as the one is productive of luxury, idleness, and a love of novelty, and the other, besides a love of novelty, is illiberal and productive of mischief.

Adeimantus:: They are entirely so. But consider this, Socrates: How shall our city be able to engage in war, since she is possessed of no money, especially if she be obliged to wage war against a great and opulent state?

Socrates:: It is plain, that to fight against one of this kind is somewhat difficult, but to fight against two is a more easy matter.

Adeimantus:: How say you,?

Socrates:: First of all now, if they have at all occasion to fight, will they not, being expert in the art of war, fight against rich men?

Adeimantus:: They will.

Socrates:: What then, Adimantus, do not you think that one boxer, who is fitted out in the best manner possible for this exercise, is easily able to fight against two who are not expert boxers, but on the contrary are rich and unwieldy?

Adeimantus:: He would not easily fight with both at once?

Socrates:: No?—though he had it in his power to retire a little, and then turn on the one who should be the furthest advanced towards him, and strike him, and by doing this frequently in the fun and heat, might not a person of this kind easily defeat many such as these?

Adeimantus:: To be sure, that would be no great wonder.

Socrates:: But do not you think that the rich have more knowledge and experience of boxing than of the military art?

Adeimantus:: I do.

Socrates:: Easily then, as it plainly appears, will our boxers combat with double and triple their number.

Adeimantus:: I will agree with you, for you seem to me to say right.

Socrates:: But what if they should send an embassy to another state, informing them of the true situation of the affair, telling we make no use of gold or silver, neither is it lawful for us to use them, but with you it is lawful; if then you become our allies in the war, you will receive the spoils of all the other states: do you imagine that any, on hearing these things, would choose to fight against strong and resolute dogs, rather than in alliance with the dogs to fight against fat and tender sheep?

Adeimantus:: I do not think it; but if the riches of others be amassed into one state, see that it does not endanger that which is poor.

Socrates:: You are happy, that you imagine any other deserves to be called a state besides such an one as we have established.

Adeimantus:: Why not?

Socrates:: We must give others, a more magnificent appellation, for each of them consists of many states, and is not one, as is said in way of irony; for there are always in them two parties at war with each other, the poor and the rich; and in each of these again there are very many, to which, if you apply as to one, you are mistaken entirely; but if, as to many, you put one part in possession of the goods and power of another, or even deliver up the one to the other, you shall always have the many for your allies, and the few for enemies. And so long as your state shall continue temperately, as now established, it shall be the greatest. I do not say it shall be accounted so, but shall be really the greatest, though its defenders were no more than one thousand; for one state so great you will not easily find, neither among the Greeks not Barbarians, but many which are accounted many times larger than such an one as this. Are you of a different opinion?

Adeimantus:: No truly.

Socrates:: Might not this then, be the best mark for our rulers how large to make the city, and what extent of ground to mark off for it in proportion to its bulk, without minding any thing more?

Adeimantus:: What mark?

Socrates:: I imagine, this one: so long as the city on its increase continues to be one, so long it may be increased, but not beyond it.

Adeimantus:: Very right.

Socrates:: Shall we not then lay this further injunction on our guardians, to take care by all means that the city be neither small nor great, but of moderate extent, and be one city?

Adeimantus:: We shall probably, enjoin them a trifling affair.

Socrates:: A more trifling affair still than this, is that we mentioned above, when we observed, that if any descendant of the guardians be naughty, he ought to be dismissed to the other classes; and if any descendant of the others be worthy, he is to be raised to the rank of the guardians. And this was intended to show that all the other citizens ought to apply themselves each to that particular art for which he has a natural genius, that so everyone minding his own proper work may not be many, but be one, and so likewise the whole state may become one and not be many.

Adeimantus:: This indeed, is still a more trifling matter than the other.

Socrates:: We do not here, good Adimantus, as one may imagine, enjoin them many and great matters, but such as are all trifling, if they take care of one grand point, as the saying is, or rather that which is sufficient in place of the grand.

Adeimantus:: What is that?

Socrates:: Education, and nurture; for if, being well educated, they become temperate men, they will easily see through all these things, and such other things as we omit at present, respecting women, marriages, and the propagation of the species. For these things ought all, according to the proverb, to be made entirely common among friends.

Adeimantus:: That, would be the rightest way.

Socrates:: And surely, if once a Republic is set a-going, it proceeds happily, increasing as a circle. And whilst good education and nurture are preserved, they produce good geniuses; and good geniuses, partaking of such education, produce still better than the former, as well in other respects, as with reference to propagation, as in the case of other animals.

Adeimantus:: It is likely.

Socrates:: To speak then briefly, this the guardians of the state must oppose, that it may not, escaping their notice, hurt the constitution; nay, above all things, they must guard against this, not to make any innovations in the exercise and music, contrary to the established order of the state, but to maintain this order as much as possible. Being afraid lest that whilst one says that poetical expression;

—Men most admire that song
Which has the most of novelty.

one should frequently imagine that the Poet means not new songs, but a new method of the song, and should commend this. Such a thing is neither to be commended nor admitted: for to receive a new kind of music is to be guarded against as endangering the whole of the constitution; for never are the measures of music altered without the greatest politic laws, according to Damon, with whom I agree.

Adeimantus:: You may place me likewise. among those who are of that opinion.

Socrates:: We must erect then, some barrier, as would seem, somewhere here for our guardians themselves, with regard to music.

Adeimantus:: A transgression here, easily indeed steals in imperceptibly.

Socrates:: It does, in the way of diversion, and as productive of no mischief.

Adeimantus:: For neither indeed does it produce any other, but that becoming familiar by degrees it insensibly runs into the manners and pursuits; and from thence, in intercourse of dealings one with another, it becomes greater; and from this intercourse it enters into laws and policies with a deal of impudence, Socrates, till at last it overturn all things, both private and public.

Socrates:: Well, let it be allowed to be so.

Adeimantus:: It appears so to me.

Socrates:: Ought not then our children, as I said at the beginning, to receive directly from their infancy an education more agreeable to the laws of the constitution? because if their education be such as is contrary to law, and the children be of such a nature themselves, it is impossible that they should ever grow up to be worthy men and observant of the laws.

Adeimantus:: Why is it not?

Socrates:: But when handsome amusements are appointed them from their infancy, and when by means of the music they embrace that amusement which is according to law (contrariwise to those others), this music attends them in everything else, and grows with them, and raises up in the city whatever formerly was fallen down.

Adeimantus:: It is true indeed.

Socrates:: And these men, discover those establishments which appear trifling, and which those others destroyed altogether.

Adeimantus:: What establishments?

Socrates:: Such as these: silence of the younger before the elder, which is proper, and the giving them place, and rising up before them, and reverence of parents; likewise what shaving, what clothes, shoes, with the whole dress of the body, and everything else of the kind. Are you not of this opinion?

Adeimantus:: I am.

Socrates:: But to establish these things by law would, I imagine, be a silly thing, nor is it done anywhere, nor would it stand, though established both by word and writing.

Adeimantus:: For how is it possible?

Socrates:: It seems then, Adimantus, that a man's character and conduct will always be according to his education, let him apply himself afterwards to what he will; or does not the like always produce the like?

Adeimantus:: Why not?

Socrates:: And we may say, I imagine, that at last it arrives at somewhat complete and vigorous, either good or what is the reverse.

Adeimantus:: Why not?

Socrates:: I would not then, for these reasons, as yet, undertake to settle by law such things as these.

Adeimantus:: Right.

Socrates:: But what truly now, as to those laws relative to matters of exchange, and to their traffic one with another at mercat, and, if you please, their traffic likewise among their handicrafts, their scandals, bodily hurt, and raising of lawsuits, their institution of judges, and likewise such imposts and payments of taxes as may be necessary either at mercats or at shores, or in general whatever laws are municipal, civil, or of the marine, or what other laws there may be of this kind—shall we dare to establish any of these?

Adeimantus:: It is improper, to prescribe these to good and worthy men, for they will easily find out the most of them, such as ought to be established by law.

Socrates:: Yes, friend, if at least God grant them the preservation of the laws we formerly explained.

Adeimantus:: And if not, they will spend the whole of their life, making and amending many such laws as these, imagining that they shall thus attain to that which is best.

Socrates:: You say that such as these shall lead a life, like those who are sick, and at the same time unwilling, through intemperance, to quit an unwholesome diet.

Adeimantus:: Entirely so.

Socrates:: And these truly must live very pleasantly! For though they deal with physicians, they gain nothing, but render their diseases greater and more complex; and they still hope that, when any one recommends any medicine to them, they shall by means of it be made whole.

Adeimantus:: This is entirely the situation of such diseased persons as these.

Socrates:: But what, is not this pleasant in them? to count that man the most hateful of all who tells them the truth: that, ‘till one give over drunkenness, and gluttony, and unchaste pleasure, and laziness, neither drugs nor caustics, nor amputations, nor charms, nor applications, nor any other such things as these, will be of any avail.

Adeimantus:: That, is not quite pleasant; for to be enraged at one who tells us what is right has nothing pleasant in it.

Socrates:: You are no admirer, as it would seem, of this sort of men.

Adeimantus:: No truly.

Socrates:: Neither then, though the whole of the city (as we were lately saying) should do such a thing, would you commend them; or is not the same thing which is done by these people done by all those cities which, being ill-governed, enjoin their citizens not to alter any part of the constitution, for that whoever shall do such a thing is to be put to death, but that whoever shall with greatest chearfulness pay reverence to those who govern in this fashion, and shall gratify them in the most obsequious manner, and anticipating their desires, be most dexterous in satisfying them, shall be reckoned both worthy and wise in matters of highest importance, and be held by them in the greatest honour?

Adeimantus:: They seem to me at least, to do the very same thing, and by no means do I commend them.

Socrates:: But what again as to those who desire to have the management of such states, and are even fond of it? are you not delighted with their courage and dexterity?

Adeimantus:: I am, excepting such as are imposed on by them and fancy that they are really politicians, because they are commended as such by the multitude.

Socrates:: How do you mean? Do you not pardon those men? Or do you even think it is possible for a man who cannot measure himself, when he hears many other such men telling that he is four cubits, not to believe this of himself?

Adeimantus:: It is impossible.

Socrates:: Then be not angry in this case; for such men as these are of all the most ridiculous, always making laws about such things as we now mentioned, and always amending. They imagine that they shall find some period of these frauds respecting commerce, and those other things I now spoke of, being ignorant that they are in reality attempting to destroy a hydra.

Adeimantus:: They are surely, doing nothing else.

Socrates:: I imagine then, that a true law-giver ought not to give himself much disturbance about such a species of laws and police, either in an ill or well-regulated state: in the one, because it is unprofitable and of no avail; in the other, because any one can find out some of the laws, and others of them show of course from the habits arising from their early education.

Adeimantus:: What part then of the institutions of law, have we yet remaining?

Socrates:: To us indeed there is nothing remaining; but however, to the Delphian Apollo there remains the greatest, noblest, and most important of legal institutions.

Adeimantus:: Of what kind?

Socrates:: The institutions of temples, sacrifices, and other worship of the Gods, Daemons, and heroes; likewise the depositing the dead, and what other rites ought to be performed to them, so as to make them propitious. For truly such things as these we ourselves neither know, nor in founding the state will we entrust them to any other, if we be wise, nor will we make use of any other interpreter besides our own God; for this God is the supreme interpreter to all men in these things, who interprets to them sitting on the middle of the earth.

Adeimantus:: And it is well established, and we must do accordingly.

Socrates:: Thus now, son of Aristo, is the city established for you. And in the next place, having procured somehow sufficient light, do you yourself observe, and call on your brother and on Polemarchus, and these others to assist us, if by any means we may at all perceive where justice is, and where injustice, and in what respect they differ from each other, and which of them the man ought to acquire who proposes to himself to be happy, whether he be concealed or not concealed both from Gods and men.

Glaucon:: But you say nothing to the purpose; for you yourself promised to inquire into this, deeming it impious for you not to assist the cause of justice by every possible means.

Socrates:: It is true, what you put me in mind of, and I must do accordingly; but it is proper that you too should assist in the inquiry.

Glaucon:: We shall do so.

Socrates:: I hope then, to find it out in this manner. I imagine that our city, if it be rightly established, is perfectly good.

Glaucon:: Of necessity.

Socrates:: Then it is plain that it is wise and brave and temperate and just.

Glaucon:: It manifestly is so.

Socrates:: Whichever then of these we shall find in it, shall there not remain behind that which is not found?

Glaucon:: Why not?

Socrates:: For as if we were in quest of one of any other four, in any thing whatever, if we discovered this one at the first we would be satisfied; but if we should first discover the other three from this itself, that which we were inquiring after would be known, for it is plain it would be no other but that which remained.

Glaucon:: You say right.

Socrates:: Since then there are in our state those four above-mentioned, shall we not inquire about them according to the same manner?

Glaucon:: It is plain we ought.

Socrates:: First of all then, to me at least, wisdom appears to be conspicuous in it; and concerning it there appears something very uncommon.

Glaucon:: What is that?

Socrates:: Surely this city which we have described appears to me to be wise, for its councils are wise, are they not?

Glaucon:: They are.

Socrates:: And surely this very thing, the ability of counseling well, is plainly a certain science; for men nowhere counsel well through ignorance, but through science.

Glaucon:: It is plain.

Socrates:: But there are many and various species of science in the state.

Glaucon:: Why are there not?

Socrates:: Is it then from the science of the carpenters that the state is to be denominated wise and well-counseled?

Glaucon:: By no means from this, is it said to be wise, but to be mechanical.

Socrates:: Is then the state to be denominated wise when it consults wisely through its knowledge in utensils of wood, how to have these in the best manner possible?

Glaucon:: Nor this neither.

Socrates:: But what, is it for its knowledge of these in brass, or for anything else of this kind?

Glaucon:: For none of these.

Socrates:: Nor yet for its knowledge of the fruits of the earth is it said to be wise, but to be skilled in agriculture.

Glaucon:: It seems so to me.

Socrates:: But what, is there any science among any of the citizens in this city which we have founded, which deliberates, not about any particular thing in the city, but about the whole, how it may in the best manner behave towards itself and towards other cities?

Glaucon:: There is truly.

Socrates:: What is it, and among whom is it to be found?

Glaucon:: This very guardianship, is it, and it is among these governors whom we lately denominated complete guardians.

Socrates:: What now do you denominate the state on account of this knowledge?

Glaucon:: Well-counseled, and really wise.

Socrates:: Whether then, do you imagine the brass-smiths or these true guardians will be most numerous in the state?

Glaucon:: The brass-smiths, will be much more numerous.

Socrates:: And of all, as many as having any knowledge are of any account, will not these guardians be the fewest in number?

Glaucon:: By much.

Socrates:: From this smallest tribe, then, and part of the state, and from that presiding and governing knowledge in it, is the whole city wisely established according to nature, and this tribe, as appears, is by nature the smallest to whom it belongs to share in this knowledge, which of all others ought alone to be denominated wisdom.

Glaucon:: You say, perfectly true.

Socrates:: This one, then, of the four we have found, I know not how, both what it is, and in what part of the state it resides.

Glaucon:: And it seems to me, to be sufficiently described.

Socrates:: But surely as to fortitude, at least, it is no difficult matter both to find out itself and the particular part of the city in which it resides, on account of which virtue the city is denominated brave.

Glaucon:: As how?

Socrates:: Does any one, call a city brave or cowardly, with reference to any other than that particular part of it which makes war and fights in its defense?

Glaucon:: No one, calls it such with reference to any other part.

Socrates:: For I do not imagine, that the other tribes who are in it, whether they be cowardly or brave, have power to render the city either the one or the other.

Glaucon:: No, indeed.

Socrates:: The city then is brave likewise in one particular part of itself, because it has within it a power of such a nature as shall always preserve their opinions about things which are dreadful, that they are both these very things, and of the very same kind which the law-giver inculcated on them in their education? Do not you call this fortitude?

Glaucon:: I have not, entirely comprehended what you say; but tell it over again.

Socrates:: I call fortitude, a certain preservative.

Glaucon:: What sort of preservative?

Socrates:: A preservative of opinion formed by law in a course of education about things which are dreadful, what these are and of what kind. I called it a preservative at all times, because they were to preserve it in pains and in pleasures, in desires and fears, and never to cast it off; and, if you please, I shall liken it to what in my opinion it bears a near resemblance.

Glaucon:: I am pleased.

Socrates:: Do not you know then, that the dyers, when they want to dye their wool so as to be a purple color, out of all the colors they first make choice of the white, and then, with no small preparation, they prepare and manage it so as best of all to take on the purest color, and thus they dye it: and whatever is tinged in this manner, is of an indelible dye, and no washing, neither without or with soap, is able to take away the pure color. But such wool as is not managed in this manner, you know what sort it proves, whether one is dying other colors or this one, without the due preparation beforehand.

Glaucon:: I know, that they are easily washed out, and are ridiculous.

Socrates:: Imagine then that we too, according to our ability, were aiming at such a thing as this, when we were choosing out our soldiers and were instructing them in music and exercise; and do not imagine we had anything else in view but that, in obedience to us, they should in the best manner imbibe the laws as a color, in order that their opinion about what is dreadful, and about other things, might be indelible, both by means of natural temper and suitable education, and that these washes, however powerful in effacing, may not be able to wash away their dye, pleasure, which is more powerful in effecting this than all soap and ashes, pain, and fear, and desire, which exceed every other cosmetic. Such a power now, and perpetual preservation of right opinion, and such as is according to law, about things which are dreadful, and which are not, I call and constitute fortitude, unless you offer something else.

Glaucon:: But I offer, nothing else; for you seem to me to reckon that such right opinion of these things as arises without education is both savage and servile, and not at all according to law, and you call it something other than fortitude.

Socrates:: You say most true.

Glaucon:: I admit then that this is fortitude.

Socrates:: Admit it further, to be political fortitude, and you shall admit rightly; but if you please, we shall inquire about it more perfectly another time, for at present it is not this, but justice we were seeking; and with regard to the inquiry concerning this, it has, in my opinion, been carried far enough.

Glaucon:: You speak very well.

Socrates:: There yet remains, two things in the city which we must search out: both temperance, and that for the sake of which we have been searching after all the rest, to wit justice.

Glaucon:: By all means.

Socrates:: How now can we find out justice, that we may not be further troubled about temperance?

Glaucon:: I truly neither know, nor do I wish it to appear first, if we are to drop altogether the consideration of temperance; but if you please to gratify me, consider this before the other.

Socrates:: I am indeed pleased, if I be not doing an injury.

Glaucon:: Consider then.

Socrates:: We must consider, and as it appears from this point of view, it seems to resemble symphony and harmony more than those things formerly mentioned.

Glaucon:: How?

Socrates:: Temperance, is somehow a kind of symmetry and a government, as they say, of certain pleasures and desires, and to appear superior to one’s self, I do not know how; and other such things are mentioned as characters of it, are they not?

Glaucon:: These are the principal characters of it.

Socrates:: Is not then the expression “superior to one’s self” ridiculous? For he who is superior to himself must somehow be likewise inferior to himself, and the inferior be the superior, for the same person is spoken of in all these cases.

Glaucon:: Why not?

Socrates:: But to me, the expression seems to denote that in the same man, with respect to his soul, there is one part better, and another worse, and that when the part more excellent in its nature is that which governs the inferior part, this is called being superior to himself, and expresses a commendation; but when through ill education, or any kind of converse, that better part, which is smaller, is conquered by the crowd, the worst part. This, by way of reproach, both expresses blame and denotes the person thus affected to be inferior to himself, and altogether licentious.

Glaucon:: So it appears.

Socrates:: Observe then, our new city, and you shall find one of these in it; for you will own it may justly be said to be superior to itself, if where the better part governs the worse, that state is said to be temperate and superior to itself.

Glaucon:: I observe, and you say true.

Socrates:: And surely one may find a great many and various desires and pleasures and pains, more especially among children and women and domestics, and among the greatest and most naughty part of those who are called free.

Glaucon:: It is perfectly so.

Socrates:: But the simple and the moderate desires, and such as are truly governed with understanding and the judgment of right opinion, you will meet with both in the few, and of the best natural temper, and of the best education.

Glaucon:: True.

Socrates:: And do not you see those things in our city, that there too the desires of the many, and of the baser part, are governed by the desires and by the prudence of the smaller and more moderate part.

Glaucon:: I see it.

Socrates:: If then any city ought to be called superior to pleasures and desires and to itself, this one is to be called so.

Glaucon:: By all means.

Socrates:: And is it not on all these accounts temperate?

Glaucon:: Very much so.

Socrates:: And if in any other city there is the same opinion in the governors and the governed about this point, who ought to govern, it is to be found in this one; do not you think so?

Glaucon:: I am strongly of that opinion.

Socrates:: In whom then of the citizens will you say that temperance resides, when they are thus affected in the governors or the governed?

Glaucon:: In both of them somehow.

Socrates:: You see then, that we justly conjectured of late that temperance resembles a kind of harmony.

Glaucon:: For what?

Socrates:: Because not as fortitude and wisdom, which reside each of them in a certain part, the one of them making the city wise, and the other courageous—not after this manner does it render the city temperate, but it is naturally diffused through the whole, connecting the weakest, and those in the middle, all in one symphony, either as to wisdom, if you will, or if you will in strength, or in substance, or in any other of those things; so that most justly may we say that this concord is temperance—a symphony of that which is naturally the worse and the better part, with reference to this, which of them ought to govern in the city and in every individual.

Glaucon:: I am entirely, of the same opinion.

Socrates:: Be it so then. There are now three things in the city, it would seem, clearly discovered; but now with respect to that other species which remains, by which the city partakes of virtue, what at all can it be? Is it not plain that it is justice?

Glaucon:: It is plain.

Socrates:: Ought we not now, Glauco, like some huntsmen, to surround the thicket carefully, attending lest justice somehow escape, and, disappearing, remain undiscovered. For it is plain that she is somewhere here. Look and be eager to perceive her, if anyhow you spy her sooner than I, and point her to me.

Glaucon:: I wish I could; but if you employ me as an attendant rather, and one who is able to perceive what is pointed out to him, you will treat me perfectly well.

Socrates:: Follow, after you have offered prayers along with me.

Glaucon:: I will do so, only, lead you the way.

Socrates:: To me this seems, to be a place somehow of difficult access and shady: it is truly dark, and difficult to be scrutinized; we must, however, go on.

Glaucon:: We must go.

Socrates:: Io! Io! Glauco, we seem to have somewhat which appears to be a footstep, and I imagine that something shall not very long escape us.

Glaucon:: You tell good news.

Socrates:: We are truly, of a slow disposition.

Glaucon:: As how?

Socrates:: It appears, happy friend, to have been long since rolling at our feet, from the beginning, and we perceived it not, but made the most ridiculous figure: like those who seek sometimes for what they have in their hand, so we did not perceive it, but were looking somewhere off at a distance, and in this way perhaps it escaped us.

Glaucon:: How do you say?

Socrates:: Thus, that we seem to me to have been speaking and hearing of it long since, and not to understand ourselves that in some measure we expressed it.

Glaucon:: A long preamble to one who is eager to hear.

Socrates:: Hear then, if I say anything. For that which we at first established, when we regulated the city, as what ought always to be done, that, I imagine, or a species of it, is justice. For we somewhere established it, and often spoke of it, if you remember, that every one ought to apply himself to one thing relating to the city to which his genius was naturally most adapted.

Glaucon:: We did speak of it.

Socrates:: And that to do one's own affairs, and not to be pragmatic, is justice. This we have both heard from many others, and have often spoken of it ourselves.

Glaucon:: We have indeed spoken of it.

Socrates:: This then, friend, appears to be in a certain manner justice: to do one's own affairs. Do you know whence I conjecture this?

Glaucon:: No, but tell.

Socrates:: Besides those things we have already considered in the city, viz., temperance, fortitude and wisdom, this, seems to remain, which gives power to all these both to have a being in the state, and, whilst they exist in it, to afford it safety; and we said too, that justice would be that which would remain, if we found the other three.

Glaucon:: There is necessity for it.

Socrates:: But if, it be necessary to judge which of these, when subsisting in the city, shall in the greatest measure render it good, it would be difficult to determine whether the agreement between the governors and the governed, or the maintaining of sound opinion by the soldiers about what things are dreadful and what are not, or wisdom and guardianship in the rulers, or whether this, when it exists in the city, renders it in the greatest measure good, viz., when child and woman, bond and free, artificer, magistrate and subject, when every one does their own affairs, and is not pragmatic.

Glaucon:: It is difficult to determine, why is it not?

Socrates:: This power then, by which everyone in the city performs his own office, is co-rival it seems for the perfection of the city along with its wisdom, temperance and fortitude.

Glaucon:: Extremely so.

Socrates:: Will you not then constitute justice to be this co-rival with these for the perfection of the city?

Glaucon:: By all means.

Socrates:: Consider it likewise in this manner, whether it shall thus appear to you. Will you enjoin the rulers to give just decisions in judgment?

Glaucon:: Why not?

Socrates:: But will they give just judgment if they aim at anything preferable to this, that no one shall have what belongs to others, nor be deprived of his own?

Glaucon:: No, but they can only give just judgment when they aim at this.

Socrates:: And do they not aim at this as being just?

Glaucon:: Yes.

Socrates:: And thus justice is acknowledged to be the habitual practice of one's own proper and natural work.

Glaucon:: It is so.

Socrates:: See then if you agree with me. If a carpenter take in hand to do the work of a shoemaker, or a shoemaker the work of a carpenter, or exchange either their utensils or prices, or if the same man take in hand to do both, and all else be exchanged, do you imagine the state would be any way greatly injured?

Glaucon:: Not very much.

Socrates:: But I imagine, that when one who is a craftsman, or who is born to any lucrative employment, shall afterwards, being puffed up by riches, by the mob, or by strength, or any other such thing, attempt to go into the rank of counselor and guardian, when unworthy of it, and when these shall exchange utensils and prices with one another, or when the same man shall take in hand to do all these things at once, then I imagine you will be of opinion that this interchange of these things, and this variety of employments practiced by one, is the destruction of the state.

Glaucon:: By all means.

Socrates:: Pragmatism then in these three species, and their change into one another, is the greatest hurt to the state, and may most justly be called its naughtiness.

Glaucon:: It may so truly.

Socrates:: But will not you say that injustice is the greatest ill of the state?

Glaucon:: Why not?

Socrates:: This then is injustice. But let us again speak of it in this manner. When the craftsman, the auxiliary, and the guardian-band do their proper work, each of them doing their own work in the city, this is the contrary of the other, that is justice, and renders the city just.

Glaucon:: It seems to me, to be no otherwise than thus.

Socrates:: But let us not, affirm it very strongly; but if it shall be allowed us that this species of these, when it enters into any individual, is likewise justice in him, we shall then be agreed (for what shall we say?); if not, we shall consider something else. But now let us finish that speculation which we thought proper, when we judged, that if we attempted first to contemplate justice in some of the greater objects which possess it, it would more easily be seen in one man. And a city appeared to us to be the most proper object of this kind, and so we established the very best one we could, well knowing that justice would be in a good one. Let us now transfer and apply to a single person what has there appeared to us with respect to a whole city, and if the same things correspond, it shall be well; but if any thing different appear in the individual, going back again to the city we shall put it to the proof, and instantly considering them, when placed by one another, and striking them, we shall make justice shine out as from flints, and when it is become manifest, we shall firmly establish it among ourselves.

Glaucon:: You say quite in the right way, and we must do so.

Socrates:: Why then, when we denominate any thing the same, though different in degrees, is it dissimilar in that respect in which we call it the same, or is it similar?

Glaucon:: It is similar.

Socrates:: The just man then, will differ nothing from the just city, according to the idea of justice, but will be similar to it.

Glaucon:: He will be similar to it.

Socrates:: But indeed with respect to this inquiry, the city at least appeared then to be just, when the three species of dispositions in it did each of them its own work, viz., the temperate, the brave, and the wise, by virtue of their own proper natures, and not according to any other affections and habits.

Glaucon:: True.

Socrates:: And shall we not, friend, judge it proper that the individual, who has in his soul the same principles (viz., temperance, fortitude, wisdom), shall, from having the same affections with those in the city, be called by the same names.

Glaucon:: By all means.

Socrates:: We have again, rare friend, fallen into no mean speculation concerning the soul, whether it has in it those three principles or not.

Glaucon:: Into no mean one, as I imagine. And it is likely, Socrates, that the common saying is true, that things excellent are difficult.

Socrates:: It appears. But know well, Glauco, that according to my opinion we shall never comprehend this matter accurately in the methods we are now using in these reasonings, for the road leading to it is greater and longer. We may however, it is likely, speak of it in such a manner as may be worthy of our former disquisitions and speculations.

Glaucon:: Is not that desirable? This would satisfy me for my own part, at present at least.

Socrates:: This, shall to me too be quite sufficient.

Glaucon:: Do not then give over, but pursue your inquiry.

Socrates:: Are we not then under a necessity, of acknowledging that there are in every one of us the same principles and dispositions which are in the city? for from nowhere else did they get thither. For it were ridiculous if one should imagine that the irascible disposition did not arise from the individuals in cities, who have this blemish, as those of Thrace, Scythia, and in some measure almost all the higher region. And the same thing may be said with respect to the love of learning, which one may chiefly ascribe to this country; or with reference to the love of riches, which we may say prevailed especially among the Phoenicians and the inhabitants of Egypt.

Glaucon:: Very much so.

Socrates:: This then is so, nor is it difficult to be known.

Glaucon:: No indeed.

Socrates:: But this is difficult to determine, whether we perform each of these by the same power, or, as they are three, we perform one by one power, and another by another; that is, we learn by one, we are angry by another, and by a certain third we desire those pleasures relating to nutrition and propagation, and the other pleasures of affinity to these. Or do we in each of these, when we apply to them, act with the whole soul? These things are difficult to be determined in a manner worthy of the subject.

Glaucon:: So it seems to me.

Socrates:: Let us then in this manner attempt to determine these things, whether they are the same with one another or different.

Glaucon:: How are we to do it?

Socrates:: It is plain that one and the same thing cannot at one and the same time do or suffer contrary things in the same respect, and with reference to the same object; so that if we anywhere find these circumstances existing among them, we shall know that it was not one and the same thing, but several.

Glaucon:: Be it so.

Socrates:: Consider then what I am saying.

Glaucon:: Proceed.

Socrates:: Is it possible for the same thing to stand and to be moved at once in the same respect?

Glaucon:: By no means.

Socrates:: Let us settle this more accurately still, lest as we proceed we be any way uncertain about it. For if one should say, that when a man stands, yet moves his hands and his head, that the same person at once stands and is moved, we would not, I imagine, think it proper to speak in this manner, but that one part of him stood, and another part was moved. Would not we speak in this manner?

Glaucon:: In this manner.

Socrates:: But if one who says these things should, in a more jocose humor still, and factiously caviling allege that tops stand wholly and are moved at once, when their centre is fixed on one point and they are whirled about, or that anything else going round in a circle in the same position does this, we would not admit it, as it is not in the same respect that they stand still and are moved; but we would say that they have in them the perpendicular and the periphery, and that with relation to the perpendicular they stood (for towards no side they declined), but with relation to the periphery they moved in a circle. But when its perpendicularity declines either to the right or left hand forwards or backwards, whilst it is at the same time whirling round, then in no respect does it stand.

Glaucon:: Very right.

Socrates:: Nothing then of this kind shall move us when it is said; nor shall anyone persuade us, as if anything, being one and the same thing, could do and suffer contraries at one and the same time, with reference to the same object, and in the same respect.

Glaucon:: He shall not persuade me.

Socrates:: But, however, that we may not be obliged to be tedious in going over all these quibbles, and in evincing them to be false, let us proceed on this supposition that so it is, after we have agreed that, if at any time these things appear otherwise than as we now settle them, we shall yield up again all we shall gain by it.

Glaucon:: It is necessary, to do so.

Socrates:: Would not you then, deem these things among those which are opposite to one another, whether they be actions or passions, for in this there is no difference: to assent, to wit, and to dissent; to desire to get a thing, and to reject it; to bring towards one's self, and to push away?

Glaucon:: I would deem these, among the things which are opposite to each other.

Socrates:: What then, with respect to thirsting, to hungering, and, in general, with respect to all the passions—and further, to desire, to will, and all these—may they not somehow be placed among those species which have now been mentioned? As for example, will you not always say that the soul of one who has desire goes out after that which it desires, or brings near to it that which it wishes to have; or again, in so far as it wants something to be afforded it, like one who only sees an object, intimates by signs to have it brought near, desiring the actual possession of it?

Glaucon:: I would say so.

Socrates:: But what, to be unwilling not to wish, nor to desire, shall we not deem these of the same kind as to push away from the soul, and drive off, and everything else which is opposite to the former?

Glaucon:: Why not?

Socrates:: This being the case, shall we say there is some species of the desires? and that the most conspicuous are to thirst and to hunger?

Glaucon:: We shall say so.

Socrates:: Is not the one the desire of drinking, and the other of eating?

Glaucon:: Yes.

Socrates:: Is it then, when considered as thirst, a desire in the soul of something further than of drink? It is according to the nature of the thirst. Is there then a thirst of a hot drink, or of a cold, of much or of little, or in short of some particular kind of drink? for if there be any heat accompanying the thirst, it readily occasions a desire of a cold drink, but if cold accompanies it, then there is excited a desire of a warm drink. If the thirst be great, through many circumstances, it occasions a desire of a great drink, but if small a desire of a small one, but the desire itself to thirst never creates the desire of any thing else, but of drink itself, as its nature prompts, and in like manner of the appetite of hunger with relation to meat.

Glaucon:: Thus every desire, in itself is of that alone of which it is the desire; but to be a desire of such or such a particular species are adventitious circumstances.

Socrates:: Let not then any one, create us any trouble, as if we were inadvertent, that no one desired drink, but good drink, or meat, but good meat, for indeed all men desire that which is good. If then thirst be a desire, it is of what is good, whether it be of drink, or of whatever else it is the desire. And in the same way of all the other desires.

Glaucon:: Perhaps, the man who should mention these things would seem to say something material.

Socrates:: But, however, whatever things are of such a nature, as to belong to any genus, have a general reference to the genus; but each particular of these refers to a particular species of that genus.

Glaucon:: I have not understood you.

Socrates:: Have you not understood, that greater is of such a kind as to be greater than somewhat?

Glaucon:: Yes indeed.

Socrates:: Is it not greater than the lesser?

Glaucon:: Yes.

Socrates:: And that which is considerably greater than that which is considerably lesser, is it not?

Glaucon:: Yes.

Socrates:: And that which was formerly greater than that which was formerly lesser, and that which is to be greater than that which is to be lesser?

Glaucon:: What else?

Socrates:: And after the same manner, what is more numerous with respect to what is less numerous, and what is double with reference to what is half, and all such like things; and further, what is heavier with respect to lighter, and swifter to slower; and further still, hot to cold, and all such like things, are they not after this manner?

Glaucon:: Entirely so.

Socrates:: But what as to the sciences? Is not the case the same? For science in general is the science of learning in general, or of whatever else you think proper to make it the science; but a certain particular science, and of such a particular kind, refers to a certain particular object, and of such a kind. What I mean is this: After the science of building houses arose, did it not separate from other sciences, so as to be called architecture?

Glaucon:: What else?

Socrates:: Was it not from its being of such a kind as none of the others were?

Glaucon:: Yes.

Socrates:: Was it not then from its being the art of such a particular thing that itself became such a particular art? and all other arts and sciences in like manner?

Glaucon:: They are so.

Socrates:: Allow then, that this is what I wanted to express, if you have now understood it: where things are considered as having reference to other things, generals alone refer to generals, and particulars to particulars. I do not, however, say that the science altogether resembles that of which it is the science (as if, for example, the science of healthy and sickly were itself healthy and sickly, or that the science of good and evil were itself good and evil). But as science is not constituted the science of that thing in general of which it is the science, but only of a certain quality of it (to wit, of its healthy and sickly state), so itself comes to be a certain particular science, and this causes it to be called no longer simply a science, but the medicinal science, the particular species it is of being superadded.

Glaucon:: I have understood you, and it appears to me to be so.

Socrates:: But will not you, make thirst now, whatever it be, to be one of those things which respect somewhat else, considered as what it is, and it is surely thirst?

Glaucon:: I will, and it respects drink.

Socrates:: And does not a particular thirst desire a particular drink? But thirst in general is neither of much nor of little, nor of good nor bad, nor, in one word, of any particular kind, but of drink in general alone is thirst in general naturally the desire.

Glaucon:: Entirely so, indeed.

Socrates:: The soul of the man, then, who thirsts inclines for nothing further than to drink; this he desires, to this he hastens.

Glaucon:: It is plain.

Socrates:: If then at any time any thing pull back the thirsting soul, it must be some different part of it from that which thirsts, and leads it as a wild beast to the drink; for have we not said that it is impossible for the same thing, in the same respects, and with the same parts of it, to do at once contrary things?

Glaucon:: It is indeed impossible.

Socrates:: In the same manner, I imagine, as it is not proper to say of an archer that his hands at once push out, and likewise pull in the bow, but that the one hand is that which pushes out, and the other that which pulls in.

Glaucon:: Entirely so.

Socrates:: But whether may we say that there are some who when athirst are not willing to drink?

Glaucon:: Yes, indeed, there are many, and many times that is the case.

Socrates:: What now, may one say of these persons? Might it not be said that there was in their soul somewhat prompting them to drink, and likewise something hindering them, different from the other, and superior to the prompting principle.

Glaucon:: It seems so to me.

Socrates:: Does not then the restraining principle arise from reason when it arises; but those which push and drive forwards proceed from passions and diseases?

Glaucon:: It appears so.

Socrates:: We shall then, not unreasonably account these to be two, and different from one another, calling the one part which reasons the rational part of the soul, but that part with which it loves and hungers and thirsts, and those other appetites, the irrational and concupiscible part, the friend of certain gratifications and pleasures.

Glaucon:: We shall not, but we may most reasonably consider them in this light.

Socrates:: Let these then, be allowed to be distinct species in the soul. But as to that of anger, is it a third principle, or has it affinity to one of those two?

Glaucon:: Perhaps it is, to the concupiscible part.

Socrates:: But I believe, what I have somewhere heard, how that Leontius, the son of Aglaion, as he returned from the Pyraeum, perceived some dead bodies lying in the sewer, below the outside of the north wall, and had both a desire to look at them, and at the same time was averse from it, and turned himself away; and for a while he struggled with his desire and covered his eyes; but at last, being overcome by his appetite, with eager eyes, running towards the dead bodies, lo now, you wretched eyes! glut yourselves with this fine spectacle.

Glaucon:: I too, have heard it.

Socrates:: This speech now, shows that anger sometimes opposes the appetites, as being different one from another.

Glaucon:: It shows it, indeed.

Socrates:: And do not we often perceive, when the appetites compel any one contrary to reason, that he reproaches himself, and is angry at the compelling principle within him, and when the rational and concupiscible are in a state of sedition, anger in such a person becomes as it were an ally to reason? but when the appetite goes along with reason, then anger gives no opposition. You will say, I imagine, that you have perceived nothing of this kind in yourself, at any time, nor yet in any other.

Glaucon:: No truly.

Socrates:: What now, when one imagines he does an injury, the more generous he is, is he not so much the less apt to be angry when he suffers hunger and cold, or any other such things from one who inflicts, as he imagines, these things with justice? And, as I have said, his anger will not incline him to rise up against such an one.

Glaucon:: True.

Socrates:: But what, when one imagines he is injured, does not anger in such an one burn, and has he not indignation, and fights as an ally on the side of what appears to be just; and under all the sufferings of hunger, cold, and such like, bears up, and conquers, and ceases not from its generous toils till either it accomplish them or dies, or is restrained by the rational principle within him, like a dog by the shepherd, and is rendered mild?

Glaucon:: It perfectly resembles, what you say; for in our city we appointed the auxiliaries to be obedient as dogs, to the rulers of the city, as to shepherds.

Socrates:: You rightly understand, what I would say. But have you besides considered this?

Glaucon:: As what?

Socrates:: That here the reverse appears concerning the irascible from that in the former case; for there we were deeming it the same with the concupiscible, but now we say it is far from it, or that in the sedition of the soul it much rather joins its arms with the rational part.

Glaucon:: Entirely so.

Socrates:: Is it then as something different from it, or as a species of the rational, so as that there are not three species, but only two in the soul, the rational and concupiscible? Or as there were three species which completed the city, the lucrative, the auxiliary, the legislative, so in the soul this irascible is a third thing, naturally an auxiliary to the rational, if it be not corrupted by bad education?

Glaucon:: Of necessity it is, a third.

Socrates:: Yes, if at least it appear to be any way different from the rational, as it appeared to be distinct from the concupiscible.

Glaucon:: But that is not difficult, to be seen, for one may see this even in little children, that immediately from their infancy they are full of anger; but some appear to me at least never at all to participate of reason, and the most arrive at it but late.

Socrates:: Yes, truly, you say right; and one may yet further observe in the brute creatures that what you say is really the case. And besides this, it is likewise attested by what we formerly mentioned from Homer;

> Striking his breast, his heart he thus reproved.

For in that passage Homer has plainly made one part reprehend another—the part which reasons about good and evil reprehend the part which is unreasonably angry.

Glaucon:: You say perfectly right.

Socrates:: These things, we have with difficulty agreed to, and it is now sufficiently acknowledged that the same species of principles as are in a city are in every individual, and in the same number.

Glaucon:: They are so.

Socrates:: Must it not therefore of necessity follow that, after what manner the city was wise, and in what respect, after the same manner, and in the same respect is the individual wise also.

Glaucon:: Why not?

Socrates:: And in what respects, and after what manner the individual is brave, in the same respect, and after the same manner is a city brave; and so in all other respects both of them are the same as to virtue.

Glaucon:: Of necessity.

Socrates:: And I fancy, Glauco, we shall say that a man is just in the same way as we said a city was so?

Glaucon:: This likewise is quite necessary.

Socrates:: But have we not somehow forgot this, that the city was just, when every one of the three species in it did each its own work?

Glaucon:: We do not appear to me, to have forgot it.

Socrates:: We must then remember likewise, that each one of us will be just, and do his own work, when he does his own affairs within himself.

Glaucon:: We must, carefully remember it.

Socrates:: Is it not then proper that the rational part should govern, as it is wise, and has the care of the whole soul? and that the irascible part should be obedient and an auxiliary of the other?

Glaucon:: Certainly.

Socrates:: Shall not then the mixture, as we observed, of music and exercise make these two harmonious, raising and nourishing the one with worthy reasonings and learning, and unbending the other, soothing and sweetening it by harmony and measure?

Glaucon:: Most perfectly.

Socrates:: And when those two are in this manner nourished, and have been truly taught and instructed in their own affairs, let them be set over the concupiscible part, which in every one is the greater part of the soul, and in its nature most insatiably desirous of being gratified: they are to take care of this part, lest being filled with these bodily pleasures, as they are called, it become great and vigorous, and do not its own work, but attempt to enslave and rule over those it ought not, and overturn the whole life of all in general.

Glaucon:: Entirely so.

Socrates:: And might he not, by this principle guard likewise in the best manner against enemies from without, by its influence both over the whole soul and body likewise, the one deliberating, and the other fighting in obedience to its leader, and executing with fortitude the things deliberated.

Glaucon:: It is so.

Socrates:: And I imagine that we call one brave when, through all the pains and pleasures of life, the irascible part preserves the opinion dictated by reason concerning what is terrible and what is not.

Glaucon:: Right.

Socrates:: And we call him wise, from that small part which governs in him, and dictates these things, having in it the knowledge of what is advantageous for each one, and for the whole community of the three themselves.

Glaucon:: Perfectly so.

Socrates:: But what, do we not call him temperate, moreover, from the friendship and harmony of these very things, when the governing and governed agree in one, that reason ought to govern, and when they do not raise sedition?

Glaucon:: Temperance, is no other than this, both as to the city and the individual.

Socrates:: But as we have often said, he shall be just by these things and in this manner.

Glaucon:: It is quite necessary.

Socrates:: What then, has any thing blunted us, that we should fancy justice to be anything else than what it has appeared to be in a city?

Glaucon:: Nothing appears to me at least, to have done it.

Socrates:: But in this manner, let us by all means confirm ourselves, if there yet remains any doubt in the soul that can be an objection to this principle, by bringing the man into difficult circumstances.

Glaucon:: As what?

Socrates:: Such as this: if we were obliged to declare concerning such a city, and concerning a man born and educated conformably to it, whether we thought such a one, when entrusted with gold or silver, would embezzle it, do you imagine that anyone would think such a one would do it sooner than those who are not of such a kind?

Glaucon:: No one.

Socrates:: Will not such a one then be free of sacrileges, thefts, treacheries, against companions in private, or the city in public?

Glaucon:: He will be free.

Socrates:: Nor will he ever, in any shape, be faithless, either as to his oaths or other declarations?

Glaucon:: How can he.

Socrates:: Adulteries, and neglect of parents, impiety against the Gods, will belong to every one else sooner than to such a one.

Glaucon:: They will belong to every one else truly.

Socrates:: And is not this the cause of all these things, that of all within him, each one thing does its own work as to governing and being governed?

Glaucon:: This is it, and nothing else.

Socrates:: Do you desire justice to be any thing else but such a power as produces such men and cities?

Glaucon:: Not I truly, for my part.

Socrates:: Our dream, then, which we conjectured is at last accomplished: that when we first began to build our city, we seemed by some God's assistance to have got to a beginning and pattern of justice.

Glaucon:: Entirely so.

Socrates:: And that, Glauco, was a certain image of justice, according to which it behooved the man who was fitted by nature for the office of a shoemaker to perform properly that office, and to do nothing else, and he who is a carpenter to perform that office, and all others in the same way.

Glaucon:: It appears so.

Socrates:: And of such a kind truly was justice, as it appeared to us, I do not mean as to external action, but concerning that which is really internal, relating to the man himself and those things which are properly his own; not allowing any principle in himself to attempt to do what belongs to others, nor the principles to be pragmatic, engaging in one another's affairs; but having well established his own proper affairs, and holding the government of himself, adorning himself, and becoming his own friend, and attuning those three principles in the most natural manner, as three musical strings, base, tenor, and treble, or whatever others may chance to intervene—to combine all these together, and become of many an entire one, temperate and attuned, and in that manner to perform whatever is done either in the way of acquiring wealth, or concerning the management of the body, or any public affair or private bargain; and in all these cases to account and call that action just and handsome which always sustains and promotes this habit; and to call the knowledge which presides over this action, wisdom, but to call that an unjust action which dissolves this habit, and the opinion which presides over this, folly.

Glaucon:: You say perfectly true, Socrates.

Socrates:: Be it so. If then we should say that we have found out a just man and city, and what justice is in them, I don’t imagine we should seem to be altogether telling a lye.

Glaucon:: No truly.

Socrates:: May we say so?

Glaucon:: We may say it.

Socrates:: Be it so. But we were next, I think, to consider injustice.

Glaucon:: That is plain.

Socrates:: Must it not then be some sedition among the three principles, some pragmatism and intermeddling in things foreign to their proper business, and an insurrection of some one principle against the whole soul, to govern in it when it does not belong to it, but which is of such a nature, as what really ought to be in subjection to the governing principle? I imagine then we shall call their tumult and mistake by such names as these, injustice, intemperance, cowardice and folly, and, in general, all vice.

Glaucon:: These things, are quite so.

Socrates:: To do injustice then, and to be injurious, and likewise to do justly, all these must be very manifest if, to wit, injustice and justice are so.

Glaucon:: As how?

Socrates:: Because they are no way different from what is salutary or noxious: as these are in the body, so are the others in the soul.

Glaucon:: How?

Socrates:: Such things as are healthy constitute health, and such as are noxious produce disease.

Glaucon:: Yes.

Socrates:: And must not the doing justly produce justice, and doing unjustly produce injustice?

Glaucon:: Of necessity.

Socrates:: But to produce health is to establish all in the body according to nature, to govern and to be governed of one another; and to produce disease is to govern and be governed, one part by another, contrary to nature.

Glaucon:: It is indeed.

Socrates:: Then, again, to produce justice, is it not to establish all in the soul according to nature, to govern and be governed by one another? and injustice is to govern and be governed by one another contrary to nature.

Glaucon:: Plainly so.

Socrates:: Virtue then, it seems, is a sort of health, and beauty, and good habit of the soul, and vice the disease, and deformity, and infirmity.

Glaucon:: It is so.

Socrates:: Do not then honorable pursuits lead to the acquisition of virtue, but dishonorable ones to that of vice?

Glaucon:: Of necessity.

Socrates:: What remains then for us, as seems, to consider is, whether it be profitable to do justly, and to pursue what is honorable, and to be just, whether one under such a character be unknown or not; or to do unjustly, and to be unjust, though one be never punished, nor by chastisement become better?

Glaucon:: But, Socrates, this speculation, seems now, to me at least, to be ridiculous. For if when the nature of the body is corrupted it be thought that life is not worth having, not even though one had all kinds of meats and drinks, all kind of wealth, all kind of dominion, when the nature of that by which we live is disordered and thoroughly corrupted, shall life then be worth having, though one can do everything else which he inclines besides this, how he shall get quit of vice and injustice, and acquire justice and virtue, since, to wit, both these things have appeared as we have represented?

Socrates:: It would be truly ridiculous. But however, as we have arrived at such a point as enables us most distinctly to perceive that these things are so, we must not give over.

Glaucon:: We must not at all truly, give over.

Socrates:: Come then, that you may likewise see how many principles vice has, principles which, as I imagine, are worthy of attention.

Glaucon:: I attend: only tell me.

Socrates:: And truly now, since we have reached this part of our discourse, it appears now to me, as from a summit, that there is one principle of virtue, but those of vice are infinite, of which there are four which deserve to be mentioned.

Glaucon:: How do you say?

Socrates:: There seem to be as many species of soul as there are of republics.

Glaucon:: How many then?

Socrates:: There are five, of republics, and five of the soul.

Glaucon:: Tell, what these are.

Socrates:: I say, that this which we have gone through is one species of a republic, and it may have a twofold appellation; for if among the rulers there be one surpassing the rest, it may be called a Monarchy; if there be several, an Aristocracy.

Glaucon:: True.

Socrates:: I call this then, one species; for whether they be several, or but one who govern, they will never alter the principal laws of the city, observing the nurture and education we have described.

Glaucon:: It is not likely.

THE END OF THE FOURTH BOOK

## THE FIFTH BOOK

Socrates:: I denominate then indeed both such a city and republic, and such a man as we have described, good and upright; and if this republic be an upright one, I deem the others bad and erroneous, both as to the regulations in cities, and the establishing the temper of soul of individuals, and that in four species of illness.

Glaucon:: Of what kind are these?

Socrates:: I was then proceeding to mention them in order, as they appeared to me to rise out of one another, but Polemarchus, stretching out his hand (for he sate a little further off than Adimantus), caught him by the robe at his shoulder and drew him near, and bending himself towards him, spoke something in a whisper, of which we heard nothing but this:

Polemarchus:: Shall we let pass then?, or what shall we do?

Socrates:: Adeimantus, speaking now aloud;

Adeimantus:: Not at all.

Socrates:: What then will not you let pass?

Adeimantus:: You.

Socrates:: As I had said what?

Adeimantus:: You seem to us to be growing negligent, and to steal a whole branch of the discourse, and that not the least considerable, that you may not have the trouble of going through it; and you imagine that you escaped our notice when you made this speech so simply, viz., that both as to wives and children, it is manifest to every one that these things will be common among friends.

Socrates:: Did not I say right, Adimantus?

Adeimantus:: Yes; but this, which was rightly said, like other parts of your discourse, requires explanation, to show what is the manner of their being common, for there may be many kinds of it. Do not omit then to tell which is the method you spoke of; for we have been in expectation for some time past, imagining you would on some occasion make mention of the propagation of children, in what way they should be propagated, and when they are born, how they should be nurtured, and everything relative to what you spoke concerning wives and children being in common; for we imagine that it is of considerable, nay, of the utmost importance to the state, when this is rightly performed or otherwise. But now when you are entering on the consideration of another constitution, before you have sufficiently discussed these things, it seemed proper to us what you now heard, not to let you pass before you went over all these things as you did the others.

Glaucon:: And you may count me too, as joining in this vote.

Thrasymachus:: You may easily judge, Socrates, that this is the opinion of us all.

Socrates:: What is this, you have done, laying hold of me? What a mighty discourse do you again raise, as you did at the beginning about a republic, in which I was rejoicing as having now completed it, being fond, if any one would have let these things pass, and been content with what was then said. But you know not what a swarm of reasonings you raise by what you now challenge, which I foreseeing, passed by at that time, lest it should occasion great disturbance.

Thrasymachus:: What then, do you imagine that these are now come hither to melt gold, and not to hear reasonings?

Socrates:: Yes, but in measure.

Glaucon:: The whole of life, Socrates, is with the wise the measure of hearing such reasonings as these. But pass what relates to us, and do not at all grudge to explain your opinion concerning what we inquire about—what sort of community of wives and children is to be observed by our guardians, and concerning the nurture the latter are to have while very young, in the period between their generation and their education, which seems to be the most troublesome of all. Endeavor then to tell us in what manner it should be done.

Socrates:: It is not easy, happy Glauco, to go through these things, for there are many of them hard to be believed, whether the things we say be possible; and though they could easily be done, whether they would be for the best might still be doubted. Wherefore, dear companion, I grudge somewhat to touch on these things, lest our reasoning appear to be rather what were to be wished for than what could take place.

Glaucon:: Do not at all grudge, for your hearers are neither stupid, nor incredulous, nor ill-affected towards you.

Socrates:: Then, do you say this, most excellent Glauco, with a desire to encourage me?

Glaucon:: I do.

Socrates:: Then your discourse has a quite contrary effect; for if I trusted to myself that I understood what I am to say, your encouragement would do well. For one who understands the truth about the greatest and the most interesting affairs, speaks with safety and confidence among the wise and friendly; but to be diffident of one's self and doubtful of the truth, and at the same time to be haranguing as I do now, is both dreadful and dangerous, not only lest he should be exposed to ridicule (for that is but a trifling thing), but lest that, mistaking the truth, I not only fall myself, but draw my friends along with me into an error about things in which we ought least of all to be mistaken. I adore therefore Adrastia for what, Glauco, I am going to say; for I trust it is a smaller offence to be a man-slayer without intention, than to be an impostor with regard to what is good and excellent, just and lawful: and it were better to hazard such a thing among enemies than friends; so that you must give me better encouragement.

Then Glauco, laughing:

Glaucon:: But Socrates, if we suffer any thing amiss from your discourse, we shall acquit you as clear of any man-slaughter, and as no impostor; so proceed boldly.

Socrates:: But indeed, he who is acquit at a court of justice, is deemed clear of the crime, as the law says; and if it be so in that case, ‘tis reasonable it should be so in this.

Glaucon:: For this reason then, proceed.

Socrates:: We must now, return again to what it seems should, according to method, have been recited before; and perhaps it is right to proceed in this manner, that after having entirely finished the drama respecting the men, we go over that which concerns the women, especially since you challenge me to proceed in this manner. For in my opinion, men who have been born and educated in such a manner as we have described can have no right profession and enjoyment of children and wives but in pursuing the same tract in which we have proceeded from the beginning: for we have endeavored in our reasoning to form somehow men as the guardians of a flock.

Glaucon:: We have.

Socrates:: Let us proceed then, having established likewise affairs relating to propagation and education in a manner similar to that of the males; and let us consider whether it be proper for us to do so or not.

Glaucon:: How do you mean?

Socrates:: Thus. Whether shall we judge it proper for the females of our guardian dogs, to watch likewise in the same manner as the males do, and to hunt along with them, and do every thing else in common; or shall we judge it proper for them to manage domestic affairs within doors, as being unable for the other exercises, because of the bringing forth, and the nursing the whelps, and the males to labor and to have the whole care of the flocks?

Glaucon:: They are to do all, in common. Only we are to employ the females as the weaker, and the males as the stronger.

Socrates:: Is it possible then, to employ any creature for the same purposes with another, unless you give it the same nurture and education as you give the other?

Glaucon:: It is not possible.

Socrates:: If then we shall employ the women for the same purposes as we do the men, must we not likewise teach them the same things?

Glaucon:: We must.

Socrates:: Were not both music and exercise bestowed on the males?

Glaucon:: They were.

Socrates:: These two arts therefore, and those likewise relating to war, must be bestowed also on the women, and they must be employed about the same things.

Glaucon:: It is reasonable, from what you say.

Socrates:: Yet as these things, are contrary perhaps to custom, many of these things we are now speaking of may appear ridiculous, if practiced in the way we mention.

Glaucon:: Extremely so.

Socrates:: What, do you perceive as the most ridiculous part? Or is it plainly because that you see the women naked in the Palaestra wrestling with the men, and not only the young women, but even the more advanced in years, in the same manner as old men in the wrestling schools, when they are wrinkled, and not at all handsome to the eye, yet still fond of the exercises?

Glaucon:: Yes, truly; because it might indeed appear ridiculous, at least, as matters stand at present.

Socrates:: Must we not therefore, since we have entered upon this discourse, be afraid of the railleries of the men of pleasantry, whatever things they may say with regard to such a revolution being introduced, as well in the exercises as in music, and particularly in the use of arms, and the management of horses.

Glaucon:: You say right.

Socrates:: But since we have entered on this discourse, we must go to the rigor of the law, and beg these men not to follow their own customs, but to think seriously and remember that it is not long ago since these things appeared base and ridiculous to the Greeks, which are only so now to the most of the Barbarians, such as to see naked men. And when first the Cretans, and afterwards the Lacedaemonians, began their exercises, it was in the power of the men of humor of that time to turn all these things into ridicule. Do not you think so?

Glaucon:: I do.

Socrates:: But I imagine, that when upon experience it appeared better to strip themselves of all these things than to be wrapped in them, what was ridiculous indeed to the eye was removed by the idea of best, mentioned in our reasoning; and this too showed manifestly that he is a fool who deems anything ridiculous but what is bad, and attempts to rally upon any other idea of the ridiculous but that of the foolish and the vicious, or to be serious in any other pursuit but that of the good.

Glaucon:: By all means.

Socrates:: Is not this then first of all to be agreed on, whether these things be possible or not? And we must allow it to be a matter of dispute, if any one, either in jest or earnest, inclines to doubt whether the human genius in the female sex be able in everything to bear a share with the male, or if it be not in any one thing, or if it be able in some things but not in others, and among which of these are the affairs of war? Would not the man who thus sets out in the most handsome manner conclude too, as it seems, most handsomely?

Glaucon:: By far,„

Socrates:: Are you willing then, that we ourselves, instead of others, dispute about these things, that the opposite side may not be destitute of a defense?

Glaucon:: Nothing hinders.

Socrates:: Let us then say this for them. That there is no need, Socrates and Glauco, of others to dispute with you about this matter, for yourselves, in the beginning of your establishment, when you established your city, agreed that it was necessary for each individual to practice one business, according to their several genius. I think we acknowledged it; for why should they not? Does not then the genius of the male differ widely from that of the female? Why does it not differ? And is it not fit to enjoin each a different work, according to their genius? Why not? Are not you then in the wrong now, and contradict yourselves, when you say that men and women ought to do the same things, whilst their genius is extremely different? Can you in answer to these objections, admirable Glauco, make any defense?

Glaucon:: It is not quite an easy matter, to do it immediately: but I will entreat you, and do now entreat you, to go through the arguments on our side, whatever they may be.

Socrates:: These are the things, Glauco, and many other such like, which I long ago foreseeing, was both afraid and backward to touch on the law concerning the possession of wives and the education of children.

Glaucon:: It is not easy indeed.

Socrates:: It is not. But the case is thus. If one falls into a small fish-pond, or into the middle of the greatest sea, he must still swim in the one no less than in the other.

Glaucon:: Entirely so.

Socrates:: Must not we swim then, and endeavor to escape from this reasoning, expecting that either some dolphin is to carry us out, or that we shall have some other remarkable deliverance?

Glaucon:: It seems we must do so.

Socrates:: Come then, if we can anywhere find an outgate; for we did acknowledge that different geniuses ought to study different things; but the genius of man and woman is different; yet now we say that different geniuses ought to study the same things: these are the things which you accuse us of.

Glaucon:: Certainly.

Socrates:: How strong, Glauco, is the power of the art of caviling?

Glaucon:: How?

Socrates:: Because, many seem to fall into it unwillingly, and imagine that they are not caviling, but reasoning truly, because they are not able to understand the subject, by dividing it into its proper parts, and under this arguing will pursue the opposite of their subject, using caviling instead of reasoning.

Glaucon:: This is indeed, the case with many; but does it at present extend likewise to us?

Socrates:: Entirely so, we seem then unwillingly to have fallen into a contradiction.

Glaucon:: How?

Socrates:: Because we have very strenuously and very keenly asserted, that when the genius is not the same, they ought not to have the same employments; but we have not in any respect considered what is the characteristic of the sameness or diversity of genius, nor to what it points: we stopped then, when we had assigned different pursuits to different geniuses, and to the same geniuses the same pursuits.

Glaucon:: We have never indeed, considered it.

Socrates:: It is therefore, still in our power, as appears, to question ourselves whether the genius of the bald, or of those who wear their hair, be the same, and not different. And after we should agree that it was different, whether, if the bald made shoes, we should allow those who wear hair to make them; or if those who wear hair made them, whether we should allow the others.

Glaucon:: That were ridiculous.

Socrates:: Is it in any other respect, ridiculous then that we did not wholly determine the sameness and diversity of genius, but attended only to that species of diversity and sameness which respects the employments themselves? just as we say that the physician and the man who has a medical soul have one and the same genius? Do not you think so?

Glaucon:: I do.

Socrates:: But that the physician and architect have a different.

Glaucon:: Entirely.

Socrates:: And so, of the genius of men and of women, if it appear different, in respect to any art, or other employment, we shall say that this different employment is to be assigned to each separately. But if their genius appear different only in this, that the female brings forth and the male begets, we shall not say that this has at all shown the man to be different from the woman in the respect we speak of, but we shall still be of opinion that both our guardians and their wives ought to pursue the same employments.

Glaucon:: And with reason.

Socrates:: Shall we not then henceforth desire any one who says the contrary to instruct us in this point: What is that art or study respecting the establishment of a city, where the genius of the man and woman is not the same, but different?

Glaucon:: It is reasonable truly.

Socrates:: Possibly someone may say, as you was saying a while ago, that it is not easy to tell this sufficiently on the sudden, but that it is not all difficult to one who has considered it.

Glaucon:: One might indeed say so.

Socrates:: Are you willing then that we desire such an opponent to listen to us, if by any means we shall show him that there is in the administration of the city no employment peculiar to the women?

Glaucon:: By all means.

Socrates:: Come on then (shall we say to him), answer us. Is not this your meaning: that one man has a good genius for any thing, and another a bad, in this respect, that the one learns anything easily, and the other with difficulty; and the one with a little instruction discovers a great deal in what he learns, but the other, when he gets a great deal of instruction and care, does not retain even what he has learned: with the one, the body is duly subservient to the mind; with the other, it opposes its improvement. Are there any other marks than these by which you would determine one to have a good genius for anything, and another to have a bad one?

Glaucon:: No one., would mention any other.

Socrates:: Know you then of any thing which is managed by mankind, with reference to which the men have not all these marks in a more excellent degree than the women? Or should we not be tedious if we mentioned particularly the weaving art, and the dressing pot herbs and victuals, in which the female genius seems to be somewhat considerable, and is most ridiculous where it is surpassed.

Glaucon:: You say true, that in the general, in every thing the one genius is superior to the other, yet there are many women who in many things excel many men; but on the whole, it is as you say.

Socrates:: There is not then, my friend, any office among the whole inhabitants of the city peculiar to the woman, considered as woman, nor to the man, considered as man; but the geniuses are indiscriminately diffused through both: the woman is naturally fitted for sharing in all offices, and so is the man; but in all the woman is weaker than the man.

Glaucon:: Perfectly so.

Socrates:: Shall we then commit everything to the care of the men. and nothing to the care of the women?

Glaucon:: How shall we do so?

Socrates:: It is therefore, I imagine, as we say, that one woman too is fitted by natural genius for being a physician, and another is not; one is naturally a musician, and another is not?

Glaucon:: What else?

Socrates:: And one is naturally fitted for the exercises, and another is not, one is fitted for war, and another is not.

Glaucon:: I at least am of this opinion.

Socrates:: And is not one likewise a lover of philosophy, and another averse to it? one of high spirits, and another of low?

Glaucon:: This likewise is true.

Socrates:: And has not one woman a natural genius for being a guardian, and another not? And have not we made choice of such a genius as this for our guardian men?

Glaucon:: Of such a genius as this.

Socrates:: The genius then of the woman and of the man for the guardianship of the city is the same, only that the one is weaker, and the other stronger.

Glaucon:: It appears so.

Socrates:: And such women as these are to be chosen to dwell with these men, and be guardians along with them, as they are naturally fit for them, and of a kindred genius.

Glaucon:: Entirely so.

Socrates:: And must not the same employments be assigned to the same geniuses?

Glaucon:: The same.

Socrates:: We are now come in a roundabout way to what we formerly mentioned; and we allow that it is not contrary to nature to appoint for the wives of our guardians music and exercise.

Glaucon:: By all means.

Socrates:: We are not then establishing things impossible, or such as can only be wished for, since we establish the law according to nature; and what is at present contrary to these things is contrary to nature rather, as appears.

Glaucon:: It seems so.

Socrates:: Was not our inquiry to hear of what was possible and best?

Glaucon:: It was.

Socrates:: And we have agreed that these things are possible.

Glaucon:: We have.

Socrates:: And we must next agree that they are best.

Glaucon:: It is plain we must.

Socrates:: In order therefore to make a guardian woman, at least the education will not be different from that of the men, especially as she has received the same natural genius.

Glaucon:: It will not be different.

Socrates:: What do you think then of such an opinion as this?

Glaucon:: Of what?

Socrates:: That of imagining with yourself one man to be better, and another worse, or do you deem them to be all alike?

Glaucon:: By no means.

Socrates:: In the city now which we establish, whether do you judge that our guardians, with this education we have described, or shoemakers with education in their art, will be rendered the better men?

Glaucon:: The question, is ridiculous.

Socrates:: I understand you. But what, of all the other citizens, are not they the best?

Glaucon:: By far.

Socrates:: But what, will not these women too be the best of women?

Glaucon:: They will be so, by far.

Socrates:: Is there anything better in a city than that both the women and the men be rendered the very best?

Glaucon:: There is not.

Socrates:: This then will be effected by music and exercise being afforded them according as we have described.

Glaucon:: Why will it not?

Socrates:: We have then established a law which is not only possible, but moreover best for the state.

Glaucon:: We have.

Socrates:: The wives, then, of our guardians must be unclothed, since they are to put on virtue for clothes, and they must bear a part in war and the other guardianship of the city, and do nothing else: but the lightest part of these services are to be allotted to the women rather than to the men, on account of the weakness of their sex. And the man who laughs at naked women, whilst performing the exercises for the sake of what is best, reaps the empty fruit of a ridiculous wisdom, and in no respect knows, as appears, at what he laughs, nor why he does it. For that ever was and will be deemed a noble saying, That what is most advantageous for the public is handsome, and what is hurtful is ugly.

Glaucon:: By all means.

Socrates:: Let us say, then, that we have got over one wave, as it were, having thus settled the law with respect to the women, without being wholly overwhelmed, ordaining that our male and female guardians are to manage all things in common: but our reasoning has been consistent with itself, as it respects both what is possible and likewise advantageous.

Glaucon:: It is truly no small wave you get over.

Socrates:: You will not, call it a great one, when you see what comes after it.

Glaucon:: Mention it, that I may see.

Socrates:: That law, and those others formerly mentioned, are followed, as I imagine, by this one.

Glaucon:: Which?

Socrates:: That these women must all be common to all these men, and that no one woman dwell with any man privately, and that their children likewise be common; that neither the parent know his own children, nor the children their parent.

Glaucon:: This is much greater than the other, as to the incredibility both of its being possible and at the same time advantageous.

Socrates:: I do not believe, that anyone will doubt of its utility, at least, as if it were not the greatest good to have the women and children in common, if it were but possible. But I imagined the greatest question will be, whether it be possible or not?

Glaucon:: One may very readily, dispute as to both.

Socrates:: You mention, a crowd of disputes. But I thought that I should at least have escaped from the one, if its utility had been agreed on, and that it should have only remained to consider its possibility.

Glaucon:: But you have not, got off unobserved; give then an account of both.

Socrates:: I must then, submit to a trial. But however, indulge me thus far: allow me to feast myself, as those are wont to feast themselves who are slow in understanding, when they walk alone. For men of this sort, sometimes, before they find out how they shall attain what they desire, waving that inquiry, that they may not fatigue themselves in deliberating about the possibility or impossibility of it, suppose they have obtained what they desire, and then go through what remains; and they delight in running over what they will do when their desire is obtained, rendering their soul, otherwise indolent, more indolent still. I am now effeminate after this manner, and wish to put off those debates, and to inquire afterwards whether these things be possible; but at present, holding them possible, if you allow me, I will consider in what manner our rulers shall regulate these things, when they take place, that they may be done in the most advantageous manner both to the state and the guardians. These things I shall endeavor, in the first place, to go over with your assistance, and the others afterwards, if you allow me.

Glaucon:: I allow, and inquire accordingly.

Socrates:: I imagine then, that if our rulers are worthy of that name, and in like manner these who are their auxiliaries, their ministers in the government, the latter will be disposed to do whatever is enjoined them, and the former will be ready to command; enjoining them some things in direct obedience to the law, and imitating the law in whatever things are entrusted to them.

Glaucon:: It is likely.

Socrates:: Do you now, who are their lawgiver, in the same manner as you have chosen out the men, choose out likewise the women, making their genius as similar as possible: and as they dwell and eat together in common, and as no one possesses any of these things privately, they will meet together; and being mingled in their exercises and other conversation, they will be led from an innate necessity, as I imagine, to mutual embraces. Do not I seem to say what will necessarily happen?

Glaucon:: Not, by any geometrical, but concupiscible necessity, which seems to be more pungent than the other to persuade and draw the bulk of mankind.

Socrates:: Much more. But after this, Glauco, to mix together in a disorderly manner, or to do anything else, is neither holy in a city of happy persons, nor will the rulers permit it.

Glaucon:: It were not just.

Socrates:: It is plain then, that after this they shall make marriages as much as possible sacred; but the most advantageous would be sacred.

Glaucon:: By all means.

Socrates:: How then shall they be most advantageous? Tell me that, Glauco, for I see in your houses dogs of chase, and a great many excellent birds. Have you then indeed ever attended at all, in any respect, to their marriages, and the propagation of their species?

Glaucon:: How?

Socrates:: First of all, that among these, although they be excellent themselves, are there not some who are most excellent?

Glaucon:: There are.

Socrates:: Whether then do you breed from all of them alike, or are you careful to breed chiefly from the best?

Glaucon:: From the best.

Socrates:: But how? from the youngest or from the oldest, or from those who are most in their prime?

Glaucon:: From those in their prime.

Socrates:: And if the breed be not of this kind, you reckon that the race of birds and dogs greatly degenerates.

Glaucon:: I reckon so.

Socrates:: And what think you as to horses, and other animals? is the case any otherwise with respect to these?

Glaucon:: That, were absurd.

Socrates:: Strange! my friend, how extremely perfect governors must we have, if the case be the same with respect to the human race.

Glaucon:: But it is so; but what then?

Socrates:: Because there is a necessity, for their using many medicines: for where bodies have no occasion for medicines, but are ready to subject themselves to a regimen of diet, we reckon that a weaker physician may suffice; but when there is a necessity for medicines, we know that a more able physician is then requisite.

Glaucon:: True; but with what view do you say this?

Socrates:: With this view. It appears that our rulers are obliged to use a deal of fiction and deceit for the advantage of the governed; and we said somewhere that all these things were useful in the way of medicines.

Glaucon:: And rightly.

Socrates:: This piece of right now seems not to be the most inconsiderable in marriages and the propagation of children.

Glaucon:: How, now?

Socrates:: It is proper, from what we have acknowledged, that the best men embrace for the most part the best women, and the most naughty men, on the contrary, the most naughty women; and the offspring of the former is to be educated, but not that of the latter, if you desire to have the flock of the most perfect kind; and this must be performed in such a manner as to escape the notice of all but the governors themselves, if you would have the whole herd of the guardians to be as free from sedition as possible.

Glaucon:: Most right.

Socrates:: Shall there not then be some festivals by law established, in which we shall draw together the brides and bridegrooms? Sacrifices too must be performed, and hymns composed by our poets suitable to the marriages which are making. But the number of the marriages we shall commit to the rulers, that as much as possible they may preserve the same number of men, having an eye to the wars, diseases, and everything else of this kind, and that as far as possible our city may be neither too great nor little.

Glaucon:: Right.

Socrates:: And certain lots too, I imagine, should be made so artificial, that the naughty man may, on every embrace, accuse his fortune, and not the governors.

Glaucon:: By all means.

Socrates:: And those of the youth who distinguish themselves, whether in war or anywhere else, ought to have rewards and prizes given them, and the most ample liberty of embracing women, that so under this pretext likewise the greatest number of children may be generated of such persons.

Glaucon:: Right.

Socrates:: And shall the children always as they are born be received by magistrates appointed for these purposes, whether men or women, or both; for the magistracies are in common to women as to men.

Glaucon:: They are so.

Socrates:: And when they receive the children of worthy persons, they will carry them, I imagine, to the nursery, to certain nurses dwelling apart in a certain place of the city. But the children of the more naughty, and such others as are any way lame, they will hide in some secret and obscure place as is proper.

Glaucon:: If they want, the race of guardians to be pure.

Socrates:: And shall not these take care likewise of their nursing, in bringing to the nursery the mothers when their breasts are full, practicing every art, that no one know her own child, and in providing others who have milk, if these shall prove insufficient, and they shall likewise take care of these nurses, that they suckle a competent time: and they shall appoint the nurses and keepers to be wakeful, and to take every other necessary toil.

Glaucon:: You speak, of great ease to the wives of our guardians, in the breeding of children.

Socrates:: It is fit. But let us go over what comes next, which we chiefly intended. We took notice that good children ought to be generated of persons in their prime. Are you then of opinion with me, that the proper season of prime is twenty years to a woman, and thirty to a man?

Glaucon:: Of what continuance are these primes?

Socrates:: The woman, beginning at twenty, is to bear children to the state until the age of forty; and the man, after he has passed the most raging part of his course, from that period, is to beget children to the state until the age of fifty-five.

Glaucon:: This indeed is the prime, in both sexes, both of body and of mind.

Socrates:: If then any one who is older or younger than these shall meddle in generating for the public, we shall say the trespass is neither holy nor just, as he begets to the state a child which, if it be concealed, is born and grows up without sacrifices and prayers (which upon every marriage the priestesses and priests, and the whole of the city shall offer, that the descendants of the good-may be still more good, and from useful descendants still more useful may arise), but is born in darkness, and from a dreadful intemperance.

Glaucon:: Right.

Socrates:: And the law, must be the same, if any of those men, who are yet of the age for generating, shall touch women of a proper age, without the concurrence of the magistrate, we shall consider him as having raised to the state a bastardly, illegitimate and unhallowed child.

Glaucon:: Most right.

Socrates:: And I imagine, that when the women and men exceed the age of generating, we will allow the men at liberty to cohabit with any woman they incline, besides their daughter and mother, and these who are the children of their daughters, or those upwards from their mother; and so likewise the women to embrace any, but a son and father, and the children of these, either downwards or upwards: all this liberty we will allow them, after we have enjoined them to attend carefully, in the first place, if any thing should be conceived not to bring it to the light; but if by any accident it should be brought forth, to expose it as a creature for which no provision is made.

Glaucon:: All these things, are reasonably said. But how shall fathers and daughters, and those other relations you now mentioned, be known of one another?

Socrates:: They shall not be known at all. But from the day on which any one is a bridegroom, whatever children are born in the tenth or in the seventh month after it, all these he shall call the male his sons, and the female his daughters, and they shall call him father. And in the same way again, he shall call the children of these grandchildren, and they again shall call them grandfathers and grandmothers: and those who were born in that period in which their fathers and mothers were begetting children, they shall call sisters and brothers, so as not to touch each other, as I just now said. But the law shall allow brothers and sisters to live together, if their lot to fall out, and the oracle give consent.

Glaucon:: Most right.

Socrates:: This, Glauco, and such as this, is the community of women and children among your city guardians; and that it is both consonant to the other parts of our polity, and by far the best, we must in the next place establish from reason; or how shall we do?

Glaucon:: Just so indeed.

Socrates:: Did not we then agree on this at the beginning: to inquire what we can mention as the greatest good with relation to the establishment of a state, with an eye to which the law-giver ought to enact the laws, and what is the greatest evil; and then to inquire whether what we have hitherto gone over contributes towards leading us in the steps of this good, and away from that evil?

Glaucon:: By all means.

Socrates:: Is there then any greater ill to a city than that which rents it in pieces, and instead of one, makes it many? Or is there any greater good than that which binds it together and makes it one?

Glaucon:: There is not.

Socrates:: Does not then one common feeling of pleasure and pain bind them together, when the whole of the citizens as much as possible rejoice and mourn in the same manner for the same things when they are obtained, and when they are lost?

Glaucon:: By all means so.

Socrates:: But a separate feeling of these things destroys it, when some of the citizens are extremely grieved, and others extremely glad at the same sufferings of the city, or of those who are in it.

Glaucon:: Why not?

Socrates:: Does not then such an evil arise from this that follows, when they do not all jointly in the state pronounce these words, mine, and not mine? And will not that city be best regulated, when every individual, with regard to the concerns of another, in the same way with him pronounces these words, mine, and not mine?

Glaucon:: By far.

Socrates:: And it is such as comes nearest to one man. As, when our finger is anyhow hurt, the whole common feeling spread through the body to the soul, with one symphony of its governing part perceives it, and the entire whole mourns along with the distressed part; and so we say that the man is distressed in his finger: and the reasoning is the same as to any other part of a man, both with respect to grief, when any part is in pain, or with respect to pleasure, when any part is at ease.

Glaucon:: It is the same.

Socrates:: And to return to your question, the city which comes nearest to this is governed in the best manner. When any one of the citizens receives any good or ill, such a city, I imagine, will most especially say that she herself receives it, and the whole city rejoice or mourn together.

Glaucon:: Of necessity, this must prevail in a city governed by good laws.

Socrates:: It may be time for us to go back to our city, and consider how those things are in it which we have agreed on in oar reasoning, whether they prevail most in our city, or more in some other.

Glaucon:: We must do so.

Socrates:: What now, are there not in other cities governors and people? and are there not likewise in this?

Glaucon:: There are.

Socrates:: And will not all these call one another citizens?

Glaucon:: Why not?

Socrates:: But besides this of citizens, what does the people call their governors in other states?

Glaucon:: Masters or Lords in most states and in democracies, this very name, Governors.

Socrates:: But in our city, besides that of citizens, what does the people call their Governors?

Glaucon:: Their Preservers, and Helpers.

Socrates:: And what do they call the people?

Glaucon:: Rewarders, and Nourishers.

Socrates:: And in other cities, what do the governors call their people?

Glaucon:: Slaves.

Socrates:: And what do the governors call one another?

Glaucon:: Fellow rulers.

Socrates:: And ours, what?

Glaucon:: Fellow guardians.

Socrates:: Can you tell whether any one of the governors in other cities can address one of their fellow governors as his kinsman,' and another as a stranger?

Glaucon:: Very many so.

Socrates:: Does he not then reckon and call the kindred one his own, and the stranger one as not his own?

Glaucon:: Just so.

Socrates:: But how is it with your guardians? Is there so much as any one of them who can deem and call any one of their fellow guardians a stranger?

Glaucon:: By no means; for with whomsoever any one meets, he reckons he meets with a brother or sister, a father or mother, a son or daughter, or the descendants or ancestors of these.

Socrates:: You say most nobly. But further, tell me this likewise: whether will you only establish among them, by law, these kindred names, or will you also enjoin them to perform all their actions suitable to these names?—with respect to parents, whatever the law enjoins to be performed to parents, such as reverence, and care, and obedience—and that otherwise it will not be for his advantage, neither in the sight of Gods nor of men, as he acts what is neither holy nor just, if he do other things than these. Shall these, or any other speeches from all our citizens, resound directly in the ears of our children, both concerning their parents, whom any one shall point out to them, and concerning other relations?

Glaucon:: These things shall be said; for it were ridiculous if friendly names alone resounded, without any actions accompanying them.

Socrates:: Of all cities then, there will be the greatest harmony in it, when any one individual is either well or ill, as to the expression we lately mentioned, viz., mine is well, or mine is ill.

Glaucon:: Most true.

Socrates:: Did not we say too, that their common pleasures and pains will accompany this opinion and expression?

Glaucon:: And we said rightly.

Socrates:: Will not then our citizens most especially have this in common which they call my own; and having this in common, they will of all others most especially have in common pleasure and pain?

Glaucon:: Extremely so.

Socrates:: And along with the other parts of the constitution, is not the community of women and children among the guardians the cause of these things?

Glaucon:: This is it most especially.

Socrates:: But we agreed, that this was the greatest good of a city, likening a well established city to a body in its being affected with the pleasure and pain of any part.

Glaucon:: And we rightly, agreed on this.

Socrates:: This community then of women and children among our auxiliaries, has appeared to us to be the cause of the greatest good to the city.

Glaucon:: Extremely so.

Socrates:: And surely we agree at least with what went before; for we somewhere said that they ought neither to have houses of their own, nor land, nor any possession, but receiving their subsistence from others, as a reward for their guardianship, they should all spend it in common, if they intended really to be guardians.

Glaucon:: Right.

Socrates:: Do not therefore, as I say, both these things which were formerly mentioned, and still more what we now speak of, render them real guardians, and prevent the city from being rent in pieces by their not at all calling one and the same thing their own, but one one thing, and another another; one drawing to his own house whatever he can possess separate from others, and another to his, which is different from the other, and having both wives and children different, which occasion different pleasures and pains, which are private, as belonging to private persons, but being of one opinion concerning their home, and all of them pointing towards the same thing, as far as possible, to have one common feeling of pleasure and pain.

Glaucon:: Extremely so.

Socrates:: But what, shall law-suits and accusations against one another be banished from among them, so to speak, by their possessing nothing as private property but their body, and everything else being common, from whence they shall be free of all those disturbances which men raise about money, children or relations.

Glaucon:: They will of necessity be free of these.

Socrates:: Neither indeed can there be reasonably among them any actions raised for violence or unseemly treatment. For, making the protection of their persons a necessary thing, we will own it to be handsome and just for those of equal age to help one another.

Glaucon:: Right.

Socrates:: And this law, has this right in it likewise: that if any one be in a passion, gratifying his passion in this manner he is less apt to raise greater seditions.

Glaucon:: It is entirely so.

Socrates:: The elder shall be enjoined both to govern and to chastise the younger.

Glaucon:: That is plain.

Socrates:: And surely the younger, as becomes them, shall never attempt to beat the elder, or in any other way to offer violence to him, unless appointed by the governors. Nor will they, I imagine, in any sort dishonor them, for there are sufficient guardians to hinder it, both fear and reverence. Reverence on the one hand restraining them from assaulting, as it were, their parents, and fear on the other, lest others shall assist the sufferer, some as sons, others as brothers, and others as fathers.

Glaucon:: It happens so.

Socrates:: In every respect then, as far as relates to the laws, the men shall live peaceably with one another.

Glaucon:: Very much so.

Socrates:: And while these have no seditions among themselves, there is no danger in any other cities raising disturbance against these, or that they shall split into factions.

Glaucon:: There is not.

Socrates:: As for the lesser evils, from which surely they will be freed, I do not choose, because of the impropriety of it, so much as to mention them—what flattery of the rich, what indigence and solicitude in the education of their children, and in making money for the necessary support of their family the poor have; sometimes borrowing, and sometimes being despised, and sometimes using all manner of shifts in procuring provisions, which they give to the management of their wives and domestics—how many slavish and mean things, my friend, they suffer in all these respects, are not even worthy to be mentioned.

Glaucon:: And they are manifest, to one blind.

Socrates:: They shall be delivered from all these things, and shall live happier than that happiest life which these enjoy who gain the prize in the Olympic games.

Glaucon:: How?

Socrates:: Those are esteemed happy on account of a small part of what these enjoy. But the victory of these is more noble, and their maintenance from the public is more complete; for the victory they gain is the safety of the whole city, and both they and their children are crowned with their maintenance, and all the other necessaries of life, as laurels, and receive honour from their city while alive, and at their death an honorable funeral.

Glaucon:: The most noble rewards.

Socrates:: Do you remember then, that in our former reasonings, I do not know who it was objected to us that we were not making our guardians happy, who, though they had it in their power to have the whole wealth of their citizens, had nevertheless nothing at all? and we proposed to consider of this afterwards, if it fell in our way; but that at the present we were making our guardians only guardians, and the city itself as happy as possible, but without regarding one particular tribe in it, with a view to make it happy.

Glaucon:: I remember it.

Socrates:: What think you now of the life of our auxiliaries, which appears far more noble and happy than that of those who gain the prize at the Olympic games? It does not at all appear to resemble the life of the leather cutter, the handicraft, or farmer.

Glaucon:: I do not think it.

Socrates:: But however, it is proper that I mention here what I likewise said on a former occasion, that if the guardian shall attempt to be happy in such a way as to be no longer a guardian, nor be content with this moderate, and steady, and, as we say, best life, but, being seized with a foolish and youthful opinion about happiness, shall, because he has it in his power, be driven to make himself the master of everything in the city, he shall know that Hesiod was truly wise in saying that the half is somehow more than the whole.

Glaucon:: If he take me, for his counselor he will remain in such a life.

Socrates:: You allow then, that the women act in common with the men, as we have explained, with respect to education and the breeding of children, and the guardianship of the other citizens, both remaining in the city and in going forth to war, and that along with the men they ought to keep guard, and to hunt like dogs, and in every case to take a share in all things as far as they can; and that while they do these things, they will do what is best, and no way contrary to the nature of the female, with respect to the male, by which nature they are made to act jointly with one another.

Glaucon:: I agree.

Socrates:: Does not then this, remain to be discussed, whether it be possible that this community take place among men likewise, as among other animals, and how far it is possible?

Glaucon:: You have prevented me, in mentioning what I was going to ask.

Socrates:: For with relation to warlike affairs, it is plain, I imagine, how they will fight.

Glaucon:: How?

Socrates:: That they will jointly go out on their military expeditions, and besides will carry along with them such of their children as are grown up, that like these of other artists they may see those things which it will be necessary for them to practice when they are grown up; and besides, seeing that they may serve and administer in every thing with relation to the war, and assist both their fathers and mothers. Or have you not observed what happens in the common arts? how that the children of the potters, ministering to them for a long time, look on before they apply themselves to the making earthen ware?

Glaucon:: Yes, indeed.

Socrates:: Whether now are these or our guardians to instruct their children with greater care, by the practice and view of what belongs to their office?

Glaucon:: To suppose those, should take greater care than our guardians, were ridiculous.

Socrates:: But every creature fights more remarkably in presence of its offspring.

Glaucon:: The case is so; but there is no small danger, Socrates, when they are defeated, as is often the case in war, that when their children as well as themselves are cut off, it shall be impossible to raise another city.

Socrates:: You say true,; but you imagine we ought, first of all, to take care never to run any risk.

Glaucon:: No, by no means.

Socrates:: What then, if they are at all to hazard themselves in any case, is it not where, if they succeed, they shall become better men?

Glaucon:: That is plain.

Socrates:: But do you imagine it a small matter, and not worthy of the risk, whether children, who yet are to be military men, see affairs relating to war or not?

Glaucon:: No; it is a matter of consequence with respect to what you mention.

Socrates:: We must then, first, endeavor to make our children spectators of the war, but contrive for them a place of safety—and then it shall do well, shall it not?

Glaucon:: Yes.

Socrates:: And shall not then, our parents, in the first place, as being men, not be ignorant, but understand which of the camps are, and which are not dangerous?

Glaucon:: It is likely.

Socrates:: And they shall bring them into the one, but with respect to the other they will be on their guard.

Glaucon:: Right.

Socrates:: And they will probably set governors over them, not such as are the most naughty, but such as by experience and years are able leaders and pedagogues.

Glaucon:: It is very proper.

Socrates:: But we will say many things have happened contrary to expectation.

Glaucon:: Very many.

Socrates:: With reference therefore to such events as these, it is proper that whilst they are children they get wings, that so, in any necessity, they may escape by flight.

Glaucon:: How do you mean?

Socrates:: They must, when extremely young, be mounted on horses, and taught to ride on horse-back, and brought to see the battle, not on high mettled and warlike horses, but on the fleetest and those that are the most obedient to the rein; for thus they shall in the best manner observe their proper work, and, on any necessity, shall escape with the greatest safety, following the aged leaders.

Glaucon:: You seem to me, to say right.

Socrates:: But what, as to the affairs of war? how are you to manage your soldiers, both with respect to one another and their enemies? Have I imagined rightly or not?

Glaucon:: As to what?

Socrates:: That whoever of them, leaves his rank, throws away his arms, or does any such thing from cowardice, must he not be made a handicraft, or land-laborer?

Glaucon:: By all means.

Socrates:: And shall not the man who is taken alive by the enemy be given gratis to any who incline to employ him in the country as they have a mind?

Glaucon:: By all means.

Socrates:: And are you of opinion that he who gains a character, and excels, ought, in the first place, in the expedition itself, to be crowned in some measure by every one of the youths and boys who are his fellow soldiers? or think you otherwise?

Glaucon:: I am of opinion, for my part, they ought to be crowned.

Socrates:: But what, and get the right hand likewise?

Glaucon:: This likewise.

Socrates:: But this further, I imagine, you are not yet satisfied about.

Glaucon:: What?

Socrates:: That they embrace and be embraced by everyone.

Glaucon:: They should most of all others; and I will add to this law, that whilst they are upon this expedition, no one shall be allowed to refuse them, whoever they incline to embrace, that if any happen to be in love with any one, male or female, he may be the more animated to win the prizes.

Socrates:: Very well; for we have already said that there are more marriages provided for the good citizen than for others, and more frequent choice in such matters allowed them than others, that the descendants of such an one may be as numerous as possible.

Glaucon:: We have already said so.

Socrates:: But surely, even according to Homer's opinion, it is just that such of the youth as are brave be honored in this way. For Homer says that Ajax, who excelled in war, was rewarded with a large share at the entertainments, this being the most natural reward to a brave man in the bloom of youth, by which he at the same time acquired honour and strength.

Glaucon:: Most right.

Socrates:: We shall then obey Homer, at least in these things. And we shall honour the good, both at our sacrifices, and all such occasions, in as far as they appear to be deserving, with hymns likewise, and with those things we lately mentioned: and besides these things, with seats, and dishes, and full cups, that at the same time we may both honour and exercise the virtue of worthy men and women.

Glaucon:: You say most admirably well.

Socrates:: Be it so. If any one of those who die in the army shall have distinguished himself, shall we not, in the first place, say that he is of the golden kind?

Glaucon:: Most especially.

Socrates:: And shall we not believe Hesiod telling us, that when any of these die;

> They blameless deities become on earth,
> Beneficent, all evil warding off;
> Guardians of men?——

Glaucon:: We shall believe him.

Socrates:: And we shall ask the oracle in what manner we ought to bury divine and god-like men, and with what marks of distinction, and thus shall we bury them in that very manner which shall be explained.

Glaucon:: Why shall we not?

Socrates:: And we shall in all after time reverence and worship their tombs as those of Deities. And we shall enact by law that the same things be performed, and in the same manner, to any who shall have been deemed to have remarkably distinguished themselves in life, when they die of old age or anything else?

Glaucon:: It is right.

Socrates:: But what now, how shall our soldiers behave towards enemies?

Glaucon:: As to what?

Socrates:: First, as to bringing into slavery. Do you think it just that Greeks should enslave Greek cities? or, rather, as far as they are able, not suffer any other to do it, and accustom themselves to this, to be sparing of the Grecian tribe, being greatly on their guard against being enslaved by the Barbarians?

Glaucon:: It is, in general, and in every particular case, best to be sparing.

Socrates:: Are they not to acquire any Grecian slave themselves, and to counsel the other Greeks to act in the same manner?

Glaucon:: By all means. They will the more, at least, by such a conduct, turn themselves against the Barbarians, and abstain from one another.

Socrates:: But what, to strip the dead, of anything but their arms, after they conquer them, is it handsome or not? It gives a pretence to cowards not to go against the enemy who is alive, as being necessarily occupied when they are thus employed about the one who is dead; and many armies have been lost by this plundering.

Glaucon:: Very many.

Socrates:: And does it not appear to you to be illiberal and sordid, and the part of a womanish and little mind to strip the dead body, and deem the body of the deceased an enemy, when the enemy is fled off, and there is only left behind that with which he fought? Or do you imagine that they who act in this manner do any way different from dogs, who are in a rage at the stones they throw at them, not touching the man who throws them?

Glaucon:: Not in the least.

Socrates:: We must let alone then this stripping the dead, and these hindrances arising from the carrying off booty.

Glaucon:: Truly, these must be banished.

Socrates:: Nor shall we at any time bring the arms into the temples, as if we were to dedicate them, at least not the arms of Grecians, if we have any concern to have the good liking of the other Greeks; but we shall rather be afraid, lest it should be a kind of profanation to bring into the temple such things as these from our own kinsman, unless the oracle shall say otherwise.

Glaucon:: Most right.

Socrates:: But what, with reference to the laying waste Grecian lands and burning of houses, how shall your soldiers behave towards their enemies?

Glaucon:: I should be glad, to hear you signifying your opinion.

Socrates:: Truly then, in my opinion, neither of these ought to be done, but only one year’s produce to be carried off. And would you have me tell you the reason why this should be done?

Glaucon:: By all means.

Socrates:: It appears to me that as these two words, war and sedition, are different, so they are two different things which are signified by them: I call them two different things, the one is domestic and akin, the other foreign and strange. When hatred is among ourselves, it is called sedition; when it respects foreigners, it is called war.

Glaucon:: What you say, is no way unreasonable.

Socrates:: But consider now, if I say this likewise reasonably: for I aver that the Greek nation is friendly and akin to itself, but is foreign and strange to the Barbarian.

Glaucon:: This too is right.

Socrates:: When then the Greeks fight with the Barbarians, and the Barbarians with the Greeks, we shall say they wage war, and are naturally enemies; and this hatred is to be called war. But when Greeks do any such thing to Greeks, we shall say that they are friends by nature, and that Greece in such a case is distempered and in sedition; and such a hatred is to be called a sedition.

Glaucon:: I agree, to account of it in the same manner.

Socrates:: Consider then, that in the sedition now mentioned, wherever such a thing happens, and the city is disjointed, if they sequester the lands, and bum the houses of one another, how destructive the sedition appears, and neither of them seems to be lovers of their country; for otherwise they would never dare to lay waste their nurse and mother; but it would suffice the victors to carry off the fruits of the vanquished, and to consider they are to be reconciled, and not perpetually to be at war.

Glaucon:: This indeed is by much a more mild sentiment than the other.

Socrates:: But what now? Is not this city you are establishing a Greek one?

Glaucon:: It should be so.

Socrates:: And shall not they be good and mild?

Glaucon:: By all means.

Socrates:: And shall they not be lovers of Greeks? And shall they not account Greece akin to them? And shall they not have the same religious rites with the rest of the Greeks?

Glaucon:: By all means.

Socrates:: A difference then with Greeks, as with kinsmen, will they not denominate a sedition, and not a war?

Glaucon:: They will.

Socrates:: And they will behave as those who are to be reconciled?

Glaucon:: By all means.

Socrates:: They shall then be mild and moderate, not punishing so far to enslave or destroy, since they are moderate and not hostile.

Glaucon:: Just so.

Socrates:: Neither then, as they are Greeks, will they sequester Grecian lands, nor burn their houses, nor will they allow that in every city all are their enemies, men, women, and children, but that always a few only are enemies, the authors of the quarrel. And on all these accounts they will neither choose to lay waste lands, as the greatest number are their friends, nor will they overturn the houses, but will carry on the war so far as till the guilty be obliged by the innocent, whom they distress, to make reparation.

Glaucon:: I agree, that we ought to behave so towards our own citizens when we are set against one another; and to behave so towards the Barbarians as the Greeks at present do to one another.

Socrates:: Let us then likewise establish this law for our guardians, neither to lay waste the lands, nor burn the houses.

Glaucon:: Let us establish it, and this further, that these things, and those too you mentioned formerly, are right. But it appears to me, Socrates, if one is to allow you to speak in this manner, that you will never remember what you formerly passed by when you entered on all this you have now said—this, to wit, how far such a government is possible? and in what way it is at all possible? For if it be at all possible, I will allow that all these good things will belong to that city, and these likewise which you have omitted; that they will in the best manner fight against their enemies, and of all others least abandon one another, recognizing these names, and calling one another by these, fathers, sons, and brothers. And if the female shall encamp along with them, whether in the same rank, or drawn up behind them, to strike terror into the enemies, and at the same time to assist if ever there be necessity for it, I know that in this way they will entirely be invincible. And I plainly see too what advantages they have at home, which we have omitted. But speak no more about this government, as I allow that all these, and ten thousand other things, will belong to it, if it actually exist. But let us endeavor to persuade one another of this itself, whether it be possible, and in what respect it is so, and let us omit those other things.

Socrates:: You have suddenly, made an assault on my reasoning, and make no allowance for one who is fighting; for perhaps you do not advert that with difficulty I am escaped from two waves, and now you are bringing upon me the greatest and most dangerous of the three. After you have seen and heard this, you will entirely forgive me, allowing that I with reason grudged and was afraid to mention so great a paradox, and undertake to examine it.

Glaucon:: The more, you mention these things, the less will you be freed from explaining in what respect this government is possible. Proceed then, and do not spend time.

Socrates:: Must not this then, in the first place, be remembered, that we are come hither in search of justice, what it is, and what injustice is?

Glaucon:: It must. But what is this to the purpose?

Socrates:: Nothing. But if we find out what justice is, shall we then judge that the just man ought in no respect to differ from it, but in every respect to be such as justice is? and shall we be satisfied if he approach the nearest to it, and, of all others, partake of it the most?

Glaucon:: We shall, be satisfied so.

Socrates:: As a model then, we were inquiring into this, what kind of thing justice is, and we likewise were in quest of a just man, and considered what sort of man he should be, if he did exist. We likewise inquired what injustice is, and what too the most unjust men, in order that looking into these two models, what sort of men they appeared with respect to happiness and its opposite, we might be obliged to acknowledge concerning ourselves, that whoever should most resemble them in character, shall have a fortune the most resembling theirs; and not for this end, to show that these things are possible or not.

Glaucon:: In this, you say true.

Socrates:: Do you imagine then that the painter is in any degree the less excellent, who having painted a model of the most beautiful man, and brought every thing fully into his piece, is yet unable to show that such a man does really exist?

Glaucon:: Truly, I do not.

Socrates:: What then, have we not made in our reasonings (shall we say) a model of a good city?

Glaucon:: Yes indeed.

Socrates:: Have we then spoken any thing the worse, do you imagine, on this account, that we are not able to show, that it is possible for a city to be established such as we have described?

Glaucon:: No indeed.

Socrates:: This then, is the truth in the case. But if truly I must now likewise, on your account, hasten to this, to show how especially and in what respects it is most possible, in order to this discovery you must again grant the same things as formerly.

Glaucon:: What things?

Socrates:: Is it possible for any thing to be executed so perfectly as it is described? or is such the nature of practice that it approaches not so near the truth as theory, though some may think otherwise? But whether will you allow this or not?

Glaucon:: I allow it.

Socrates:: Do not then oblige me to show you all these things, and in every respect existing in fact, so perfectly as we have described in our reasoning; but if we be able to find out how a city may be established the nearest possible to what we have mentioned, you'll say we have found out that these things which you require are possible? Or will you not even be satisfied if this be obtained? for my own part I should be satisfied.

Glaucon:: And I too.

Socrates:: We are now it seems, in the next place, to endeavor to find out and to show what at all is the evil which is now practiced in cities through which they are not established in this manner we have described; and what is that smallest change which, if made, would bring the city to this model of government, and let us chiefly see, if this can be effected by the change of one thing; if not, by the change of two; if not that, by the change of the fewest things in number and the smallest in power.

Glaucon:: By all means.

Socrates:: Upon the change then of one thing, I am able, I think, to show that the state can fall into this model of government; but the change is not indeed small nor easy, yet it is possible.

Glaucon:: What is it?

Socrates:: I am now come, to what I compared to the greatest wave: and it shall now be mentioned, though, like a breaking wave, it should overwhelm us with excessive laughter and unbelief. But consider, what I am going to say.

Glaucon:: Proceed.

Socrates:: Unless either philosophers, govern in cities, or those who are at present called kings and governors philosophize really and thoroughly, and these two, the political power and philosophy, unite in one, and ‘till the bulk of those who at present pursue each of these separately are of necessity excluded, there shall be no end, Glauco, to the miseries of cities, nor yet, as I imagine, to those of the human race; nor till then shall ever this republic, which we have gone over in our reasonings, spring up to a possibility, and behold the light of the sun. But this is that which all along made me grudge to mention it, that I saw what a paradox I was to utter: for it is difficult to be convinced that no other but this republic can enjoy happiness, whether public or private.

Glaucon:: You have thrown out, Socrates, such an expression and argument as you may imagine will bring on you a great many, and these courageous to such a degree as to put off their clothes, and naked to snatch whatever weapon fortune affords each of them, and, as if they were to perform prodigies, rush upon you in battle array. And unless mowing them down with argument you make your escape, you will pay for it by suffering most severe ridicule.

Socrates:: And are not you the cause of all this?

Glaucon:: But in acting handsomely at least. However, in this affair, I will not betray you, but defend you with such things as I am able, and I am able, both by my good-will, and by encouraging you, and probably I will answer your questions more carefully than any other; only do you endeavor, with the help of such an assistant, to show those who are backward to believe these things that the case really is as you represent it.

Socrates:: I must endeavor, since even you afford so great an alliance. And here it seems to me to be necessary, if we are anyhow to make our escape from those you mention, accurately to define to them what kind of men these are we call philosophers, when we dare to assert that they alone ought to govern; in order that when they are made perfectly manifest, any one may be able to defend himself when he asserts that to these it naturally belongs both to apply themselves to philosophy, and likewise to take upon them the government of the state: but others are to apply themselves neither to philosophy nor government, but to obey their leader.

Glaucon:: It is proper, to define them.

Socrates:: Come then, follow me this way, if together anyhow we shall sufficiently explain this matter.

Glaucon:: Lead on then.

Socrates:: Will it then be needful, to put you in mind, or do you remember it, that when we say of any one that he loves any thing, when we speak with propriety, he must not appear to love one part of it and not another, but to have an affection for the whole?

Glaucon:: I need, it seems, to be put in mind, for I do not understand it perfectly.

Socrates:: It might become another, Glauco, to say what you say; but it does not become a man who is a lover to forget that all those who are in their bloom sting somehow, and give emotion to one who is amorous and a lover, as they are deemed worthy both of respect and of being saluted. Or do you not behave in this manner towards the beautiful? One, because fiat-nosed, shall be called agreeable, and be commended by you; and the hook-nose of the other, you say, is princely; and that which is in the middle of these is according to the exactest symmetry: the black are said to be manly to behold, and the fair to be the children of the Gods; but this appellation of pale green, do you imagine it is the invention of any other than of a flattering lover, and one who easily bears with the paleness, provided it is in the bloom of youth? And, in one word, you make all sort of pretences, and say everything so as never to reject anyone who is of a blooming age?

Glaucon:: If you incline, to judge by me of other lovers, that they do in this sort, I agree to it for the sake of the argument.

Socrates:: And what, with respect to the lovers of wine; do you not observe them acting in the same manner, cheerfully drinking every kind of wine upon every pretext?

Glaucon:: Yes, indeed.

Socrates:: And you perceive, as I imagine, that the ambitious likewise, if they cannot obtain the command of a whole army, will take the third command; and if they cannot be honored by greater and better men, are content if they be honored by the lower and more contemptible, being desirous of honour at any rate?

Glaucon:: It is perfectly so.

Socrates:: Agree to this or not: if we say one is desirous of anything, shall we say that he desires the whole species, or that he desires one part of it, but not another?

Glaucon:: The whole.

Socrates:: Shall we not then likewise say that the philosopher is desirous of wisdom, and that not of one part only, but of the whole?

Glaucon:: True.

Socrates:: He then who has a dislike of learning, especially if he be young, and has not at all understanding to discern what is good, and what is otherwise, shall not be called a lover of learning, nor a philosopher; in the same manner as we say of one who is disgusted with meats, that he neither hungers after nor desires meats, nor is a lover but a hater of them.

Glaucon:: And we shall say right.

Socrates:: But the man who readily inclines to taste of every piece of learning, and with pleasure enters on the study of it, and is insatiable of it, this man we shall with justice call a philosopher, shall we not?

Glaucon:: You shall have a great many such philosophers as those very absurd: for all your lovers of shows appear to me to be of this kind, from their taking a pleasure in learning, and your story lovers are the most stupid of all, to be reckoned among philosophers at least. These indeed would not willingly attend on such reasonings, and such a disquisition as this. But yet, as if they had hired out their ears to listen to every chorus, they run about to the Bacchanalia, omitting neither those of cities nor villages. Shall all these then, and others studious of such things, and those who apply to the inferior arts, be called by us philosophers?

Socrates:: By no means, but resembling philosophers?

Glaucon:: But whom, do you call the true ones?

Socrates:: Those, who are desirous of discerning the truth.

Glaucon:: This likewise, is right; but how do you mean?

Socrates:: It is not easy, to tell it to another; but you, I imagine, will agree with me in this.

Glaucon:: In what?

Socrates:: That since the beautiful is opposite to the deformed, these are two things.

Glaucon:: Why are they not?

Socrates:: And if they are two, then each of them is one.

Glaucon:: This also is granted.

Socrates:: And the reasoning is the same concerning justice and injustice, good and evil. And concerning every other species of things, the argument is the same. That each of them is one in itself, but appears to be many, being every where diversified by their communication with action and body, and with one another.

Glaucon:: You say right.

Socrates:: In this manner then, I separate these, and set apart those you now mentioned, the lovers of public shows, of handicrafts, and mechanics, and then apart from these, I set those of whom we discourse at present, whom alone we may properly call philosophers.

Glaucon:: How do you say?

Socrates:: The lovers of common stories and of spectacles delight in fine sounds, colors, and figures, and everything which is compounded of these; but the real nature of beauty itself their understandings are incapable to discern and admire.

Glaucon:: Indeed the case is so.

Socrates:: But as to those then who are able to approach this beauty itself, and to behold it as it is in itself, must they not be few in number?

Glaucon:: Extremely so.

Socrates:: He then who accounts some things beautiful, but neither knows beauty itself, nor is able to follow, if one were to lead him to the knowledge of it, does he seem to you to live in a dream, or to be awake? Consider now, what is it to dream. Is it not this, when one, whether asleep or awake, imagines the similitude of a thing is not the similitude, but really the thing itself which it resembles?

Glaucon:: I for my part would aver, that such a person is really in a dream.

Socrates:: But what now as to him who judges opposite to this, who understands both what beauty is itself, and is able to discern both it and such things as participate of it, and neither deems the participants to be beauty, nor beauty to be the participants? whether does such an one seem to you to live awake, or in a dream?

Glaucon:: Perfectly awake.

Socrates:: May we not then properly call this man’s perception, as he really knows, knowledge, but that of the other, opinion, as he only imagines?

Glaucon:: By all means.

Socrates:: But what if the person who we say only imagines things, but does not really know them, be enraged at us, and dispute with us, alleging that what we say is not true, shall we have any method of soothing and persuading him, in a gentle manner, by concealing that he is not in a sound state?

Glaucon:: At least there is need of it.

Socrates:: Come now, consider what we shall say to him. Or do you incline we shall thus interrogate him, telling him that if he knows any thing, no one envies him for it, but we shall gladly see him possessed of some knowledge? But only tell us this: does the man who has knowledge know something or nothing? Do you now answer me for him?

Glaucon:: I will answer, that he knows something.

Socrates:: Whether something which really exists, or which does not?

Glaucon:: What does really exist; for how can that be known which has no real existence?

Socrates:: We have then examined this sufficiently, though we might have considered it more fully: that what really is may be really known, but what does not at all exist cannot at all be known.

Glaucon:: We have examined it most sufficiently.

Socrates:: Be it so. But if there be anything of such a kind as both to be and not to be, must it not lye between that which perfectly is, and that which is not at all?

Glaucon:: Between them.

Socrates:: As to what really is, then, is there not knowledge, and as to that which is not at all, is there not of necessity ignorance; and for that which is between these we must seek for something between ignorance and knowledge, if there be any such thing.

Glaucon:: By all means.

Socrates:: Do we say then that opinion is anything?

Glaucon:: Why not?

Socrates:: Whether is it a different power from knowledge, or the same?

Glaucon:: Different.

Socrates:: Is opinion then conversant about one thing, and knowledge about another, by virtue of the same power, or each of them by virtue of a power of its own?

Glaucon:: This last.

Socrates:: Is not the power of knowledge conversant about what really exists, to know that it is? Or rather it seems to me to be necessary to distinguish in this manner.

Glaucon:: How?

Socrates:: We shall say that powers are a certain species of real existences, by which both we can do whatever we can do, and every being else whatever it can do. Thus, I say that seeing and hearing are among these powers, if you understand what I mean to call a species.

Glaucon:: I understand.

Socrates:: Hear then what appears to me concerning them, for I do not see any color of a power, nor figure, nor any of such qualities, as of many other things, in regard to which I distinguish some things with myself, that they are different from one another. But as to power, I regard that alone about which it is conversant, and what it effects, and on this account I have called each of these a power. And the power which is conversant about, and effects, one and the same thing, I call the same power, but that conversant about, and effecting a different thing, I call a different power. But what say you? In what manner do you?

Glaucon:: Just so.

Socrates:: But come again, excellent Glauco, whether do you say that knowledge is itself a certain power, or to what class do you refer it?

Glaucon:: I refer it to this class of power, as it is of all powers the most strong.

Socrates:: But what now? Shall we refer opinion to power, or to some other species?

Glaucon:: By no means to power; for that by which we form opinions, is nothing else but opinion.

Socrates:: But you owned a little ago that knowledge and opinion were not the same.

Glaucon:: How, can ever anyone who has understanding reduce under one that which is infallible and that which is not infallible?

Socrates:: You say right. And it is plain that we have allowed opinion to be a different thing from knowledge.

Glaucon:: A different.

Socrates:: Each of them then has naturally a different power over a different thing.

Glaucon:: Of necessity.

Socrates:: Knowledge has a power over being itself, in knowing real existence, how it exists.

Glaucon:: Yes.

Socrates:: But we say that opinion imagines.

Glaucon:: Yes.

Socrates:: Whether does it imagine the same thing which knowledge understands? and shall that which is known and that which is imagined be the same? or is this impossible?

Glaucon:: Impossible, from what we have allowed, since they are naturally powers of different things, and both of them are powers, opinion and knowledge, and each of them different from the other, as we have said. From these things it cannot be that that which is imagined is the same with that which is known.

Socrates:: If then real existence itself be known, must it not be different from the existence which is imagined?

Glaucon:: Different.

Socrates:: Does he then imagine that which has no existence? Or is it impossible even to imagine that which does not exist at all? Consider now, does not the man who imagines, refer his opinion to somewhat? Or is it possible to imagine, and yet imagine nothing at all?

Glaucon:: Impossible.

Socrates:: But whoever imagines, imagines some one thing.

Glaucon:: Yes.

Socrates:: But surely that which does not exist cannot be called any one thing, but most properly nothing at all.

Glaucon:: Certainly so.

Socrates:: But we necessarily referred ignorance to that which does not exist, but knowledge to real existence.

Glaucon:: Right.

Socrates:: Therefore neither existence, nor what does not exist imagines.

Glaucon:: No indeed.

Socrates:: Opinion then is neither knowledge, nor is it ignorance.

Glaucon:: It appears it is not.

Socrates:: Does it then exceed these, either knowledge in perspicuity, or ignorance in obscurity?

Glaucon:: It does neither.

Socrates:: But does opinion, seem to you to be more obscure than knowledge, but more perspicuous than ignorance?

Glaucon:: A great deal.

Socrates:: But does it lye between them both then?

Glaucon:: It does.

Socrates:: Opinion then is in the middle of these two.

Glaucon:: Entirely so.

Socrates:: And have we not already said that if anything appeared of such a kind as at the same time to be and yet not to be, such a thing would lye between that which has really an existence, and that which does not at all exist, and that neither knowledge nor ignorance would be conversant about it, but that which appeared to be between ignorance and knowledge.

Glaucon:: Right.

Socrates:: And now that which we call opinion has appeared to be between them.

Glaucon:: It has appeared.

Socrates:: It yet remains for us, as appears, to find out that which participates of both these, of existence and of non-existence, and which with propriety can be called neither of them perfectly, that if it appear to be what is imagined, we may justly call it so, assigning to the extremes what is extreme, and to the middle what is in the middle. Shall we not do thus?

Glaucon:: Thus.

Socrates:: These things being settled, let this worthy man, I will say, tell and answer me, he who reckons that beauty, and a certain idea of beauty, there is none, always the same, and in the same respects; but this lover of beautiful objects reckons there are many beautiful things, but can never bear it?—if any one tells him that there is one beautiful, and one just, and so of others. Of all these many things, excellent man, shall we say to him, where is there any which will not appear ugly, and of those just which will not appear unjust, of those holy which will not appear profane?

Glaucon:: No, but of necessity, the beautiful things themselves must in some respects appear even ugly, and others in like manner.

Socrates:: But what, many things which are double, or twofold, do they less really appear to be halves than doubles?

Glaucon:: No less.

Socrates:: And things great and small, light and heavy, shall they be denominated what we call them, any more than the opposite?

Glaucon:: No, but each of them, always participates of both.

Socrates:: Whether then is each of these many things that which it is said to be, or is it not?

Glaucon:: It is like their riddles at feasts, and the riddle of children about the eunuch’s striking the bat, puzzling one another in what manner and how far he strikes it. For all these things have a double meaning, and it is impossible to know accurately that they are, or are not, that they are both, or neither of the two.

Socrates:: How can you do with them then, or have you a better class for them than a medium between existence and non-existence? For nothing seems more obscure than non-existence in respect of having no being at all, nor more perspicuous than existence in respect of real being.

Glaucon:: Most true.

Socrates:: We have then discovered, it seems, that the most of the maxims of the generality of mankind concerning the beautiful, and those other things, roll somehow between existence and non-existence.

Glaucon:: We have accurately discovered it.

Socrates:: But we formerly agreed that if any such thing should appear, it ought to be called that which is imagined, and not what is known; and that which fluctuates between the two to be perceived by the power between the two.

Glaucon:: We agreed.

Socrates:: Those then who contemplate many beautiful things, but who never perceive beauty itself, nor are able to follow another leading them to it and many just things, but never justice itself, and all other things in like manner, we will say that they imagine all things, but of all that they imagine they know none.

Glaucon:: Of necessity.

Socrates:: But what now? Those who perceive each of the things themselves, always existing in the same manner and in the same respect, will we not say that they know, and do not imagine?

Glaucon:: Of necessity this likewise.

Socrates:: And will we not say that these embrace and love these things of which they have knowledge, and the others the things of which they have opinion? Or do we not remember that we said they beheld and loved fine sounds and colors, and such things, but that beauty itself they do not admit of as any real existence?

Glaucon:: We remember.

Socrates:: Shall we then commit any wrong in calling them lovers of opinion, rather as philosophers? Yet they will be greatly enraged at us, if we call them so.

Glaucon:: No. if they be persuaded by me; for it is not lawful to be enraged at the truth, These then who admire everything which has a real existence, are to be called philosophers, and not lovers of opinion.

Socrates:: By all means.

THE END OF THE FIFTH BOOK

## THE SIXTH BOOK

Socrates:: These now who are philosophers, Glauco, and these who are not, have, through a long compass of discourse, with difficulty, discovered themselves what they severally are.

Glaucon:: Because, perhaps, it was not easy, in a short one.

Socrates:: So it appears. But I still think they would have better discovered themselves, if we had been to speak to no other point than this, and not have gone through, all those other things, when we were to consider what difference there is between a just life and an unjust.

Glaucon:: What then, are we to treat of next?

Socrates:: What else, but of what is next in course. Since those are philosophers who are able to attain to the knowledge of that which exists always, and in all respects the same, but those who are not able to attain to this, but who wander amidst many things, and such as are every way shifting, are not philosophers, which of these ought to be the governors of the city?

Glaucon:: Which way, shall we determine in this, and determine reasonably?

Socrates:: Whichever of them, appears capable of preserving the laws and institutions of cities, these are to be made guardians.

Glaucon:: Right.

Socrates:: This now, is certainly plain, whether a blind or quick-sighted guardian be proper for guarding anything.

Glaucon:: Why, is it not plain?

Socrates:: Whether then do those appear to you to differ from the blind, who are wholly deprived of the knowledge of each particular being, and have neither a clear model in their soul, nor are able, as painters looking up to the truest model, and always referring themselves thither, and contemplating it in the most accurate manner possible, to establish here too in like manner just maxims of the beautiful, and just and good, if there be occasion to establish them, and to guard and preserve such as are already established?

Glaucon:: No, surely, they do not differ much.

Socrates:: Shall we then appoint those to be guardians, or those who know each being, and who in experience are nothing behind those others, nor inferior to them in any other part of virtue?

Glaucon:: It were absurd, to choose others, at least if these are not behind in other things; for in this, which is almost the greatest, they excel.

Socrates:: Shall we not then speak to this point? In what manner the same persons shall be able to have both the one and the other of those things?

Glaucon:: By all means.

Socrates:: It is then first of all necessary, as we observed in the beginning of this discourse, thoroughly to understand their genius, and I imagine, if we sufficiently agree as to it, we shall likewise agree that the same persons are able to have both of these things, and that no others but these ought to be the governors of cities.

Glaucon:: How so?

Socrates:: Let this now be agreed among us concerning the philosophic geniuses, that they are always desirous of such learning as may discover to them that being which always exists, and is not changed by generation or corruption.

Glaucon:: Let it be agreed.

Socrates:: And likewise, that they are desirous of the whole of such learning, and that they will not willingly omit any part of it, neither small nor great, more honorable, or more dishonorable, as we formerly observed concerning the ambitious, and concerning lovers.

Glaucon:: You say right.

Socrates:: Consider then, in the next place, if besides what we have mentioned, it be necessary that this also should subsist in the genius of those who are to be such as we have described.

Glaucon:: As what?

Socrates:: That they be void of falsehood, nor willingly at any time receive a lye, but hate it, and love the truth.

Glaucon:: It is likely.

Socrates:: It is not only likely, friend, but must be so of necessity, that one who is naturally in love with any thing should love everything akin and belonging to the objects of his affection.

Glaucon:: Right.

Socrates:: Can you then find any thing more akin to wisdom than truth?

Glaucon:: How can we?

Socrates:: Is it possible then that the same genius can be philosophic, and at the same time a lover of falsehood?

Glaucon:: By no means.

Socrates:: He then, who is in reality a lover of learning, ought immediately from his infancy to be in the greatest measure desirous of all truth.

Glaucon:: By all means.

Socrates:: But we know, somehow, that whoever has his desires running vehemently after any one thing, has them upon this very account weaker as to other things, as a current diverted from its channel.

Glaucon:: Why are they not?

Socrates:: But whosoever has his desires running out after learning, and everything of this kind, would be conversant, I imagine, about the pleasure of the soul itself, and would forsake those pleasures which arise from the body—provided he be not a counterfeit, but some real philosopher.

Glaucon:: This of necessity must be the case.

Socrates:: And such an one is moderate, and by no means a lover of money; for the reasons why money is with so much trouble solicitously sought after, have weight with any other than such an one to make him solicitous.

Glaucon:: Assuredly.

Socrates:: And surely somehow you must likewise consider this, when you are to judge what is a philosophic genius, and what is not.

Glaucon:: As what?

Socrates:: That it do not without your knowledge partake of an illiberal turn; for littleness of soul is most opposite to a mind which is always to pursue earnestly the whole, and everything divine and humane.

Glaucon:: Most true.

Socrates:: Do you then imagine that any understanding which has a greatness of mind, and is fitted for the contemplation of the whole of time, and the whole of being, can possibly think human life a great matter?

Glaucon:: It is impossible.

Socrates:: Such an one then will not account death any thing terrible.

Glaucon:: Least of all.

Socrates:: A cowardly and illiberal genius then will not it seems readily participate of true philosophy.

Glaucon:: No, as I imagine.

Socrates:: What now, can the moderate man, and one who is not a lover of money, nor illiberal, nor boasting, nor cowardly, ever possibly be an ill co-partner or unjust?

Glaucon:: It is impossible.

Socrates:: And you will likewise consider this, when you are viewing from its infancy what is the philosophic soul, and what is not, whether it be just and mild, or unsocial and savage.

Glaucon:: By all means.

Socrates:: Neither indeed, as I imagine, will you omit this.

Glaucon:: What?

Socrates:: Whether it be docile or indocile? Or do you expect that ever anyone will at all love anything to purpose, in performing which he performs with uneasiness and with difficulty, making small progress?

Glaucon:: It cannot be.

Socrates:: But what if he can retain nothing of what he learns, being quite forgetful, is it possible for him not to be void of knowledge?

Glaucon:: How is it possible?

Socrates:: And when he labors unprofitably, do you not imagine he will be obliged at last to hate both himself and such practice?

Glaucon:: Why must he not?

Socrates:: We shall never then reckon a forgetful soul among those who are thoroughly philosophic, but we shall require it to be of a good memory.

Glaucon:: By all means.

Socrates:: But never shall we say this at least, that an unmusical and indecent genius leads anywhere else but towards intemperance.

Glaucon:: Where else?

Socrates:: But whether do you reckon truth akin to intemperance, or to temperance?

Glaucon:: To temperance.

Socrates:: Let us require then among other things an understanding naturally temperate and graceful, as a proper guide towards attaining the real idea of each particular being, according to its own nature.

Glaucon:: Why not?

Socrates:: What now? Do we not in some measure seem to you to have gone through the necessary qualifications, and such as are consequent on one another, in a soul which is to apprehend being sufficiently, and to perfection.

Glaucon:: The most necessary.

Socrates:: Is it possible then for you in any measure to find fault with such a study as this, which one can never be able sufficiently to apply to, unless he be naturally possessed of a good memory, be docile, generous, graceful, and the friend and ally of truth, justice, fortitude and temperance?

Glaucon:: Not even Momus himself, could find fault with such a study.

Socrates:: But, will it not be to these alone, when they are perfected by education and age, that you will entrust the city?

Adeimantus:: Indeed, Socrates, no one is able to contradict you as to these things; but all who hear you at any time advancing what you do at present, are somehow affected in this manner. Being led off a little by your reasoning on each question, through their inexperience in this method of question and answer, when all these littles are collected together, at the close of your reasonings, they reckon that the mistake appears considerable, and the contrary of their first concessions: and like those who play at talus with such as are dexterous, but are themselves unskillful, they are in the end shut up and can do no more, so your hearers have nothing to say, shut up by this other kind of game, not with pieces, but with your reasonings, though the truth at least is not by this any way advanced. I say this with reference to the present inquiry: for one may tell you that he has nothing to oppose to each of your questions by way of argument, but that in fact he sees, that all those who plunge into philosophy, applying to it not with this view, that being early instructed they may give it over when in their prime, but that they may continue in it much longer, become the most of them quite awkward, not to say altogether naughty, and those of them who appear the most worthy do yet suffer this much from this study you so much commend, that they become useless to the public.

Socrates:: When I had heard this, do you imagine then, that such as say these things are telling a falsehood?

Adeimantus:: I do not know, but would gladly hear your opinion.

Socrates:: You would then hear that they appear to me to say true.

Adeimantus:: How then, is it right to say that the miseries of cities shall never have an end till they be governed by philosophers, whom we are now acknowledging to be useless to them?

Socrates:: You ask a question, which needs an answer by a comparison.

Adeimantus:: And you, are not wont, I imagine, to talk by comparisons.

Socrates:: Be it so. You joke now, when you have brought me on a subject which is so hard to be explained. But hear now my comparison, that you may see further with what difficulty I make one; for the sufferings of the most worthy philosophers, in the management of public affairs, are so grievous, that there is not any one other suffering so severe; but in making our comparison, and in apologizing for them, we must collect from many particulars, in the same manner as painters mix the figures of two different animals together, and paint a creature which is both goat and stag in one, and others of this kind. Imagine now that such an one as this is the pilot of a fleet, or of a single ship, one who exceeds all in the ship, both in bulk and in strength, but is somewhat deaf, and sees in like manner but a short way, and whose skill in sea affairs is much of the kind. And imagine that the sailors are all in sedition among themselves, contending for the pilotship, each imagining he ought to be pilot, though he never at all learned the art, nor is able to show who was his master, nor what time he learned it. That besides this, all of them say that the art itself cannot be taught, and are ready to cut in pieces anyone who says that it can. Imagine, further, that they continually surround the pilot himself, begging and doing everything that he may put the helm into their hands; and even sometimes, when they are not so successful in persuading him as others are, they either kill these others, or throw them overboard: and after they have by mandragora, or wine, or some other thing, rendered the real pilot incapable, they manage the ship with the assistance of the crew, and whilst they drink and feast in this manner, they fail as it may be expected of such people. And besides these things, if anyone be dexterous in assisting them to get the government into their own hands, and in setting aside the pilot, either by persuasion or force, they commend such an one, calling him sailor and pilot, and intelligent in navigation, but they contemn as useless everyone who is not of this kind—whilst it never enters into their thought that the true pilot must have regard to the year, the seasons, the heavens, and stars, and winds, and everything belonging to the art, if he mean to be a governor of a ship in reality; but the art and practice of governing men, whether some be willing or not, they think impossible for one to attain along with the art of navigation. Whilst affairs are in this situation with regard to the ships, do you not imagine that the true pilot will be called by the sailors aboard of ships fitted out in this manner, a stargazer, insignificant, and unprofitable to them?

Adeimantus:: Undoubtedly.

Socrates:: I imagine then, that you will not want any explanation of the comparison, to see that it represents how they are affected in cities towards true philosophers, but that you understand what I say?

Adeimantus:: Perfectly.

Socrates:: First of all then with respect to this, if any one wonders that philosophers are not honored in cities, teach him our comparison, and endeavor to persuade him that it would be much more wonderful were they held in greater honour.

Adeimantus:: I will teach them so.

Socrates:: And further, that it is indeed true, what you now was observing, that the best of those who apply to philosophy are useless to the bulk of mankind; but however, for this, bid them blame such as make no use of these philosophers, and not these philosophers themselves. For it is not natural for the pilot to entreat the sailors to allow him to govern them, nor for the wise to be resorting to the gates of the rich; but whoever made this witty objection was in a mistake; for this is the most natural method, that whoever is sick, whether rich or poor, must of necessity go to the gates of the physician, and whoever wants to be governed, must wait on him who is capable to govern—for it is not natural that the governor who is really of any value should entreat the governed to subject themselves to his government. But you will not greatly err, when you compare our present political governors to those sailors we now mentioned, and those who are called by them insignificant and star-gazers to those who are truly pilots.

Adeimantus:: Most right.

Socrates:: From hence then it would seem that the best pursuit is not likely to be held in esteem among those who pursue studies of an opposite nature; but by far the greatest and most violent accusation of philosophy is occasioned by means of those who profess to be studying it, the most of whom, you say your accuser of philosophy calls altogether naughty, and the very best of them of no advantage to the state—and I agreed that you say the truth, did I not?

Adeimantus:: You did.

Socrates:: And have we not fully explained the cause, why the best of them are of no advantage?

Adeimantus:: We have.

Socrates:: Would you choose, then, that we should, in the next place, explain the reason why the most of them must of necessity be naughty, and that we endeavor to demonstrate that of this, as little as of the other, is philosophy the cause?

Adeimantus:: By all means.

Socrates:: Let us attend then, and begin our reasoning, calling to mind what we formerly observed concerning the natural genius which necessarily belongs to the good and worthy. And what was a leading part in it, if you remember, was truth, which he must by all means wholly pursue, or else be a vain boaster, and never partake of true philosophy.

Adeimantus:: It was so said.

Socrates:: Is not this one part of his character quite contrary to the present opinions of him?

Adeimantus:: It is very much so.

Socrates:: Will it not then be no small defense, if we be able to show that the true lover of learning is naturally made to aspire to the knowledge of real being, and not to rest in the many particular things which are the objects of opinion, but goes on, and is not blunted, nor ceases from his love of truth before he attain to the knowledge of the nature of each particular being, by that part of the soul whose office it is to attain to such knowledge, and it belongs to that principle in the mind which is akin to it: and when he' has approached to this knowledge, and mingled with real being, having generated intelligence and truth, he would then really have true knowledge, and enjoy life and nourishment in the most real manner, and then alone, and no sooner, does he cease from trouble?

Adeimantus:: This, will be a most reasonable defense.

Socrates:: What now, will it be the part of such an one to love falsehood, or quite the contrary, to hate it?

Adeimantus:: To hate it.

Socrates:: But whilst truth indeed leads the way, we can never at all, as I imagine, say that any band of evils follows in her train.

Adeimantus:: How can we?

Socrates:: But on the contrary we may aver that she is followed by~ a sound and moderate disposition, and such as is accompanied with temperance.

Adeimantus:: Right.

Socrates:: Why now, need we go over again, and range in order the whole qualities of the philosophic genius? for you no doubt remember that there belong to men of this character fortitude, magnanimity, docility, memory: and when you replied, that every one would, be obliged to agree to what we said, we quitted that subject, and turned to that which is the subject of discourse at present, on your saying that you observed some of the philosophers were insignificant, and many of them altogether naughty. And while we were examining into the cause of that calumny, we are now come to this, whence it is that many of them are naughty. And on this account we have gone over again the genius of true philosophers, and have-necessarily defined what it is.

Adeimantus:: It is so.

Socrates:: It is necessary now, that we consider the corruptions of this genius, and in what manner it is destroyed in-the most. But one small matter escapes us: who they: are they call not naughty, but insignificant; and next, what those geniuses are which counterfeit the philosophic one, and pretend to its pursuits—what is the genius of their minds, who aspire to a pursuit which does not belong to them, and is above their reach. Thus by their manifold blunders, they have everywhere spread over all this opinion of philosophy you mention.

Adeimantus:: What sort of corruptions, do you mean?

Socrates:: I shall endeavor to rehearse them, if I be able. And this now, I imagine, every one will allow us, that such a genius, with all those qualifications we have enjoined one who is to be a perfect philosopher, rarely arises among men, and that there are but few of them. Do not you think so?

Adeimantus:: Entirely so.

Socrates:: And of those few, consider how many and how great are the causes of corruption.

Adeimantus:: As what?

Socrates:: What is most of all wonderful to hear, that each of those things we commended in the genius of a philosopher corrupts the mind which possesses them, and withdraws it from philosophy, fortitude, I mean, and temperance, and all those other qualifications we have gone through.

Adeimantus:: That is strange to hear.

Socrates:: And further still, besides these things, all those which are commonly called good, such as beauty, riches, strength of body, a powerful alliance in the city, and everything akin to these, corrupt and withdraw it from philosophy; for you have now a sample of what I mean.

Adeimantus:: I have, and would gladly understand more perfectly what you say.

Socrates:: Understand then, the whole of it aright, and it will appear manifest, and what we formerly said will not appear absurd.

Adeimantus:: How then, do you bid me do?

Socrates:: With respect to every kind of seed or plant, whether of vegetables or animals, we know that whatever does not meet with the proper nourishment, nor season, nor place belonging to it, the more vigorous it is by nature, the more it is defective in the excellencies of its kind; for evil is more opposite to good than to that which is not good.

Adeimantus:: Why is it not?

Socrates:: It is then agreeable to reason, I imagine, that the best genius, when meeting with nourishment foreign to it, shall be more changed to what is evil than a bad genius.

Adeimantus:: It is.

Socrates:: And shall we not, Adimantus, in the same manner say that souls of the noblest genius, when they meet with ill education, become remarkably bad? Or do you imagine that great iniquity and the extremest wickedness arise from a weak genius, and not from a vigorous one quite ruined in its education; but that a weakly genius will never at all be the cause of anything remarkable, whether good or evil?

Adeimantus:: I do not think it will, but the case is as you say.

Socrates:: If then this philosophic genius, which we have established, meet with suitable instruction, it will, as I imagine, necessarily grow up and attain to every virtue; but if when sown in an improper soil it grow up and be nourished accordingly, it will on the other hand turn out quite the reverse, unless one of the Gods come to its assistance. Or do you imagine, as the generality do, that certain of the youth are corrupted by the sophists, and that the corruptors are certain private sophists, which is worthy of our notice? Or think you rather, that the persons who' say these things are themselves the greatest sophists, conveying their instruction in the most powerful manner, and rendering young and old, men and women, such as they incline?

Adeimantus:: When do they so?

Socrates:: When many of them, are set down, crowded together in an assembly, in their courts of justice, the theatre, or the camp, or any other public meeting of the people, with a deal of tumult, they blame some speeches and actions, and commend others, roaring and bawling out the one and the other beyond measure; and besides these things, the rocks and the place where they are, resounding, redoubles the noise they make whilst they blame and applaud in this manner. In such a situation now, what kind of heart, as we say, do you imagine the youth are to have? Or what private instruction can make him withstand, so as not to be quite overwhelmed by such blame or applause, and giving way, be carried down the stream wherever it carries him, and say that things are beautiful and base, according as these people say, and pursue the things they pursue, and become of the very same kind himself?

Adeimantus:: This, must of necessity happen, Socrates.

Socrates:: But, we have not yet mentioned what must of the greatest necessity be the case.

Adeimantus:: What is that?

Socrates:: That which these instructors and sophists superadd by action, not being able to persuade by speech; or do you not know that they punish with disgraces, and fines, and deaths, the man whom they cannot persuade?

Adeimantus:: I know that, extremely well.

Socrates:: What other sophist then, or what private reasonings do you imagine capable, drawing opposite to these, to overpower them?

Adeimantus:: I know none.

Socrates:: But is it not besides, great folly even to attempt it? For there neither is, nor was, nor ever can be a different method of attaining virtue, besides this education by these sophists. I mean a humane method, friend, for a divine one, according to the proverb, I keep out of the question; for you must know well, that whatever temper is preserved, and becomes such as it ought to be in such a constitution of politics, you will not say amiss when you say that a divine interposition has preserved it.

Adeimantus:: Nor am I, of a different opinion.

Socrates:: But further now, besides these things, you must likewise be of this opinion.

Adeimantus:: Of what?

Socrates:: That each of these private hirelings, which these men call sophists and deem the rivals of their art, teach no other things but those maxims of the vulgar which they approve when they are assembled together, and call it wisdom. As if one had learned what were the passions and desires of a great and strong animal he were nourishing, how one must approach it, how touch it, and at what seasons it is most fierce or most mild, and from what causes, and the sounds which on these several occasions it was wont to utter, and at what sounds uttered by another the animal is rendered both mild and savage; and having learned all these things by associating with the animal, and by spending considerable time with it, should call this wisdom, and as if he had established an art, should set about the teaching it; whilst yet with reference to these opinions and desires, he knows not in reality what is handsome, or base, or good, or ill, or just, or unjust, but should pronounce all these according to the opinions of the great animal, calling these things good in which it delighted, and that evil with which it was vexed, and should have no other measure as to these things; and should call these things which proceed from necessity of nature, handsome and just, but the nature of necessity and good, how much they differ in reality, he has never discovered himself, nor is able to show to another. Whilst he is such an one, does he not truly appear to you an absurd teacher?

Adeimantus:: To me he appears so.

Socrates:: And from this man, think you, does he any way differ, who deems it wisdom to have understood the anger, and the pleasures of the multitude, and of assemblies of all kinds of men, whether with relation to painting, music, or politics? For if any one converses with these, and shows them either a poem, or any other piece of workmanship, or piece of administration respecting the city, and makes the multitude the judges of it, he is under what is called a Diomedaean necessity, which is above all other necessities, of doing whatever they commend. But to show that these things are in reality good and handsome, have you at any time heard any of them advance a reason that was not quite ridiculous?

Adeimantus:: Nor do I imagine, I ever shall.

Socrates:: Whilst you attend then to all these things, bear this in mind, that the multitude never will admit or reckon that there is the one beautiful, and not many beautifuls, one proper nature to each thing, and not many natures.

Adeimantus:: They will be the last to do so.

Socrates:: It is impossible then for the multitude to be philosopher.

Adeimantus:: Impossible.

Socrates:: And those who philosophize, must of necessity be reproached by them.

Adeimantus:: Of necessity.

Socrates:: And likewise by those private persons who, in conversing with the multitude, desire to please them.

Adeimantus:: It is plain.

Socrates:: From this state of things now, what safety do you see for the philosophic genius to continue in its pursuit and arrive at perfection? and consider from what was formerly hinted, for we have allowed, that docility, memory, fortitude, and magnanimity belong to this genius.

Adeimantus:: We have.

Socrates:: And shall not such an one, of all-men, immediately be the first at everything, especially if he have a body naturally assisting to the soul?

Adeimantus:: Why shall he not?

Socrates:: And when he comes to riper years, his kindred and citizens, I imagine, will incline to employ him in their affairs.

Adeimantus:: Why will they not?

Socrates:: And making supplications to him, and paying him homage, they will submit to him, and anticipate and flatter before-hand his growing power.

Adeimantus:: Thus, it usually happens.

Socrates:: What now, do you imagine such an one will do in such a case, especially if he happen to belong to a great city, and be rich and of a noble descent, and withal beautiful and of a handsome stature? Shall he not be filled with extravagant hopes, deeming himself capable of managing both the affairs of Greeks and Barbarians, and on these accounts carry himself loftily, without any solid judgment, full of ostentation and vain conceit?

Adeimantus:: Extremely so.

Socrates:: If one should gently approach a man of this disposition and tell him the truth, that he has no judgment, yet needs it, but that it is not to be acquired but by one who subjects himself to this acquisition, do you think, that with all these evils about him, he would be ready to hearken?

Adeimantus:: Far from it.

Socrates:: If now, through a good natural temper and an innate disposition to reason, any one should somehow be made sensible, and be bended and drawn towards philosophy, what do we imagine those others will do when they reckon they shall lose his company and acquaintance? Will they not by every action, every speech, say and do everything both towards the man himself, not to suffer himself to be persuaded, and towards his adviser, to render him incapable by insnaring him in private, and bringing him to public trial?

Adeimantus:: This, must of necessity happen.

Socrates:: Is it likely, now, such an one shall philosophize?

Adeimantus:: Not altogether.

Socrates:: You see then, that we were not wrong when we said that even the very ingredients of the philosophic genius, when they meet with bad education, are in some measure the cause of a falling off from this pursuit, as well as those vulgarly reputed goods, riches, and all furniture of this kind.

Adeimantus:: We were not, but it was rightly said.

Socrates:: Such then, admirable friend, is the ruin, such and so great the corruption of the best genius for the noblest pursuit, and which besides but rarely happens, as we observed. And from among such as these are the men who do the greatest mischief to cities and to private persons, and likewise they who do the greatest good, such as happen to be drawn to this side; but a little genius never did any-thing remarkable to any one, neither to a private person, nor to a city.

Adeimantus:: Most true.

Socrates:: These indeed then whose business it chiefly was to apply to philosophy, having thus fallen off, leaving her desolate and imperfect, lead themselves a life neither becoming nor genuine, whilst other unworthy persons, intruding themselves on philosophy, abandoned in a manner by her kindred, have disgraced her, and loaded her with reproaches, such as these you say her reproachers reproach her with: how that of those who converse with her, some are of no value, and the generality of them worthy of the greatest punishments.

Adeimantus:: These things, are commonly said.

Socrates:: And with reason, they are said. For other contemptible men seeing the field unoccupied, and that the possession of it is attended with dignities and honorable names, like persons who make their escape from prisons to temples, these likewise gladly leap from their handicrafts to philosophy; such of them as are of the greatest address in their own little art; for even in this situation of philosophy, her remaining dignity, in comparison with all the other arts, is still far superior: of which dignity many are desirous, who by natural disposition are unfit for it, whose bodies are not only deformed by their arts and handicrafts, but whose souls also are in like manner confused and crushed by their servile works. Must it not of necessity be so?

Adeimantus:: Undoubtedly.

Socrates:: Do you imagine then, that they are any way different in appearance from a black-smith, who has made a little money, bald and puny, newly loosed from chains, and washed in the bath, with a new robe on him, just decked out as a bridegroom, presuming to marry the daughter of his master, encouraged by the poverty and forlorn circumstances he sees him in?

Adeimantus:: There is, no great difference.

Socrates:: What sort of a race must such as these produce? Must at not be bastardly and abject?

Adeimantus:: Most necessarily.

Socrates:: But what now? When men who are unworthy of instruction apply to it, and are conversant in it, in an unworthy manner, what sort of sentiments and opinions shall we say are produced? Must they not be such as ought properly to be termed sophisms, and having nothing at all genuine or worthy of one of true judgment?

Adeimantus:: By all means so.

Socrates:: A very small number now, Adimantus, remains of those who worthily are conversant in philosophy, who happen either to be detained somehow in banishment, and whose generous and well cultivated genius persists in the study of philosophy, being removed from everything which tends to corrupt it; or else, when in a small city a mighty genius arises, who, despising the honors of the state, entirely neglects them, and likewise with justice despising any small thing arising from the other arts, his generous soul returns to philosophy: so that the bridle which keeps in our friend Theagis, is sufficient to keep them; for all other things conspire to withdraw Theagis from philosophy, but the care of his health excluding him from politics, keeps him to it. For as to my genius, it is not worth mentioning; for certainly it has happened heretofore to but one other, or to none at all. And even of these few now, such as are tasting, and have tasted how sweet and happy the acquisition of philosophy is, and have withal sufficiently seen the madness of the multitude, and how none of them, to speak in the general, does anything salutary in the affairs of cities, and that there is no ally with whom one might go to the assistance of the just and be safe, but that he is as a man falling among wild beasts—being neither willing to join them in injustice, nor able, being but one, to oppose the whole savage crew, but, ere he can serve the city or his friends, is destroyed and is unprofitable both to himself and others—reasoning on all these things, lying quiet and minding his own affairs, as in a tempest, when earth and sea are driven by winds, entering under roof, beholding others overwhelmed in injustice, he is satisfied if he shall himself anyhow pass his life here pure from injustice and unholy deeds, and make his exit hence in good hopes, cheerful and composed.

Adeimantus:: And he shall make his exit, after having done none of the smallest matters.

Socrates:: Nor the greatest neither, whilst he has not met with a republic that is suitable to him; for in a suitable one he shall both be more improved himself, and shall preserve the affairs of private persons as well as of the public. We have now then, I imagine, sufficiently told whence it happens that philosophy is accused, and that it is so unjustly, unless you have something else to offer.

Adeimantus:: But, I say nothing further about this point. But which of the present republics do you say is suitable to philosophy?

Socrates:: Not one indeed; but this is what I complain of, that there is no constitution of a city at present worthy of the philosophic genius, which is therefore turned and altered, as a foreign seed, sown in an improper soil, which degenerates to what is usually produced in that soil. After the same manner this race, as it has not at present its proper activity, degenerates to another species: but should it meet with the best republic, as it is the best in itself, then shall it indeed discover that it is really divine, and that all besides are human, both as to their genius and their pursuits. But now you seem plainly to be going to ask which is this republic.

Adeimantus:: You are mistaken; for this I was not going to ask, but whether it was this which we have described, in establishing our city, or another one.

Socrates:: As to other things, it is this one, and this very thing was then mentioned, that there must always be in the city something which shall have the same regard for the republic, which you the legislator have, when you establish the laws.

Adeimantus:: It was mentioned.

Socrates:: But it was not, made sufficiently plain, through fears which pre-occupied you, when you signified that the illustration of the thing would be both tedious and difficult; and it is not indeed altogether easy to go over what remains.

Adeimantus:: As what?

Socrates:: In what manner a city shall attempt philosophy and not be destroyed, for all grand things are dangerous, and, as the saying is, fine things are truly difficult.

Adeimantus:: But however, let our disquisition be completed in making this evident.

Socrates:: Want of inclination, shall not hinder, though want of ability may. And being present, you shall know my eagerness, and consider now how eagerly and adventurously I am going to say, that a city ought to attempt this study in a way opposite to that at present.

Adeimantus:: How?

Socrates:: At present, those who meddle with it are striplings, who immediately from their childhood, amidst their domestic affairs and lucrative employments, apply themselves to the most abstruse parts of philosophy, and then they go off most consummate philosophers. I call the most difficult part, that respecting the art of reasoning. And in all after time, if, when they are invited by others who practice this art, they are pleased to become hearers, they think it a mighty matter, reckoning they ought to do it as a by-work; but towards old-age, besides some few, they are extinguished much more than the Heraclitean sun, in that they are never kindled up again.

Adeimantus:: But how should they do?

Socrates:: Quite the reverse. Whilst they are striplings and boys they should apply to juvenile instruction and philosophy, and in taking proper care of their body whilst it shoots and grows to firmness, provide for philosophy a proper assistant; and then, as that age advances in which the soul begins to be perfected, they ought vigorously to apply to her exercises; and when strength decays, and is no longer able for civil and military employments, they should then be dismissed and live at pleasure, and excepting a by-work, do nothing else but philosophize, if they propose to live happy, and at death to have in the other world a lot suitable to the life they have led in this.

Adeimantus:: How truly, Socrates, do you seem to me to speak with zeal; yet, I imagine, the greater part of your hearers will still more zealously oppose you, and by no means be persuaded, and that Thrasymachus will be the first of them.

Socrates:: Do not divide, Thrasymachus and me, who are now become friends, nor were we enemies heretofore. For we shall no way desist from our attempts, till we either persuade both him and the rest, or make some advances towards that life at which when they arrive they shall again meet with such discourses as these.

Adeimantus:: You have spoken, but short time.

Socrates:: None at all, with respect at least to the whole of time: but that the multitude are not persuaded by what is said, is no wonder, for they have never at any time seen existing what has now been mentioned, but rather such discourses as have been industriously composed, and have not fallen in naturally as these do at present. But as for a man who is come up to the model of virtue, and is rendered conformable to it in the most perfect manner possible, both in word and in deed, never at all have they seen such a man, neither one nor more of the kind. Or do you imagine they have?

Adeimantus:: By no means.

Socrates:: Neither yet, happy friend, have they sufficiently attended to noble and generous reasonings, so as keenly to inquire after the truth, by every method, merely for the sake of knowing it, banishing at a distance such intricate and contentious debates as tend to nothing else but to opinion and contention, both in their courts of justice and in their private meetings.

Adeimantus:: The case is just so.

Socrates:: On these accounts then, and with foresight of these things, we were formerly afraid; however, being compelled by the truth, we did assert, that neither city nor republic, nor even single man in the same way, would ever become perfect, till some necessity of fortune oblige these few philosophers, who are at present accounted not naughty, yet insignificant, to take the government of the city whether they will or not, and oblige the city to be obedient to them; or till the sons of those who are in the offices of power and magistracies, or they themselves, by some divine inspiration, be smitten with a genuine love of genuine philosophy: and I aver that no one has reason to think that either of these, or both, are impossible; for thus might we justly be laughed at as saying things which are only to be wished for. Is it not so?

Adeimantus:: It is.

Socrates:: If then, in the infinite series of past ages, the greatest necessity has obliged philosophy to take the government of a state, or is now prevailing in any barbarous region, remote somewhere from our observation, or shall afterwards happen, we are ready in that case to contend in our reasoning, that this republic we have described has existed and subsists, and shall arise at least when this our muse shall get the government of the state. For this is neither impossible to happen, nor do we talk impossibilities, though we ourselves confess that they are difficult.

Adeimantus:: I am likewise, of the same opinion.

Socrates:: But you will say, that the multitude do not think so too.

Adeimantus:: It is likely.

Socrates:: Happy friend, do not thus altogether accuse the multitude; but whatever opinion they may have, without upbraiding them, but rather encouraging them, and removing the reproach thrown on philosophy, point out to them the persons you call philosophers, and define distinctly, as at present, both their genius and their pursuits, that they may not think you call these philosophers whom they think so; or if they mean the same men, you will tell them they have conceived a different opinion of the men from what you have, and give very different answers about them from yours. Or do you imagine, that one can be enraged at one who is not in a passion? or that one shall envy the envious, who is himself both void of envy and is of a mild disposition? I will prevent you, and say that I imagine there is in some few so bad a natural temper, but not in the generality.

Adeimantus:: I likewise, imagine so.

Socrates:: Are you not then of the same opinion with me in this: that these men are the cause of the multitude's being ill affected towards philosophy, who openly satirize what is no way becoming them, behaving in a scoffing and distasteful manner towards the multitude, always making? discourses about particular men, doing what is least of all becoming philosophy.

Adeimantus:: Certainly.

Socrates:: For certainly, somehow, Adimantus, the man at least who really applies his understanding to real being, has not leisure to look down to the little affairs of mankind, and in fighting with them, to be filled with envy and ill nature; but beholding and contemplating such objects as are orderly and always uniform, such as neither injure nor are injured of one another, but are in all respects beautiful and according to reason, these he imitates and resembles as far as possible. Or do you imagine it possible to find out any contrivance to draw men off from the imitation of that in conversing with which they are filled with admiration?

Adeimantus:: It is impossible.

Socrates:: The philosopher then who converses with that which is beautiful and divine, as far as is possible for man, becomes himself beautiful and divine. But calumny is powerful in every thing.

Adeimantus:: It is entirely so.

Socrates:: If then, he be under any necessity, not merely forming himself alone, but likewise of endeavoring to introduce any thing he beholds there among mankind, in order to form their manners, both in private and in public life, would he prove, think you, a bad artist of temperance and of justice, and of every social virtue?

Adeimantus:: Not at all.

Socrates:: But if now the multitude perceive that we say the truth of such an one, will they be angry at philosophers, and disbelieve us when we say that the city can never otherwise be happy unless it be drawn by those painters who follow a divine original?

Adeimantus:: They will not be angry, if they perceive so. But what method of painting do you mean?

Socrates:: When they have got, the city and the manners of men as their canvas, they would first make it clean, which is not altogether an easy matter. But in this, you know, they differ from others, that they are unwilling to meddle either with private man or city, or to prescribe laws, 'till once they either receive these clean, or cleanse them themselves.

Adeimantus:: And rightly.

Socrates:: And after this, do not you imagine they will draw a sketch of the republic?

Adeimantus:: Why not?

Socrates:: Afterwards, I imagine, as they proceed in their work, they will frequently look both ways, both to what is naturally just, and beautiful, and temperate, and the like; and likewise again to that which they can establish among mankind, blending and compounding their human form from different human characters and pursuits, drawing from this which Homer calls the divine likeness and the divine resemblance subsisting among men.

Adeimantus:: Right.

Socrates:: They will then, I imagine, strike out one thing, and insert another, ‘till they have rendered human manners, as far. as is possible, amiable to the Gods.

Adeimantus:: It should thus, be the most beautiful picture.

Socrates:: Do we now then, any way persuade these men, who, you said, were coming upon us in battle array, that such a painter of republics is the man we then recommended to them, and on whose account they were enraged at us, that we committed cities to him, and will they now be more mild when they hear us mentioning it?

Adeimantus:: Certainly, if they be wise.

Socrates:: For what is there now they can further question? Shall they say that philosophers are not lovers of real being and of truth?

Adeimantus:: That, were absurd.

Socrates:: Or that their genius, as we described it, is not akin to that which is best?

Adeimantus:: Nor this neither.

Socrates:: What then? Whilst their genius is such as this, and meets with suitable exercises, shall it not become perfectly good and philosophic, if any other be so? Or will you say those will be more so whom we set aside?

Adeimantus:: Not at all.

Socrates:: Will they still then be enraged at us, when we say that till the philosophic race have the government of the city, neither the miseries of the city nor of the citizens shall have an end, nor shall this republic, which we speak of in way of fable, come in fact to perfection?

Adeimantus:: It is likely, they will be less enraged.

Socrates:: Are you content then, that we say not of them they are less enraged at us, but that they are altogether appeased and persuaded, that if we make no more of them, they may at least consent by their blushing?

Adeimantus:: By all means.

Socrates:: Let them then, be persuaded of this. But is there any one will call this into question, that those of the philosophic genius do not usually spring from kings and sovereigns?

Adeimantus:: Not one, would allege that.

Socrates:: And though they were born with a philosophic genius, one may say they are under a great necessity of being corrupted; for indeed that it is a difficult matter for these geniuses to be preserved untainted, even we ourselves agree. But that in the infinite series of time, of the whole of the human race, there should never at all be so much as a single one preserved pure and untainted, is there any one who will call into question?

Adeimantus:: How could any do it?

Socrates:: But surely, a single one is sufficient, if he exists, and has a city subject to him, to accomplish every thing now so much disbelieved.

Adeimantus:: He is sufficient.

Socrates:: And when the governor, has established the laws and customs we have recited, it is not at all impossible that the citizens should be willing to obey him.

Adeimantus:: Not at all.

Socrates:: But is it wonderful or impossible that what appears to us should also appear to others?

Adeimantus:: I do not think it.

Socrates:: And that these things are best, if they be possible, we have sufficiently, as I imagine, explained in the preceding part of our discourse.

Adeimantus:: Sufficiently indeed.

Socrates:: Now then it seems we are agreed about our legislation—that the laws we mention are the best, if they could exist, but that it is difficult to get them to prevail, not, however, impossible.

Adeimantus:: We are agreed.

Socrates:: After that this has with difficulty been brought to a conclusion, shall we not, in the next place, consider what follows? In what manner, and from what education and studies, they shall become the preservers of our republic? and in what periods of life they shall each of them apply to the several branches of education.

Adeimantus:: We must indeed consider that.

Socrates:: I acted not wisely, when in the former part of our discourse, I left untouched the difficulty attending the possession of women, and the propagation of the species, and the establishing governors, knowing with what envy and difficulty they must be introduced, or be carried no further than theory. For now we are under no less a necessity of discussing these things at present. What relates to women and children is already finished; and we must now go over again, as from the beginning, what refers to governors. We said, if you remember, that they should appear to be lovers of the city, and be tried both by pleasures and by pains, and appear to quit this opinion neither through toils nor fears, nor any other change, and that he who was not able to do this was to be rejected; but he who came forth altogether pure as gold tried in the fire, was to be appointed ruler, and to have honors and rewards paid him both alive and dead. Such were the things we said whilst our reasoning passed over and concealed itself, as afraid to rouse the present argument.

Adeimantus:: You say most truly, for I remember it.

Socrates:: For I grudged, friend, to say what I am now to adventure on; but now we must even venture to assert this: that the most complete guardians must be made philosophers.

Adeimantus:: Let this be agreed upon.

Socrates:: But consider that you shall likely have but few of them: for such a genius as we said they must of necessity have, is wont but seldom in all its parts to meet in one; but its different parts generally spring up in different persons.

Adeimantus:: How do you say?

Socrates:: That such as are wont to be docile, of good memory, quick, and acute, and endued with whatever qualifications are akin to these, are not at the same time vigorous, and magnanimous in their mind, so as to live decently, with quietness and stability; but that such are carried by their acuteness wherever it happens, and everything that is stable departs from them.

Adeimantus:: You say true.

Socrates:: With regard then to these firm habits of the mind, which are not at all versatile, and which one might rather employ as trusty, and which are difficult to be moved at dangers in war, are they not of the same temper with reference to learning; they move heavily, and with difficulty learn, as if they were benumbed, and are oppressed with sleep and yawning, when they are obliged to labor at any thing of this kind?

Adeimantus:: It is so.

Socrates:: But we said that he must partake both these well and handsomely, or else he ought not to share in the most perfect education, nor magistracy, nor honors of the state.

Adeimantus:: Right.

Socrates:: Do not you imagine this will but rarely happen?

Adeimantus:: Why will it not?

Socrates:: They must be tried then both in the things we formerly mentioned, in labors, in fears, and in pleasures, and likewise in what we then passed over, and are now mentioning; we must exercise them in various kinds of learning, whilst we consider whether their genius be able for the highest learning, or whether it fails, as those who fail in the other things.

Adeimantus:: It is proper now, to consider this question at least in this manner. But which learning do you call the highest?

Socrates:: You remember in some measure, that when we had distinguished the soul into three parts, we determined concerning justice, temperance, fortitude, and wisdom, what each of them is.

Adeimantus:: If I did not remember, it were just I should not hear what remains.

Socrates:: Do you likewise remember what was said before that?

Adeimantus:: What was it?

Socrates:: We somewhere said that it was possible to behold these in their most beautiful forms, but that the journey would be tedious which one must go over who would see them conspicuously. That it was possible, however, to approach towards them in the way of our demonstrations above-mentioned; and you said that these were sufficient; so what was then advanced, came to be spoken far short, in my own opinion, of accuracy, but if agreeably to you, you may say so.

Adeimantus:: To me at least, they seemed to be discussed in measure; and the rest seemed to think so too.

Socrates:: But, friend, in speaking of matters of this kind, such a measure as leaves out any part whatever of the truth is not altogether in measure. For nothing that is imperfect is the measure of anything—though some at times are of opinion that matters are sufficiently well when brought this length, and that there is no necessity for further inquiry.

Adeimantus:: Very many, are thus affected through indolence.

Socrates:: But the guardian of the city and of the laws, has least of all need of that passion.

Adeimantus:: It appears so.

Socrates:: Such an one then, friend, must go over the longer compass, and labor no less in learning than in the exercises, otherwise, as we were now saying, he shall never at all arrive at the perfection of the highest and most suitable learning.

Adeimantus:: But are not these, the highest? Or is there yet any thing higher than justice, and those virtues which we mentioned?

Socrates:: There is even higher. And even of these, we must not contemplate only the coarse draught, but not omit the highest finishing. Or is it not ridiculous in other things of small account to employ our whole labor, and to strain hard to have them the most accurate and perfect, and not deem the highest and most important matters worthy of our highest attention, in order to render them the most perfect?

Adeimantus:: The sentiment, is very just. But however, do you imagine, that any one will let you pass without asking you what indeed is this highest learning, and about what is it conversant, when you call it so?

Socrates:: Not at all, but do you yourself ask me; for assuredly you have not seldom heard it, and at present you either do not attend, or you intend to occasion me trouble in raising opposition. This I rather imagine, since you have often heard at least that the idea of the good is the highest learning: which idea, when justice and the other virtues use as a model, they become really useful and advantageous; you now almost know that this is what I mean to say, and besides this, that we do not sufficiently know that idea, and that without this knowledge, though we understood all else in the highest measure, you know that it profits us nothing: in the same manner, as it would avail us nothing though we possessed any thing whatever without the possession of the good. Or do you imagine there is any more profit in possessing all things without the possession of the good, than in knowing all things without the knowledge of the good, knowing nothing at all that is beautiful and good?

Adeimantus:: Not I, for my part, indeed.

Socrates:: But surely this too at least you know, that to the multitude pleasure seems to be the good, and to the more elegant it seems to be wisdom.

Adeimantus:: And very ridiculously.

Socrates:: How indeed can it be otherwise? if when they upbraid us, that we know not what is the good, they tell us that they know, and call it the wisdom of what is good, as if we understood what they say, when they pronounce the word the good.

Adeimantus:: Most true.

Socrates:: But what, those who define pleasure to be good, are they any way in a lesser error than the. others, or are not these too obliged to confess that pleasures are evil?

Adeimantus:: Extremely so.

Socrates:: They come then to acknowledge, I imagine, that the same things are both good and evil, do they not?

Adeimantus:: Why do not they?

Socrates:: Is it not evident then that there are great and manifold doubts about it?

Adeimantus:: Why are there not?

Socrates:: But what, is it not also evident, that with reference to things just and beautiful, the multitude choose the apparent, even though they be not really so, yet they act, and possess, and are reputed of accordingly; but the acquisition of goods, that were only the apparent never yet satisfied anyone, but in this they seek what is real, and here everyone despises what is only the apparent.

Adeimantus:: Extremely so.

Socrates:: This then is that which every soul pursues, and for the sake of this it acts all with a prophetic impression, that it is somewhat yet in doubt, and unable to comprehend what it is, nor to hold by a steady opinion of it, as in other things, and thus are they unsuccessful also in other things, if there be in them any profit. About a matter now of such a kind, and of such mighty consequence, shall we say that even these our best men in the city, and by whom we take in hand to do every thing, shall be thus in the dark?

Adeimantus:: As little at least as possible.

Socrates:: I imagine then, that whilst it is unknown in what manner the just and beautiful are good, they are not of any great value to a guardian to possess, if it be likely he shall know these, whilst he is ignorant of this, but I prophesy no one will come to the real knowledge of these before he knows what is good.

Adeimantus:: You prophesy rightly.

Socrates:: Shall not then our republic be completely adorned if such a guardian be set over it as is intelligent in these things?

Adeimantus:: It must of necessity. But with respect to yourself, whether, Socrates, do you say that the good is science, or pleasure, or something else besides these?

Socrates:: You was ever, a worthy man, and manifestly showed of old that you was not to be satisfied with the opinions of others about these things.

Adeimantus:: Nor does it appear to me just, Socrates, that one should be able to tell the opinions of others, but not his own, after having spent so much time inquiring about these things.

Socrates:: But what, does it then appear to you just for one to speak of these things of which he is ignorant, as if he knew them?

Adeimantus:: By no means, as if he knew them; yet however, according as he imagines, that he should be willing to tell us what he imagines.

Socrates:: But what, have you not observed of opinions void of knowledge how deformed they all are? Or do those, who without understanding form right opinion, seem to you in any respect to differ from those who are blind, and at the same time go straight on the road?

Adeimantus:: No way.

Socrates:: Do you incline then that we should examine things deformed, blind, and crooked, having it in our power to hear from others what is clear and beautiful?

Glaucon:: Do not, I entreat you, Socrates, give over at the end; for it will suffice us, if in the same way as you have talked of justice, and temperance, and those other virtues, you likewise talk concerning the good.

Socrates:: And I too shall be very well satisfied, friend, but I’m afraid I shall not be able; and by appearing keen I shall incur the ridicule of the unmannerly. But, my happy friends, let us quit at present this inquiry, what the good is (for it appears to me a greater matter than that in our present pursuit we can overtake, even what I imagine of it at the time); but I am willing to tell you what the offspring of the good appears, and what most resembles it, if this be agreeable to you, and if not, shall let it alone.

Glaucon:: But tell us; for you shall afterwards explain to us what the father is.

Socrates:: I could wish, both that I were able to give that explanation, and you to receive it, and not as now the offspring only. Receive now then this child and offspring of the good itself. Yet take care, however, that unwillingly I deceive you not, in any respect, giving an adulterate account of this offspring.

Glaucon:: We shall take care, as we are able; only tell us.

Socrates:: I shall tell then, after we shall have settled matters together, and I have put you in mind of what was mentioned in our preceding discourse, and has been frequently said on other occasions.

Glaucon:: What is it?

Socrates:: That there are many things, beautiful, and many good, and each of these we say is so, and we distinguish them in our reasoning.

Glaucon:: We say so.

Socrates:: But as to the beautiful itself, and the good itself, and in like manner concerning all those things which we then placed as many, now again establishing them according to one simple idea of each particular, as being one, we give each that appellation which belongs to it; and the things themselves we say are seen by the eye, but not understood by the intellect; but that the ideas are understood by the intellect, but not seen by the eye.

Glaucon:: Perfectly so.

Socrates:: By what part then of ourselves do we see things visible?

Glaucon:: By the sight.

Socrates:: And is it not, by hearing that we perceive what is heard, and by the other senses all the matters of sense?

Glaucon:: Why not?

Socrates:: But have you not observed, with regard to the maker of the senses, how he has formed the power of sight, and of being visible in the most perfect manner?

Glaucon:: I have not entirely perceived it.

Socrates:: But consider it in this manner. Is there any other species, which hearing and sound require, in order that the one may hear, and the other be heard, which third thing if it be not present, the one shall not hear, and the other not be heard?

Glaucon:: There is nothing.

Socrates:: Imagine then, that neither do many others (that I may not say none) require any such thing: or can you mention any one that does require it?

Glaucon:: Not I.

Socrates:: But with reference to the sense of seeing and the object of sight, do not you perceive that they require something?

Glaucon:: How?

Socrates:: When there is sight in the eyes, and when he who has it attempts to use it, and when there is color in the objects before him, unless there concur some third species, naturally formed for the purpose, you know that the sight shall see nothing, and the colors shall be invisible.

Glaucon:: What is that you speak of?

Socrates:: What you call light.

Glaucon:: You say true.

Socrates:: This species then is not despicable. By no small idea then are the sense of seeing, and the power of being seen, connected together; but by a bond the most honorable of all bonds, if light be not dishonorable.

Glaucon:: But it is far, from being dishonorable.

Socrates:: Whom then of the Gods in heaven can you assign as the cause of this, that light makes our sight to see, and visible objects to be seen in the best manner?

Glaucon:: The same as you, and others do; for it is evident you mean the sun.

Socrates:: Is not the sight then naturally formed in this manner with reference to this God?

Glaucon:: How?

Socrates:: The sight is not the sun, nor is that the sun in which sight is, which we call the eye.

Glaucon:: It is not.

Socrates:: But yet, I imagine, that of all the organs of sense, it par-takes most of the image of the sun.;

Glaucon:: Greatly so.

Socrates:: And the power which it has, does it not possess as dispensed and flowing from hence?

Glaucon:: Perfectly so.

Socrates:: Is not then the sun, which indeed is not sight itself, yet as it is the cause of it, seen by sight itself?

Glaucon:: It is so.

Socrates:: Imagine then, that this is what I was calling the offspring of the good, which the good generates, analogous to itself, and that what this is in the intellectual world, with respect to intelligence and the objects of intelligence, the same is the sun in the visible world with respect to sight and visible things.

Glaucon:: How is it? Explain to me yet further.

Socrates:: You know that the eyes, when they are no longer directed towards objects whose colors are shone upon by the light of day, but by that faint one of the night, grow dim and appear almost blind, as if they had in them no perfect sight.

Glaucon:: Just so.

Socrates:: But, I imagine, when they turn to objects which the sun illuminates, they see clearly, and in those very eyes there appears now to be sight.

Glaucon:: There does.

Socrates:: Understand then, in the same manner, the case to be so with reference to the soul. When it shall firmly adhere to that which truth and real being enlighten, then it understands and knows it, and appears to have intelligence; but when it adheres to that which is blended with darkness, which is generated and which perishes, it fancies and guesses, takes up and lays down its opinions, and resembles now one without intelligence.

Glaucon:: It has such a resemblance.

Socrates:: That therefore which gives truth to what is known, and dispenses the power to him who knows, you may call the idea of good, being the cause of knowledge and of truth, as being known by intelligence. And as both these two, knowledge and truth, are so beautiful, when you deem that the good is something different, and still more beautiful than these, you shall deem aright. Knowledge and truth here are as light and sight there, which we rightly judged to partake most of the image of the sun, but that we were not to imagine they were the sun. So here it is right to judge, that both these partake of the image of the good, but to imagine either of them the good, is not right, but the good itself is worthy of greater honour.

Glaucon:: You mean, an inestimable beauty, since it affords knowledge and truth, but is itself superior to these in beauty. And you never any where at all said that it was pleasure.

Socrates:: Softly, and in this manner rather consider its image yet further.

Glaucon:: How?

Socrates:: You will say, I imagine, that the sun gives to things which are seen, not only their visibility, but likewise their generation, growth and nourishment, though in itself it be not generation.

Glaucon:: Why not?

Socrates:: We may say, therefore, that things which are known have not only this from the good, that they are known, but likewise their being and essence are given them by it, whilst the good itself is not essence, but above essence, superior to it both in dignity and in power.

Here Glauco, with a great laugh, says;

Glaucon:: What a prodigious excellence is this! I swear.

Socrates:: You yourself, are the cause, having obliged me to tell my opinion about it.

Glaucon:: And by no means, stop, if something does not hinder you, but go over again the resemblance relating to the sun, if you are omitting anything.

Socrates:: But I omit, many things.

Glaucon:: Do not omit, the smallest matter.

Socrates:: I imagine, there will be a great deal omitted; however, as far as I am able at present, I shall not willingly omit anything.

Glaucon:: Do it not.

Socrates:: Attend then, how that we say there are two species, and that the one reigns over the intellectual world, and the other over the visible, not to say the heavens, lest I seem to you to be using sophistry in the expression. You understand then these two species?—the visible, the intellectual?

Glaucon:: I do.

Socrates:: As if then you took a line cut into two unequal parts, and cut over again each section according to the same proportion, both that of the visible species, and that of the intellectual—and thus you shall have perspicuity and obscurity placed by one another—in the visible species you shall have in one section images—I call images, in the first place, shadows; next, the appearances in water, and such as appear in bodies which are close, polished, and bright, and everything of this kind, if you understand me.

Glaucon:: I do.

Socrates:: Suppose now the other section of the visible which this resembles, such as the animals around us, and every kind of plant, and all sort of workmanship.

Glaucon:: I suppose it.

Socrates:: Are you willing then that this section appear to be divided into true and untrue? And that the same proportion, which the object of opinion has to the object of knowledge, the very same proportion has the resemblance to that of which it is the resemblance?

Glaucon:: I am indeed, extremely so.

Socrates:: But it now again the section of the intellectual, how it was divided.

Glaucon:: How?

Socrates:: How as to one part of it the soul uses the former sections as images, and is obliged to inquire upon hypotheses, not going to the beginning, but to the conclusion; and the other part again, where the soul goes by an hypothesis to a beginning, not supposed, and without those images about it, by the species themselves, making its way through them.

Glaucon:: I have not, sufficiently understood you in these things.

Socrates:: But again, for you shall more easily understand me after these things have been premised. For I imagine that those who are conversant in geometry and computations, and such like, after they have laid down hypotheses of excess and of equality, and made their figures, and three kinds of angles, and other things akin, according to each method, they go upon these things as known, having laid down all these as hypotheses, and do not give any further reason about them, neither to themselves nor others, as being things obvious to all; but beginning at these, they directly go over, explaining the rest, and with full consent end at that which their inquiry pursued.

Glaucon:: I know this, perfectly well.

Socrates:: And do you not likewise know that when they make use of the visible species, and reason about them, their understandings are not employed about these species, but about those which they are the resemblances of, holding their reasonings about a real square, and about a real diameter, not about that which they draw? And, in the same manner, with reference to other things, those very things which they form and draw, in which number, shadows and images in water are to be reckoned, these they make use of as images, seeking to behold those real things which one can no way see but by his intellect.

Glaucon:: You say true.

Socrates:: This, then, I called a species of the intellectual, but that the soul was obliged to use hypotheses in the search of it, not going back to the principle, as not being able to go beyond hypotheses in ascending upwards, but made use of images formed from things below, to lead to those above, as perspicuous, as objects of opinion, and distinct from the things themselves.

Glaucon:: I understand, that you mention what happens in the geometrical and other sister arts.

Socrates:: Understand now, that by the other section of the intellectual I mean this, that which reason by itself attains, making hypotheses by its own reasoning power, not as principles, but really hypotheses, as steps and handles to go on to that which was not an hypothesis, but the principle of the whole, and attain to it; and then, again, holding by all those things which hold by it, to descend down to the conclusion, using no where anything which is matter of sense but the ideas themselves, from some, onwards to others, and concluding in ideas.

Glaucon:: I understand, but not sufficiently, for you seem to me to talk of a perplexed subject; but you want, however, to determine that the discoveries concerning real being and the objects of intellect, made by the science of reasoning, are more conspicuous than the discoveries made by the arts, as they are called, which have hypotheses for their first principles, and those who inquire into them are obliged, in their disquisitions, to use their understandings and not their external senses. But as they are not able to perceive by rising up to the principle, but by hypotheses, they seem to you not to have intelligence, though the things are objects of the intellect, by the help of the principle; and you seem to me to call the practice, in geometrical and such other arts, demonstration, and that it is somewhat between opinion and science.

Socrates:: You have comprehended, most sufficiently. And conceive now, that corresponding to my four sections there are these four faculties in the soul: intelligence answering to the highest, demonstration to the second, and assign opinion to the third, and to the last imagination, and range the objects accordingly, that as their objects participate of truth, so reckon that they participate of perspicuity.

Glaucon:: I understand, and I agree, and I range them as you desire.

THE END OF THE SIXTH BOOK

## THE SEVENTH BOOK

Socrates:: After these things now, compare, with reference to instruction and the want of instruction, our nature to such a condition as follows. Consider men as in a subterraneous habitation resembling a cave, with its entrance opening to the light, and answering to the whole extent of the cave. Suppose them to have been in it from their childhood, with chains both on their legs and necks, so as to remain there and only be able to look before them, but by the chain incapable to turn their heads round. Suppose them to have light of a fire, burning far above and behind them, and that between the fire and the chained men there is a road above them, along which observe a low wall built, like that which hedges in the stage of mountebanks on which they show to men their wonderful tricks.

Glaucon:: I observe it.

Socrates:: Observe now, along this wall, men bearing all sorts of utensils, raised above the wall, and human statues, and other animals, in wood and stone, and all sort of furniture, and, as is likely, some of those who are carrying these are speaking, and others silent.

Glaucon:: You mention, a wonderful comparison, and wonderful chained men.

Socrates:: But such, however, as resemble us. For, in the first place, do you imagine that such as these see any thing of themselves or of one another, but the shadows formed by the fire, falling on the opposite part of the cave?

Glaucon:: How can they, if through the whole of life they be under a necessity, at least, of having their heads unmoved?

Socrates:: But what do they see of what is carrying along? Is it not the very same?

Glaucon:: Why not?

Socrates:: If then they were able to converse with one another, do not you imagine they would think it proper to give names to those very things they saw before them?

Glaucon:: Of necessity they must.

Socrates:: And what if the opposite part of this prison had an echo, when any of those who passed along spoke, do you imagine they would reckon that what spoke was any thing else than the shadow passing by?

Glaucon:: Not I, truly.

Socrates:: Such as these then, will entirely judge that there is nothing genuine but the shadows of utensils.

Glaucon:: Entirely so.

Socrates:: With reference then both to their freedom from these chains, and their cure of this ignorance, consider the nature of it, if such a thing should happen to them. When any one should be loosed, and obliged on a sudden to rise up, turn round his neck, and walk and look up towards the light, and in doing all these things he should be pained, and be unable, from the splendors, to behold the things he formerly saw the shadows of, what do you imagine he would say, if one should tell him that formerly he had seen trifles, but now being somewhat nearer to reality, and having his face turned toward what was more real, he saw better; and so, pointing out to him each of the things passing along, should question him, and oblige him to tell what it were, do not you imagine he would be both in doubt, and would deem what he had formerly seen to be more genuine than what was now pointed out to him?

Glaucon:: By far.

Socrates:: And if he should oblige him to look to the light itself, would not he find pain in his eyes, and shun it; and turning to such things as he is able to behold, reckon that these are really more certain than those pointed out?

Glaucon:: Just so.

Socrates:: But if one, should drag him from thence violently, through a rough and steep ascent, and never stop till he drew him up to the light of the sun, would not he whilst he was thus drawn, both be in torment, and be filled with indignation, and after he had even come to the light, having his eyes filled with splendor, he would be able to see none of those things now called genuine.

Glaucon:: He would not, all of a sudden, at least.

Socrates:: But he would need, I imagine, to be accustomed to it some time, if he were to perceive things above. And, first of all, he would most easily perceive shadows, afterwards the images of men and of other things in water, and after that the things themselves. And with reference to these things, he would more easily see the things in the heavens, and the heavens themselves, looking in the nighttime to the light of the stars and the moon, than by day, looking on the sun and the light of the sun.

Glaucon:: How can it be otherwise?

Socrates:: And, last of all, he may be able, I imagine, thoroughly to perceive and contemplate the sun himself, not in water, nor images of him, appearing in any thing else, but as he is in himself, in his own proper region, such as he is.

Glaucon:: Of necessity.

Socrates:: And after this he would now reason with himself concerning him, that it is he who gives the seasons and years, and regulates all things in this visible region, and that, of all these things which they formerly saw, he is in a certain manner the cause.

Glaucon:: It is certain, that after these things, he may come to such reasonings as these.

Socrates:: But what? when he remembers his first habitation, and the wisdom which was there, and those who were there his companions in bonds, do you not imagine he will esteem himself happy by the exchange, and compassionate them?

Glaucon:: And that greatly.

Socrates:: And if there were there any honors and encomiums and rewards among themselves for him who most accurately perceived what passed along, and best remembered which of them were wont to pass foremost, which latest, and which of them went together, and from these observations were most able to presage what was to happen, do you imagine he will be desirous of these honors, or envy those who among these are honored and in power? or rather wish to suffer that of Homer, and greatly desire

——as laborer to work
To some ignoble man for hire——

and rather to suffer anything than to hold such opinions, and live after such a manner?

Glaucon:: I imagine so,—that he would suffer and embrace any thing rather than live in that manner.

Socrates:: But consider this further, if such an, one should descend and sit down again in the same seat, should not he now have his eyes filled with darkness, coming on the sudden from the sun?

Glaucon:: Very much so.

Socrates:: And should he now again be obliged to give his opinion of those shadows, and to dispute about them with those who are there eternally chained, whilst yet his eyes were dazzled, and before they recovered their former state (which would require no small time of habit) would he not afford them laughter, and would it not be said of him, that having gone above, he was returned with vitiated eyes, and that it was not proper even to attempt to go above, and that whoever should attempt to loose them and lead them up, if ever they were able to get him into their hands, should even be put to death?

Glaucon:: They would by all means, put him to death.

Socrates:: The whole of this comparison now, friend Glauco, is to be applied to our preceding discourse; for if you compare this region, which is seen by the sight, to the habitation of the prison, and the light of the fire in. it to the power of the sun, and the ascent above, and the sight of things above, to the soul's ascent into the region of intelligence, you will apprehend my meaning, since you want to hear it. But God knows whether it be true. Appearances then to me appear in this manner. In the intellectual world the idea of the good is most remote, and scarcely to be seen; but if it be seen, it is to be deemed as indeed the cause to all of all things bright and beautiful, generating in the visible world light, and its principle the sun, and in the intellectual world, it is itself the principle producing truth and intelligence, and that this must be beheld by him who is to act wisely, either privately or in public.

Glaucon:: I agree with you, in such manner as I can.

Socrates:: Come now, and agree with me likewise in this, and do not wonder that such as come hither are unwilling to act in human affairs, but their souls are carried always to converse with things above; for it is somehow reasonable it should be so, if these matters hold according to our comparison above-mentioned.

Glaucon:: It is indeed reasonable.

Socrates:: But what, do you imagine this any thing wonderful, that when one comes from divine contemplations to human evils, he should behave awkwardly and appear extremely ridiculous, whilst yet the light is in his eyes, and is obliged, before he is sufficiently accustomed to the present darkness, to contend in courts of justice, or elsewhere, about the shadows of justice, or those statues which occasion the shadows, and to dispute about this point, how these things are conceived of by those who have never at any time beheld justice itself?

Glaucon:: This is not at all, to be wondered at.

Socrates:: But if one has, at least, understanding, he must remember that there is a twofold disturbance of the sight, and arising from two causes, when one comes from light to darkness, and from darkness to light. And when one imagines that these very things happen with reference also to the soul, when at any time he sees one in confusion, and unable to perceive any thing, he will not laugh in an unreasonable manner, but will consider whether the soul, coming from a more enlightened life, be darkened by ignorance, or going from prevailing ignorance to a life more enlightened, be filled with the dazzling splendor; and so will congratulate the one on its fate and life, and compassionate the life and fate of the other. And if he wants to laugh at the soul that goes from darkness to light, his laughter would be less improper than if he were to laugh at the soul which comes from the light to darkness.

Glaucon:: You say very reasonably.

Socrates:: It is proper then, that we judge of them after such a manner as this, if those things be true. That education is not such a thing as some undertakers talk of; for they somehow say, that whilst there is no knowledge in the soul, they will insert it, as if they were inserting sight in blind eyes.

Glaucon:: They say so.

Socrates:: But our present reasoning, now shows that this power being in the soul of every one, and the organ by which every one learns, and being in the same condition as the eye, if it were unable otherwise than with the whole body to turn from darkness to light, must in like manner, with the whole soul, be turned from generated being, till it be able to endure the contemplation of being itself, and the most splendid of being; and this we call the good. Do we not?

Glaucon:: We do.

Socrates:: This then, would appear to be the art of his conversion, in what manner he shall with greatest ease and advantage be turned. Not to implant in him the power of seeing, but considering him as possessed of it, only improperly situated, and not looking at what he ought, to contrive a method of accomplishing this point.

Glaucon:: It seems so.

Socrates:: The other virtues now then of the soul, as they are called, seem to be somewhat resembling those of the body (for when in reality they were not in it formerly, they are afterwards produced in it by habits and exercises), but that of wisdom, as it seems, happens to be of a nature somewhat more divine than any other, as it never loses its power, but, according as it is turned, is useful and advantageous, or useless and hurtful. Or have you not observed of those who are said to be wicked, yet wise, how sharply the little soul sees, and how acutely it comprehends every thing to which it is turned, as having no contemptible sight, but compelled to minister to wickedness: so that the more accurately it sees, so much the more productive is it of wickedness?

Glaucon:: Entirely so.

Socrates:: But however, with reference to this part of such a genius, if, being dressed immediately from childhood, it should be stripped of every thing akin to procreation, as leaden weights, and of all those pleasures and lusts which relate to feastings and such like, which turn the sight of the soul towards things downwards, from all which if the soul, being freed, should turn itself towards truth, the very same principle in the same men would most accurately see those things as it now does these to which it is turned.

Glaucon:: It is likely.

Socrates:: But what, is not this likely, and necessarily flowing from what has been mentioned, that neither these who are uninstructed and unacquainted with truth can ever sufficiently take care of the city, nor yet those who allow themselves to spend the whole of their time in learning—those, because they have no one scope in life, aiming at which they ought to do whatever they do, both in private and in public; and the latter, because they are not willing to manage civil affairs, imagining that whilst they are yet alive they inhabit the islands of the blest.

Glaucon:: True.

Socrates:: It is our business then, to oblige those of the inhabitants who have the best geniuses, to apply to that learning which we formerly said was the greatest, both to view the good, and to ascend that ascent; and, when they have ascended and sufficiently viewed it, we are not to allow them what is now allowed them.

Glaucon:: What is that?

Socrates:: To continue there, and be unwilling to descend again to those bondmen, or share with them in their toils and honors, whether more trifling or more important.

Glaucon:: Shall we then, do them injustice, and make them live a worse life when they have it in their power to live a better?

Socrates:: You have again forgot, friend, that this is not the legislator’s concern, in what manner any one tribe in the city shall live remarkably happy; but this he endeavors to effectuate in the whole city, connecting the citizens together, and by necessity, and by persuasion, making them share the advantage with one another, with which they are severally able to benefit the community. And the legislator, when he makes such men in the city, does it not that he may permit them to go where each may incline, but that himself may employ them for connecting the city together.

Glaucon:: True, I forgot, indeed.

Socrates:: Consider then, Glauco, that we shall no way injure the philosophers who arise among us, but tell them what is just, when we oblige them to take care of others, and to be guardians. We will allow, indeed, that those who in other cities become philosophers, with reason do not participate of the toils of public offices in the state (for they spring up of themselves, the policy of each city opposing them; and it is just, that what springs of itself, owing its growth to none, should not be forward to pay for its nurture to any one). But you have we generated both for yourselves and for the rest of the state, as the leaders and kings in a hive, and have educated you better, and in a more perfect manner than they, and made you more capable of sharing both in the rewards and labors attending public offices. Every one then must, in part, descend to the dwelling of the others, and accustom himself to behold obscure objects; for when you are accustomed to them, you will infinitely better perceive things there, and will fully know the several images what they are, and of what, from your having perceived the truth concerning things beautiful and just and good. And thus, as a real vision, both to us and you, shall the city be inhabited, and not as a dream, as are the generality of cities at present inhabited by such as both fight with one another about shadows, and raise sedition about governing, as if it were some mighty good. But the truth is in this manner: In whatever city those who are to govern are the most averse to undertake government, that city, of necessity, will be the best established and the most free from sedition; and that city whose governors are of an opposite character, will be in a condition quite opposite.

Glaucon:: Entirely so.

Socrates:: Do you imagine then that our pupils will disobey us, when they hear these injunctions, and be unwilling to labor jointly in the city, each bearing a part, but. spend the most of their time with one another, free from public affairs?

Glaucon:: Impossible; for we prescribe just things to just men. And each of them enters on magistracy from this consideration beyond all others, that they are under a necessity to govern contrariwise to all the present governors of all other cities.

Socrates:: For thus the matter stands, companion. If you shall find out a life for those who are to be our governors, better than that of governing, then it will be possible for you to have the city well established, for in it alone shall those govern who are truly rich, not in gold, but in that in which a happy man ought to be rich, in a good and prudent life. But if, whilst they are poor and destitute of goods of their own, they come to the public, imagining they ought thence to pillage good, it is not possible to have the city rightly established. For the contest being who shall govern, such a war being domestic and within them, it destroys both themselves and the rest of the city.

Glaucon:: Most true.

Socrates:: Have you then, any other kind of life which despises public magistracies, but that of true philosophy?

Glaucon:: No truly.

Socrates:: But however, they ought, at least, not to be fond of governing who enter on it, otherwise the rivals will fight about it.

Glaucon:: How can it be otherwise?

Socrates:: Whom else then will you oblige to enter on the guardianship of the city but those who are most intelligent in those things by which the city is best established, and who have other honors, and a life better than the political one?

Glaucon:: No others.

Socrates:: Are you willing, then, that we now consider this, by what means such men shall be produced, and how one shall bring them into the light, as some are said, from the lower regions, to have ascended to the gods?

Glaucon:: Why am I not willing,?

Socrates:: This now, as it seems, is not the turning of a shell, but the conversion of the soul coming from some benighted day to the true re-ascent to real being, which we shall say is true philosophy.

Glaucon:: By all means.

Socrates:: Ought we not then to consider which of the parts of learning has such a power?

Glaucon:: Why not?

Socrates:: What now, Glauco, may be that discipline of the soul which draws her from that which is generated towards being itself? But this I consider whilst I am speaking. Did not we indeed say that it was necessary for them, whilst young, to be wrestlers in war?

Glaucon:: We said so.

Socrates:: It is proper, then, that this piece of learning likewise be added to that which we are inquiring after.

Glaucon:: Which?

Socrates:: Not to be useless to military men.

Glaucon:: It must indeed, be added if possible.

Socrates:: They were somewhere in our former discourse instructed by us in exercise and music.

Glaucon:: They were.

Socrates:: Exercise indeed somehow respects what is generated and destroyed, for it presides over the increase and corruption of body.

Glaucon:: It seems so.

Socrates:: This then cannot be the learning we require.

Glaucon:: It cannot.

Socrates:: Is it music then, such as we formerly described?

Glaucon:: But it was, as a counter-part of exercise, if you remember, by habits instructing our guardians, imparting no science, but only with respect to harmony, a certain propriety, and with regard to measure, a certain propriety of measure, and in discourses, certain other things akin to these, both in such discourses as are fabulous, and in such as are nearer to truth. But as to learning respecting such a good as you now inquire after, there was nothing at all of this in that music.

Socrates:: You have, most accurately, put me in mind, for it treated in reality of no such thing. But, divine Glauco, what may this learning be? for all the mechanical arts have somehow appeared to be servile.

Glaucon:: Why have they not? And what other learning is there left yet remaining distinct from music, exercise, and the mechanical arts?

Socrates:: Come, if we have nothing yet further besides these to lay hold of, let us lay hold of something in these which extends over them all.

Glaucon:: What is that?

Socrates:: Such as this general thing, which all arts, and reasonings, and sciences make use of, and which every one ought in the first place necessarily to learn.

Glaucon:: What is that?

Socrates:: This trifling thing, to understand one, and two, and three: I call this in the general, number, or computation. Or is it not thus with reference to these, that every art, and likewise every science, must of necessity participate of these?

Glaucon:: They must of necessity.

Socrates:: And must not the art of war likewise participate of them?

Glaucon:: Of necessity.

Socrates:: Palamedes then, in the tragedies, shows every where Agamemnon to have been at least a most ridiculous general; or have you not observed how he says, that having invented numeration, he adjusted the ranks in the camp at Troy, and numbered up both the ships and all the other forces which were not numbered before; and Agamemnon, as it seems, did not even know how many foot he had, as he understood not how to number them. But what kind of general do you imagine him to be?

Glaucon:: Some absurd one, for my part, if this were true.

Socrates:: Is there any other learning then, which we shall establish as more necessary to a military man than to be able to compute and to number?

Glaucon:: This most of all, if he would any way understand how to range his troops, and more still if he want to be a man.

Socrates:: Do you perceive then, with regard to this piece of learning the same thing as I do?

Glaucon:: What is that?

Socrates:: It seems to be of those things which we are inquiring after, which naturally lead to intelligence, but that no one uses it aright, being entirely a conductor towards real being.

Glaucon:: How do you say?

Socrates:: I shall endeavor, to explain at least my own opinion. With reference to those things which I distinguish with myself into such as lead towards intelligence, and such as do not, do you consider them along with me, and either agree or dissent, in order that we may more distinctly see whether this be such as I conjecture of it.

Glaucon:: Show me.

Socrates:: I show you then, if you perceive some things with relation to the senses, which call not upon the intelligence to the inquiry, as they are sufficiently determined by the sense, but other things which by all means call upon it to inquire, as the sense does nothing genuine.

Glaucon:: You plainly mean, such things as appear at a distance, and such as are painted.

Socrates:: You have not altogether, hit my meaning.

Glaucon:: Which then, do you mean?

Socrates:: These things, call not upon intelligence, which do not issue in a contrary sensation at one and the same time; but such as issue in this manner, I deem to be of those which call upon intelligence, since here sense makes the one sensation no more manifest than its contrary, whether it meet with it nigh at hand or at a distance. But you will understand my meaning more plainly in this manner: These, we say, are three fingers—the little finger, the next to it, and the middle finger?

Glaucon:: Plainly so.

Socrates:: Consider me, then, as speaking of them when seen nigh at hand, and take notice of this concerning them.

Glaucon:: What?

Socrates:: Each of them alike appears to be a finger, and in this there is no difference, whether it be seen in the middle or in the end, whether it be white or black, gross or slender, or any thing else of this kind; for in all these the soul of the multitude is under no necessity to question their intellect what is a finger, for never at all does sight itself at the same time intimate finger to be finger, and its opposite.

Glaucon:: It does not.

Socrates:: Is it not likely then, that such a case as this at least shall neither call upon, nor excite intelligence?

Glaucon:: It is likely.

Socrates:: But what, with reference to their greatness and littleness, does the sight sufficiently perceive this matter, and makes it no difference to it that one of them is situated in the middle, or at the end? And in like manner with reference to their grossness and slenderness, their softness and hardness, does the touch sufficiently perceive these things? And in like manner the other senses, do they no way defectively manifest such things? Or does each of them act in this manner? First of all, must not that sense which relates to hard, of necessity relate likewise to soft; and feeling these, it reports to the soul, as if both hard and soft were one and the same?

Glaucon:: It does.

Socrates:: And must not then the soul again, in such cases, of necessity be in doubt what at all the sense points out to it as hard, since it calls the same thing soft likewise; and so likewise with reference to the sense relating to light and heavy; the soul must be in doubt what is light and what is heavy, if the sense intimates that heavy is light, and that light is heavy.

Glaucon:: These at least, are truly absurd reports to the soul, and stand in need of examination.

Socrates:: It is likely then, that first of all, in such cases as these, the soul, calling in reason and intelligence, endeavors to find out whether the things reported be one, or whether they be two.

Glaucon:: Why not?

Socrates:: And if they appear to be two, each of them appears to be one, and distinct from the other.

Glaucon:: It does.

Socrates:: And if each of them be one, and both of them two, his understanding will at least-perceive two distinct; for if they were not distinct, he could not perceive two, but only one.

Glaucon:: Right.

Socrates:: The sight in like manner, we say, perceives great and small, but not as distinct from each other, but as somewhat blended together. Does it not?

Glaucon:: It does.

Socrates:: In order to clear this matter, the intellect is obliged again to consider great and small, not as blended together, but distinct, contrariwise of what the sense does.

Glaucon:: True.

Socrates:: And is it not from hence, somehow, that it comes first of all to question us, What at all, then, is great, and what is little?

Glaucon:: By all means.

Socrates:: And so we have called the one that which is known by intellect, and the other that which is seen by the eye.

Glaucon:: Very right.

Socrates:: This then is what at present I was endeavoring to express, when I said that some things call on the intelligence, and others do not. Such as fall on the sense at the same time with their contraries, I define to be such as require intelligence, but such as do not, do not excite intelligence.

Glaucon:: I understand now, and it appears so to me.

Socrates:: What now, with reference to number and unity? to which of the two classes do you imagine they belong?

Glaucon:: I do not understand.

Socrates:: But reason by analogy, from what we have already said: for if unity be of itself sufficiently seen, or be apprehended by any other sense, it will not lead towards real being, as we said concerning finger. But if there be always seen at the same time something contrary to it, so as that it shall no more appear unity than the contrary, it would truly want then one to judge of it: and the soul would be under a necessity to doubt within itself, and to inquire, rousing the intellect within itself, and to interrogate it what this unity is. And thus the learning which relates to unity would be of the class of those which lead up and turn the soul towards the contemplation of real being.

Glaucon:: But indeed this at least, is what the very sight of it does in no small measure effect: for we behold the same thing, at one and the same time as one, and as an infinite multitude.

Socrates:: And if this be the case with reference to unity, will not every number be affected in the same manner?

Glaucon:: Why not?

Socrates:: But surely both computation and arithmetic wholly relate to number.

Glaucon:: They do entirely.

Socrates:: These then at least seem to lead towards truth.

Glaucon:: Remarkably so.

Socrates:: They are then, as it appears, of those pieces of learning which we are in search of. For the soldier must necessarily learn these things, for the disposing of his ranks; and the philosopher for the attaining to real being, coming up above what is generated, otherwise he can never become a reasoner.

Glaucon:: It is so.

Socrates:: But our guardian at least happens to be both a soldier and a philosopher.

Glaucon:: Why is he not?

Socrates:: It were proper then, Glauco, to establish by law this piece of learning, and to persuade those who are to manage the greatest affairs of the city, to apply to computation, and study it, not in a common way, but ‘till by the intellect itself they arrive at the contemplation of the nature of numbers, not for the sake of buying nor of selling, as merchants and retailers, but both for war and for the agility of the soul itself, and its conversion from what is generated towards both truth and being.

Glaucon:: Most finely said.

Socrates:: And surely now, I perceive likewise, at present whilst this learning respecting computations is mentioned, how elegant it is, and every way advantageous towards our purpose, if one applies to it for the sake of knowledge, and not to make a traffic by it.

Glaucon:: Which way,!

Socrates:: This very thing at least, which we now mentioned, how powerfully does it somehow lead up the soul, and put it under a necessity of reasoning about the numbers themselves, no way admitting, if one in reasoning with it shall produce numbers which have visible and tangible bodies. For you know of some who are dexterous in these things, how that if one, in reasoning, shall attempt to divide unity itself, they both ridicule him and will not admit of it, but if you divide it into parts, they multiply them, afraid lest anyhow unity should appear not to be unity, but many.

Glaucon:: You say, most true.

Socrates:: What think you now, Glauco, if one should ask them: Wonderful men, about what kind of numbers are you reasoning? In which there is unity, such as you allow of, each whole equal to each whole, and not differing in the smallest degree, having no fraction in itself? What do you imagine they would answer?

Glaucon:: This, as I imagine: that they mean such numbers as can be conceived by the mind alone, but cannot at all be comprehended any other way.

Socrates:: You see then, friend, that, in reality, this learning appears necessary for us, since it appears to lay the soul under a necessity at least of employing the intellect itself towards the discovery of truth itself.

Glaucon:: And surely now, it does this at least in a very strong degree.

Socrates:: But what, have you hitherto considered this? that those who are naturally computers appear to be acute in all pieces of learning; and such as are naturally slow, if they be instructed and practiced in this, though they gain nothing else, all of them however proceed so far as to become more acute than they were before.

Glaucon:: It is so.

Socrates:: And surely, as I imagine, you will not easily find any thing, and not at all many, which occasion greater labor to the learner and student than this.

Glaucon:: No, indeed.

Socrates:: On all these accounts then, this learning is not to be omitted, but the best geniuses are to be instructed in it.

Glaucon:: I agree.

Socrates:: Let this one thing then, be established among us; and, in the next place, what is akin to it, let us consider if it any way belongs to us.

Glaucon:: What is it?; or do you mean geometry?

Socrates:: That very thing.

Glaucon:: As far, as it relates to warlike affairs, it is plain that it belongs to us; for as to encampments, and the occupying of ground, contracting and extending an army, and all those figures into which they form armies, both in battles and in marches, the same man would differ from himself when he were a geometer, and when he were not.

Socrates:: But surely now, for such purposes as these, some little geometry, and some particle of computation might suffice: but we must inquire, whether much of it, and great advances in it, would contribute any thing to this great end, to make us more easily comprehend the idea of the good. And we say that every thing contributes to this that obliges the soul to turn itself towards that region in which is the most divine of being, which it must by all means contemplate.

Glaucon:: You say right.

Socrates:: If therefore it oblige the soul to contemplate being, it belongs to us; but if it oblige to contemplate what is generated only, it does not belong to us.

Glaucon:: We say so at least.

Socrates:: They then who are but a little conversant in geometry, will not dispute with us this point at least, that this science is quite opposite to the common modes of speech employed in it by those who practice it.

Glaucon:: How?

Socrates:: They speak somehow very ridiculously, and through necessity; for all the discourse they employ in it appears to be with a view to operation and to practice. Thus they speak of making a square, of prolonging, of adjoining, and the like; but yet the whole of this learning is somehow studied with a view to knowledge.

Glaucon:: By all means indeed.

Socrates:: Must not this further be agreed on?

Glaucon:: What?

Socrates:: That it is the knowledge of what is perpetual, and not at all of what is ever generated and destroyed.

Glaucon:: This, is agreed on'; for geometrical knowledge is of that which is perpetual.

Socrates:: It would seem then, brave Glauco, to draw the soul towards truth, and to be productive of a philosophic understanding, so as to make us raise the powers of the mind to things above, instead of unworthily fixing them on things below.

Glaucon:: As much as possible.

Socrates:: As much as possible then, must we give orders that those in this finest city of yours by no means omit geometry; for even its by-works are not inconsiderable.

Glaucon:: What by-works?

Socrates:: Those, which you mentioned relating to war; and indeed with reference to all pieces of learning, as to the understanding of them more handsomely, we know somehow that one's having learned geometry or not makes every way an entire difference.

Glaucon:: Every way truly.

Socrates:: Let us then establish this second piece of learning for the youth.

Glaucon:: Let us establish it.

Socrates:: But what, shall we, in the third place, establish astronomy? or are you of a different opinion?

Glaucon:: I am, of the same; for to be well skilled in the seasons of months and years, belongs not only to agriculture and navigation, but equally to the military art.

Socrates:: You are pleasant, as you seem to be afraid of the multitude, lest you appear to enjoin useless pieces of learning. But this is not altogether despicable, though it is hard to persuade them, that by each of these pieces of learning some power of the soul is both purified and invigorated, which was destroyed and blunted by other studies, though more worthy of preservation than ten thousand eyes, for by it alone is truth beheld. To such therefore as are of the same opinion you will very readily appear to reason admirably well; but such as have never observed this will probably imagine you say nothing at all, for they perceive no other advantage in these things worthy of account. Consider now from this point, with which of these two you will reason; or carry on the reasonings with neither of them, but principally for your own sake, yet not grudge another, if any one shall be able to reap any benefit by them.

Glaucon:: In this manner, I choose, on my own account principally, both to reason, and to question and answer.

Socrates:: Come then, let us go back again, for we have not taken aright in order what comes next after geometry.

Glaucon:: How have we taken?

Socrates:: After plain surface, we have taken a solid moving in a circle, before we considered it by itself, but the right method was to have taken the third augment immediately after the second, and that is somehow the augment of cubes and what participates of depth.

Glaucon:: It is so. But these things, Socrates, seem not yet to be found out.

Socrates:: The reason of it, is twofold. Because there is no city which holds them in sufficient honour, they are slightly searched into, being difficult; and besides, those who do search into them want a leader, without which they cannot find them out. And this leader is, in the first place, hard to be found; and after that he does exist, as matters are at present, the inquirers into these things, as they are high-spirited, will not obey him. But if the whole city presided over these things, and held them in esteem, such as inquired into them would be obedient, and their inquiries, being carried on with assiduity and vigor, would discover themselves what they were; since even now, whilst they are on the one hand despised, and kept down by the multitude, and on the other by those who study them without being able to give any account of their utility, they yet forcibly, under all these disadvantages, grow up through their native charm, and it is no wonder that they do appear.

Glaucon:: Because truly, this charm is very remarkable. But tell me more plainly what you were just now saying; for somehow that study which respects plain surface you called geometry.

Socrates:: I did.

Glaucon:: And then, you mentioned astronomy in the first place after it, but afterwards you drew back.

Socrates:: Because whilst I am hastening, to go through all things speedily, I advance more slowly. For that augment by depth which was next in method we passed over, because the investigation of it is ridiculous, and after geometry we mentioned astronomy, which is the circular motion of a solid.

Glaucon:: You say right.

Socrates:: We establish then, astronomy as the fourth piece of learning, supposing that one to subsist which we have now omitted, if the city shall enter upon it.

Glaucon:: It is reasonable. And now that you agree with me, Socrates, I proceed in my commendation of astronomy, which you formerly reproved as unseasonable. For it is evident, I imagine, to every one, that this piece of learning at least obliges the soul to look to that which is above, and from the things here conducts it thither.

Socrates:: It is probable, that it is evident to every one, but to me; for to me it does not appear so.

Glaucon:: How then do you think of it?

Socrates:: In the way these pursue it who introduce it into philosophy, it plainly makes the soul entirely to look downwards.

Glaucon:: How do you say?

Socrates:: You seem to me, to have formed with yourself no ignoble opinion of the learning respecting things above, what it is; for you seem to think that if any one contemplates the various bodies in the firmament, and by earnestly looking up apprehends every thing, you reckon he has intelligence of these things, and not merely sees them with his eyes. And perhaps you judge right, and I foolishly. For I, on the other hand, for my part, am not able to imagine that any other learning can make a soul look upwards but that which respects the being, and that which is invisible. And if any one undertakes to learn any thing of sensible objects, whether he gape upwards, or bellow downwards, never at all shall I say that he learns; for I aver he has no real knowledge of these things, nor shall I say that his soul looks upwards, but downwards, even though he learns lying on his back, either at land or at sea.

Glaucon:: I am punished, for you have justly reproved me. But which was the proper way, said you, of learning astronomy different from the methods they learn at present, if they mean to learn it with advantage for the purposes we speak of?

Socrates:: In this manner, that these variegated bodies in the heavens, as they are varied in a visible subject, be deemed the most beautiful and the most regular of the kind, but far inferior to real beings, according to those orbits in which the real velocity, and the real slowness, in true number, and in all true figures are carried with respect to one another, and carry all things that are within them. Which things truly are to be comprehended by reason and intellect, but not by sight. Or do you think they can?

Glaucon:: By no means.

Socrates:: Is not then, that variety in the heavens to be made use of as a pattern for learning those real things, in the same manner as if one should meet with geometrical figures, drawn remarkably well and elaborately by Daedalus or some other artist or painter? For one who were any way skilled in geometry, or seeing these, would truly think the workmanship most excellent, yet would esteem it ridiculous to consider these things seriously, as if from thence he were to learn the truth as to what were in equal, in duplicate, or in any other proportion?

Glaucon:: Why would it not be ridiculous?

Socrates:: And do not you then imagine that he who is truly an astronomer is affected in the same manner when he looks up to the orbits of the planets? And that he reckons that the heavens and all in them are indeed established by the Former of the heavens, in the finest manner possible for such works to be established. But would not he deem him absurd, who should imagine that this proportion of night with day, and of both these to a month, and of a month to a year, and of other planets to such like things, and towards one another, existed always in the same manner, and in no way suffered any change, though they have a body, and are visible, but would search by every method to apprehend the truth of these things?

Glaucon:: So it appears to me, whilst I am hearing you.

Socrates:: Let us then make use of problems, in the study of ¦ astronomy, as in geometry. And let us drop the heavenly bodies, if we want truly to apprehend astronomy, and render profitable instead of unprofitable that part of the soul which is naturally wise.

Glaucon:: You truly enjoin a much harder task on astronomers, than is taken at present.

Socrates:: And I imagine, at least, that we must likewise enjoin other things, in the same manner, if we are to be of any service as law-givers. But can you suggest any of the proper pieces of learning?

Glaucon:: I can suggest none, at present at least.

Socrates:: Motion, as I imagine, affords us not one indeed, but many species of learning, all of which any wise man can probably tell. What occur to us are two.

Glaucon:: Which now?

Socrates:: Along with this, there is its counter-part.

Glaucon:: Which?

Socrates:: As the eyes, seem to be fitted to astronomy, so the ears seem to be fitted to harmonious motion. And these seem to be sister arts to one another, both as the Pythagoreans say, and we, Glauco, agree with them; or how do we do?

Glaucon:: Just so.

Socrates:: Shall we not, as they deal greatly in these matters, inquire how they talk about them, and if there be any other thing besides these, inquire into it likewise? But above all these things, we will still watch over our own affairs.

Glaucon:: What is that?

Socrates:: That those we educate never at all attempt at any time to learn any of those things in an imperfect manner, and not pointing always at that mark to which all ought to be directed, as we now mentioned with reference to astronomy. Or do not you know that they do the same thing with regard to harmony as in astronomy? For whilst they measure one with another the symphonies and sounds which are heard, they labor like the astronomers un-profitably.

Glaucon:: Nay truly, and ridiculously too, whilst they frequently repeat certain notes, and listen with their ears, to catch the sound as from a neighborhood; and some of them say they hear some middle note, but that the difference is exceeding small which measures them; and others again are in doubt about it, and say that the notes are the same as were sounded before, and both parties subject the mind to the ears.

Socrates:: But you speak, of the lucrative musicians, who perpetually harass and torment their strings, and turn them on the pegs. But that the comparison may not be too tedious, I shall say nothing of their complaints of the strings, their refusals and stubbornness, but put an end to it. But I say we ought not to choose these to talk of harmony, but these true musicians whom we spoke of. For these do the same things here as the others did in astronomy; for in these symphonies which are heard they search for numbers, but they pass not thence to the problems, to inquire which numbers are symphonious, and which are not, and the reason why they are either the one or the other.

Glaucon:: This is truly, a divine work you mention.

Socrates:: It is then indeed profitable in the search of the beautiful and good, but if pursued in another manner, it is unprofitable.

Glaucon:: It is likely at least.

Socrates:: But I imagine, that the proper method of inquiry into all these things, if it reach the union and affinity which they have, and compute in what respects they are akin to one another, this exercise will contribute somewhat towards what we want, and our labor will not be unprofitable, otherwise it will.

Glaucon:: I likewise, am of the same opinion. But you speak, Socrates, of a very mighty work.

Socrates:: Mean you the introduction, or what else? Or do not we know that all these things are introductory to the law itself, which we ought to learn; for even the dialectic philosophers do not appear any way expert as to these things.

Glaucon:: No, truly, unless a very few of all I have met with. •

Socrates:: But whilst they are not able, to offer and to hear reason, shall they ever be able to know any thing of what we say is necessary to be known?

Glaucon:: Never shall they be able to do this at least.

Socrates:: Is not this itself then, Glauco, the law? To carry the power of reasoning to its highest perfection, which, being intellectual, the power of sight may be said to resemble it; which power endeavors, as we said, first to look at the animals, then at the stars, and last of all at the sun himself. So when any one attempts to reason without any of the senses, by reasoning he pushes on to know each particular, what it is; and if he never give over till he apprehend by his intelligence what is the good itself, he then arrives at the perfection of intelligence, as the other' does at that of visible.

Glaucon:: By all means.

Socrates:: What now? Do not you call this progress reasoning?

Glaucon:: What else?

Socrates:: And now, as the loosing the men from their chains, and their turning from the shadows towards the statues, and the light, and their ascent from the subterraneous dwelling to the sun; and when there, the looking at the images in water, from their inability at first to look at animals and vegetables, and the light of the sun. And here the contemplating the divine images themselves, and the shadows of real beings, and not the shadows of images shadowed out by another sort of light, as by the sun: this whole exercise in the arts we have mentioned has this power, to lead back again that which is best in the soul to the contemplation of that which is best in beings, as in the former case that which is brightest in the body is led to that which is brightest in the material and visible world.

Glaucon:: I admit, of these things, though truly it appears to me quite difficult to admit of them, and in another respect it is difficult not to admit of them. But however (for we shall hear these things not only now at present, but often go over them afterwards), establishing these things as now expressed, let us go to the law itself, and go through with it as we have done with the introduction. Say then what is the manner of the reasoning power, and into what species is it divided, and what are the paths leading to it? For these, it is likely, conduct us to that place at which, when we are arrived, we shall have repose from travel, and the end of the journey.

Socrates:: You will not as yet, friend Glauco, be able to follow, for otherwise no zeal should be wanting on my part; nor should you any longer only see the image of what we speak of, but the truth itself. But this is what to me at least it appears, whether it be so in reality or not, this it is not proper confidently to affirm, but that indeed it is somewhat of this kind may be affirmed. May it not?

Glaucon:: Why not?

Socrates:: And further that it is the reasoning power alone which can discover this to one who is conversant in these things we have mentioned, and that by no other power it is possible.

Glaucon:: This also, we may confidently affirm.

Socrates:: This at least no one, will dispute with us. That no other method can attempt to comprehend at all, in any orderly way, what each particular being is; for all the other arts respect either the opinions and passions of men, or generations, and compositions, or are all employed in the culture of things generated and compounded. Those others, which we said participated somewhat of being, geometry, and such as are connected with her, these we see, having a dream as it were of the being; but it is impossible for them to see the reality, so long as employing hypotheses they hold by these immovably, without being able to give the reason of them. For where one holds as a principle what he does not know, and a conclusion and intermediate steps are connected with that unknown principle, what contrivance can there be found by which an assent of such a kind shall ever become science?

Glaucon:: None at all.

Socrates:: Does not then, the reasoning method proceed in this way alone, towards the first principle itself, removing all hypotheses, in order to establish it, and disengaging the eye of the soul from a certain barbarian clay with which it was buried, gently draws and leads it upwards, using as helps and assistants those arts we have mentioned, which through custom we frequently call sciences, but they require another appellation more expressive than opinion, and more indistinct than science. We have somewhere m our preceding discourse termed it demonstration. But it is not, as I imagine, about a name they dispute, who inquire into matters of so great importance as we have now before us.

Glaucon:: No indeed.

Socrates:: Do you agree then, as formerly, to call the first class science, the second demonstration, the third faith, and the fourth imagination? and both these last opinion, and the two former intelligence. And that opinion respects what is generated, and intelligence real being; and in the same proportion as being is to what is generated, so is intelligence to opinion, science to faith, and demonstration to imagination. But as for the analogy of the things which these powers respect, and the division of each of them into two, to wit what is matter of opinion, and what is matter of intellect, we omit, Glauco, that we may not be more tedious here than in our former reasonings.

Glaucon:: As for me, with reference to those other things, as far as I am able to follow, I am of the same opinion.

Socrates:: But do not you call him a reasoner, who apprehends the reason of the being of each particular? And as for the man who is not able to give a reason to himself and to another, in as far as he is not able, so far will you say he wants intelligence of the thing?

Glaucon:: Why should I not say so?

Socrates:: And is not the case the same with reference to the good? Whosoever cannot define it by reason, separating the idea of good from all others, and piercing through all arguments as in a battle, eagerly contending to prove it, not according to opinion, but according to reality, and in all these cases to march forward with unerring reason, such an one knows nothing of the good itself, nor of any good whatever; but if he has attained to any image of the good, we will say he has attained to it by opinion, not by science, and is dreaming and sleeping out his present life, and ere he be awakened, he will descend to the lower regions, there to sleep on to the end.

Glaucon:: Now truly, I will strongly aver all these things.

Socrates:: But surely you will not, as I imagine, allow your own children at least whom you bred up and educated in reasoning, if ever at all indeed you educate them, to have the supreme government of the most important affairs in the state, whilst they are void of reason as letters of the alphabet.

Glaucon:: By no means.

Socrates:: You will then lay down this to them as a law. That in a most especial manner they attain to that piece of education, by which they may become capable to question and answer in the most scientific manner.

Glaucon:: I will settle it by law, with your assistance at least.

Socrates:: Do you agree then, that above all the other pieces of learning, we place the art of reasoning as the top stone, and that no other piece of learning can be properly set above it, but that every thing respecting learning is now finished?

Glaucon:: I agree.

Socrates:: There now remains for you, the distribution: to whom shall we assign these pieces of learning, and after what manner?

Glaucon:: That is plain.

Socrates:: Do you remember then our former election of rulers, what kind we chose?

Glaucon:: Why do I not?

Socrates:: As to other things then, imagine, that such geniuses as these ought to be picked out. For the most firm and brave are to be preferred, and, as far as possible, the most graceful; and besides, we must not only seek for such as are of noble and stern manner, but they must be possessed of every other natural disposition conducive to this education.

Glaucon:: Which dispositions do you recommend?

Socrates:: They must have, happy friend, acuteness for the sciences, that they may not learn with difficulty; for souls are much more discouraged by hard pieces of learning than by severe bodily exercises, as the toil which is proper to them, and not in common with the body, more intimately affects them.

Glaucon:: True.

Socrates:: And we must seek for one of good memory, untainted, and every way laborious: or how else do you imagine any one shall be willing to endure the fatigue of the body, and to accomplish at the same time such learning and study?

Glaucon:: No one, unless he be every way of a fine genius.

Socrates:: The mistake then about philosophy, and the contempt of it have been occasioned through these things, because, as I formerly said, they apply to it not in a worthy manner; for it ought not to be applied to it by the bastardly, but the legitimate.

Glaucon:: How?

Socrates:: In the first place, he who is to apply to philosophy ought not, to be lame as to his love of any kind of labor, loving it in some things, and hating it in others: and this is the case when one loves wrestling and hunting, and all exercises of the body, but is not a lover of learning, and loves neither to hear nor to inquire, but in all these respects has aversion to labor. He likewise is lame, in a different manner from this one, who dislikes all bodily exercise.

Glaucon:: You say most true.

Socrates:: And shall we not, in like manner account that soul lame as to truth, who hates indeed a voluntary falsehood, and bears it ill in itself, and is beyond measure enraged when others tell a lye; but the involuntary lye, it easily admits, and though at any time it be found ignorant, it is not displeased, but like a savage sow willingly wallows in ignorance.

Glaucon:: By all means.

Socrates:: And in like manner, as to temperance and fortitude, and magnanimity, and all the parts of virtue, we must no less carefully attend to what is bastardly and what is legitimate; for when either any private person or city understands not how to attend all these things, they unawares employ the lame and the bastardly for whatever they have occasion; private persons employ them as friends, and cities as governors.

Glaucon:: The case is entirely so.

Socrates:: But we, must beware of all such things; for if we take such as are entire in body and in mind for so extensive learning, and so extensive an exercise, and instruct them, justice herself will not blame us, and we shall preserve both the city and its constitution; but if we introduce other sort of persons into these affairs, we shall do everything the reverse, and bring philosophy under still greater ridicule.

Glaucon:: That indeed were shameful.

Socrates:: Certainly. But I myself seem at present to be somewhat ridiculous.

Glaucon:: How so?

Socrates:: I forgot, that we were amusing ourselves, and spoke with too great keenness; for whilst I was speaking, I cast my eye towards philosophy, and seeing her most unworthily abused, I seem to have been filled with indignation, and as being enraged at those who are the cause of it, to have spoken more earnestly what I said.

Glaucon:: No truly, not to me your hearer at least.

Socrates:: But for me, the speaker. But let us not forget this, that in our former election we made choice of old men, but in this election it will not be allowed us. For we must not believe Solon, that one who is old is able to learn many things; but he is less so than to run. They are the young who perform all great and frequent toils.

Glaucon:: Of necessity.

Socrates:: Every thing then relating to arithmetic and geometry, and all that previous instruction which they should be taught before they learn the art of reasoning, ought to be set before them whilst they are children, and that method of teaching observed which shall make them learn without compulsion.

Glaucon:: Why so?

Socrates:: Because, a free spirit ought to learn no piece of learning with slavery; for the toils of the body, when undergone through compulsion, render the body nothing worse; but no piece of compelled learning is lasting in the soul.

Glaucon:: True.

Socrates:: Do not then, excellent friend, compel boys in their learning; but train them up amusing themselves, that you may be better able to discern to what every one’s genius naturally tends.

Glaucon:: What you say, is reasonable.

Socrates:: Do not you remember then, that we said the boys are even to be carried to war, as spectators, on horseback, and that they are to be brought nearer, if they can with safety, and like young hounds taste the blood?

Glaucon:: I remember.

Socrates:: Whoever then, shall appear the most forward in all these toils, and in all pieces of learning, and in terrors, are to be selected into a certain number.

Glaucon:: At what age?

Socrates:: When they have, finished their necessary exercises, for during this time, whilst it continues, for two or three years, it is impossible to do any thing else; for fatigue and sleep are enemies to learning. And this too is none of the least of their trials, what each of them appears to be in his exercises.

Glaucon:: Why is it not?

Socrates:: And after this period, let such as formerly have, been selected of the age of twenty receive greater honors than others, and let those pieces of learning which in their youth they learned separately be brought before them in one view, that they may see the relation between the sciences and the nature of real being.

Glaucon:: This learning indeed will alone, remain immoveable in those in whom it obtains.

Socrates:: And this, is the greatest trial for distinguishing between those geniuses which are naturally fitted for learning, and those which are not. He who perceives this relation is a reasoning genius; he who does not, is none.

Glaucon:: I am of the same opinion.

Socrates:: It will then be necessary for you, after you have observed these things, and seen who are most approved in these, persevering in learning, persevering in war, and in the other things established by law, to make choice of such after they exceed thirty years, choosing a-new from those chosen formerly, and advance them to greater honors; and observe them, trying them by the reasoning power, who of them without the help of his eyes, or any other sense, is able to proceed with truth to being itself. And here, friend, is a work of great care.

Glaucon:: For what principally?

Socrates:: Do not you perceive, the evil which at present attends reasoning, how great it is?

Glaucon:: What is it, you mean?

Socrates:: How it is somehow, full of what is contrary to law.

Glaucon:: Greatly so.

Socrates:: Do you imagine then, they suffer some dreadful thing, and will you not forgive them?

Glaucon:: How do you mean?

Socrates:: Just as if, a certain supposititious child were educated in great opulence in a rich and noble family, and amidst many flatterers, and should perceive when grown up to manhood that he is not descended of those who are said to be his parents, but yet should not discover his real parents; can you guess how such an one would be affected both towards his flatterers and towards his supposed parents, both at the time when he knew nothing of the cheat, and at that time, again, when he came to perceive it? Or are you willing to hear me, while I guess at it?

Glaucon:: I am willing.

Socrates:: I conjecture then, that he will pay more honour to his father and mother, and his other supposed relations, than to the flatterers, and that he will less neglect them when they are in any want, and be less apt to do or say any thing amiss to them, and in matters of consequence be less disobedient to them than to those flatterers, during that period in which he knows not the truth.

Glaucon:: It is likely.

Socrates:: But when he perceives the real state of the matter, I conjecture, he will then slacken in his honour and respect for them, and go after the flatterers, and be remarkably more persuaded by them now than formerly, and truly live according to their manner, conversing with them openly. But for that father, and those supposed relations, if he be not of an entirely good natural disposition, he will have no regard.

Glaucon:: You say every thing, as it would happen. But in what manner does this comparison respect our present argument?

Socrates:: In this. We have certain opinions from our childhood concerning just and beautiful, in which we have been educated, as by parents, obeying and honouring them.

Glaucon:: We have.

Socrates:: Are there not likewise other pursuits opposite to these, with pleasures flattering our souls, and drawing towards these. They do not however persuade those who are in any degree moderate, but they honour those their relations, and obey them.

Glaucon:: These things are so.

Socrates:: What now, when to one who is thus affected the question is proposed, What is the beautiful? and when he, answering what he has heard from the law-giver, is refuted by reason; and reason frequently and every way convincing him, reduces him to the opinion, that this is no more beautiful than it is ugly. And in the same manner, as to what is just and good, and whatever else he held in highest esteem, what do you imagine such an one will after this do with regard to these things, as to honouring and observing them?

Glaucon:: Of necessity, he will neither honour nor observe them any more in the same manner as formerly.

Socrates:: When then he no longer deems, these things honorable, and a-kin to him as formerly, and cannot discover those which really are so, is it possible he can readily join himself to any other life than the flattering one?

Glaucon:: It is not possible.

Socrates:: And from being an observer of the law, he shall, I imagine, appear to be a transgressor.

Glaucon:: Of necessity.

Socrates:: Is it not likely then, that those shall be thus affected who in this situation apply to reasoning, and that they should have, as I was just now saying, great forgiveness.

Glaucon:: And pity too.

Socrates:: Whilst you take care then lest this compassionable case befall these of the age of thirty, ought you not by every method to accomplish them in reasoning?

Glaucon:: Certainly.

Socrates:: And is not this one prudent care? that they meddle not with reasonings whilst they are young: for you have not forgot, I imagine, that the youth, when they first meddle with reasonings, abuse them in the way of amusement, whilst they use them always in the way of contradiction. And imitating those who are refuters, they themselves refute others, delighting like whelps in dragging and tearing to pieces, in their reasonings, those always who are near them.

Glaucon:: Extremely so.

Socrates:: And after they have confuted many, and been themselves confuted by many, do they not powerfully and speedily come to hold none of the opinions they held formerly? And by these means they themselves and the whole of philosophy are scandalized to others.

Glaucon:: Most true.

Socrates:: But he who is of a riper age, will not incline to share in such a madness, but will rather imitate him who inclines to reason and inquire after truth, than one who, for the sake of diversion, amuses himself and contradicts; and will both be more modest himself, and render the practice of disputing more honorable instead of being more dishonorable.

Glaucon:: Right.

Socrates:: Were not then all our former remarks rightly made, in the way of precaution, in this point, that the geniuses ought to be decent and grave, to which one shall impart the art of reasoning, and not, as at present, when every common genius, and such as is not at all proper, is admitted to it?

Glaucon:: Certainly.

Socrates:: Will not then the double of the former period suffice one to remain in imbibing the art of reasoning with perseverance and application, and doing nothing else, but in way of counterpart exercising himself in all bodily exercises?

Glaucon:: Do you mean six years, or four?

Socrates:: 'Tis of no consequence; make it five. After this you must make them descend to that cave again, and oblige them to govern both in things relating to war, and such other magistracies as require youth, that they may not fall short of others in experience. And they must be still further tried among these, whether being drawn to every different quarter, they will continue firm, or! whether they will in any measure be drawn aside.

Glaucon:: And for how long a time, do you appoint this?

Socrates:: For fifteen years. And when they are of the age of fifty, such of them as are preserved, and as have excelled in all these things, in actions, and in the sciences, are to be brought to the highest degree, and are to be obliged to direct the beam of their soul towards that which gives light to all; and when they have viewed the good itself, to use it as a model, each of them in their turn, in adorning both the city and private persons, and themselves, all the remainder of their life; occupied for the most part in philosophy, and when their turn comes on them, they toil in political affairs, and take the government, each for the good of the city, performing this office, not as any thing honorable, but as a matter of necessity. And after they have educated others in the same manner still, and left such as resemble themselves to be the guardians of the city, they depart to inhabit the islands of the blest. But the city will publicly erect for them monuments, and offer sacrifices, if the oracle assent, as to superior beings; and if it do not, as to happy and divine men.

Glaucon:: You have, Socrates, like a statuary, made our governors every way perfect.

Socrates:: And our governesses likewise, Glauco. For do not imagine that I have spoken what I have said any more concerning the men, than concerning the women, such of them as are of a sufficient genius.

Glaucon:: Right, if at least they are to share in all things equally with the men, as we explained.

Socrates:: What then, do you agree that, with reference to the city and republic, we have not altogether spoken what can only be considered as wishes, but such things as are indeed difficult, yet possible some way, and in no other way than what has been mentioned, viz., when those who are truly philosophers, whether more of them or a single one, becoming governors in a city, shall despise those present honors, esteeming them illiberal and of no value, but esteeming the right and the honors which come from it above all things, and accounting justice of greatest moment and most absolutely necessary, and ministering to it and increasing it, thoroughly regulate the constitution of their own city?

Glaucon:: How?

Socrates:: As many, of the more advanced in life as have lived ten years in the city, they will send out to the country, and taking their children away from those habits which the domestics have at present, they will educate them in their own manners and laws, which are what we formerly mentioned; and the city and republic we have described being thus established in the speediest and easiest manner, it will both be happy itself, and be of the greatest advantage to that people among whom it is established.

Glaucon:: Very much so indeed. And you seem to me, Socrates, to have told very well how this city shall arise, if it arise at all.

Socrates:: Are not now then, our discourses sufficient both concerning such a city as this, and concerning a man similar to it? For it is also now evident what sort of a man we shall say he ought to be.

Glaucon:: It is evident; and your inquiry seems to me to be at an end.

THE END OF THE SEVENTH BOOK

## THE EIGHTH BOOK

Socrates:: Be it so. These things, Glauco, have now been agreed on—that in this city which is to be established in a perfect manner, the women are to be common, the children common, and likewise the whole of education; and, in like manner, their employments both in peace and war are to be common; and that their kings are to be such as most excel both in philosophy and in the arts of war.

Glaucon:: These things, have been agreed on.

Socrates:: And surely we likewise agreed on these things, that when the govern ours are marching with the soldiers, and come to settle themselves, they shall dwell in such habitations as we formerly mentioned, which have nothing peculiar to any one, but are common to all. And besides these houses, we likewise, if you remember, agreed on what sort of possessions they shall have.

Glaucon:: I remember, that we were of opinion none of them ought to possess any thing as others do at present; but, as wrestlers in war and guardians, they were to receive a reward for their guardianship from others, or an yearly maintenance on these accounts, and were to take care of themselves and the rest of the city.

Socrates:: You say right. But after we have finished this now, let us recollect whence we made this digression, that we may now proceed again in the same way.

Glaucon:: That is no hard matter: for you were mentioning much the same things of the city with those you have done at present, saying that you held such a city to be good, as it was at that time described, and the man to be good who resembles it; whilst yet it seems you are able to describe a better city and a better man. And you said, moreover, that all the others were wrong, if this one was right. Of the other republics, you said, as I remember, there were four species which deserved to be considered, and to have the errors in them and the lawless people in them observed; in order that, when we have beheld the whole of them, and when we have agreed which is the best and which is the worst man, we may inquire whether the best man be the happiest, and the worst the most miserable, or otherwise. And when I asked you which you call the four republics, Polemarchus and Adimantus hereupon interrupted; and you in this manner having taken up the subject are come to this part of the reasoning.

Socrates:: You have recollected, most accurately.

Glaucon:: As a wrestler, now, afford me again the same opportunity; and whilst I ask you the same question, endeavor to answer what you was going to do then.

Socrates:: If indeed I be able.

Glaucon:: And I am truly desirous, for my part, to hear which you call the four republics.

Socrates:: You shall hear that, without difficulty, for they are these I mention, and they have names too. There is that which is commended by many, the Cretan and the Spartan. There is. secondly, that which has a secondary praise, called Oligarchy, a republic full of many evils: and that which is different from this one, and follows next in order, a Democracy; then genuine Tyranny, different from all these, the fourth and last disease of a city. Or have you any other form of a republic belonging to any distinct species? For your little principalities and venal kingdoms, and such like republics, are somehow of a middle kind between these, and one may find of them as many among the barbarians as among the Greeks.

Glaucon:: They are indeed, said to be very many, and very strange ones.

Socrates:: Do you know now, that there is somehow a necessity that there be as many species of men as of republics? Or do you imagine that republics are generated somehow of an oak, or a rock, and not of the manners of those who are in the city, to which, as into a current, all other things likewise are drawn?

Glaucon:: By no means do I imagine, they are generated from any thing but from hence.

Socrates:: If then there be five species of cities, the species of souls in individuals shall be likewise five.

Glaucon:: Why not?

Socrates:: We have already gone over that one which resembles an Aristocracy, which we have rightly pronounced to be both good and just.

Glaucon:: We have so.

Socrates:: Are we now, in the next place, to go over the worse species, the contentious and the ambitious man, who is formed according to the Spartan republic; and then him resembling an Oligarchy; then the Democratic and the Tyrannic, that we may contemplate the most unjust, and set him in opposition to the most just, that our inquiry may be completed; how after all, the most finished justice is in comparison of the most finished injustice, as to the happiness or misery of the possessor: that so we may either follow injustice, being persuaded by Thrasymachus, or justice, yielding to the present reasoning?

Glaucon:: By all means, we must do so.

Socrates:: Shall we then, in the same manner as we began, consider the manners in republics, before we consider them in private persons, as being there more conspicuous? And according to this method the ambitious republic is first to be considered (for I have no other name to call it by, but it may be called either ambitious, or aspiring after power), and along with it we shall consider a man resembling it; afterwards we shall consider an Oligarchy, and a man resembling Oligarchy; and then, again, when we have viewed a Democracy, we shall contemplate a Democratic man; and then in the fourth place, when we come to Tyranny, and contemplate it, and likewise a tyrannic soul, we shall endeavor to become competent judges of what we proposed.

Glaucon:: Both our contemplation and judgment, would in this manner at least be agreeable to reason.

Socrates:: Come then, let us endeavor to tell in what manner the ambitious republic arises out of Aristocracy. Or is not this plain, that every republic changes by means of that part which holds the magistracies, when in this itself there arises sedition; but whilst this agrees with itself, though the state be extremely small, it is impossible to be changed?

Glaucon:: It is so indeed.

Socrates:: How then, Glauco, shall our city be changed, or in what shape shall our allies and rulers fall into sedition with one another, and among themselves? Or are you willing that, like Homer, we invoke the Muses to tell us, “How first sedition rose”? and shall we say, that whilst they talk tragically, playing with us, and rallying us as children, they yet talk seriously and sublimely?

Glaucon:: In what manner?

Socrates:: Somehow thus: It is indeed difficult for a city in this manner constituted to be changed; but as every thing which is generated is liable to corruption, neither will such a constitution as this remain for ever, but be dissolved. And its dissolution is this: Not only the vegetable species, but likewise the animal, has seasons of fertility and sterility of soul as well as of body, when their revolutions complete the periphery of their respective orbits—which are shorter to the shorter lived, and contrariwise to such as are the contrary. And with reference to the fertility and sterility of our race, although they are wise, these you have educated to be governors of cities, yet will they not, for all that, by their reason joined with sensation, observe the proper seasons, but overlook them, and sometimes, generate children when they ought not. Now the period for a divine generation is that which the perfect number comprehends, and that for a human generation is that whole geometrical number which is of such an influence as to regulate the better and the worse births—of which when our governors, being ignorant, join our couples together unseasonably, the children shall neither be of a good genius nor fortunate. And though the former governors-shall install the best of them in the office, they nevertheless being unworthy of it, and coming to have the power their fathers had, will begin to be negligent of us, in their guardianship in the first place, esteeming music less than they ought, and in the next place the exercises. Hence our youth shall become less acquainted with music, and the guardians which shall be appointed from among these shall not be altogether expert guardians to distinguish, according to Hesiod and us, the several species of geniuses.—the golden, the silver, the brazen and the iron; but whilst iron is mixed with silver and brass with gold, dissimilitude arises and unharmonious irregularity. And when these arise, wherever they prevail they perpetually" generate war and enmity. To such a race now of men as this, we must suppose them to say that sedition belongs whenever it happens to rise.

Glaucon:: And we shall say that they have answered justly at least.

Socrates:: And of necessity, for they are muses.

Glaucon:: What then, do the muses say next?

Socrates:: When sedition is risen, two of the species of geniuses, the iron and the brazen, will be carried, after making gain, and the acquisition of lands and houses, of gold and silver. But the golden and the silver geniuses, as they are not in want, but naturally rich, will lead the soul towards virtue and the original constitution; yet as they live in a violent manner, and draw contrary to one another, they make an agreement to divide their lands and houses between them, and to dwell apart one from another; and then enslaving those who were formerly kept by them as freemen, as friends, and tutors, they keep them as domestics and slaves, for service in war and for their own protection.

Glaucon:: This revolution, seems to me to arise in such a manner.

Socrates:: Shall not then this republic, be somewhat in the middle between Aristocracy and Oligarchy?

Glaucon:: Certainly.

Socrates:: And the change shall happen in this manner, and on this change what sort of life shall it lead? Or is it not plain that in some things it shall imitate the former republic, and in others Oligarchy, as being in the middle of the two, and shall likewise have somewhat peculiar to itself?

Glaucon:: Just so.

Socrates:: Shall they not then, in honouring their rulers, and in this that their military abstain from agriculture, from mechanical and other gainful employments, in their establishing common meals, and in studying both gymnastic exercises and contests of war—in all these things shall they not imitate the former republic?

Glaucon:: Yes.

Socrates:: But in this, that they are afraid to bring wise men into the magistracy, as having no longer any such as are truly simple and inflexible, but such as are of a mixed kind; and in that they incline for those who are more forward and rough, whose natural genius is rather fitted for war than peace, and in that they esteem tricks and stratagems, and spend the whole of their time in continual war—in all these respects shall it not have many things peculiar to itself?

Glaucon:: Yes.

Socrates:: And such as these, shall be desirous of wealth, as those who live in Oligarchies, and in an illiberal manner value gold and silver hoarded up, as having repositories of their own, and domestic treasuries, where they hoard them up and hide them, and have their houses enclosed about, where, as in nests altogether peculiar, they squander every thing profusely, together with their wives and such others as they fancy.

Glaucon:: Most true.

Socrates:: And will they not likewise be sparing of their substance, as valuing it highly, and acquiring it not in an open manner, but love to squander the substance of others, through their dissoluteness and secretly indulging their pleasures. They will likewise fly from the law, as children from their father, who have been educated not by persuasion but by force, having neglected the true muse, which is accompanied with reason and philosophy, and honored exercise more than music.

Glaucon:: You describe entirely, a mixed republic, compounded of good and ill.

Socrates:: It is indeed mixed. One thing is most remarkable in it, from the prevalence of the forward temper, contention, and ambition.

Glaucon:: Exceedingly.

Socrates:: Does not then, this republic arise in this manner? And is it not of such a kind as this, as far as the form of a republic can be described in words where there is not perfect accuracy, as it suffices us to contemplate in description likewise the most just and the most unjust man, and it were a work of prodigious length to go over all republics, and all the various manners of men, without omitting any thing?

Glaucon:: Very right.

Socrates:: What now shall the man be correspondent to this republic? how shall be he formed, and of what kind?

Adeimantus:: I imagine, he shall be somewhat like Glauco here, at least in a love of contention.

Socrates:: Perhaps, as to this particular; but in other respects he does not seem to me to have a natural resemblance of him.

Adeimantus:: In what?

Socrates:: He must necessarily, be more arrogant, and unapt to music, but fond of it, and fond to hear oratory, but not at all an orator. And such an one will be rough towards some slaves, without despising them, as he does who is sufficiently educated; he will be mild towards such as are free, and extremely submissive to governors; fond of being in the magistracy and of dignity, reckoning that neither eloquence, nor any such thing, should entitle to magistracy, but political management and military performances, being a lover of exercises and of hunting.

Adeimantus:: This indeed, is the temper of that republic.

Socrates:: And shall not such an one, despise money whilst he is young, but the older he grows, the more he will always value it, because he partakes of the covetous natural temper, and is not sincerely affected towards virtue, because destitute of the best guardian.

Adeimantus:: Which?

Socrates:: Reason, accompanied with music, which, being the alone inbred preservative of virtue, dwells with the possessor through the whole of life.

Adeimantus:: You say well.

Socrates:: And surely at least such an ambitious youth, resembles such a city.

Adeimantus:: Certainly.

Socrates:: And such an one, is formed, somehow, in this manner. He happens sometimes to be the young son of a worthy father, who dwells in an ill regulated city, and who shuns honors and magistracies, and law-suits, and all such public business, and wants to be neglected in obscurity, in order that he may have no trouble.

Adeimantus:: In what manner then, is he formed?

Socrates:: When first of all, he hears his mother venting her indignation, because her husband is not in the magistracy, and complaining that she is on this account neglected among other women, and that she observes him not extremely attentive to the making of money, not fighting nor scolding privately nor publicly in courts of justice; but behaving on all these occasions indolently, and perceiving him always taken up about himself, and treating her neither with extreme respect nor contempt—upon all these accounts, being filled with indignation, she tells her son that his father is unmanly and extremely remiss, and all other such things as wives are wont to cant over concerning such husbands.

Adeimantus:: They are very many truly, and very much in their spirit.

Socrates:: And you know, that the domestics likewise of such families, such of them as appear good-natured, sometimes privately say the same things to the son; and if they see any one either owing money, whom the father does not sue at law, or in any other way doing injustice, they exhort him to punish all such persons when he comes to be a man, and to be more of a man than his father. And when he goes abroad he hears other such like things. And he sees that such in the city as mind their own affairs are called simple, and held in little esteem, and that such as mind not their affairs are both honored and commended. The young man, now hearing and seeing all these things, and then again hearing the speeches of his father, and observing his pursuits in a near view, in comparison with those of others, being drawn by both these, his father watering and increasing the rational part in his soul, and these others the concupiscible and irascible, and being naturally no bad man, but spoiled by the bad conversations of others, he is brought to a mean between the two, and delivers up the government within himself to a middle power, that which is fond of contention and irascible, and so he becomes a haughty and ambitious man.

Adeimantus:: You seem, to have accurately explained the formation of such an one.

Socrates:: We have now then, the second republic and the second man.

Adeimantus:: We have.

Socrates:: Shall we not after this say with Aeschylus;

"O'er different cities din'rent men are set"?

Or, rather, according to our plan, shall we first establish the cities?

Adeimantus:: By all means so.

Socrates:: It would be Oligarchy then, I imagine, which succeeds this republic.

Adeimantus:: But what constitution, is it you call Oligarchy?

Socrates:: That republic, which is founded on men’s valuations, in which the rich bear rule, and the poor have no share in the government.

Adeimantus:: I understand.

Socrates:: Must we not tell, first, how the change is made from the ambitious republic to the Oligarchy?

Adeimantus:: We must.

Socrates:: And surely at least how this change is made, is manifest even to the blind.

Adeimantus:: How?

Socrates:: That treasury, which every one has filled with gold destroys such a republic; for first of all they find out for themselves methods of expense, and to this purpose strain the laws, both they and their wives disobeying them.

Adeimantus:: That is likely.

Socrates:: And afterwards, as I imagine, one observing another, and coming to rival one another, the generality are rendered of this kind.

Adeimantus:: It is likely.

Socrates:: And from hence then, proceeding still to a greater desire of making money, the more honorable they account this to be, the more will virtue be thought dishonorable. Or is not virtue so different from wealth, that, if each of them be placed in the opposite arm of a balance, they always weigh opposite to each other?

Adeimantus:: Entirely so.

Socrates:: But whilst wealth and the wealthy are held in honour in the city, both virtue and the good must be more dishonored.

Adeimantus:: It is plain.

Socrates:: And what is honored is always pursued, and what is dishonored is neglected.

Adeimantus:: Just so.

Socrates:: Instead then of contentious and ambitious men, they will at last become lovers of gain and of wealth. The rich, on the one hand, they both praise and admire, and bring into the magistracy, but the poor man they despise?

Adeimantus:: Certainly.

Socrates:: And do not they then make laws, marking out the boundary of the Oligarchic constitution, and regulating the quantity of Oligarchic power according to the quantity of wealth, more to the more wealthy, and less to the less, intimating that he who has not the valuation settled by law is to have no share in the government? And these things they transact violently, by force of arms, or establish such a republic after they have previously stricken them with terror. Is it not thus?

Adeimantus:: Thus indeed.

Socrates:: This then, to say in a word, is the constitution.

Adeimantus:: It is. But what now is the nature of the republic, and what are the faults we ascribed to it?

Socrates:: First of all, this very thing, the constitution itself, what think you of this? For consider, if one should in this manner appoint pilots of ships according to their valuations, but never entrust one with a poor man, though better skilled in piloting?

Adeimantus:: They would, make very bad navigation.

Socrates:: And is it not in the same manner with reference to any other thing, or any government whatever?

Adeimantus:: I imagine so.

Socrates:: Is it so in all cases but in a city? or is it so with reference to a city likewise?

Adeimantus:: There most especially, in as much as it is the most difficult and the greatest government.

Socrates:: Oligarchy then would seem to have this one, which is so great a fault.

Adeimantus:: It appears so.

Socrates:: But what, is this anything less than it?

Adeimantus:: What?

Socrates:: That such a city is not one, but of necessity two; one consisting of the poor, and the other of the rich, dwelling in one place, and always plotting against one another.

Adeimantus:: Truly, it is no way less.

Socrates:: But surely neither is this a handsome thing, to be incapable to wage any war, because of the necessity they are under either of employing the armed multitude, and of dreading them more than the enemy themselves, or not employing them, to appear in battle itself truly Oligarchic, and at the same time to be unwilling to advance money for the public service, through a natural disposition of covetousness.

Adeimantus:: This is not handsome.

Socrates:: But what, with reference to what we long ago condemned, the engaging in a multiplicity of different things the same persons, at the same time, minding in such a republic, agriculture, lucrative employments, and military affairs, does this appear to be right?

Adeimantus:: Not in any degree.

Socrates:: But see now whether this form of republic be the first which introduces this greatest of all evils.

Adeimantus:: What is that?

Socrates:: That one shall be allowed to dispose of the whole of his effects, and another to purchase them from him, and the seller be allowed to dwell in the city, whilst he belongs to no one class in the city, and is neither called a maker of money, nor mechanic, nor horse-man, nor foot-soldier, but poor and destitute.

Adeimantus:: It is the first.

Socrates:: But yet such an one shall not be prohibited in Oligarchic governments, for otherwise some of them should not be over-rich, and others altogether poor.

Adeimantus:: Right.

Socrates:: But consider this likewise: When such a rich man as this is spends of his substance, was it of any more advantage to the city with reference to the purposes we now mentioned? or did he appear to be indeed one of the magistrates, but was in truth neither magistrate of the city, nor servant to it, but a waster of substance?

Adeimantus:: So he appeared.

Socrates:: He was nothing but a waster. Are you willing then, that we say of him, that as when a drone is in a bee-cell it is the disease of the swarm, in like manner such an one, when a drone in his house, it is the disease of the city?

Adeimantus:: Entirely so, Socrates.

Socrates:: And has not God, Adimantus, made all the winged drones without any sting? but these with feet, some of them without stings, and some of them with dreadful stings? And of those who are without stings are they who continue poor to old age; and of those who have stings are all these who are called mischievous.

Adeimantus:: Most true.

Socrates:: It is plain then, that in a city where you observe there are poor, there are somewhere in that place concealed thieves and purse-cutters, and sacrilegious persons, and workers of all other such evils.

Adeimantus:: It is plain.

Socrates:: What then? Do not you perceive poor people in cities under Oligarchic government?

Adeimantus:: They are almost all so, except the governors.

Socrates:: And do we not imagine, that there are many mischievous persons in them with stings, whom the magistracy, by diligence and by force, restrains?

Adeimantus:: We imagine so indeed.

Socrates:: And shall we not say, that through want of education, through bad nurture, and a corrupt constitution of state, such sort of persons are there produced?

Adeimantus:: We shall say so.

Socrates:: Is not then the city which is under Oligarchy of such a kind as this, and has it not such evils as these, and probably more too?

Adeimantus:: It is nearly so.

Socrates:: We have now finished, this republic likewise, which they call Oligarchy, having its governors according to valuation. And let us now consider the man who resembles it, in what manner he arises, and what sort of man he is.

Adeimantus:: By all means.

Socrates:: And is not the change from that ambitious one, to the Oligarchic, chiefly in this manner?

Adeimantus:: How?

Socrates:: When such a one has a son, first of all, he both emulates his father, and follows his steps; afterwards he sees him, on a sudden, dashed on the city, as on a rock, and wasting both his substance and himself, either in the office of a general, or some other principal magistracy; then falling into courts of justice, destroyed by sycophants, either put to death, or striped of his dignities, disgraced, and losing all his substance.

Adeimantus:: It is likely.

Socrates:: When he has seen and suffered those things, friend, and has lost his substance, he instantly, in a terror, pushes headlong from the throne of his soul that ambitious and forward disposition, and being humbled by, his poverty, turns to the making of money, lives meanly and sparingly, and applying to work, scrapes together substance. Or do you not imagine that such a man will then seat in that throne the covetous and avaricious disposition, and make it a mighty king within himself, decked out with Persian crowns, and bracelets, and scepters?

Adeimantus:: I imagine so.

Socrates:: But he, I imagine, having placed both the rational and the ambitious disposition low on the ground, on either side, and having enslaved them under it, the one he allows to reason on nothing, nor ever to inquire but in what way lesser substance shall be made greater; and the other, again, he allows to admire and honour nothing but riches and rich people, and to receive honour on no other account but the acquisition of money, or whatever conduces towards it.

Adeimantus:: There is no other change, of an ambitious youth to a covetous one so sudden and so powerful as this.

Socrates:: Is not this then, the Oligarchic man?

Adeimantus:: And the change into such an one is from a man resembling that republic from which the Oligarchic republic arises.

Socrates:: Let us consider now if he any way resembles it.

Adeimantus:: Let us consider.

Socrates:: Does he not, in the first place, resemble it in valuing money above all things?

Adeimantus:: Why, does he not?

Socrates:: And surely at least in being sparing and laborious, satisfying only his necessary desires, and not allowing of any other expenses, but subduing the other desires as foolish.

Adeimantus:: Certainly.

Socrates:: And being, an emaciated man, and making gain of every thing, a hoarding-up person, such as the multitude extols—would not this be the man who resembles such a republic?

Adeimantus:: It appears so to me. Riches then must be most valued both by the city and by such a man.

Socrates:: For I do not imagine, that such a man has applied his mind to education.

Adeimantus:: I do not imagine he has, for he would not have taken a blind one to be the leader of his life.

Socrates:: But farther still, consider this attentively: shall we not say that there are in him, from the want of education, the desires of the drone, some of them beggarly, and some of them mischievous, forcibly kept in by some other desire?

Adeimantus:: Entirely so.

Socrates:: Do you know then, where you will best observe their wickedness?

Adeimantus:: Where?

Socrates:: In their tutelages of orphans, or in whatever else of this kind comes in their way, where they have it much in their power to do injustice.

Adeimantus:: True.

Socrates:: | And is not this now manifest, that in every other commerce of life, wherever such an one acts so as to be approved, appearing to be just, and by a certain moderate behavior restrains the other wrong desires within him, he does so, not from any persuasion that it is not better to indulge them, nor from sober reason, but from necessity and fear, trembling for the rest of his substance.

Adeimantus:: Entirely so.

Socrates:: And truly, friend, you shall find in the most of them desires partaking of the nature of the drone, where there is occasion to spend the things of others.

Adeimantus:: Very much so.

Socrates:: Such a one as this, then, will not be without sedition within himself, nor be one, but a kind of double man. He will, however, have for the most part desires governing other desires, the better governing the worse.

Adeimantus:: It is so.

Socrates:: And on these accounts such a one, as I imagine, will be more decent than many others, but the true virtue of a harmonized and consistent soul would far escape him.

Adeimantus:: It appears so to me.

Socrates:: And the parsimonious man will, in private life, be but a poor rival for any victory, or in any contest of the honorable kind. And being unwilling, for the sake of good reputation, or for any such contests, to spend his substance, being afraid to waken up expensive desires, or any alliance or contest of this kind, fighting with a small part of his forces in an Oligarchic manner, he is generally defeated, and makes rich.

Adeimantus:: Very true.

Socrates:: Do we then yet hesitate, to rank the covetous and parsimonious man as most of all resembling the city under Oligarchic government?

Adeimantus:: By no means.

Socrates:: Democracy now, as seems, is next to be considered, in what manner it arises, and what kind of man it produces when arisen; that understanding the nature of such a man, we may bring him to a trial.

Adeimantus:: We shall in this method, proceed in a consistency with ourselves.

Socrates:: Is not, the change from Oligarchy to Democracy produced in some such way as this, through the insatiable desire of the proposed good, viz., the desire of becoming as rich as possible?

Adeimantus:: How now?

Socrates:: As those who are governors in it govern on account of their possessing great riches, they will be unwilling, I imagine, to restrain by law such of the youth as are dissolute from having the liberty of squandering and wasting their substance; that so, by purchasing the substance of such persons, and lending them on usury, they may still become both richer, and be held in greater honour.

Adeimantus:: They will be more unwilling than any other.

Socrates:: And is not this already manifest in the city, that it is impossible for the citizens to hold riches in esteem, and at the same time sufficiently to possess temperance, but either the one or the other must of necessity be neglected?

Adeimantus:: It is abundantly plain.

Socrates:: But whilst in Oligarchies they neglect education, and suffer the youth to grow licentious, they lay sometimes under a necessity of becoming poor such as are of no ungenerous disposition.

Adeimantus:: Very much so.

Socrates:: And these, I imagine, sit in the city, fitted both with slings and with armor, some of them in debt, others in contempt, others in both, hating and conspiring against those who possess their substance, and others likewise, being desirous of a change.

Adeimantus:: These things are so.

Socrates:: But the money-catchers, still brooding over it, and not seeming to observe these; but wherever they see any of the rest giving way, they wound them by throwing money into their hands, and drawing to themselves exorbitant usury, fill the city with plenty of drones and of poor.

Adeimantus:: How can there be, but great plenty?

Socrates:: Nor yet, when so great an evil is burning in the city, are they willing to extinguish it, not even by that method, restraining any one from spending his substance at pleasure, nor yet to take that method by which, according to the second law, such disorder might be removed.

Adeimantus:: According to which?

Socrates:: According to that which, after that other, is secondary, obliging the citizens to apply to virtue. For if one should enjoin them to trade a great deal in the way of voluntary commerce, and upon their own hazard, they should in a less shameful way make money in the city, and likewise less of those evils we have now mentioned should arise in it.

Adeimantus:: Much less.

Socrates:: But at present, by means of all these things, the governors render the governed of this kind. And do they not render both themselves and all belonging to them, and the youth likewise, luxurious and idle with respect to all the exercises of body and of mind, and effeminate in bearing both pleasures and pains, and likewise indolent?

Adeimantus:: What else?

Socrates:: As to themselves, they neglect every thing but the making of money, and make no more account of virtue than the poor do.

Adeimantus:: They do not indeed.

Socrates:: After they are trained up in this manner, when these governors and their subjects meet together, either on the road in their journeying, or in any other meetings, either at public shows or military marches, either when fellow-sailors or fellow-soldiers, or when they see one another in common dangers, by no means are the poor in these cases contemned by the rich; but very often a robust fellow, poor and sun-burnt, when he has his rank in battle beside a rich man bred up in the shade, and swollen with a great deal of adventitious flesh, and sees him panting for breath and in agony, do not you imagine that he thinks it is through their own fault that such fellows grow rich, and that they say to one another, when they meet in private, that our rich men are good for nothing at all?

Adeimantus:: I know very well, that they do so.

Socrates:: For as a diseased body needs but the smallest shock from without to render it sickly, and sometimes without any impression from without is in sedition with itself, shall not in like manner a city resembling it in these things, on the smallest occasion from without, when either the one party makes an alliance with the Oligarchic, or the other with the Democratic, be sickly and fight with itself, and sometimes, without these things from abroad, be in sedition?

Adeimantus:: And extremely so.

Socrates:: A Democracy then, as I imagine, arises when the poor, prevailing over the rich, kill some and banish others, and share the places in the republic and the magistracies equally among the remainder; and for the most part the magistracies are disposed in it by lot.

Adeimantus:: This, truly, is the establishment of a Democracy, whether it arise by force of arms, or through others withdrawing themselves through fear.

Socrates:: In what manner now, do these live, and what sort of a republic is this? for it is plain that a man of this kind shall appear some Democratic one.

Adeimantus:: It is plain.

Socrates:: Is not then the city, in the first place, full of all freedom of action, and of speech, and of liberty, to do in it what any one inclines?

Adeimantus:: So, truly, it is said at least.

Socrates:: And wherever there is liberty, it is plain that every one will regulate his own method of life in whatever way he pleases.

Adeimantus:: It is plain.

Socrates:: And I imagine that, in such a republic most especially, there would arise men of all kinds.

Adeimantus:: How can it be otherwise?

Socrates:: This, seems to be the finest of all republics. As a variegated robe, diversified with all kinds of flowers, so this republic, variegated with all sorts of manners, appears the finest.

Adeimantus:: What else?

Socrates:: And it is likely, that the multitude judge this republic to be the best, like children and women gazing at variegated things.

Adeimantus:: Very likely.

Socrates:: And it is very proper at least, happy friend, to search for a republic in such a state as this.

Adeimantus:: How now?

Socrates:: Because it contains all kinds of republics on account of liberty; and it appears necessary for any one who wants to constitute a city, as we do at present, to come to a Democratic city, as to a general fair of republics, and choose that form which he fancies.

Adeimantus:: It is likely indeed, he should not be in want of models.

Socrates:: But what now, is not this a divine and sweet manner of life for the present. To be under no necessity in such a city to govern, not though you were able to govern, nor yet to be subject unless you incline, nor to be engaged in war when others are, nor to live in peace when others do so unless you be desirous of peace; and though there be a law restraining you from governing or administering justice, to govern, nevertheless, and administer justice if you incline.

Adeimantus:: It is likely, it is pleasant for the present at least.

Socrates:: But what now, is not the meekness of some of those who are condemned very curious? Or have you not as yet observed, in such a republic, men condemned to death or banishment, yet nevertheless continuing still, and walking up and down openly, and as if no one minded or observed him, the condemned man returns like a hero?

Adeimantus:: I have observed very many.

Socrates:: But is not this indulgence of the city very generous, and not at all to say the small regard, but the contempt it shows for all those things we celebrated so much when we settled our city, how that unless one had an extraordinary genius, he never would become a good man, unless when a child he were instantly educated in things handsome, and should diligently apply to all these things. How magnanimously it despises all these things, and does not regard from what sort of pursuits one comes to act in political affairs, but honors him if he only say he is well affected towards the multitude?

Adeimantus:: This contempt, is very generous indeed.

Socrates:: These now, and such things as are a-kin to these, are to be found in a Democracy, and it would be, as appears, a pleasant sort of republic, anarchical and variegated, distributing a certain equality to all alike without distinction.

Adeimantus:: What you say, is quite manifest.

Socrates:: Consider now, what sort of man such an one is in private, or, first, must we not consider as we did with respect to the republic in what manner he arises?

Adeimantus:: Yes.

Socrates:: And does he not in this manner arise from that parsimonious one, who was under the Oligarchy as a son, I imagine, trained up by his father in his manners?

Adeimantus:: Why not?

Socrates:: Such a one by force governs his own pleasures, these of them which are expensive, and tend not towards making money, and which are called unnecessary ones.

Adeimantus:: It is plain.

Socrates:: Are you willing then, that we may not reason in the dark, first to determine what desires are necessary, and what are not?

Adeimantus:: I am content.

Socrates:: May not such be justly called necessary, which we are not able to remove, and such as when gratified are of advantage to us; for both these kinds our nature is under a necessity to pursue, is it not?

Adeimantus:: Very strongly.

Socrates:: This then we shall justly say makes the necessary part in our desires.

Adeimantus:: Justly.

Socrates:: But what now? Such desires as one may banish, if he study it from his youth, and such as whilst they remain do no good, if we say of these that they are not necessary, shall we not say right?

Adeimantus:: Right indeed.

Socrates:: Let us choose out a sample of each of them, that we may understand by an example what they are.

Adeimantus:: It is proper.

Socrates:: Is not the desire of eating, so far as is conducive towards health and good habit of body, and the desire of food and victuals, may it not be considered as of the necessary kind?

Adeimantus:: I imagine so.

Socrates:: The desire of food at least is indeed necessary on both accounts, as meat is advantageous, and as the want of it must put an end to life altogether.

Adeimantus:: It is.

Socrates:: And the desire of victuals is likewise necessary if it any how contribute any thing towards the good habit of the body.

Adeimantus:: Certainly.

Socrates:: But what, such desire even of these things as goes beyond these purposes, or such desire as respects other meats than these, and yet is capable of being curbed in youth, and by being disciplined, to be removed from many things, and which is hurtful both to the body, and hurtful to the soul with reference to her attaining wisdom and temperance, may not such desire be rightly called unnecessary.

Adeimantus:: Most rightly indeed.

Socrates:: And may we not call these expensive likewise, and the others frugal, as they are conducive towards the actions of life?

Adeimantus:: Why not?

Socrates:: In the same manner, surely shall we say of venereal desires and the others.

Adeimantus:: In the same manner.

Socrates:: And did we not by him whom we just now denominated the drone, mean one who was full of such desires and pleasures, and was governed by the unnecessary desires, but that he who was under the necessary ones was the parsimonious and Oligarchic?

Adeimantus:: Without doubt.

Socrates:: Let us again mention, how the Democratic arises from the Oligarchic, and to me he appears to arise in great measure thus.

Adeimantus:: How?

Socrates:: When a young man, bred up, as we now mentioned, without proper instruction, and in a parsimonious manner, comes to taste the honey of the drones, and associates with those vehement and terrible creatures who are able to procure all sorts of pleasures, and every way diversified, and from every quarter, thence imagine there is somehow the beginning of a change in him from the Oligarchic to the Democratic.

Adeimantus:: There is great necessity for it.

Socrates:: And as the city was changed by the assistance of an alliance from without with one party of it with which it was a-kin, shall not the youth be changed in the same manner, by the assistance of one species of desires from without to another within him which resembles it, and is a-kin to it?

Adeimantus:: By all means.

Socrates:: And I imagine at least, if by any alliance there be given counter-assistance to the Oligarchic party within him, either any how by his father, or by the others of the family, both admonishing and upbraiding him, then truly arises sedition, and opposition, and a fight within him with himself.

Adeimantus:: Why does there not?

Socrates:: And sometimes indeed, I imagine, the Democratic party yields to the Oligarchic, and some of the desires are destroyed, some of them retire, on the rise of a certain modesty in the soul of the youth, and he is again rendered somewhat decent.

Adeimantus:: It happens sometimes.

Socrates:: And again, I imagine, that when some desires retire, there are others a-kin to them which grow up, and through inattention to the father's instruction, become both many and powerful.

Adeimantus:: It is wont, to happen so.

Socrates:: And do they not draw towards intimacies among themselves, and meeting privately together, generate a multitude?

Adeimantus:: What else?

Socrates:: And at length, I imagine, they seize the citadel of the soul of the youth, finding it evacuated both of noble learning and pursuits and of true reasoning, which truly are the best watchmen and guardians in the understandings of men beloved of the Gods.

Adeimantus:: Very much so.

Socrates:: And then indeed, false and boasting reasonings and opinions, rushing up in their stead, possess the same place in such a one.

Adeimantus:: Strongly so.

Socrates:: And does he not now again, on coming among those Lotophagi, dwell with them openly? And if any assistance come from his friends to the parsimonious part of his soul, those boasting reasonings shutting the gates of the royal wall against it, neither give entrance to this alliance, nor to the ambassadorial admonitions of private old men; but fighting against these, hold the government themselves. And denominating modesty to be stupidity, they thrust it out disgracefully as a fugitive, and temperance they call unmanliness, and abusing it most shamefully, thrust it out; and persuading themselves that moderation, and decent expense, are no other than rusticity and illiberality, they expel them their territories, with many other and unprofitable desires.

Adeimantus:: This they do mightily.

Socrates:: And after that they have emptied and cleared of all these desires the soul that is held down by them, and is initiated in all the great mysteries, they next lead in, with encomiums and applauses, insolence, and anarchy, and luxury, and impudence, shining with a great retinue, and crowned with crowns; insolence, they denominate Education, anarchy they call Liberty, luxury thy call Magnificence, and impudence they call Manhood. Is it not, somehow in this manner that a youth changes from one bred up with the necessary desires into the licentiousness and remissness of the unnecessary and unprofitable pleasures?

Adeimantus:: And very plainly so.

Socrates:: And such a one, I imagine, after this leads his life, expending his substance, his labor, and his time no more on the necessary than the unnecessary pleasures; and if he be fortunate, and be not excessively debauched, when he is somewhat more advanced in years, and when the great crowd of desires is over, he admits a part of those which were thrust out, and does not deliver himself wholly up to such as had intruded, but regulates his pleasures by a sort of equality, and so lives delivering up the government of himself to every incidental desire as it chances, till it be satisfied, and then to another, undervaluing none of them, but indulging them all alike.

Adeimantus:: Entirely so.

Socrates:: And such a one, does not listen to true reasoning, nor admit it into the citadel, if any should tell him that there are some pleasures of the worthy and the good desires, and others of the ill ones; and that he ought to pursue and honour those, but to chastise and subject these But, in all these cases, he dissents, and says that they are all alike, and ought to be held in equal honor.

Adeimantus:: Whoever is thus affected, acts in this manner very powerfully.

Socrates:: And does he not live, from day to day, indulging after this manner every incidental desire—

sometimes indulging himself in drinking strong drink, and in music, sometimes drinking water, and extenuating himself by abstinence; then again minding the exercises—sometimes too he is quite indolent and careless about every thing; then again he applies as it were to philosophy. Many times he acts the part of a politician, and in a desultory manner says and does whatever happens. If at any time he affects to imitate any of the military, thither he is carried; or of the mercantile, then again hither. Nor is his life regulated by any order, or any necessity, but deeming this sort of life pleasant, and free, and happy, he follows it throughout?

Adeimantus:: You have entirely, gone through the life of one who puts all laws whatever on a level.

Socrates:: I imagine at least, that he is multiform, and full of very different manners; and that, like the city, he is fine, and variegated, and that very many men and women would desire to imitate his life, as he has in him a great many patterns of republics and of manners.

Adeimantus:: He has so.

Socrates:: What now? Shall such a man as this be ranked as resembling a Democracy, as he may truly be called Democratic?

Adeimantus:: Let him be ranked.

Socrates:: But it yet remains that we go over, the most excellent republic, and the most excellent man, viz., Tyranny and the Tyrant.

Adeimantus:: It does.

Socrates:: Come then, friend companion, in what manner does Tyranny arise? for it is almost plain that the change is from Democracy.

Adeimantus:: It is plain.

Socrates:: Does not Tyranny arise in the same manner from Democracy, as Democracy does from Oligarchy?

Adeimantus:: How?

Socrates:: What did Oligarchy, propose as its good, and according to what was it constituted? It was with a view to become extremely rich, was it not?

Adeimantus:: Yes.

Socrates:: An insatiable desire then of riches, and a neglect of other things, through attention to making money, destroys it.

Adeimantus:: True.

Socrates:: And with reference to that which Democracy denominated good, an insatiable thirst of it destroys it likewise?

Adeimantus:: But what is it you say it denominates good?

Socrates:: Liberty. For this you are told is most beautiful in a city which is under a Democracy, and that for the sake of liberty any one who is naturally of a free spirit chooses to live in it alone.

Adeimantus:: This word, Liberty, is indeed often mentioned.

Socrates:: Does not then, as I was going to say, the insatiable desire of this, and the neglect of other things, change even this republic, and prepare it to stand in need of a tyrant?

Adeimantus:: How.

Socrates:: When a city, is under a Democracy, and is thirsting after liberty, and happens to have bad cup-bearers appointed it, and grows drunk with an unmixed draught of it beyond what is necessary, it punishes even the governors if they will not be entirely tame and afford a deal of liberty, accusing them as corrupted and leaning towards Oligarchy.

Adeimantus:: That they do.

Socrates:: But such as are obedient to magistrates, they abuse, as willing slaves and good for nothing, and both in private and in public commend and honour magistrates who resemble subjects, and subjects who resemble magistrates. Must they not in such a city, of necessity, go to the highest pitch of liberty?

Adeimantus:: Why must they not?

Socrates:: And must not this inbred anarchy, friend, descend into private families, and in the end reach even the brutes?

Adeimantus:: How, do we say such a thing as this?

Socrates:: Just as if, a father should accustom himself to resemble a child, and to be afraid of his sons, and the son accustom himself to resemble his father, and neither to revere nor to stand in awe of his parents, that so indeed he may be free, as if a stranger were to be equaled with a citizen, and a citizen with a stranger, and in like manner a foreigner.

Adeimantus:: It is just so.

Socrates:: These things, and other little things of a like nature happen. The teacher in such a city fears and flatters the scholars, and the scholars despise their teachers and their tutors in like manner. And in general the youth resemble the more advanced in years, and rival it with them both in words and deeds: and the old men sitting down with the young, are full of merriment and pleasantry, mimicking the youth, that they may not appear to be morose and despotic.

Adeimantus:: It is entirely so.

Socrates:: But that highest pitch, of the liberty of the multitude, how great it is in such a city as this, when the men and women-slaves are no less free than those who purchase them, and how great an equality and liberty the wives have with their husbands, and husbands with their wives, we have almost forgotten to mention.

Adeimantus:: Shall we not then, according to Aeschylus, say whatever now comes into our mouth.

Socrates:: By all means; and accordingly I do say in this manner; with reference even to the brute creatures, such of them as are under men’s discipline, how much more free they are in such a city, one who has not experience of it will not easily believe. For readily even the puppies, according to the proverb, resemble their mistresses; and the horses and asses are accustomed to go freely and gracefully, marching up against any one they meet on the road unless he give way: and many other such things happen full, in like manner of liberty.

Adeimantus:: You tell me, my dream, for I have often met with this when going into the country.

Socrates:: But do you observe, what is the sum of all those things collected together? How delicate it makes the soul of the citizens, in so much that if any one bring near to them any thing of slavery, they are filled with indignation and cannot endure it. And do you know, that at length they regard not even the laws, written or unwritten, that no one whatever by any manner of means may become their master.

Adeimantus:: I know it well.

Socrates:: This now, friend, is that government, so beautiful and youthful, whence Tyranny springs, as it appears to me.

Adeimantus:: Youthful, truly!

Socrates:: But what comes after this? The same thing, which springing up as a disease in Oligarchy, destroyed it, the same arising here in a greater and more powerful manner, through its licentiousness, enslaves the Democracy. And in reality, the doing any thing to excess is wont to occasion a mighty change to the reverse: thus in seasons, in vegetable and in animal bodies, and in republics as much as any.

Adeimantus:: It is probable.

Socrates:: And excessive liberty seems to change into nothing else but excessive slavery, both with a private person and a city.

Adeimantus:: It is probable indeed.

Socrates:: It is probable then, that out of no other republic is Tyranny constituted but out of Democracy, out of the most excessive liberty I imagine the greatest and most savage slavery.

Adeimantus:: There is indeed, reason for it.

Socrates:: But this I imagine, was not what you was asking. But what is that disease which enslaves Democracy, resembling that which destroys Oligarchy?

Adeimantus:: You say true.

Socrates:: That then, I called the race of idle and profuse men, one part of which was more brave and were leaders, the other more cowardly, and followed. And we compared them to drones, some to such as have stings, others to such as have none.

Adeimantus:: And rightly.

Socrates:: These two now, springing up in any republic, raise disturbance, as phlegm and bile in a natural body. And it behooves a wise physician and law-giver of a city no less than a wise bee-master, to be afraid of these, at a great distance principally, that they never get in; but if they have gotten in, that they be in the speediest manner possible cut off, together with their very cells.

Adeimantus:: Yes, truly, by all means.

Socrates:: Let us take it then, in this manner, that we may see more distinctly what we want.

Adeimantus:: In what manner?

Socrates:: Let us divide in our reasoning a Democratic city into three, as it really is; for one such species as the above grows through licentiousness in it, no less than in the Oligarchic.

Adeimantus:: It does so.

Socrates:: But it is much more fierce at least in this than in that one.

Adeimantus:: How?

Socrates:: Under Oligarchy, because it is not in places of honour, but is debarred from the magistracies, it is unexercised, and does not become strong. But in a Democracy this, excepting a few, is somehow the presiding party, and now it says and does itself the most outrageous things, and then again approaching courts of justice, it makes a noise, and cannot bear any other to say different from it; so that all things, if it be not some few, in such a republic are administered by such a party.

Adeimantus:: Extremely so.

Socrates:: Some other party now, such as this, is always separated from the multitude.

Adeimantus:: Which?

Socrates:: Whilst the whole are somehow in the pursuit of gain, such as are naturally the most temperate become for the most part the wealthiest.

Adeimantus:: It is likely.

Socrates:: And hence, I imagine, the greatest quantity of honey, and what comes with the greatest ease, is pressed out of these by the drones.

Adeimantus:: For how, shall any one press out of those who have but a little?

Socrates:: Such wealthy people, I imagine, are called the pasture of the drones.

Adeimantus:: Almost so.

Socrates:: And the people would be a sort of third species, such of them as mind their own affairs, and meddle not with any others, who have not very much substance, but yet are the most numerous, and the most prevalent in a Democracy, whenever it is fully assembled.

Adeimantus:: It is so; but this it will not do often, if it does not get some share of the honey.

Socrates:: Does it not always get a share, as far as their leaders are able, robbing those who have substance, and giving to the people, that they may have the most themselves?

Adeimantus:: They are indeed, sharers in this manner.

Socrates:: These then, who are thus despoiled are obliged to defend themselves, saying and doing all they can among the people.

Adeimantus:: Why not?

Socrates:: Others then give them occasion to form designs against the people, though they should have no inclination to introduce a change of government, and so they are Oligarchic.

Adeimantus:: Why not?

Socrates:: But at length, after they see that the people, not of their own accord, but being ignorant and imposed on by those slanderers, attempt to do them wrong, do they not then indeed, whether they will or not, become truly Oligarchic, yet not spontaneously? but this mischief likewise is generated by that drone stinging them.

Adeimantus:: Extremely so indeed.

Socrates:: And so they have accusations, law-suits, and contests one with another.

Adeimantus:: Frequently too.

Socrates:: And are not the people wont always to set some one, in a conspicuous manner, over themselves, and to cherish him and greatly to increase his power?

Adeimantus:: They are wont indeed.

Socrates:: And this, is plain, that whenever a tyrant arises it is from this president root, and from nothing else that he blossoms.

Adeimantus:: This is extremely manifest.

Socrates:: What is the beginning then of the change from a president into a tyrant? Or is it plain, that it is after that the president begins to do the same thing with that in the fable which is told in relation to the temple of Lycaean Jupiter, to whom was dedicated the wolf in Arcadia.

Adeimantus:: Which?

Socrates:: How that whoever tasted human entrails which were mixed with those of other sacrifices, necessarily became a wolf. Have you not heard the story?

Adeimantus:: I have.

Socrates:: And must not he in the same manner, who being president of the people, and receiving an extremely submissive multitude, abstains not from kindred blood, but unjustly accusing them (of such things as they are wont) and bringing them into courts of justice, stains himself with bloodshed, taking away the life of a man, and with unhallowed tongue and mouth tasting kindred blood, and banishes, and slays, and proposes the abolition of debts, and division of lands—must not such an one of necessity, and as it is destined, be either destroyed by his enemies or exercise tyranny, and from being a man become a wolf?

Adeimantus:: Of great necessity.

Socrates:: This is he now, who becomes seditious towards those who have substance, and when he fails he goes against his enemies with open force, and becomes an accomplished tyrant.

Adeimantus:: It is plain.

Socrates:: And if they be unable to expel him, or to put him to death on an accusation before the city, they truly conspire to cut him off privately by a violent death.

Adeimantus:: It is wont indeed, to happen so.

Socrates:: And on this account all those who mount up to tyranny invent this celebrated tyrannical demand, to demand of the people certain guards for their person, that the assistance of the people may be secured to them.

Adeimantus:: This, they take special care of.

Socrates:: And they grant them, I imagine, being afraid of his safety, but secure as to their own.

Adeimantus:: Extremely so.

Socrates:: And when one who has substance, and who along with his substance, has the crime of hating the people, observes this, he then, friend, according to the answer of the oracle to Croesus;

> ——To craggy Hermus flies,
> Nor stays, nor fears, to be a coward deemed.

because he would not, be in fear again a second time. But he at least, I imagine, who is caught is put to death.

Adeimantus:: Of necessity.

Socrates:: It is plain then that this president of the city does not himself behave like a truly great man in a manner truly great, but tumbling down many others, sits in his chair a consummate tyrant of the city, instead of a president.

Adeimantus:: Why is he not?

Socrates:: Shall we consider now, the happiness of the man, and of the city in which such a mortal arises?

Adeimantus:: By all means, let us consider it.

Socrates:: Does he not then, in the first days, and for the first season, smile and salute every one he meets, says he is no tyrant, and promises many things, both in private and in public, and frees from debts, and distributes land both to the people in general, and to those about him, and affects to be mild and of the patriot spirit toward? ail?

Adeimantus:: Of necessity.

Socrates:: But when, as I imagine, he has reconciled to himself some of his foreign enemies, and destroyed others, and there is tranquility with reference to these, he in the first place always raises some wars, in order that the people may be in need of a leader.

Adeimantus:: It is likely.

Socrates:: And is it not likewise with this view, that being rendered poor by payment of taxes, they may be under a necessity of becoming intent on a daily sustenance, and may be less ready to conspire against him?

Adeimantus:: It is plain.

Socrates:: And, I imagine, if he suspect that any of them who are of free spirits will not allow him to govern, in order to have some pretext for destroying them, he exposes them to the enemy. On all these accounts a tyrant is always under a necessity of raising war.

Adeimantus:: Of necessity.

Socrates:: And whilst he is doing these things, he must readily become more hateful to his citizens.

Adeimantus:: Why not?

Socrates:: And must not some of those who have been promoted along with him, and who are in power, speak out freely both towards him, and among themselves, finding fault with the transactions, such of them as are of a more manly spirit?

Adeimantus:: It is likely.

Socrates:: It behooves the tyrant then to cut off all these, if he means to govern, till he leave no one, either of friends or foes, worth anything.

Adeimantus:: It is plain.

Socrates:: He must then carefully observe who is courageous, who is magnanimous, who wise, who rich, and in this manner is he happy, that, willing or not willing, he is under a necessity of being an enemy to all such as these, and to lay snares till he cleanse the city of them.

Adeimantus:: A noble cleansing!

Socrates:: Yes, the reverse of what physicians do with respect to animal bodies; for they, taking away what is worst, leave the best, but he does the contrary.

Adeimantus:: Because it seems, he must of necessity do so, if he is to govern.

Socrates:: In a blessed necessity then truly is he bound, which obliges him either to live with many naughty people, and to be hated too by them, or not to live at all.

Adeimantus:: In such necessity he is.

Socrates:: And the more he is hated by his citizens whilst he does these things, shall he not so much the more want a greater number of guards, and more faithful ones?

Adeimantus:: Why shall he not?

Socrates:: Who then are the faithful, and from whence shall he send for them?

Adeimantus:: Many, of their own accord will come flying, if he give them hire.

Socrates:: You seem, by the dog, again to mention certain drones foreign and multiform.

Adeimantus:: You imagine right.

Socrates:: But those at home, would he not incline to have them also as guards?

Adeimantus:: How?

Socrates:: After he has taken away the citizens, to give the slaves their liberty, and make of them guards about his person?

Adeimantus:: By all means, for these are the most faithful to him.

Socrates:: What a blessed possession, is this which you mention belonging to the tyrant, if he employ such friends and faithful men, after having destroyed those former ones!

Adeimantus:: But surely such at least, he does employ.

Socrates:: And such companions, admire him, and the new citizens accompany him, but the worthy men both hate and fly from him.

Adeimantus:: Why will they not?

Socrates:: It is not without reason, that tragedy in the general is thought a wise thing, and that Euripides is thought to excel in it.

Adeimantus:: For what?

Socrates:: Because he uttered this, which is the mark of a good understanding: That tyrants are wise, by the conversation of the wise, and he plainly said those were wise with whom they hold converse.

Adeimantus:: And he commends, too, Tyranny as a divine thing, and says a great many other things of it, as do likewise the other poets.

Socrates:: Therefore then, those composers of tragedy, as they are wise, will forgive us, and such as establish the government of cities in a manner nearly resembling ours, in not admitting them into our republic as being panegyrists of Tyranny.

Adeimantus:: I imagine, such of them at least as are more polite will forgive us.

Socrates:: But going about among other cities, I imagine, and drawing together the crowds, and putting to sale their fine, magnificent and persuasive words, they will draw over the republics to Tyrannies and Democracies.

Adeimantus:: Extremely so.

Socrates:: And do they not further receive rewards, and are held in honour chiefly by Tyrants, as is natural, and in the next place by Democracy? But the further on they advance towards the republics the reverse of these, their honour forsakes them the more as if it were disabled by an asthma to advance.

Adeimantus:: Entirely so.

Socrates:: Thus far, we have digressed. But now again let us mention in what manner that army of the Tyrant, which is so beautiful, so numerous and multiform, and no way the same, shall be maintained.

Adeimantus:: It is plain, that if at any time there be any sacred things in the city, these they will spend, that so what they sell for may still answer their demands, and the people be obliged to pay in the lighter taxes.

Socrates:: But what shall they do, when these fail them?

Adeimantus:: It is plain, that he and his drunken companions, and his associates, male and female, shall be maintained out of the paternal inheritance.

Socrates:: I understand, that the people who have made the Tyrant shall nourish him and his companions.

Adeimantus:: They are under great necessity.

Socrates:: How do you say? What if the people be enraged, and say that it is not just that the son who is come to maturity be maintained by the father, but contrariwise that the father be maintained by the son; and that they did not make and establish him for this purpose, to be a slave to his slaves when he should be grown up, and to maintain him and his slaves with their other tumultary attendants, but in order that they might be set at liberty from the rich in the city, who are also called the good and worthy, by having set him over them. And now they order him and his companions to be gone out of the city, as a father drives out of the house his son with his tumultuary drunken companions.

Adeimantus:: Then indeed at least shall the people, know truly what a beast they are themselves, and what a beast they have generated, and hugged, and bred up, and that whilst they are the weaker, they attempt to drive out the stronger.

Socrates:: How do you say? Will the Tyrant dare to offer violence to his father, and if he cannot persuade him, will he strike him?

Adeimantus:: Yes, even stripping him of his armor.

Socrates:: You call, the Tyrant a parricide and a miserable nourisher of old-age; and yet, as it is probable, Tyranny would really seem to be of this kind, and according to the saying, the people, defending themselves against the smoke of slavery amid free men, have fallen into the slavish fire of despotism; instead of that excessive and unseasonable liberty, embracing the most rigorous and the most wretched slavery of bond-men.

Adeimantus:: These things, happen very much so.

Socrates:: What then, shall we not speak modestly, if we say that we have sufficiently shown how Tyranny arises out of Democracy, and what it is when it does arise?

Adeimantus:: Quite sufficiently.

THE END OF THE EIGHTH BOOK

## THE NINTH BOOK

Socrates:: The tyrannical man himself, remains yet to be considered, in what manner he arises out of the Democratic, and when he does arise, what kind of man he is, and what kind of life he leads, whether wretched or happy.

Adeimantus:: He indeed yet remains.

Socrates:: Do you know, what I still want?

Adeimantus:: What is it?

Socrates:: We do not appear to me to have sufficiently distinguished that matter of the desires, of what kind they are, and how many; and whilst this is defective, the inquiry we make shall be less evident.

Adeimantus:: May it not be done, in good season still.

Socrates:: Certainly. And consider what it is I want to know about them; for it is this. Of those pleasures and desires which are not necessary, some appear to me to be repugnant to law: these indeed appear to spring up in every one, but being chastised by the laws, and the better desires, along with reason, they either forsake some men altogether, or are less few in number, and feeble; in others they are more powerful and in greater number.

Adeimantus:: Which are these you mean?

Socrates:: Such, as are excited in sleep, when the other part of the soul, such as is rational and mild, and which governs in it, is asleep, and the part which is brutal and savage, being filled with meats and drunkenness, frisks about, and pushing away sleep, wants to go and accomplish its practices. In such a one you know it dares to do every thing, as being loosed and disengaged from all modesty and discretion; for it scruples not the embraces, as it imagines of a mother, or of any one else, whether of

Gods, of men, or of beasts; nor to kill any one, nor to abstain from any sort of meat, and, in one word, is wanting in no folly nor impudence.

Adeimantus:: You say most true.

Socrates:: But I imagine, when one is in health, and keeps himself temperately, and goes to sleep, having stirred up the rational part, and having feasted it with worthy reasonings and inquiries, coming to an unanimity with himself, and allowing the part of the soul which is concupiscible neither to be starved nor glutted, that it may lye quiet and give no disturbance to the part which is best, either by its joy or grief, but suffer it by itself alone and untainted to inquire, and to desire to apprehend what it knows not, either something of what has existed, or of what now exists, or what will exist hereafter; and having likewise soothed the irascible part, not suffering it to be hurried by any thing to transports of anger, and to fall asleep with agitated passion, but having quieted these two parts of the soul, and excited the third part, in which wisdom resides, shall in this manner take rest—by such an one, you know, the truth is chiefly apprehended, and the visions of his dreams are then least of all repugnant to law.

Adeimantus:: I am altogether, of this opinion.

Socrates:: We have, indeed, been carried a little too far in mentioning these things. But what we want to be known is this, that there is in every one a certain species of desires which is terrible, savage, and irregular, even in some who entirely seem to us to be moderate. And this species becomes indeed manifest in sleep. But consider if there appear to be anything in what I say, and if you agree with me.

Adeimantus:: But I agree.

Socrates:: Recollect now what kind of man we said the Democratic one was. For he was somehow educated from his infancy under a parsimonious father, who valued the avaricious desires alone; but such as were not necessary, but rose only through a love of amusement and finery, he despised Was he not?

Adeimantus:: Yes.

Socrates:: But being conversant with those who are more refined, and such as are full of those desires we now mentioned, running into their manner and all sort of insolence, from a detestation of his father’s parsimony; however, having a better natural temper than those who corrupt him, and being drawn opposite ways, he settles into a manner in the middle of both, and participating moderately, as he imagines, of each of them, he leads a life neither illiberal nor licentious, becoming a Democratic man from an Oligarchic.

Adeimantus:: This was, and is our opinion of such an one.

Socrates:: Suppose now again, that when such a one is become old, his young son is educated in his manners.

Adeimantus:: I suppose it.

Socrates:: And suppose too, the same things happening to him as to his father: that he is drawn into all kind of licentiousness—which is termed, however, by such as draw him off the most complete liberty—and that his father and all the domestics are aiding to those desires which are in the middle, and others also give aid likewise. But when those curious magicians and tyrant-makers have no hopes of retaining the youth in their power any other way, they contrive to excite in him a certain love which presides over the indolent desires, and such as minister readily to their pleasures a certain winged and large drone; or do you imagine that the love of these things is anything else?

Adeimantus:: I imagine, it is nothing other than this.

Socrates:: And when other desires make a noise about him, full of their odors and perfumes, and crowns, and wines, and those pleasures of the most dissolute kind which belong to such copartnerships, and being increased and cherished, add a sting of desire to the drone, then truly he is surrounded with madness as a life-guard, and that president of the soul rages with frenzy; and if he find in himself any opinions or desires which seem to be good, and which yet retain modesty, he kills them and pushes them from him, 'till he be cleansed of temperance, and is filled with additional madness.

Adeimantus:: You describe perfectly, the formation of a tyrannical man.

Socrates:: Is it not, on such an account as this that of old love is said to be a tyrant?

Adeimantus:: It appears so.

Socrates:: And, friend, has not a drunken man likewise somewhat of a tyrannical spirit?

Adeimantus:: He has indeed.

Socrates:: And surely at least he who is mad and is disturbed in his mind undertakes and hopes to be able to govern not only men, but likewise the Gods.

Adeimantus:: Entirely so.

Socrates:: The tyrannical man then, divine friend, becomes so in perfection, when either by temper, or by his pursuits, or by both, he becomes drunk, and in love, and melancholy.

Adeimantus:: Perfectly so indeed.

Socrates:: Such a one, it seems then, arises in this manner. But in what manner does he live?

Adeimantus:: As they say in their plays, that you will tell me likewise.

Socrates:: I tell then. For I imagine that after this there are feastings among them, and reviling and banqueting, and mistresses, and all such things as may be expected among those where Love the tyrant, dwelling within, governs all in the soul.

Adeimantus:: Of necessity.

Socrates:: And every day and night do there blossom forth many and dreadful desires, indigent of many things.

Adeimantus:: They are many indeed.

Socrates:: And if they have any supplies, they are soon spent.

Adeimantus:: What else?

Socrates:: And after this there is borrowing and pillaging of substance.

Adeimantus:: What else?

Socrates:: And when every thing fails them, is there not a necessity that the desires, on the one hand, nestling in the mind, shall give frequent and powerful cries; and the men, on the other hand, being driven, as by stings, both by the other desires, and more especially by Love itself, commanding all the others as its life-guards, shall rage with frenzy, and search if any one have any thing which they are able, by deceit or violence, to carry off?

Adeimantus:: Extremely so.

Socrates:: They must of necessity therefore be plundering from every quarter, or be tormented with great agonies and pains.

Adeimantus:: Of necessity.

Socrates:: And as with such a man his new pleasures have more to say than his ancient once, and take away what belonged to them, shall not he deem it proper in the same manner, that himself being young, should have more than his father and mother, and take away from them, and, if he has spent his own portion, encroach on that of his parents?

Adeimantus:: Why will he not?

Socrates:: And if they do not allow him, will he not first endeavor to pilfer from, and beguile his parents?

Adeimantus:: By all means.

Socrates:: And where he is not able to do this, will he not, in the next place, use rapine and violence?

Adeimantus:: I imagine so.

Socrates:: But, wonderful friend, when the old man and the old woman oppose and fight, will he not revere them, and beware of doing any thing tyrannical?

Adeimantus:: I, for my part, am not quite secure, with reference to the safety of the parents of such an one.

Socrates:: But do you truly, Adimantus, imagine that for the sake of a newly beloved and unnecessary mistress, such a one §would give up his anciently beloved and necessary mother; or for the sake of a blooming youth newly beloved, and not necessary, give up his decayed, his necessary and aged father, the most ancient of all his friends, to stripes, and suffer these to be enslaved by those others, if he should bring them into the same house?

Adeimantus:: Yes, truly I do.

Socrates:: It seems, to be an extremely happy thing to beget a tyrannical son.

Adeimantus:: Not altogether so.

Socrates:: But what, when the substance of his father and mother fails such an one, and when now there is the greatest swarm of pleasures assembled in him, shall he not first break into some house, or late at night strip someone of his coat, and after this shall he not rifle some temple? and in all these actings those desires, newly loosed from slavery and become as the guards of love, shall along with him rule over those ancient opinions he had from his infancy, the established decisions concerning good and evil—these desires which heretofore were only loose from their slavery in sleep, when he was as yet under the laws and his father, when under Democratic government, now when he is tyrannized over by love, such as he rarely was when asleep, such shall he be always when awake; and from no horrid slaughter, or food, or deed of any kind, shall he abstain. But that tyrannical love within him, living without any restraint of law or government, as being sole monarch itself, shall lead on the man it possesses, as a city, to every mad attempt whence he may support himself and the crew about him; which partly enters from without from ill company, and partly through their manners and his own is become unrestrained and licentious. Or is not this the life of such a one?

Adeimantus:: It is this truly.

Socrates:: And if there be, but a few such in the city, and the rest of the multitude be sober, they go out and serve as guards to some other tyrant, or assist him for hire, if there be any war; but if they remain in peace and quiet they commit at home in the city a great many small mischief’s.

Adeimantus:: Which do you mean?

Socrates:: Such as these: they steal, break houses, cut purses, strip people of their clothes, rifle temples, make people slaves; and where they can speak they sometimes turn false informers, and give false testimony, and take gifts.

Adeimantus:: You call these, small mischief’s, if there be but a few such persons.

Socrates:: What is small, is small in comparison of great; and all those things, with regard to the tyrant, when compared with the wickedness and misery of the city, do not, as the saying is, come near the mark; for when there are many such in the city, and others accompanying them, and when they perceive their own number, then these are they who through the foolishness of the people establish as tyrant the man who among them has himself most of the tyrant, and in the greatest strength within his soul.

Adeimantus:: It is probable indeed, for he shall be most tyrannical.

Socrates:: Shall he not be so, if they willingly submit to him? But if the city shall not allow him, in the same manner as he formerly used violence to his father and mother, so now again shall he chastise his country if he be able, and bringing in other young people, he shall keep and nourish under subjection to these his formerly beloved mother- and father-country, as the Cretans say? And this shall be the issue of such a man’s desire.

Adeimantus:: It shall be entirely this.

Socrates:: But do not these, become such as this, first in private, and before they govern? In the first place by the company they keep, either conversing with their own flatterers, and such as are ready to minister to them in every thing, or if they need anything themselves, falling down to those they converse with, they dare to assume every appearance as friends, but after they have gained their purpose, they act as enemies.

Adeimantus:: Extremely so.

Socrates:: Thus they pass the whole of their life, never friends to any one, but always either domineering, or enslaved to another. But liberty and true friendship the tyrannic disposition never tastes.

Adeimantus:: Entirely so.

Socrates:: May we not then rightly call these men faithless?

Adeimantus:: Why not?

Socrates:: And surely we may call them most of all unjust, if we have rightly agreed about justice, in our former reasonings, what it is.

Adeimantus:: But we did rightly agree.

Socrates:: Let us finish then, our worst man. He would then seem such a one awake, as we described as asleep.

Adeimantus:: Entirely so.

Socrates:: And does not that man become such a one, who, being most tyrannical by natural temper, is in possession of supreme power, and the longer time he lives in tyranny, the more he becomes such a one?

Glaucon, taking up the discourse, opened with;

Glaucon:: Of necessity.

Socrates:: And shall not the man, who appears the most wicked, appear likewise the most wretched, and he who shall tyrannize for the longest time, and in the greatest measure, shall in reality, in the greatest measure, and for the longest time, be such a one? But as many men, as many minds.

Glaucon:: Of necessity, these things at least must be so.

Socrates:: And would this tyrannic man at least differ anything, as to likeness when compared with the city under Tyranny, and the Democratic man when compared with the city under Democracy, and the same way of others?

Glaucon:: How should they?

Socrates:: As city then is in respect of city as to virtue and happiness, will not man be to man in the same way?

Glaucon:: Why not?

Socrates:: What then? How is the city which is tyrannized over, in respect of that under kingly government, such as we at the first described?

Glaucon:: Quite the reverse, for the one is the best, and the other is the worst.

Socrates:: I will not ask, which you mean, for it is plain; but do you judge in the same way, or otherwise, as to their happiness and misery? And let us not be struck with admiration, whilst we regard the tyrant alone, or some few about him; but let us, as we ought to do, enter into the whole of the city, and consider it, and going through every part, and viewing it, let us declare our opinion.

Glaucon:: You propose rightly; and it is evident to every one that there is no city more wretched than that which is under Tyranny, nor any more happy than that under regal power.

Socrates:: If now, I should propose the same things with respect to the men, should I rightly propose, whilst I account him worthy to judge about them, who is able by his understanding to enter within, and see through the temper of the man and who may not, as a child beholding the out-side, be struck with admiration of tyrannical pomp, which he makes a show of to those without, but may sufficiently see through him. If then I should be of opinion that all of us ought to hear such a one, who, having dwelt with the man in the same house, and having been along with him in his actions in his family, is able to judge in what manner he behaves to each of his domestics (in which most especially one appears striped of theatrical shows), and likewise in public dangers; and after he has observed all these things, we shall bid him declare, how the Tyrant is as to happiness and misery, in comparison of others.

Glaucon:: You would advise to these things, most properly.

Socrates:: Are you willing then, that we pretend to be ourselves of the number of those who are thus able to judge, and that we have already met with such men, that we may have one who shall answer our questions?

Glaucon:: By all means.

Socrates:: Come then, consider in this manner. Recollect the resemblance of the city and the man to one another, and thus considering each of them apart, tell the affections of each.

Glaucon:: Which affections?

Socrates:: To begin first, with the city. Do you call the one under Tyranny either free or enslaved?

Glaucon:: Slavish, in the greatest degree possible.

Socrates:: And yet, surely, at least, you see in it masters and free men.

Glaucon:: I see, some small part so; but the whole in it, in the general, and the most excellent part, is disgracefully and miserably slavish.

Socrates:: If then the man, resembles the city, is it not necessary that there be the same regulation in him likewise, and that his soul be full of the greatest slavery and illiberality, and that these parts of his soul which are the noblest be enslaved, and that some small part which is most wicked and frantic is master.

Glaucon:: Of necessity.

Socrates:: What now? shall you say that such a soul is slavish or free?

Glaucon:: Slavish somehow, I say.

Socrates:: But does not then the city, which is slavish and tyrannized over, least of all do what it inclines?

Glaucon:: In great measure.

Socrates:: And shall not the soul too, which is tyrannized over, least of all do what it shall incline, to. speak in the general of the whole soul; but hurried violently by some stinging passion, shall be full of tumult and inconstancy?

Glaucon:: Why shall it not?

Socrates:: But whether shall the city which is tyrannized over be necessarily rich or poor?

Glaucon:: Poor.

Socrates:: And the soul under Tyranny be of necessity likewise indigent and insatiable.

Glaucon:: Just so.

Socrates:: But what? Must not such a city and such a man of necessity be full of fear?

Glaucon:: In great measure.

Socrates:: Do you imagine you will find more lamentations and groans and weepings and torments in any other city?

Glaucon:: By no means.

Socrates:: But with reference to a man, do you imagine that these things are greater in any other than in this tyrannical one, who madly rages by his desires and lusts?

Glaucon:: How can they?

Socrates:: It is then on consideration of all these things, and others such as these, I imagine, that you have deemed this city the most wretched of cities?

Glaucon:: And have I not deemed right?

Socrates:: Extremely so. But what say you again with reference to the tyrannical man, when you consider these things?

Glaucon:: That he is by far, the most wretched of all others.

Socrates:: You do not as yet say this rightly.

Glaucon:: How?

Socrates:: I do not as yet imagine, that he is such in the greatest degree.

Glaucon:: But who then is so?

Socrates:: This one shall probably appear to you to be yet more miserable than the other.

Glaucon:: Which one?

Socrates:: He, who being naturally tyrannical, leads not a private life, but is unfortunate, and through some misfortune it is brought upon him to become a Tyrant.

Glaucon:: I conjecture, from what was formerly mentioned, that you say true.

Socrates:: It is so. But we ought not merely to conjecture about matters of such importance as these, but most thoroughly to inquire into them by reasoning of this kind: for the inquiry is concerning the most important matter, a good life and a bad.

Glaucon:: Most right.

Socrates:: Consider then whether there be any thing in what I say; for, in considering this question, I am of opinion we ought to perceive it from these things.

Glaucon:: From what?

Socrates:: From each particular one of private men, such of them as are rich and possess many slaves, for those have this resemblance at least of Tyrants, that they rule over many, with this difference, that the Tyrant has great numbers.

Glaucon:: There is this difference.

Socrates:: You know then that these live securely, and are not afraid of their domestics.

Glaucon:: What should they be afraid of?

Socrates:: Nothing; but do you consider the reason?

Glaucon:: Yes; it is because the whole city gives assistance to each particular private man.

Socrates:: You say right. But what now, if some God should lift some man who had fifty slaves or upwards out of the city, both him and his wife and children, and set him down in a desert with his other substance and his domestics, where no freeman was to give him assistance, in what kind of fear, and in how great, do you imagine he would be about himself, his children and wife, lest they should be destroyed by the domestics?

Glaucon:: In the greatest possible, I imagine, for my part.

Socrates:: Would he not be obliged even to flatter some of the very slaves, and promise them many things, to set them at liberty when there was no occasion for it: and appear to be himself a flatterer of servants?

Glaucon:: He is under great necessity, to do so, or be destroyed.

Socrates:: But what, if the God should settle round him many other neighbors, who could not endure if any one should pretend to lord it over another; but if they any where found such a one, should punish him with the extremest rigor.

Glaucon:: I imagine, that he would be still more in all sort of distress, thus beset with all sort of enemies.

Socrates:: And in such a prison-house is not the tyrant bound, being such by disposition, as we have mentioned, full of many and most various fears and loves of all kinds? And whilst he has in his soul the greatest desire, he alone of all in the city is neither allowed to go anywhere abroad, nor to see such things as other men are desirous of; but creeping into his house, lives mostly as a woman, envying the other citizens if any of them goes abroad and sees any good.

Glaucon:: It is entirely so.

Socrates:: And besides such evils as these, does not the man reap still more of them who, being under ill policy within himself (which you just now deemed to be the most wretched Tyranny), lives not as a private person, but through some fortune is obliged to act the tyrant, and without holding the government of himself, attempts to govern others, as if one. with a body diseased, and unable to support itself, were obliged to lead their life not in a private way, but in wrestling and fighting against other bodies?

Glaucon:: You say, Socrates, what is altogether most likely and true.

Socrates:: Is not then, friend Glauco, this condition altogether miserable, and does not the tyrant live more miserably still than the man deemed by you to live most miserably?

Glaucon:: Very much so.

Socrates:: True it is then, though one may fancy otherwise, that the truly tyrannical man is truly slavish with respect to the greatest flatteries and slaveries, and is a flatterer of the most abandoned men. Nor does he ever in the smallest degree obtain the gratification of his desires, but is of all the most indigent of the most things, and appears poor indeed, if one knows how to contemplate his whole soul; and full of fear through the whole of life, being filled with anxieties and griefs, if indeed he resembles the constitution of that city which he governs. But he does resemble it, does he not?

Glaucon:: Extremely.

Socrates:: And shall we not, besides these things, likewise ascribe to this man what we formerly mentioned, that he must necessarily be, and, by governing still, become more than formerly envious, faithless, unjust, unfriendly, unholy, and a sink and breeder of all wickedness; and from all these things be most especially unhappy himself, and then render all about him unhappy likewise.

Glaucon:: No one, who has understanding will contradict you.

Socrates:: Come now, as a judge who pronounces after considering all, so do you tell me who, according to your opinion, is the first as to happiness, and who second, and the rest in order, they being five in all—the Regal, the Ambitious, the Oligarchic, the Democratic, and the Tyrannic.

Glaucon:: But the judgment, is easy; for as if I had entered among them, I judge of them as of public performers, by their virtue and vice, and by their happiness, and its contrary.

Socrates:: Shall we, then, hire a Herald?  or shall I myself declare that the son of Ariston has judged the best and justest man to be the happiest (and that this is the man who has most of the regal spirit, and rules himself with a kingly power), and that the worst and the most unjust is the most wretched; and that he again happens to be the man who is most tyrannical who in the greatest degree tyrannizes over himself and the city.

Glaucon:: Let it be published by you.

Socrates:: Shall I add, whether they be unknown to be such or not both to all men and Gods?

Glaucon:: Add it.

Socrates:: Be it so, this would seem to be one proof of ours. And this, if you are of the same opinion, must be the second.

Glaucon:: Which is it?

Socrates:: Since the soul, of every individual is divided into three, in the same manner as the city was divided into three parts, it will, in my opinion, afford a second proof.

Glaucon:: Which is it?

Socrates:: It is this. Of the three parts of the soul, there appear to me to be three pleasures, one peculiar to each one; and the desires and governments are in the same manner.

Glaucon:: How do you say?

Socrates:: There is one part, we said, by which a man learns, and another by which he is irascible; the third is so multiform, we are unable to express it by one word peculiar to itself, but we denominated it from that which is greatest, and most impetuous in it; for we called it the concupiscible, on account of the impetuosity of the desires relative to meat, drink, and venereal pleasures, and whatever others belong to these, and we called it avaricious likewise, because it is by means of wealth most especially that such desires are accomplished.

Glaucon:: And we said rightly.

Socrates:: If then we say that its pleasure and delight are in gain, shall we not best of all reduce it under one head in our discourse, so as to express something to ourselves, when we make mention of this part of the soul, and calling it the covetous, and the desirous of gain, shall we not term it properly?

Glaucon:: So I imagine at least.

Socrates:: But what, do not we say that the irascible ought wholly to run after superiority, victory, and applause?

Glaucon:: Extremely so.

Socrates:: If then we term it the contentious and ambitious, shall it not be accurately expressed?

Glaucon:: Most accurately.

Socrates:: But it is evident to every one that the part of the soul by which we learn is wholly intent always to know the truth, and as to wealth and glory, it cares for these least of all.

Glaucon:: Extremely so.

Socrates:: When we call it then the desirous of learning and the philosophic, we shall call it according to propriety.

Glaucon:: Why shall we not?

Socrates:: And do not these, govern in souls, one of them in some, and in others another, as it happens?

Glaucon:: Just so.

Socrates:: On this account then we said there were three original species of men: the philosophic, the ambitious, and the avaricious.

Glaucon:: Entirely so.

Socrates:: And that there were likewise three species of pleasures, one subject to each of these.

Glaucon:: Certainly.

Socrates:: You know then, that if you were to ask these three men, each of them apart, which of these lives is the most pleasant, each would most of all commend his own. And the avaricious will say, that in comparison with the pleasure of making gain, that arising from honour, or from learning, is of no value, unless one make money by them.

Glaucon:: I True.

Socrates:: And what says the ambitious? does not he deem the pleasure arising from making money a sort of burden, and likewise that arising from learning, unless learning brings him honour, does he not deem it smoke and trifling?

Glaucon:: It is so.

Socrates:: And we shall suppose the philosopher, to deem the other pleasures as nothing in comparison of that of knowing the truth, how it is, and that whilst he is always employed in learning something of this kind, he is not very remote from pleasure; but that he calls the other pleasures truly necessary, as wanting nothing of the others, but where there is a necessity for it.

Glaucon:: This, we must well understand.

Socrates:: When therefore, these several lives, and the respective pleasure of each, dispute among themselves, not with reference to living more worthily or more basely, or worse or better, but merely with reference to this, of living more pleasantly, or on the contrary more painfully, how can we know which of them speaks most conformably to truth?

Glaucon:: I am not quite able, to tell.

Socrates:: But consider it thus. By what ought we to judge of whatever is to be rightly judged of? Is it not by experience, by prudence, and by reason? Or has any one a better criterion than these?

Glaucon:: How can he?

Socrates:: Consider now; of the three men, who is the most experienced in all the pleasures? Whether do you imagine that the avaricious man, in learning truth itself, what it is, is more experienced in the pleasure arising from knowledge than the philosopher is in that arising from making money?

Glaucon:: There is, a great difference; for the philosopher, beginning from his childhood, must of necessity taste the other pleasures; but what it is to know real beings, and how sweet this pleasure is, the lucrative man has no necessity of tasting, or of becoming experienced in, but, rather, when he uses earnest endeavors it is no easy matter.

Socrates:: The philosopher then, far surpasses the lucrative man, at least in experience of both the pleasures.

Glaucon:: Far indeed.

Socrates:: But what with reference to the ambitious man? Is he more experienced in the pleasure arising from honour than the philosopher is in that arising from knowledge?

Glaucon:: Honour, attends all of them, if they obtain each of them what they aim at; for the rich man is honored of many, and so is the brave, and the wise; so as to that of honour, what sort of pleasure it is, all of them have the experience. But in the contemplation of being itself, what pleasure there is, it is impossible for any other but the philosopher to have tasted.

Socrates:: On account of experience then, he of all men judges the best.

Glaucon:: By far.

Socrates:: And surely, along with prudence at least, he alone becomes experienced.

Glaucon:: Why does he not?

Socrates:: But even the organ by which these pleasures must be judged is not the organ of the lucrative, nor of the ambitious, but of the philosopher.

Glaucon:: Which is it?

Socrates:: We said somewhere that they must be judged of by reason, did we not?

Glaucon:: Yes.

Socrates:: But reasoning is chiefly the organ of the philosopher.

Glaucon:: Why is it not?

Socrates:: If then the things to be determined were best determined by riches and gain, what the lucrative man commended or despised were of necessity most agreeable to truth.

Glaucon:: Entirely.

Socrates:: And if by honour, and victory and bravery, must it not be as the ambitious and contentious man determined?

Glaucon:: It is evident.

Socrates:: But since it is by experience, and prudence, and reason?

Glaucon:: Of necessity, what the philosopher and the philologist commends must be the most true.

Socrates:: Of the three pleasures then, that is the most pleasant [which belongs to that part of the soul by which we learn most, and in whomsoever of us this part governs, his life is the most pleasant.

Glaucon:: How can it, be otherwise? For the wise man being the sovereign commender, commends his own life.

Socrates:: But which life, does our judge pronounce the second, and which the second pleasure?

Glaucon:: It is plain that of the war-like and ambitious man, for this is nearer to his own than that of the lucrative.

Socrates:: And that of the covetous, as it appears, is last of all.

Glaucon:: Why not?

Socrates:: These things now have thus succeeded one another in order. And the just man has twice now overcome the unjust. The third victory now, as at the Olympic games, is sacred to Olympic Jupiter, the deliverer: for consider, that the pleasure of the others is not every way genuine, but that of the wise man is, nor are they pure, but somehow colored over, as I imagine I have heard from one of the wise men. And this truly now would be the greatest and most complete downfall of the unjust.

Glaucon:: Extremely so; but how do you mean?

Socrates:: I shall thus trace it out, whilst in searching you answer my questions.

Glaucon:: Ask then.

Socrates:: Tell me then, do we not say that pain is opposite to pleasure?

Glaucon:: Entirely so.

Socrates:: And do we not say likewise, that to feel neither pleasure nor pain is somewhat?

Glaucon:: We say it is.

Socrates:: That being in the middle of both these, it is a certain tranquility of the soul with reference to them. Do you not thus understand it?

Glaucon:: Thus.

Socrates:: Do you not remember, the speeches of the sick diseased, which they utter in their sickness?

Glaucon:: Which?

Socrates:: How that nothing is more pleasant than health, but that it escaped their notice before they became sick, that it was the most pleasant.

Glaucon:: I remember it.

Socrates:: And are you not wont to hear those who are under any acute pain say, that there is nothing more pleasant than a cessation from pain?

Glaucon:: I am wont to hear them.

Socrates:: And you may perceive in men, I imagine, the same thing, when they are in many other such like circumstances, where, when they are in pain, they extol a freedom from pain, and the tranquility of such a state, as being the most pleasant, and do not extol that of feeling joy.

Glaucon:: Because this, it is likely, becomes at that time pleasant and desirable tranquility.

Socrates:: And when any one ceases, to feel joy, this tranquility from pleasure will be painful.

Glaucon:: It is likely.

Socrates:: This tranquility then, which we just now said was between the two, shall at times become each of these, pain and pleasure.

Glaucon:: It appears so.

Socrates:: But is it truly possible that what is neither of the two should become both?

Glaucon:: I do not imagine it is.

Socrates:: And surely at least, when any thing pleasant or any thing painful is in the soul, both sensations are a sort of emotion; are they not?

Glaucon:: Yes.

Socrates:: But did not that which is neither painful nor pleasant appear just now to be tranquility, and in the middle of these two?

Glaucon:: It appears so indeed.

Socrates:: How is it right, then, to deem it pleasant not to be in pain, or painful not to enjoy pleasure?

Glaucon:: It is by no means.

Socrates:: In these cases, then, tranquility is not really so, but it appears pleasant in respect of the painful, and painful in respect of the pleasant. And there is nothing genuine in these appearances as to the truth of pleasure, but a sort of imposture.

Glaucon:: As our reasoning shows.

Socrates:: Consider then, the pleasures which do not arise from the cessation of pains, that you may not frequently in the present discourse imagine, that by nature these two are universally in this manner, pleasure, the cessation of pain, and pain the cessation of pleasure.

Glaucon:: How, and which pleasures do you mean?

Socrates:: There are many others, but chiefly if you incline to consider the pleasures from smells; for these, without any preceding pain, are on a sudden immensely great, and when they cease, they leave no pain behind them.

Glaucon:: Most true.

Socrates:: Let us not then be persuaded that pure pleasure is the removal of pain, or pain the removal of pleasure.

Glaucon:: Let us not.

Socrates:: But yet, these which reach the soul, by means of the body, and which are called pleasures, the greatest part of them almost, and the most considerable, are of this species, certain cessations of pain.

Glaucon:: They are so.

Socrates:: And are not the pre-conceptions of pleasure and pain, which arise in the mind from the foresight of these things, of the same kind?

Glaucon:: Of the same.

Socrates:: Do you know then, what kind they are of, and what they chiefly resemble?

Glaucon:: What?

Socrates:: Do you reckon, there is any such thing in nature as this, the above, the below, and the middle?

Glaucon:: I do.

Socrates:: Do you imagine then, that any one when he is brought from the below to the middle, imagines any thing else than that he is brought to the above, and when he stands in the middle, and looks down whence he was brought, will he imagine he is any where else but in the above, whilst yet he has not seen the true above?

Glaucon:: Truly, I do not think that such an one will imagine otherwise.

Socrates:: But if he should again, be carried to the below, he would imagine he was carried to the below, and would imagine according to truth.

Glaucon:: Why would he not?

Socrates:: Would he not be effected in all these respects, from his not having experience in what is really above, and in the middle, and below?

Glaucon:: It is plain.

Socrates:: Should you wonder then that whilst men are inexperienced in the truth, they have unsound opinions about many other things, and that as to pleasure and pain, and what is between these, they are likewise affected in this same manner? So that even when they are brought to what is painful, they imagine truly, and are truly pained; but when from pain they are brought to the middle, they strongly imagine that they are arrived at fullness of pleasure. In the same manner as these who along with the black color look at the grey, through inexperience of the white, are deceived; so those who consider pain along with a freedom from pain, are deceived through inexperience of pleasure.

Glaucon:: Truly, I should not wonder, but much rather if it were not so.

Socrates:: But consider it at least, in this manner. Are not hunger and thirst, and such like, certain emptinesses in the bodily habit?

Glaucon:: What else?

Socrates:: And is not ignorance and folly an emptiness in the habit )f the soul?

Glaucon:: Extremely so.

Socrates:: And is not the one filled when it receives food, and the other when it has intelligence?

Glaucon:: Why not?

Socrates:: But which is the more real repletion, that of the less, or that of the more real existence?

Glaucon:: It is plain that of the more real.

Socrates:: Which species, then, do you imagine participates most of a more pure substance; whether these which participate of bread and drink, and meat, and all such sort of nourishment; or that species which participates of true opinion, and knowledge, and intelligence, and in general, of all virtue? And judge of it in this manner. That which resides in that which is always alike, and immortal, and true, and is so itself, and arises in what is such, does it appear to you to exist more really than that which resides in what is never alike, and mortal, is so itself, and arises in what is such?

Glaucon:: This, differs much from that which is always alike.

Socrates:: Does then the essence of that which is always alike participate any more of essence than of science?

Glaucon:: By no means.

Socrates:: But what with relation to truth?

Glaucon:: Nor of this neither.

Socrates:: If it participate less of truth, does it not likewise do so of essence?

Glaucon:: Of necessity.

Socrates:: In general then, do not the species relating to the care of the body participate less of truth and essence than the species relating to the care of the soul?

Glaucon:: By far.

Socrates:: And the body less than the soul; do you not think so?

Glaucon:: I do.

Socrates:: Is not that which is filled with more real beings, and is itself a more real being, in reality more truly filled than that which is filled with less real beings, and is itself a less real being?

Glaucon:: Why not?

Socrates:: If then it be pleasant to be filled with what is suitable to nature, that which is in reality filled, and with more real being, must be made both more really and more truly to enjoy true pleasure; but that which participates of less real being must be less truly and solidly filled, and participates of a more uncertain and less genuine pleasure.

Glaucon:: Most necessarily.

Socrates:: Such then as are unacquainted with wisdom and virtue, and are always conversant in feastings and such like, are carried as it appears to the below, and back again to the middle, and there they wander for life. But never at all,! getting beyond this, do they look towards the true above, nor are carried to it, nor are they ever really filled with real being, nor have they ever tasted solid and pure pleasure, but after the manner of brutes looking always downwards, and bowed towards earth and their tables,! they live feeding and coupling, and from a lust of these things, kicking and pushing at one another with iron horns and hoofs, they perish through their insatiableness, as those who are filling with unreal being that which is no real being, nor friendly to themselves.

Glaucon:: You ‘pronounce most perfectly, Socrates, as from an oracle, the life of the multitude.

Socrates:: Must they not then, of necessity, be conversant in pleasures mixed with pains, images of the true pleasure, painted over, and colored by their position beside one another, hence both their pleasures and pains appear vehement, and engender their mad passions in the foolish. Hence also they must fight about these things, as Stesichorus says those at Troy fought about the image of Helen, through ignorance of the true one.

Glaucon:: Of necessity, the matter must be something of this kind.

Socrates:: And what as to the irascible part of the soul? Must not other such like things happen wherever any one gratifies it, either in the way of envy through ambition, or in the way of violence through contentiousness, or in the way of anger through moroseness, pursuing after a glut of honour, of conquest, and of anger, both without reason and without intelligence?

Glaucon:: Such things as these, must necessarily happen with reference to this part of the mind.

Socrates:: What then, shall we boldly say concerning all the Measures, both respecting the avaricious and the ambitious part, that such of them as are obedient to intelligence and reason, and along with these follow after and obtain the pleasures to which wisdom points, shall obtain he truest pleasures, as far as it is possible for them to attain true pleasure, and in as much as they follow truth, Measures which are properly their own, if indeed what is best for every one be most properly his own? But surely it is most properly, his own at least. When then the whole soul is obedient to the philosophic part and there is no sedition in it, then every part in other respects does its proper business and is just, and also reaps is own pleasures, and such as are the best and as far as is possible the most true.

Glaucon:: Certainly, indeed.

Socrates:: But when any of the others governs, it happens that it neither attains its own pleasures, and it obliges the other parts to pursue a pleasure foreign to them, and not at all true.

Glaucon:: It does so.

Socrates:: Do not then the parts which are the most remote from philosophy and reason most especially effectuate such things?

Glaucon:: Extremely.

Socrates:: And is not that which is most remote from law and order, likewise most remote from reason?

Glaucon:: It plainly is.

Socrates:: And have not the amorous and the tyrannical desires appeared to be most remote from law and order?

Glaucon:: Extremely.

Socrates:: And the royal and the moderate ones, the least remote?

Glaucon:: Yes.

Socrates:: The tyrant then, I imagine, shall be the most remote from true pleasure, and such as is most properly his own, and the other shall be the least.

Glaucon:: Of necessity.

Socrates:: And the tyrant, shall lead a life the most unpleasant, and the king the most pleasant one.

Glaucon:: Of great necessity.

Socrates:: Do you know then, how much more unpleasant a life the tyrant leads than the king?

Glaucon:: If you tell me.

Socrates:: As there are three pleasures, as it appears, one genuine, and two illegitimate, the Tyrant in carrying the illegitimate to extremity, and flying from law and reason, dwells with slavish pleasure as his life-guards, and how far he is inferior, is not easily to be told, unless it may be done in this manner.

Glaucon:: How?

Socrates:: The Tyrant is somehow the third remote from the Oligarchic; for the Democratic was in the middle between them.

Glaucon:: Yes.

Socrates:: Does he not then dwell with the third image of pleasure, distant from him with reference to truth, if our former reasonings be true?

Glaucon:: Just so.

Socrates:: But the Oligarchic is the third again from the Royal, if we suppose the Aristocratic and the Royal the same.

Glaucon:: He is the third.

Socrates:: The Tyrant then, is remote from true pleasure, the third from the third.

Glaucon:: It appears so.

Socrates:: A plain surface then, may be the image of tyrannical pleasure, as to the computation of length.

Glaucon:: Certainly.

Socrates:: But as to power, and the third augment, it is manifest, by how great a distance it is remote.

Glaucon:: It is manifest, to the computer at least.

Socrates:: If now, conversely, one shall say the King is distant from the Tyrant as to truth of pleasure, as much as and  are distant from, shall he not, on completing the multiplication, find him leading the more pleasant life, and the Tyrant the more wretched one by this same distance?

Glaucon:: You have heaped up, a prodigious account of the difference between these two men, the just and the unjust,; with reference to pleasure and pain.

Socrates:: Yet the numbers are true, and corresponding to their lives, if indeed days, and nights, and months, and years, correspond to them.

Glaucon:: But these, do correspond to them.

Socrates:: If then the good and just man surpasses so far the evil and unjust man in pleasure, in what a prodigious degree further shall he surpass him in decorum of life, in beauty and in virtue?

Glaucon:: In a prodigious degree, truly.

Socrates:: Be it so. Since now we are come to this part of our argument, let us recapitulate what we first said, on account of which we have come hither: and it was somewhere said that it was advantageous to do injustice, if one were completely unjust but were reputed just. Was it not so said?

Glaucon:: It was indeed.

Socrates:: Now then, let us settle this point, since we have now settled the other with reference to acting justly and unjustly, what power each of these has in itself.

Glaucon:: How?

Socrates:: Let us in our reasoning make a resemblance of the soul, that the man who said those things may know what he said.

Glaucon:: What kind of resemblance?

Socrates:: One of those creatures, which are fabled to have been of old, as that of Chimaera, of Scylla, of Cerberus, and many others are spoken of, where many particular natures existed together in one.

Glaucon:: They are spoken of indeed.

Socrates:: Form now one figure of a creature, various and many-headed, having all around heads of tame creatures and of wild, and having power in itself of changing all these heads, and of breeding them out of itself.

Glaucon:: This is the work, of a curious former; however, as the formation is easier in reasoning than in wax and such like, let it be formed.

Socrates:: Let there be now one other figure of a lion, and one of a man, but let the first be by far the greatest, and the second be the second in bulk.

Glaucon:: These are easy, and they are formed.

Socrates:: Conjoin now these three in one, so as to exist somehow with one another.

Glaucon:: They are conjoined.

Socrates:: Form now around them the external appearance of one f them, that of the man, so that to one who is not able to see what is within, but who perceives only the external covering, the man may appear one creature.

Glaucon:: This is formed around.

Socrates:: Let us now tell him who says that it is profitable to this man to do injustice, but to do justice is unprofitable, that he says nothing else than that it is profitable for him to feast the multiform creature, and to make it strong; and likewise the lion, and what respects the lion, whilst the man he kills with famine, and renders weak, so as to be dragged whichever way either of those drag him, and never accustom the one to live in harmony with the other, nor to make them friends, but to suffer them to be biting one another, and to fight and devour one another.

Glaucon:: He, who commends the doing injustice says undoubtedly these things.

Socrates:: And does not he again who says it is profitable to do justice say that he ought to do and to say such things by which the inner man shall come to have the most entire command of the man, and, as a tiller of the ground, shall take care of the many-headed creature, cherishing the mild ones, and nourishing them, and hindering the wild ones to grow up, taking the nature of the Lyon as his ally, and having a common care for all, make them friendly to one another and to himself, and so nourish them?

Glaucon:: He who commends justice undoubtedly says such things as these.

Socrates:: In all respects then, he who commends justice would seem to speak the truth, but he who commends injustice to speak what is false; for with regard both to pleasure, and applause, and profit, he who commends justice speaks the truth, and he who discommends it speaks nothing genuine. Nor does he discommend with understanding what he discommends.

Glaucon:: Not at all, as appears to me at least.

Socrates:: Let us then in a mild manner persuade him (for it is not willingly he errs), asking him, happy man, do not we say that the maxims of good and evil become so upon such accounts as these? These are good which subject the brutal part of our nature most to the human, or rather to the divine, but these evil which enslave the mild part of our nature to the brutal. Shall he agree with us? or how?

Glaucon:: He shall, if he be advised by me.

Socrates:: Is there then any one, whom it avails, by this reasoning, to take gold unjustly, if something of this kind happens, if whilst he takes the money he at the same time subjects the best part of himself to the worst; or if, taking gold, he should enslave a son or daughter, and that even to savage and wicked men, this would not avail him, no, though he should receive for it a prodigious sum? But if he enslaves the most divine part of himself to the most unhallowed and most polluted part, without any pity, is he not wretched, and takes a gift of gold to his far more dreadful ruin than Euriphyle did when she received the necklace for her husband’s life?

Glaucon:: By far, for I will answer you for the man.

Socrates:: And do you not imagine that to be intemperate, has of old been discommended on such accounts as these, because that in such a one that terrible, that great and multiform beast was indulged more than was meet?

Glaucon:: It is plain.

Socrates:: And are not arrogance and moroseness blamed, when the lion and the serpentine disposition increase and stretches beyond measure?

Glaucon:: Entirely so.

Socrates:: And are not luxury and effeminacy blamed because of the remissness and looseness of this disposition, when it engenders in the man cowardice?

Glaucon:: What else?

Socrates:: Are not flattery and illiberality blamed, when any one makes this irascible part itself subject to the brutal crew, and for the sake of wealth and its insatiable lust, accustoms the irascible to be affronted from its youth, and instead of a lion to become an ape?

Glaucon:: Entirely so.

Socrates:: But why is it, do you imagine, that bodily toil and handicrafts are despicable? Shall we say it is on any other account than this, that when one has the best part of his constitution naturally weak, so as not to be able to govern the creatures within himself, but to minister to them, he is able only to learn what flatters them?

Glaucon:: It is likely.

Socrates:: In order then that such a one may be governed in the same manner as the best man is, do we not say that he must be the servant of one who is the best, and who has within him the divine governor? not at all imagining that he should be governed to the hurt of the subject (as Thrasymachus imagined), but as it is best for every one to be governed by one divine and wise, most especially having it of his own within him, if not subjecting himself to it without; that as far as possible we may all resemble one another and be friends, governed by one and the same?

Glaucon:: Rightly indeed.

Socrates:: And law at least, plainly shows it intends such a thing, being an ally to all in the city, as does likewise the government of children, in not allowing them to be free ‘till we establish in them a proper government, as in a city; and having cultivated that in them which is best, by [ that which is best in ourselves, we establish a similar guardian and governor for youth, and then truly we set it free.

Glaucon:: It shows indeed.

Socrates:: In what way then shall we say, Glauco, and according to what reasoning, that it is profitable to do injustice, to be intemperate, or do any thing base, by which a man shall indeed become more wicked, but yet shall acquire more wealth, or any kind of power?

Glaucon:: In no way.

Socrates:: But how shall we say it is profitable for the unjust to be concealed, and not to suffer punishment? or does he not indeed, who is concealed, still become more wicked? but he who is not concealed, and is punished, has the brutal part quieted and made mild, and the mild part set at liberty. And the whole soul being settled in the best temper, in possessing temperance and justice, with wisdom, acquires a more valuable habit than the body does in acquiring vigor and beauty, with a sound constitution, in as far as the soul is more valuable than the body.

Glaucon:: Entirely so.

Socrates:: Shall not every one then, who has understanding at least, regulate his life in bending the whole of his powers hither, in the first place, in honouring those pieces of learning which will render his soul of this kind, and despising all other things?

Glaucon:: It is plain.

Socrates:: And next, with reference to a good habit of body and its nourishment, he will spend his life in attention to these, not that he may indulge the brutal and irrational pleasure, nor yet with a view to health, nor principally regarding this, to become strong, and healthy, and beautiful, unless by means of these he is to become temperate likewise; but he always appears to adjust the harmony of the body for the sake of the symphony which is in the soul.

Glaucon:: By all means, if indeed he is to be truly musical.

Socrates:: That arrangement then, and symphony arising from the possession of wealth, and that vulgar magnificence, he will not, struck with admiration of the felicity of the multitude, increase to infinity, and bring on himself infinite evils.

Glaucon:: I do not think it.

Socrates:: But having an eye, to that polity within himself, and taking care that nothing there be moved out of its ‘place, through the greatness or smallness of his substance, governing in this manner as far as he is able, he will add to his substance, and spend out of it.

Glaucon:: Entirely so.

Socrates:: He will regard honors likewise in the same manner; some he will willingly partake of and taste, which he judges will render him a better man, but those which he imagines would dissolve that habit of soul which subsists within him, he will fly from, both in private and in public.

Glaucon:: He shall not then, be willing to act in polities, if he take care of this.

Socrates:: Yes, truly, in his own city, and greatly too. But not probably in his country, unless some divine fortune befall him.

Glaucon:: I understand. You mean in the city we have now established, which exists in our reasoning, since it is no where on earth, at least, as I imagine.

Socrates:: But in heaven, probably, there is a model of it, for any one who inclines to contemplate it, and on contemplating to regulate himself accordingly; and it is no matter to him whether it does exist any where, or shall ever exist here. He does the duties of this one alone, and of no other.

Glaucon:: It is reasonable.

THE END OF THE NINTH BOOK

## THE TENTH BOOK

Socrates:: I observe, with reference to many other things, that we have established a city in a right manner, beyond what all others have done, and among these establishments I mean that respecting poesy as none of the least.

Glaucon:: Which?

Socrates:: That no part of it which is imitative be by any means admitted. For it appears, now most of all and with greatest perspicuity, that it is not to be admitted, after that the several principles of the soul have been distinguished apart from one another.

Glaucon:: How do you mean?

Socrates:: To tell it as to you (for you will not accuse me to the composers of tragedy, and the rest of the imitative kind), all such things as these seem to be the ruin of the understanding of the hearers; such of them as have not a medicine to enable them to discern what kind they are of.

Glaucon:: From what consideration, do you say so?

Socrates:: It must be spoken, although a certain friendship, at least, and reverence for Homer, which I have had from my childhood, restrains me from telling it; for he seems truly both to have been the first teacher and leader of all these good composers of tragedy: but the man must not be honored preferably to the truth. But what I mean must be spoken.

Glaucon:: By all means.

Socrates:: Hear me then, or rather answer me.

Glaucon:: Ask.

Socrates:: Can you tell me perfectly what at all imitation is? for I do not myself altogether understand what it means?

Glaucon:: And shall I then anyhow understand it?

Socrates:: That would be no way strange, since those who are dim-sighted perceive many things sooner than those who see more clearly.

Glaucon:: The case is so; but whilst you are present, I should not be able to adventure to tell, even though something did appear to me. But consider it yourself.

Socrates:: Do you incline then that we hence begin our inquiry in our usual method: for we were wont to suppose a certain species with respect to many individuals, to which we give the same name; or do you not understand me?

Glaucon:: I understand.

Socrates:: Let us suppose now of the many, which you choose; as for example, there are many beds and tables, if you incline.

Glaucon:: Why are there not?

Socrates:: But the ideas, at least, respecting these pieces of furniture are two; one of bed, and one of table.

Glaucon:: Yes.

Socrates:: And are we not wont to say that the workmen of each of these pieces of furniture, looking towards the idea, make in this manner, the one the beds, and the other the tables which we use? and all other things after the same manner. For no one of the artists makes, at least, the idea itself; for how can he?

Glaucon:: In no way.

Socrates:: But see now whether you call such a one as this an artist? Which one. One who does all things, whatever each particular mechanic does.

Glaucon:: You mention some dexterous and wonderful man.

Socrates:: Not yet, at least, but you will much more say so presently; for this same mechanic is not only able to make all sorts of utensils, but he makes also every thing which springs from the earth, and he makes all sorts of animals, himself, as well as others; and besides these things, he makes the earth, and heaven, and the Gods, and all things in heaven and in the world below.

Glaucon:: You mention, quite a wonderful sophist.

Socrates:: You do not believe me? But tell me, do you imagine there is no such artist at all? or that, in one respect he is the maker of all these things, and in another he is not? Or do you not perceive that even you yourself might be able to make all these things, in a certain manner at least?

Glaucon:: And what, is this manner?

Socrates:: 'Tis no difficult manner, but is many ways and Quickly performed; but in the quickest manner of all, if you choose to take a mirror and carry it round everywhere, you shall quickly make the sun, and the things in the heavens, quickly the earth, quickly yourself, and the other animals, and utensils, and vegetables, and all that was now mentioned.

Glaucon:: Yes, the appearances, but not however the real things at least.

Socrates:: You come well, and seasonably, with your remark; for I imagine that the painter too is one of these artists. Is he not?

Glaucon:: Why is not he?

Socrates:: But you will say, I imagine, that he does not make genuine what he makes, although the painter too, in a certain manner, at least, makes a bed, does he not?

Glaucon:: Yes, he too makes only the appearance.

Socrates:: But what with reference to the bed-maker? Did you not indeed say just now that he does not make the species which we say exists, which is bed, but a particular bed?

Glaucon:: I said so indeed.

Socrates:: If then he does not make that which is, he does not make real being, but some such thing as being, but not being itself; but if any one would say, that the work of a bed-maker, or of any other handicraft, were real being, he would seem not to say true.

Glaucon:: He would, as it would appear at least to those who are conversant in such kind of reasonings.

Socrates:: Let us not then at all wonder if this likewise happen to be somewhat obscure with reference to the truth.

Glaucon:: Let us not.

Socrates:: Do you incline then, that with reference to these very things we inquire concerning the imitator who he really is.

Glaucon:: If you incline.

Socrates:: Are there not then these three sorts of beds? One which exists in nature, and which we may say, as I imagine, God made, or who else?

Glaucon:: None, I imagine.

Socrates:: And one at least which the joiner makes.

Glaucon:: Yes.

Socrates:: And one which the painter makes. Is it not so?

Glaucon:: Be it so.

Socrates:: Now the painter, the bed-maker, God, these three preside over three species of beds.

Glaucon:: They are three indeed.

Socrates:: But God, whether it were that he did not incline it, or whether there was some necessity for it that he should not make but one bed in nature, made this one only, which is really bed; but two such, or more, have never been produced by God, nor ever will be produced.

Glaucon:: How so?

Socrates:: Because, if he had made but two, one again there would have appeared, the species of which both these two would have partaken of, and that species would be that which is bed, and not those two.

Glaucon:: Right.

Socrates:: God then knowing these things, as I imagine, and willing to be the maker of bed, really, and really existing, but not of any particular bed, nor to be any particular bed-maker, produced but one in nature.

Glaucon:: It appears so.

Socrates:: Do you incline then that we call him the creator of this one, or something of this kind?

Glaucon:: It is just in reason, since he has, in their nature, made both this and all other things.

Socrates:: But what as to the joiner? Is not he the workman of a bed?

Glaucon:: Yes.

Socrates:: And is the painter too, the workman and maker of such a work?

Glaucon:: By no means.

Socrates:: But what will you say he is with relation to bed?

Glaucon:: This, as I imagine, we may most reasonably call him: the imitator of what these are the workmen.

Socrates:: Be it so. You call him then the imitator who makes what is generated the third from nature?

Glaucon:: Entirely so.

Socrates:: And this the composer of tragedy shall be likewise, since he is an imitator, rising as a sort of third from the King and the truth, and in like manner all other imitators.

Glaucon:: It seems so.

Socrates:: We have agreed then as to the imitator. But tell me this concerning the painter. Whether do you imagine he undertakes to imitate each particular thing in nature, or the works of artists?

Glaucon:: The works of artists.

Socrates:: Whether such as they really are, or such as they appear? Determine this further.

Glaucon:: How do you say?

Socrates:: Thus: Does a bed differ anything from itself, whether he view it obliquely, or directly opposite, or in any particular position? or does it differ nothing, but only appears different? And in the same way as to other things?

Glaucon:: Thus, it appears, but differs nothing.

Socrates:: Consider this too: with reference to which of the two does painting work, in each particular work? whether with reference to real being, to imitate it as it really is, or with reference to what is apparent, as it appears? and whether is it the imitation of appearance or of truth?

Glaucon:: Of appearance.

Socrates:: The imitative art, then, is far from the truth; and on this account, it seems, he is able to make these things, because he is able to attain but to some small part of each particular, and that but an image. Thus we say that a painter shall paint us a shoemaker, a joiner, and other artists, though he be skilled in none of those arts; yet he shall be able to deceive children and ignorant people, if he be a good painter, when he paints a joiner, and shows him at a distance, so far as to make them imagine he is a real joiner.

Glaucon:: Why not?

Socrates:: But this, I imagine, friend, we must consider with reference to all these things; that-when any one tells us of such a painter, that he has met with a man who is skilled in all manner of workmanship, and every thing else which every several artist understands, and that there is nothing which he does not understand more accurately than anyone else, we ought to reply to such a one that he is a simple man, and that it seems, having met with some impostor and mimic, he has been deceived; so that he has appeared to him to know every thing, from his own incapacity to distinguish between science, and ignorance, and imitation.

Glaucon:: Most true.

Socrates:: Ought we not then, in the next place, to consider tragedy, and its leader, Homer, since we hear from some that these poets understand all arts, and all human affairs respecting virtue and vice, and likewise all divine things, for a good poet must of necessity compose with knowledge, if he means to compose well what he composes, else he is not able to compose. It behooves us then to consider whether these who have met with those imitators have been deceived, and on viewing their works have not perceived that they are the third distant from real being, and that their works are such as can easily be made by one who knows not the truth (for they are phantoms they make, and not real beings); or whether they do say somewhat, and that the good poets in reality have knowledge in these things which they seem to the multitude elegantly to express.

Glaucon:: By all means, this is to be inquired into.

Socrates:: Do you imagine then, that if any one were able to make both of these, that which is imitated and likewise the image, he would allow himself seriously to apply to the workmanship of the images, and propose this to himself as the best thing in life?

Glaucon:: I do not.

Socrates:: But if he were in reality intelligent in these things which he imitates, he would far rather, I imagine, seriously apply himself to the things than to the imitations, and would endeavor to leave behind him many and beautiful actions, as monuments of himself, and would study rather to be himself the person commended than the commender.

Glaucon:: I imagine so; for neither is the honour nor the profit equal.

Socrates:: As to other things then, let us not call them to account, asking Homer or any other of the poets whether any of them were any way skilled in medicine, and not an imitator only of medical discourses; for which of the ancient or latter poets is said to have recovered any to health, as Aesculapius did? or what students in medicine has any left behind him, as he did his descendants? Nor let us ask them concerning the other arts, but let them alone: but with reference to those greatest and most noble things which Homer attempts to speak of, with reference to wars, and armies, and constitutions of cities, and the education belonging to men, it is just, somehow, to question him, whilst we demand of him: Friend Homer, if you be not the third from the truth with regard to virtue, being the workman of an image (which we have defined an imitator to be), but art the second, and art able to discern what pursuits render men better or worse, both in private and public, tell us which of the cities has been by you better constituted, as Lacedaemon was by Lycurgus, and many other both great and small cities by many others? But what city acknowledges you to have been a good lawgiver, and to have been of advantage to them? Italy and Sicily acknowledge Charondas, and we Solon; but shall any one acknowledge you as any thing?

Glaucon:: I fancy not. It is not then pretended even by the Homerics themselves.

Socrates:: But. what war in Homer's days is recorded to have been well conducted by him as leader or counselor?

Glaucon:: Not one.

Socrates:: But what are his discoveries? as among the works of a wise man there are many discoveries and inventions spoken of respecting the arts and other affairs—as of Thales the Milesian, and of Anacharsis the Scythian?

Glaucon:: By no means is there any such thing.

Socrates:: But if not in a public manner, is Homer said to have lived as a private tutor to any, who delighted in his conversation, and have delivered down to posterity a certain Homeric manner of life, in like manner as Pythagoras was remarkably beloved on this account, and even to this day such as denominate themselves from the Pythagorean manner of life appear to be somehow, eminent beyond others?

Glaucon:: Neither is there, anything of this kind related of Homer. For flesh-lover Creaphilus, Socrates, the companion of Homer, may probably appear more ridiculous still in his education than in his name, if what is said of Homer be true. For it is said that he was greatly neglected when he lived under Homer's tuition.

Socrates:: It is said indeed. But do you imagine, Glauco, that if Homer had been able to educate men and to render them better, as being capable not only to imitate with respect to these matters, but to understand them, would he not then have procured himself many companions, and have been honored and beloved by them? But Protagoras the Abderite, and Prodicus the Chian, and many others are able to persuade the men of their times, conversing with them privately, that they shall neither be able to govern their family, nor yet their city, unless they themselves shall preside over their education; and for this wisdom of theirs they are so exceedingly beloved, that their companions almost carry them about on their heads. Would then the men of Homer's time have left him or Hesiod to go about singing their songs, if he had been able to profit men in the way of virtue, and not rather have retained him with gold, and obliged him to stay with them? or, if they could not persuade him, they would as scholars have followed him everywhere, 'till they had got sufficient education?

Glaucon:: You seem to me, Socrates, to say perfectly right.

Socrates:: Shall we not then establish this point: That all the poetical men, beginning with Homer, are imitators of the images of virtue, and of other things about which they compose, but that they do not attain to the truth? but as we just now said, a painter who himself knows nothing about the making of shoes, shall draw a shoemaker, who shall appear to be real to such as are not intelligent, but who view according to the color and figures?

Glaucon:: Entirely so.

Socrates:: In the same manner, I imagine, we shall say that the poet colors over with his names and words certain colors of the several arts, whilst he understands nothing himself, but merely imitates, so as to others such as himself who view things in his compositions, he appears to have knowledge; and if he say anything about shoe-making in measure, number, and harmony, he seems to say quite well, and in like manner if of an expedition, or of any thing else, so great an enchantment have these things naturally—since you know, I imagine, in what manner poetical things appear when stript of musical coloring, and expressed apart by themselves, for you have somewhere beheld it.

Glaucon:: I have.

Socrates:: Do they not, resemble the faces of people who are in their prime, but who are not beautiful, such as they appear when their bloom forsakes them?

Glaucon:: Entirely.

Socrates:: Come now, and consider this. The maker of the image, whom we call imitator, knows nothing of real being, but only of the apparent. Is it not so?

Glaucon:: Yes.

Socrates:: Let us not then leave it expressed by halves, but let us sufficiently perceive it.

Glaucon:: Say on.

Socrates:: A painter, we say, shall paint reins and a bit.

Glaucon:: Yes.

Socrates:: And the leather-cutter and the smith shall make them.

Glaucon:: Certainly.

Socrates:: Does then the painter understand what kind of reins and bit there ought to be, or not even he who makes them, the smith nor the leather-cutter, but he who understands to use them, the horseman alone?

Glaucon:: Most true.

Socrates:: Shall we not say it is so in every thing else?

Glaucon:: How?

Socrates:: That with reference to each particular thing, there are these three arts—that which is to use it, that which is to make it, and that which is to imitate it?

Glaucon:: Yes.

Socrates:: Is then the virtue, and the beauty, and the rectitude of every utensil, and animal, and action for nothing else but for the use for which each particular was made or generated?

Glaucon:: Just so.

Socrates:: Of all necessity then, he who uses each particular must be the most skilful, and be able to tell the maker what he makes good or bad, with reference to the use in which he uses it. Thus, for example, a player on the pipe tells the pipe-maker concerning pipes, what things are of service towards the playing on the pipe, and he shall give orders how he ought to make them, but the work-man does not so.

Glaucon:: What else?

Socrates:: Does not the one then being intelligent, pronounce concerning good and bad pipes, and the other, believing him, make accordingly.

Glaucon:: Yes.

Socrates:: With reference then to one and the same instrument, the maker shall have right opinion concerning its excellence or naughtiness, whilst he is conversant with one who is intelligent, and is obliged to hear from the intelligent; but he who uses it shall have science.

Glaucon:: Entirely so.

Socrates:: But whether shall the imitator have intelligence from using the things he paints, whether they be handsome and right, or otherwise; or shall he have right opinion from his being necessarily conversant with the intelligent, and from being enjoined in what manner he ought to paint?

Glaucon:: Neither of the two.

Socrates:: The imitator then shall have neither knowledge nor right opinion about what he imitates, with reference to excellence or naughtiness.

Glaucon:: It appears not.

Socrates:: The imitator then should be very agreeable in his imitation, with regard to wisdom concerning what he paints.

Glaucon:: Not entirely.

Socrates:: But, however, he will imitate at least, without knowing concerning each particular in what respect it is ill or good; but it is likely, such as appears to be beautiful to the multitude and those who know nothing, that he shall imitate.

Glaucon:: What else?

Socrates:: We have now indeed sufficiently, as it appears at least, settled these things: that the imitator knows nothing worth mentioning in those things which he imitates, but that imitation is a sort of amusement, and not a serious affair; and likewise, that those who apply to tragic poetry in iambics and heroics are all imitators in the highest degree.

Glaucon:: Entirely so.

Socrates:: But certainly, this of imitation, is it not somehow n the third degree from the truth? Is it not?

Glaucon:: Yes.

Socrates:: To what part then of man bears it a reference, having the power it has?

Glaucon:: What part do you speak of?

Socrates:: Of such as this. The same magnitude, perceived by sight, does not appear in the same manner near at hand and at a distance.

Glaucon:: It does not.

Socrates:: And the same things appear crooked and straight, when we look at them in water and out of water, and concave and convex, through the mistake of the sight as to colors; all this disturbance is manifest in the soul. And this infirmity of our nature painting lays hold of and leaves nothing of imposture undone, in the same way as magic does, and many other arts of this kind.

Glaucon:: True.

Socrates:: And have not the arts of measuring, numbering and weighing appeared to be most ingenious helps in these things, that so the apparent greater or less, the apparent more or heavier, may not govern us, but the numbered, the measured, and the weighed?

Glaucon:: What else?

Socrates:: But this again is at least the work of the rational part in the soul.

Glaucon:: It is so indeed.

Socrates:: But whilst reason often measures and declares some things to be greater or less than other things, or equal, the contrary appears at the same time with reference to these things.

Glaucon:: Yes.

Socrates:: But did not we say that it was impossible for - the same person to have contrary opinions about the same things at the same time?

Glaucon:: And thus far at least we said rightly.

Socrates:: That part of the soul, then, which judges contrary to the measure, would seem not to be the same with that; which judges according to the measure.

Glaucon:: It would not.

Socrates:: But surely at least that which trusts to measure and computation would seem to be the best part of the soul.

Glaucon:: Why not?

Socrates:: That then which opposes itself to it would seem to be some of the naughty parts of us.

Glaucon:: Of necessity.

Socrates:: It was then this I inclined should be agreed upon, when I said that painting, and imitation in general, being far from the truth, delight in their own work, conversing with that part in us which is far from wisdom, and are its companion and friend, to no sound nor genuine purpose.

Glaucon:: Entirely so.

Socrates:: Imitation then, being naughty in itself, and joining with that which is naughty, generates naughty things.

Glaucon:: It seems so.

Socrates:: Whether, is the case thus, with reference to the imitation which is by the sight only, or is it likewise so with reference to that by hearing, which we call poetry?

Glaucon:: Likely as to this also.

Socrates:: We shall not therefore, trust to the appearance in painting, but we shall proceed to the consideration of that part of the intellect with which the imitation by poetry is conversant, and see whether it is naughty or valuable.

Glaucon:: It must be done.

Socrates:: Let us proceed then thus. Poetic imitation, we say, imitates men acting either voluntarily or involuntarily, and imagining that in their acting they have done either well or ill, and in all these cases, receiving either pain or pleasure. Does it any more than this?

Glaucon:: No more.

Socrates:: In all these, now, does the man agree with himself, or, as he disagreed with reference to sight, and had contrary opinions in himself of the same things at one and the same time, does he in the same manner disagree likewise in his actions, and fight with himself? But I recollect that there is no occasion for us to settle this at least; for in our reasonings above we sufficiently settled all these things, that our soul is full of a thousand such contrarieties existing in it.

Glaucon:: Right.

Socrates:: Right, truly, but it appears to me necessary to go over now what was then omitted.

Glaucon:: As what?

Socrates:: We said somewhere formerly, that a good man when he meets with such a fortune as the loss of a son, or I of anything else, which he values the most, will bear it of all men the easiest.

Glaucon:: Certainly.

Socrates:: But let us now consider this further, whether will he grieve none at all, or is this indeed impossible, but he will, however, moderate his grief?

Glaucon:: The truth, is rather this last.

Socrates:: But tell me this now concerning him, whether do you imagine that he will struggle more with grief and oppose it, when he is observed by his equals, or when he is in solitude, alone by himself?

Glaucon:: Much more, when he is observed.

Socrates:: But when alone he will venture, I imagine, to utter many things which, if any one heard him, he would be ashamed of, and he will do many things which he would not wish any one saw him doing.

Glaucon:: It is so.

Socrates:: Is it not then reason and law which command him to restrain his grief, but what drags him to grief is the passion itself?

Glaucon:: True.

Socrates:: As then there is in the man an opposite conduct with regard to the same thing, at one and the same time, we must necessarily say that he has two conductors.

Glaucon:: What else?

Socrates:: And shall we not say that one of them is ready to obey the law wherever law leads him?

Glaucon:: How?

Socrates:: Law in a manner says that it is best in misfortunes to have the greatest tranquility possible, and not to bear them ill; since the good and evil of such things as these is not manifest, and since no advantage follows the bearing these things ill, and as nothing of human affairs is worthy of great concern, and besides their grief proves a hindrance to that in them which we ought to have most at hand.

Glaucon:: What is it, you speak of?

Socrates:: To deliberate, on the event, and as on a throw of the dice, to regulate his affairs according to what casts up, in whatever way reason shall declare to be best. And not as children when they fall, to lye still and waste the time in crying, but always to accustom the soul to apply in the speediest manner to heal and rectify what was fallen and sick, dismissing lamentation.

Glaucon:: One would thus, behave in the best manner in every condition.

Socrates:: And did not we say that the best part is willing to follow this which is rational?

Glaucon:: It is plain.

Socrates:: And shall not we say that the part which leads to the remembrance of the affliction, and to wailings, and is insatiably given to these, is irrational and idle, and a friend to cowardice?

Glaucon:: We shall say so truly.

Socrates:: Is not then the grieving part that which admits of much and of various imitation? But the prudent and tranquil part, which is always uniform with itself, is neither easily imitated, nor when imitated, easily understood, especially by a popular assembly, where all sorts of men are assembled together in a theatre? For it is the imitation of a disposition which is foreign to them.

Glaucon:: Entirely so.

Socrates:: It is plain then that the imitative poet is not made at least for such a part of the soul as this. Nor is his skill fitted to please it, if he mean to gain the applause of the multitude; but he applies to the passionate and the multiform part, as it is easily imitated.

Glaucon:: It is plain.

Socrates:: May we not then, with justice, lay hold of the imitative poet and place him as correspondent to the painter; for he resembles him, both in that, as to truth, he does but naughty things, and in this too he resembles him, in being conversant with a different part of the soul from that which is best. And thus we may with justice not admit him into our city, which is to be well regulated, because he excites and nourishes this part of the soul, and strengthening it, destroys the rational; as, when one in a city makes the wicked powerful, he betrays the city and destroys the best men, in the same manner we shall say that the imitative poet establishes a bad republic in the soul of each individual, gratifying the foolish part of it, which neither discerns what is great nor what is little, but deems the same things sometimes great and sometimes small, forming little images in its own imagination, altogether remote from the truth.

Glaucon:: Entirely so.

Socrates:: But we have not, however, as yet at least, brought the greatest accusation against it, for that is, somehow, a very dreadful one: that it is able to corrupt even the good, if it be not a very few excepted.

Glaucon:: Why will it not, since it acts in this manner?

Socrates:: But hear now, and consider; for somehow, the best of us, when we hear Homer, or any of the tragic writers imitating some of the heroes when in grief, pouring forth long speeches in their sorrow, bewailing and beating their breasts, you know we are delighted, and yielding ourselves, we follow along and sympathizing with them, we seriously commend him as an able poet, whoever most affects us in this manner.

Glaucon:: I know it.

Socrates:: Why do you not? But when any domestic grief befalls any of us, you perceive, on the other hand, that we value ourselves on the opposite behavior, if we can be quiet and endure, this being the part of a man, but that of a woman, which in the other case we commended.

Glaucon:: I perceive it.

Socrates:: Is this commendation then, a handsome one, when we see such a man as one would not deign to be one's self, but would be ashamed of, not to abominate but to delight in him, and commend him?

Glaucon:: No, truly; it appears unreasonable.

Socrates:: Certainly, if you consider it at least in this manner.

Glaucon:: How?

Socrates:: If you consider that the part of us, which in our private misfortunes is forcibly restrained, and is kept from weeping and bewailing to the full, being by nature of such a kind as is desirous of these, is the very part which is by the poets filled and gratified; but that part in us which is naturally the best, being not sufficiently instructed, neither by season nor habit, grows remiss in its guardianship over the bewailing part, by attending to the sufferings of others, and deems it no way disgraceful to itself to commend and pity one who grieves immoderately, whilst he professes to be a good man. But this it thinks it gains, even pleasure, which it would not choose to be deprived of, by despising the whole of the poem. For I imagine it falls to the share of few to be able to consider that what we feel with respect to the fortunes of others must necessarily be felt with respect to our own, since it is not easy for one to bear up under his own misfortunes, who strongly cherishes the bewailing disposition over those of others.

Glaucon:: Most true.

Socrates:: And is not the reasoning the same with reference to the ridiculous? For when you hear, in imitation by comedy, or in private conversation, what you would be ashamed to do yourself to excite laughter, and are delighted with it, and imitate it, you do the same thing here as in the tragic: for that part, which, when it wanted to excite laughter, was formerly restrained by reason from a fear of incurring the character of scurrility, you now letting loose, and allowing there to grow vigorous, you are often imperceptibly brought to be in your own behavior a buffoon.

Glaucon:: Extremely so.

Socrates:: And the case is the same as to venereal pleasures, and anger, and the whole of the passions, as well the sorrowful as the joyful; which, truly, we have said, attend us in every action that the poetical imitation of these has the same effect upon us; for it nourishes and waters those things which ought to be parched, and constitutes as our governor those which ought to be governed, in order to our becoming better and happier, instead of being worse and more miserable.

Glaucon:: I can say no otherwise.

Socrates:: When therefore, Glauco, you meet with the com-menders of Homer, who tell how this poet instructed Greece, and that he deserves to be taken as a master to teach one both the management, and the knowledge of human affairs, and that one should regulate the whole of his life according to this poet, we should indeed love and embrace such people, as being the best they are able, and agree with them that Homer is most poetical, and the first of tragedy writers; but they must know that the hymns of the Gods, and the praises of worthy action are alone to be admitted into the city. But if it should admit the pleasurable muse likewise, in songs or verses, you should have pleasure and pain reigning in the city, instead of law and of that reason which always appears best to the community.

Glaucon:: Most true.

Socrates:: Let these things now, be our apology, when we recollect what we have said with reference to poetry, that it was with reason we then dismissed it from our republic, since it is such as is now described: for reason obliged us. And let us tell it further, lest it accuse us of a certain roughness, and rusticity, that there is an old variance between philosophy and poetry. For such as these;

> "That bawling bitch, which at her mistress barks,"

and;

> "He's great in empty eloquence of fools,"

and;

> "On trifles still they plod, because they're poor,"

and a thousand such like, are marks of an ancient opposition between them. But nevertheless let it be said, that if any one show reason for it, that the poetry and the imitation which are calculated for pleasure ought to be in a well-regulated city, we for our part shall gladly admit them, as we are at least conscious to ourselves that we are charmed by them. But to betray what appears to be truth were an unholy thing. For are not you yourself, friend, charmed by this imitation, and most especially when you see it performed by Homer?

Glaucon:: Very much so.

Socrates:: Is it not just, then, that we introduce it, apologizing for itself, either in song or in any other measure?

Glaucon:: By all means.

Socrates:: And we may at least grant, somehow, even to its defenders, such as are not poets but lovers of poetry, to speak in its behalf, without verse, and show that it is not only pleasant, but profitable for republics, and for human life; and we shall hear with pleasure, for we shall gain somewhat if it shall appear not only pleasant but also profitable.

Glaucon:: Why shall we not gain?

Socrates:: And if it happen otherwise, friend, we shall do as those who have been in love, when they deem their love unprofitable: though it is a violence on them, they however desist; so we in like manner, through this inborn love of such poetry that prevails in our best republics, shall be well pleased to see it appear to be the best and truest, and we shall hear it till it is able to make no further apology. But we shall take along with us this discourse we have held, as a counter-charm and incantation, being afraid to fall back again into a childish and vulgar love. We may perceive then that we are not to be much in earnest about such poetry as this, as if it were a serious affair, and approached to the truth, but the hearer is to beware of it, and to be afraid for the republic within himself, and to hold those opinions of poetry which we mentioned.

Glaucon:: I entirely agree.

Socrates:: For great, friend Glauco, great is the contest, and not such as is imagined, to become a good or a bad man, so as not to be moved neither through honour, nor riches, nor any magistracy, nor poetic imitation, ever to neglect justice and the other virtues.

Glaucon:: I agree with you, from what we have discussed, and so I imagine will any other.

Socrates:: But we have not yet, gone through the greatest prize of virtue, and the rewards laid up for her.

Glaucon:: You speak of some prodigious greatness, if there be other greater than those mentioned.

Socrates:: But what is there, can be great in a little time? for this whole period from infancy to old age is but little in respect of the whole.

Glaucon:: Nothing at all, indeed.

Socrates:: What then? Do you imagine an immortal being ought to be much concerned about such a period, and not about the whole of duration?

Glaucon:: I imagine, about the whole. But why do you mention this?

Socrates:: Have you not perceived, that our soul is immortal, and never at all perishes? On which, he, looking at me and wondering, said:

Glaucon:: Not I, indeed. But are you able to show this?

Socrates:: I should otherwise do a wrong. And I imagine you yourself can show it, for it is, in no respect, difficult.

Glaucon:: To me, at least, it is difficult; but I would willingly hear from you this which is not difficult.

Socrates:: You shall hear then.

Glaucon:: Only speak.

Socrates:: Is there not something, you call good, and something you call evil?

Glaucon:: I own it.

Socrates:: Do you then conceive of them in the same manner as I do?

Glaucon:: How?

Socrates:: That which destroys and corrupts everything is the evil, and what preserves and profits it is the good.

Glaucon:: I do.

Socrates:: But what? Do you not say there is something is good, and something is bad, to each particular? As blindness to the eyes, and disease to every animal body, blasting to corns, rottenness to wood, rust to brass and iron, and as I am saying, almost every thing has its peculiar evil and disease?

Glaucon:: I imagine so.

Socrates:: And when any thing of this kind befalls anything, does it not render that which it befalls naughty, and in the end dissolves and destroys it?

Glaucon:: Why does it not?

Socrates:: Its own peculiar evil then, and naughtiness, destroys each particular, or if this does not destroy it, nothing else at least can ever destroy it. For that which is good at least, can never at all destroy anything, nor yet that which is neither good nor evil.

Glaucon:: How can they?

Socrates:: If then, we shall be able to find among beings any one which has indeed some evil, which renders it naughty, but is not, however, able to dissolve and destroy it, shall we not then know that a being thus constituted cannot be destroyed at all?

Glaucon:: So, it appears.

Socrates:: What then? Is there not something which renders the soul evil?

Glaucon:: Certainly, all these things which we have now mentioned, injustice, intemperance, cowardice, ignorance.

Socrates:: But does then any of these dissolve and destroy it? And attend now, that we may not be imposed on in imagining that an unjust and foolish man, when he is caughted doing injustice, is then destroyed through his injustice, which is the naughtiness of his soul. But consider it thus: As disease, which is the naughtiness of animal body, dissolves and destroys body, and reduces it to be no longer that body, and all those things we mentioned, being destroyed by their own proper evil adhering to them and possessing them, are reduced to a non-existence. Is it not so?

Glaucon:: Yes.

Socrates:: Consider now the soul in the same manner. Does injustice or other vice possessing it, by possessing it, and adhering to it, corrupt and deface it, ‘till bringing it to death, it separate it from the body?

Glaucon:: By no means, does it this.

Socrates:: But it were absurd, that any thing should be destroyed, by the naughtiness of another, but not by its own.

Glaucon:: Absurd.

Socrates:: For consider, Glauco, that neither by the naughtiness of victuals, whether it be their moldiness, or rottenness, or whatever else, do we imagine our body can be destroyed, but if this naughtiness in them create in the body a naughtiness of the body, we will say that through their means the body is destroyed by its own evil, which is disease. But we will never allow that by the naughtiness of food which is one thing, the body which is another thing, can ever by this foreign evil, without creating in it its own peculiar evil, be at any time destroyed.

Glaucon:: You say most right.

Socrates:: According to the same reasoning then, unless the naughtiness of the body create a naughtiness of the soul, let us never allow that the soul can be destroyed by an evil which is foreign, without its own peculiar evil, one thing by the evil of another.

Glaucon:: There is reason for it.

Socrates:: Let us then either refute these things as not good reasoning, or so long as they are unrefuted, let us at no time say that the soul shall be ever in any degree the more destroyed, either by burning fever, or by any other disease, or by slaughter, not even though one should cut the whole body into the smallest parts possible, ‘till one show that through these sufferings of the body, the soul herself becomes more unjust and impure. But we will never allow it to be said that when a foreign evil befalls anything, whilst its own proper evil is not within it, that either the soul or any thing else is destroyed.

Glaucon:: But this at least, no one shall ever show, that the souls of those who die are by death rendered more unjust.

Socrates:: But if any one, shall dare to contend with us in reasoning, and, in order that he may not be obliged to own the souls are immortal, will say that when one dies he becomes more wicked and unjust, we shall somehow justly demand of him to show, if he says true in telling us this, that injustice is deadly to the possessor, as a disease, and that those who embrace it are destroyed by it as by a disease destructive in its own nature—of those most speedily who embrace it most, and those more slowly who embrace it less, and not as at present, where the unjust die having this punishment inflicted on them by others.

Glaucon:: Truly, injustice does not appear altogether dreadful, if it shall be deadly to him who practices it (for that were a deliverance from evil); but I rather imagine it will appear to be altogether the reverse, it destroying others as far as it can, but rendering the unjust extremely alive, and along with his being alive rendering him wakeful likewise; so far, it seems, does it dwell from being deadly.

Socrates:: You say well, for when one’s own wickedness and peculiar evil is insufficient to kill and destroy the soul, hardly can that evil at least, which aims at the destruction of another, destroy a soul or any thing else, but what it is aimed against.

Glaucon:: Hardly indeed, as appears to me at least.

Socrates:: When therefore it is destroyed by no one evil, neither I peculiar nor foreign, is it not plain that of necessity it always exists, and if it always exists, it is immortal?

Glaucon:: Of necessity.

Socrates:: Let this then, be fixed in this manner. And if it be, you'll perceive that the same souls shall, always remain,! for their number shall never become less, none being destroyed, nor shall it become greater; for if anyhow the number of immortals was made greater, you know it would take from the mortal, and in the end all would be immortal.

Glaucon:: You say true.

Socrates:: But let us not, imagine this (for reason will not allow of it), nor yet that the soul in its truest nature is of such a kind as to be full of much variety, diversity and difference, considered in itself.

Glaucon:: How do you say?

Socrates:: That can hardly, be eternal which is compounded of many things, and which has not the finest composition as has now appeared to us to be the case with reference to the soul?

Glaucon:: It is not likely, at least.

Socrates:: That the soul then is something immortal, both our present reasonings and others too, may oblige us to own; but in order to know what kind of being the soul is, in truth, one ought not to contemplate it, as it is damaged both by its conjunction with the body and by other evils, as we now behold it, but such as it is when become pure, such it must by reasoning be fully contemplated, and he who does this) shall find it far more beautiful at least, and shall more plainly see through justice and injustice, and every thing we have now gone over. We are now telling the truth concerning it, such as it appears at present. We lave seen it, indeed, in the same condition in which they see the marine Glaucus, where they cannot easily perceive his ancient nature, because the ancient members of his body are partly broken off, and others are worn away, and he altogether damaged by the waves; and besides other things are grown to him, such as shell fish, sea weed, and stones, so that he every way resembles a beast, rather as what he naturally was. In such a condition do we behold the soul under a thousand evils. But we ought, Glauco, to behold it there.

Glaucon:: Where?

Socrates:: In its philosophy, and to observe to what it applies, and hat intimacies it affects, as being allied to that which divine, immortal, and eternal; and what it would become if it pursued wholly what is of this kind, and were by this pursuit, brought out of that ocean in which it now is, and had the stones and shell fish shaken off from it, which at present, as it is fed on earth, render its nature in great measure earthy, stony, and savage, through those enjoyments which are said to render happy. And then should le behold its true nature, whether multiform or uniform, id everything concerning it. But we have, now, as I imagine, sufficiently gone over its passions and appearances human life.

Glaucon:: Entirely so.

Socrates:: Have we not now, discussed everything else in our reasonings, but have not produced those rewards and honors of justice (as you say Hesiod and Homer do), but we find justice itself to be the best reward to the soul; and that it ought to do what is just, whether it have, or have not Gyges’ ring, and along with such a ring, the helmet likewise of Pluto.

Glaucon:: You say most true.

Socrates:: Will it not now then, Glauco, be attended with no envy, if besides these, we add those rewards to justice and the other virtues, what and how great there are afforded to the soul both by men and Gods, both whilst the man is alive, and after he is dead?

Glaucon:: By all means.

Socrates:: Will you then restore me what you borrowed in the reasoning?

Glaucon:: What, chiefly?

Socrates:: I granted you that the just man should be deemed unjust, and the unjust be deemed to be just. For you were of opinion, that though it were not possible that these things should be concealed from Gods and men, it should however be granted for the sake of the argument, that justice in itself might be compared with injustice in itself; or do you not remember it?

Glaucon:: I should indeed be unjust, if I did not.

Socrates:: Now after the judgment is over, I demand again, it behalf of justice, that as you allow it to be indeed esteemed both by Gods and men, you likewise allow it to have the same good reputation, that it may also receive these prize; of victory which it acquires from the reputation of justice and bestows them on those who possess it, since it hat) already appeared to bestow those good things which arise from really being just, and that it does not deceive those who truly embrace it.

Glaucon:: You demand what is just.

Socrates:: Will you not then, in the first place restore m this? That it is not concealed from the Gods what sort of man each of the two is.

Glaucon:: We will grant it.

Socrates:: And if they be not concealed, one of them shall be beloved of the Gods, and one of them hated, as we agreed in the beginning.

Glaucon:: We did so.

Socrates:: And shall we not agree that, as to the man who is beloved of the Gods, whatever comes to him from the Gods shall ill be the best possible, unless he have some necessary ill from former miscarriage.

Glaucon:: Entirely so.

Socrates:: We are then, to think in this manner of the just man, that if he happen to be in poverty, or in diseases, or in any other of those imaginary evils, these things to him issue in something good, either whilst alive, or dead. For never at all is he neglected by the Gods at least, whoever he is who inclines earnestly to endeavor to become just, and practices virtue as far as it is possible for man to resemble God.

Glaucon:: It is reasonable, that such an one should not be neglected by him he resembles.

Socrates:: And are we not to think the reverse of these things, concerning the unjust man?

Glaucon:: Entirely.

Socrates:: Such then would seem to be the prizes which the just man receives from the Gods.

Glaucon:: Such they are indeed in my opinion.

Socrates:: But what, do they receive from men? Is not the case thus? (if we are to suppose the truth). Do not cunning and unjust men do the same thing as racers who run well at the beginning, but not so at the end? for at the first they briskly leap forward, but in the end they become ridiculous, and, with their ears on their neck, they run off without any reward. But such as are true racers, arriving at the end, both receive the prizes and are crowned. Does it not happen thus for the most part as to just men? that it the end of every action and intercourse of life they are both held in esteem, and receive rewards from men.

Glaucon:: Entirely so.

Socrates:: You will then suffer me to say of these what you yourself aid of the unjust. For I will aver now, that the just when hey are grown up, shall arrive at power if they desire magistracies, they shall marry where they incline, and hall settle their children in marriage where they incline, and everything else you mentioned concerning the others, now say concerning these. And on the other hand, I will say of the unjust, that the most of them, though they nay be concealed whilst they are young, yet being caught at the end of the race, are ridiculous, and when they become old, are wretched and ridiculed, and shall be scourge. both by foreigners and citizens, and they shall afterward be tortured and burnt, which you said were terrible thing and you spoke the truth. Imagine you hear from me that they suffer all these things. But see if you will admit of what I say.

Glaucon:: Entirely, for you say what is just.

Socrates:: Such as these now, are the prizes, the rewards an gifts, which a just man receives in his life time, both from Gods and men, besides those good things which jus tic contains in itself.

Glaucon:: And they are extremely beautiful, and likewise permanent.

Socrates:: But these now, are nothing in number or magnitude, when compared with those which await each of the two at death. And these things must likewise be heard that each of them may completely have what is their due in the reasoning.

Glaucon:: You may say on, not as to a hearer who hath heard much, but who hears with greater pleasure.

Socrates:: But, however, I will not, tell you the apologue of Alcinus, but that, indeed, of a brave man, Erus the son of Armenius, by descent a Pamphilian, who happening on time to die in battle, when the dead were on the tenth day carried off, already all corrupted, he was taken up sound and being carried home, as he was about to be buried on the twelfth day, when laid on the funeral pile, he revived, and being revived, he told what he saw in the other state, and said: That after his soul went out, it went with man others, and that they came to a certain region of spirit where there were two gulps in the earth, near to one another, and other two openings in the heavens, opposite to them, and that the judges sate between these. An when they give judgment, they commanded the just to go to the right hand, and upwards through the heaven, fixing before them the accounts of the judgment pronounced but the unjust they commanded to the left, and downwards, and these likewise had behind them the accounts of all they had done. But on his coming before the judges, they said it behooved him to be a messenger to men concerning things there, and they commanded him to hear, and to contemplate every thing in the place. And that he saw here, through two openings, one of the heaven, and one of the earth, the souls going away, after they were there judged; and through the other two openings he saw, rising through the one out of the earth, souls full of squalidness and dust; and through the other he saw other souls descending pure from heaven; and that always on their arrival, they seemed to come off a long journey, and that they gladly went to rest themselves in the meadow, as in a public assembly, and saluted one another, such as were of acquaintance, and that these who rose out of the earth, asked the others concerning the things above, and those from heaven asked them concerning the things below, and that they told one another: those wailing and weeping whilst they called to mind what and how many things they suffered and saw in their journey under earth (for it was a journey of a thousand years), and that these again from heaven explained their enjoyments and spectacles of inexpressible beauty. To narrate many of them, Glauco, would take much time; but this, was the sum, whatever pieces of injustice any had committed, and how many soever any one had injured, they were punished for all these separately tenfold, and that it was in each, according to the rate of an hundred years, the life of man being considered as so long, that they might suffer tenfold punishment of the injustice they had done. So that if any one had put any to death, either by betraying cities, or armies, or bringing men into slavery, or being confederates in any other wickedness, for each of all these they reaped tenfold sufferings; and if, again, they had benefited any by good deeds, and had been just and holy, they reaped what was worthy, according to these actions. Of those who died very young, and lived but a little time, he told what is not worth relating in respect of other things. But of impiety and piety towards the Gods, and parents, and of suicide, he told the more remarkable retributions. For he was present when one was asked by another where the great Aridaeus was? This Aridaeus had been tyrant in a certain city of Pamphylia a thousand years before that time, and had killed his aged father and his elder brother, and had done many other unhallowed deeds, as it was reported. And he said the one who was asked, replied: He neither comes, nor ever will come hither. For we then surely saw this likewise among other dreadful spectacles, when we were near the mouth of the opening, and were about to come up after having suffered all our sufferings, we beheld both him on a sudden, and others likewise, the most of whom were tyrants, and some private persons who had committed great iniquity, whom, when they imagined they were to get up, the mouth of the opening did not admit, but bellowed when any of those who were so polluted with wickedness, or who had not been sufficiently punished, made an attempt to ascend. And then, fierce men, and all of fire to look at, standing by and understanding the bellowing, took them and led them apart, Aridaeus and the rest, binding their hands and their feet, and thrusting down their head, and pulling off their skin, dragged them to an outer road, tearing them on thorns, declaring always to those who passed by, on what accounts they suffered these things, and that they were carrying them to be thrown into Tartarus. And hence, that amidst all their various terrors, this terror surpassed, lest the mouth should bellow, and that when it was silent, every one most gladly ascended. And that the punishments and torments were such as these, and their rewards were the reverse of these. And that every one, after they had been seven days in the meadow, arising thence, it behooved them to depart on the eight day, and arrive at another place on the fourth day after, from whence they perceived from above, through the whole heaven and earth, a light stretched as a pillar, mostly resembling the rainbow, but more bright, and pure. At which they arrived in one day's journey, and thence they perceived through the middle of the light from heaven, the extremities of its ligatures extended: for that this light was the belt of heaven, like the transverse beams of ships in like manner keeping the whole circumference united. And that from the extremities hang the distaff of necessity, by which all the revolutions were turned round, whose spindle, and point, were both of adamant, but its whirl mixed of this and of other things, and that the nature of the whirl was of such a kind, as to its figure, as is any one we see here. And you must conceive it, from what he said, to be of such a kind as this. As if in some great hollow whirl, carved throughout, there was such another, but lesser within it, fitted to it, like casks fitted one within another, and in the same manner a third, and a fourth, and other four, for that the whirls were eight in all, as circles one within another, having their lips appearing upwards, and forming 'round the spindle one united convexity of one whirl; and that the spindle was driven through the middle of the eight; and that the first and outmost whirl had the widest circumference in the lip, that the sixth had the second wide, and that of the fourth is the third wide, and the fourth wide that of the eight, and the fifth wide that of the seventh, the sixth wide that of the fifth, and the seventh wide that of the third, and the eight wide that of the second. And that that of the largest is variegated, that of the seventh is the brightest, and that of the eight has its color from the shining of the seventh, that of the second and fifth like to one another, more yellow than those others. But the third has the whitest color, the fourth reddish; the second in whiteness surpassing the sixth, and that the distaff must turn round in a circle with the whole it carries, and whilst the whole is turning round, the seven inner circles are gently turned round in a contrary motion to the whole. And that of these, the eight moves the swiftest, and next to it, and equal to one another, the seventh, the sixth and the fifth; and that the third went in a motion which as appeared to them completed its circle in the same way as the fourth. The fourth in swiftness was the third, and the fifth was the second, and it was turned round on the knees of necessity. And that on each of its circles there was seated a Syren on the upper side carried round, and uttering her voice in one monotone, but that the whole of them being eight, composed one harmony. That there were other three sitting round at equal distance one from another, each on a throne, the daughters of necessity, the Fates, in white vestments, and having crowns on their heads; Lachesis, and Clotho, and Atropos, singing to the harmony of the Syrens, Lachesis singing the past, Clotho the present, and Atropos the future. And that Clotho, at certain intervals, with her right hand laid hold of the spindle, and along with her mother turned about the outer circle; and Atropos, in like manner, turned the inner ones with her left hand; and that Lachesis touched both of these severally with either hand. After they arrive here, it behooves them to go directly to Lachesis. That then a certain prophet first of all ranges them in order, and then taking the lots, and the models of lives, from the knees of Lachesis, and ascending a lofty tribunal, he says: The speech of virgin Lachesis, the daughter of necessity; souls of a day! The beginning of another period of men of mortal race. The daemon shall not receive you as his lot, but you shall choose the daemon: he who draws the first, let him first make choice of a life, to which he must of necessity adhere: virtue is independent which every one shall partake of, more or less, according as he honors, or dishonors her: the cause is in himself, who makes the choice, and God is blameless. And that when he had said these things, he threw on all of them the lots, and that each took up the one which fell beside him, and that he was allowed to take no other than it. And that when he had taken it, he knew what number he had drawn. That after this he placed on the ground before them, the models of lives many more than those we see at present. And that they were of every kind. For there were lives of all sorts of animals, and human lives of every kind. And that among these, there were tyrannies also, some of them perpetual, and others destroyed in the midst of their greatness, and ending in poverty, banishment, and want. That there were also lives of renowned men, some for their appearance as to beauty, strength, and agility; and others renowned for their descent and the virtues of their ancestors. There were the lives of renowned women in the same manner. But that there was no disposition of soul among these models, because, of necessity, on choosing a different life it becomes different itself. As to other things, riches and poverty, sickness and health, they were mixed with one another, and some were in a middle station between these. There, then, as appears, friend Glauco, is the whole danger of man. And, on these accounts, this, of all things, is most to be studied, in what manner every one of us, omitting other studies, shall become an enquirer and learner in this study, if by any means he be able to learn and find out who shall make him expert and intelligent to discern a good life and a bad; and to choose everywhere, and at all times, the best of what is possible, considering all the things now mentioned, both compounded and separated from one another, what they are with respect to the virtue of life. And to understand what good or evil beauty operates when mixed with poverty, or riches, and with this or the other habit of soul; and what is operated by noble and ignoble descent, by privacy, and by public station, by strength and weakness, docility and indocility, and everything else of the kind which naturally pertains to the soul, and likewise of what is acquired when blended one with another; so as to be able from all these things to compute, and having an eye to the nature of the soul, to comprehend both the worse and the better life, pronouncing that to be the worse which shall lead the soul to become more unjust, and that to be the better life which (shall lead it to become more just, and to dismiss every Bother consideration. For we have seen that in life and in death this is the best choice. But it is necessary that one ‘pave this opinion firm as an adamant in him, when he goes into the other world, in order that there also he may be unmoved with riches, or any such evils, and may not, [stumbling into tyrannies, and other such practices, do [many and incurable mischief’s, and himself suffer still greater; but may understand to choose always the middle life, as to these things, and to shun the extremes on either hand, both in this life as far as is possible, and in the whole of hereafter. For thus man becomes most happy. For that then the messenger from the other world further told how that the prophet spoke thus: Even, to him who comes last, choosing with judgment, living consistently, there is prepared a desirable life, no way bad. Let neither him who is first be heedless in his choice, nor let him who is last, despair. He said that when the prophet had spoken these things, the first who drew a lot run instantly and chose the greatest tyranny, but through folly and insatiableness had not sufficiently examined all things on making his choice, but was ignorant that in this life there was this destiny, the devouring of his own children, and other evils, and that afterwards, when he had considered at leisure, he wailed and lamented his choice, not having observed the admonitions of the prophet above mentioned. For that he did not accuse himself, as the author of his misfortunes, but fortune and the daemons, and every thing instead of himself; and that he was one of those who came from heaven, who had in his former life lived in a regulated republic, and had been virtuous by custom without philosophy, and that in general among these, there were not a few found who came from heaven, as being unexercised in trials. But that the most of those who came from earth, as they had endured hardships themselves, and had seen others in hardships, did not precipitately make their choice; and hence, and through the fortune of the lot, to most souls there was an exchange of good and evil things. Since if one should always, whenever he comes into this life, soundly philosophize, and the lot of election should not fall on him the very last, it would seem from what has been told us from thence, that he shall be happy not only here, but when he goes hence, and his journey hither back again shall not be earthy and rugged, but smooth and heavenly. This spectacle, was worthy to behold, in what manner the several souls made choice of their life; for it was both pitiful and ridiculous and wonderful to behold, as each for the most part chose according to the habit of their former life. For he told that he saw the soul which was formerly the soul of Orpheus making choice of the life of a swan, through hatred of womankind, being unwilling to be born of woman on account of the death he suffered from them. He saw, likewise, the soul of Thamyris, making choice of the life of a nightingale, and he saw likewise a swan turning to the choice of human life, and other musical animals, in like manner, as is likely. And that he saw one soul, in making its choice, choosing the life of a lion, and that it was the soul of Telamonian Ajax, shunning to become a man, remembering the judgment given with reference to the amour. That next he saw the soul of Agamemnon, and that this one, in hatred also of the human kind, on account of his misfortunes, exchanged it for the life of an eagle. And that he saw the soul of Atalante choosing her lot amidst the rest, and having attentively observed the great honors paid an athletic man, was unable to pass by, but took it. That after it he saw the soul of Epaeus the Panopean going into the nature of a skilful workwoman. And that far off, among the last, he saw the soul of the buffoon Thersites assuming the ape. And that by chance, he saw the soul of Ulysses, who had drawn its lot last of ill, going to make its choice: that in remembrance of its former toils, and tired of ambition, it went about a long time seeking the life of a private man of no business, and with difficulty found it lying somewhere, neglected by the rest. And that when it saw it, it said that he would lave made the same choice if he had gotten the first lot, and gladly made choice of it. And that in like manner the souls of wild beasts went into men, and men again into beasts. The unjust changing into wild beasts, and the just into tame, and that they were blended by all sorts of mixtures. That after all the souls had chosen their lives according as they drew their lots, they went all in order to Lachesis, and that she gave to every one the daemon he chose, and sent him along to be the guardian of his life, and the accomplisher of what he had chosen. He first of all conducts it to Clotho, to ratify under her hand and by the whirl of the vortex of her spindle, the destiny he had chosen by lot; and after being with her, he leads him back again to the spinning of Atropos, who makes the destinies irreversible, and that from hence they proceed directly under the throne of Necessity. And after he had passed by it, as all others passed, they marched all into the plain of Lethe amidst dreadful heat and scorching, for he said that it is void of trees and everything that the earth produces. That when night came on they encamped beside the river Amelete, whose water no vessel contains; a certain measure then of the water all of them must of necessity drink, and such of them as are not preserved by prudence, drink more than the measure, and that he who drinks, always forgets every thing. And that after they were laid asleep, and it became midnight, there was thunder, and an earthquake, and they were thence on a sudden carried upwards, some one way, and some another, approaching to generation, like stars. But that he himself was forbidden to drink of the water. Where however, and in what manner, he came into his body, he knew nothing, but suddenly looking up in the morning he saw himself already laid on the funeral pile. And this fable, Glauco, has been preserved, and is not lost, and it may preserve us, if we observe it, and shall happily pass over the river Lethe, and shall not contaminate the soul.

But if the company will be persuaded by me, accounting the soul immortal, and able to bear all evil and all good, we shall always hold the road which leads above. And justice with prudence we shall by all means pursue in order that we may be friends both to ourselves and to the Gods, both whilst we remain here, and when we receive its rewards, like victors assembled together; and. we shall both here, and in that thousand years' journey we have described, enjoy a happy life.

THE END OF THE TENTH BOOK

# The Republic.

Translated by Thomas Taylor.

| Socrates | Glauco |
| Cephalus | Adimantus |
| Polemarchus | Thrasymachus |

THE WHOLE IS A RECITAL BY SOCRATES.

*The* SCENE *is in the House of* Cephalus, *at the Piræum.*

Socrates:: I went down yesterday to the Piræum, with Glauco, the son of Aristo, to pay my devotion to the Goddess; and desirous, at the same time, to observe in what manner they would celebrate the festival, as they were now to do it for the first time. The procession of our own countrymen seemed to me to be indeed beautiful; yet that of the Thracians appeared no less proper. After we had paid our devotion, and seen the solemnity, we were returning to the city; when Polemarchus, the son of Cephalus, observing us at a distance hurrying home, ordered his boy to run and desire us to wait for him: and the boy, taking hold of my robe behind;

Boy:: Polemarchus, desires you to wait.

Socrates:: I turned about, and asked where he was.

Boy:: He is coming up, after you; but do you wait for him.

Glaucon:: We will wait.

Socrates:: And soon afterwards came Polemarchus, and Adimantus the brother of Glauco, and Niceratus the son of Nicias, and some others as from the procession. Then said Polemarchus;

Polemarchus:: Socrates! you seem to me to be hurrying to the city.

Socrates:: You conjecture, not amiss.

Polemarchus:: Do you not see, then, how many there are of us?

Socrates:: Undoubtedly I do.

Polemarchus:: Therefore, now, you must, either be stronger than these, or you must stay here.

Socrates:: Is there not, one way still remaining? May we not persuade you that you must let us go?

Polemarchus:: Can you be able to persuade such as will not hear?

Glaucon:: By no means.

Adeimantus:: Then, as if we are not to hear, determine accordingly. But do you not know, that there is to be an illumination in the evening, on horse-back, to the goddess?

Socrates:: On horse-back? That is new. Are they to have torches, and give them to one another, contending together with their horses? or how do you mean?

Polemarchus:: Just so. And besides, they will perform a nocturnal solemnity worth seeing. For we shall rise after supper, and see the nocturnal solemnity, and shall be there with many of the youth, and converse together: But do you stay, and do not do otherwise.

Glaucon:: It seems proper, then, that we should stay.

Socrates:: Nay, if it seem so, we ought to do it.

We went home therefore to Polemarchus’s house; and there we found both Lysias and Euthydemus, brothers of Polemarchus; likewise Thrasymachus the Chalcedonian, and Charmantides the Pæoneian, and Clitipho the son of Aristonimus; Cephalus the father of Polemarchus was likewise in the house; he seemed to me to be far advanced in years, for I had not seen him for a long time. He was sitting crowned, on a certain couch and seat; for he had been offering sacrifice in the hall. So we sat down by him; for some seats were placed there in a circle. Immediately, then, when Cephalus saw me, he saluted me, and said;

Cephalus:: Socrates, you do not often come down to us to the Piræum, nevertheless you ought to do it; for, were I still able easily to go up to the city, you should not need to come hither, but we would be with you. But now you should come hither more frequently: for I assure you that, with relation to myself, as the pleasures respecting the body languish, the desire and pleasure of conversation increase. Do not fail, then to make a party often with these youths, and come hither to us, as to your friends and intimate acquaintance.

Socrates:: And, truly, Cephalus, I take pleasure in conversing with those who are very far advanced in years; for it appears to me proper, that we learn from them, as from persons who have gone before us, what the road is which it is likely we have to travel; whether rough and difficult, or plain and easy. And I would gladly learn from you, as you are now arrived at that time of life which the poets call the threshold of old-age, what your opinion of it is; whether you consider it to be a grievous part of life, or what you announce it to be?

Cephalus:: And I will tell you, Socrates, what is really my opinion; for we frequently meet together in one place, several of us who are of the same age, observing the old proverb. Most of us, therefore, when assembled, lament their state, when they feel a want of the pleasures of youth, and call to their remembrance the delights of love, of drinking, and feasting, and some others akin to these: and they express indignation, as if they were bereaved of some mighty things. In those days, they say, they lived well, but now they do not live at all: some of them, too, bemoan the contempt which old-age meets with from their acquaintance: and on this account also they lament old-age, which is to them the cause of so many ills. But these men, Socrates, seem not to me to blame the real cause; for, if this were the cause, I likewise should have suffered the same things on account of old-age; and all others, even as many as have arrived at these years: whereas I have met with several who are not thus affected; and particularly was once with Sophocles the poet, when he was asked by some one, How, Sophocles, are you affected towards the pleasures of love? are you still able to enjoy them? Softly, friend, most gladly, indeed, have I escaped from these pleasures, as from some furious and savage master. He seemed to me to speak well at that time, and no less so now: for, certainly, there is in old-age abundance of peace and freedom from such things; for, when the appetites cease to be vehement, and are become easy, what Sophocles said certainly happens; we are delivered from very many, and those too insane masters. But with relation to these things, and those likewise respecting our acquaintance, there is one and the same cause; which is not old-age, Socrates, but manners: for, if indeed they are discreet and moderate, even old-age is but moderately burthensome: if not, both old-age, Socrates, and youth are grievous to such.

Socrates:: Being delighted to hear him say these things, and wishing him to discourse further, I urged him, and said, I think, Cephalus, the multitude will not agree with you in those things; but will imagine that you bear old-age easily, not from manners, but from possessing much wealth; for the rich, say they, have many consolations.

Cephalus:: You say true, they do not agree with me; and there is something in what they say; but, however, not so much as they imagine. But the saying of Themistocles was just; who, when the Seriphian reviled him, and said that he was honored, not on his own account, but on that of his country, replied, “That neither would himself have been renowned had he been a Seriphian, nor would he, had he been an Athenian.” The same saying is justly applicable to those who are not rich, and who bear old-age with uneasiness, ‘That neither would the worthy man, were he poor, bear old-age quite easily; nor would he who is unworthy, though enriched, ever be agreeable to himself.’

Socrates:: But, whether, Cephalus, was the greater part of what you possess, left you; or have you acquired it?

Cephalus:: Somewhat, Socrates, I have acquired: as to money-getting, I am in a medium between my grandfather and my father: for my grandfather, of the same name with me, who was left almost as much substance as I possess at present, made it many times as much again; but my father Lysanias made it yet less than it is now: I am satisfied if I leave my sons here, no less, but some little more than I received.

Socrates:: I asked you, for this reason, because you seem to me to love riches moderately; and those generally do so who have not acquired them: but those who have acquired them are doubly fond of them: for, as poets love their own poems, and as parents love their children, in the same manner, those who have enriched themselves value their riches as a work of their own, as well as for the utilities they afford, for which riches are valued by others.

Cephalus:: You say true.

Socrates:: It is entirely so. But further, tell me this: What do you think is the greatest good derived from the possession of much substance?

Cephalus:: That, probably, of which I shall not persuade the multitude. For be assured, Socrates, that after a man begins to think he is soon to die, he feels a fear and concern about things which before gave him no uneasiness: for those stories concerning a future state, which represent that the man who has done injustice here must there be punished, though formerly ridiculed, do then trouble his soul with apprehensions that they may be true; and the man, either through the infirmity of old-age, or as being now more near those things, views them more attentively: he becomes therefore full of suspicion and dread; and considers, and reviews, whether he has, in any thing, injured any one. He then who finds in his life much of iniquity, and is wakened from sleep, as children by repeated calls, is afraid, and lives in miserable hope. But the man who is not conscious of any iniquity.

Still pleasing hope, sweet nourisher of age!
Attends—

as Pindar says. This, Socrates, he has beautifully expressed; that, who ever lives a life of justice and holiness.

Sweet hope, the nourisher of age, his heart
Delighting, with him lives; which most of all
Governs the many veering thoughts of man.

So that he says well, and very admirably; wherefore, for this purpose, I deem the possession of riches to be chiefly valuable; not to every man, but to the man of worth: for the possession of riches contributes considerably to free us from being tempted to cheat or deceive; and from being obliged to depart thither in a terror, when either indebted in sacrifices to God, or in money to man. It has many other advantages besides; but, for my part, Socrates, I deem riches to be most advantageous to a man of understanding, chiefly in this respect.

Socrates:: You speak most handsomely, Cephalus. But with respect to this very thing, justice: Whether shall we call it truth, simply, and the restoring of what one man has received from another? or shall we say that the very same things may sometimes be done justly, and sometimes unjustly? My meaning is this: Every one would somehow own, that if a man should receive arms from his friend who was of a sound mind, it would not be proper to restore such things if he should demand them when mad; nor would the restorer be just: nor again would he be just, who, to a man in such a condition, should willingly tell all the truth.

Cephalus:: You say right.

Socrates:: This, then, to speak the truth, and restore what one hath received, is not the definition of justice?

Polemarchus:: It is not, Socrates, if at least we may give any credit to Simonides.

Cephalus:: However that be, I give up, this conversation to you; for I must now go to take care of the sacred rites.

Socrates:: Is not Polemarchus, your heir?

Cephalus:: Certainly.

Socrates:: He smiling departed to the sacred rites.—

Tell me, then, you who are heir in the conversation, what is it which, according to you, Simonides says so well concerning justice?

Polemarchus:: That to give every one his due, is just; in saying this, he seems to me to say well.

Socrates:: It is, indeed, not easy to disbelieve Simonides, for he is a wise and divine man; but what his meaning may be in this, you, Polemarchus, probably know it, but I do not; for it is plain he does not mean what we were saying just now; that, when one deposits with another any thing, it is to be given, back to him when he asks for it again in his madness: yet what has been deposited is in some respect, at least, due; is it not?

Polemarchus:: It is.

Socrates:: But yet, it is not at all, by any means, then, to be restored, when any one asks for it in his madness.

Polemarchus:: It is not.

Socrates:: Simonides then, as it should seem, says something different from this, that to deliver up what is due, is just?

Polemarchus:: Something different, truly: for he thinks that friends ought to do their friends some good, but no ill.

Socrates:: I understand. He who restores gold deposited with him, if to restore and receive it be hurtful, and the restorer and receiver be friends, does not give what is due. Is not this what you allege Simonides says?

Polemarchus:: Surely.

Socrates:: But what? are we to give our enemies too, what may chance to be due to them?

Polemarchus:: By all means, what is due to them; and from an enemy, to an enemy, there is due, I imagine, what is fitting, that is, some evil.

Socrates:: Simonides, then, as it should seem, expressed what is just, enigmatically, and after the manner of the poets; for he well understood, as it appears, that this was just, to give every one what was fitting for him, and this he called his due.

Polemarchus:: But, what, is your opinion?

Socrates:: Truly, if any one should ask him thus: Simonides, what is the art, which, dispensing to certain persons something fitting and due, is called medicine? what would he answer us, do you think?

Polemarchus:: That art, surely, which dispenses drugs, and prescribes regimen of meats and drinks to bodies.

Socrates:: And what is the art, which, dispensing to certain things something fitting and due, is called cookery?

Polemarchus:: The art which gives seasonings to victuals.

Socrates:: Be it so. What then is that art, which, dispensing to certain persons something fitting and due, may be called justice?

Polemarchus:: If we ought to be any way directed, Socrates, by what is said above, it is the art which dispenses good offices to friends, and injuries to enemies.

Socrates:: To do good, then, to friends, and ill to enemies, he calls justice?

Polemarchus:: It seems so.

Socrates:: Who, then, is most able to do good, to his friends, when they are diseased, and ill to his enemies, with respect to sickness and health?

Polemarchus:: The physician.

Socrates:: And who, when they fail, with respect to the danger of the sea?

Polemarchus:: The pilot.

Socrates:: But as to the just man, in what business, and with respect to what action, is he most able to serve his friends, and to hurt his enemies?

Polemarchus:: It seems to me, in fighting in alliance with the one, and against the other.

Socrates:: Be it so. But, surely, the physician is useless, Polemarchus, to those, at least, who are not sick?

Polemarchus:: It is true.

Socrates:: And the pilot, to those who do not sail?

Polemarchus:: He is.

Socrates:: And is the just man, in like manner, useless to those who are not at war?

Polemarchus:: I can by no means think that he is.

Socrates:: Justice, then, is useful likewise in time of peace.

Polemarchus:: It is.

Socrates:: And so is agriculture, is it not?

Polemarchus:: It is.

Socrates:: Towards the possession of grain?

Polemarchus:: Certainly.

Socrates:: And is not shoe-making likewise useful?

Polemarchus:: It is.

Socrates:: Towards the possession of shoes, you will say, I imagine.

Polemarchus:: Certainly.

Socrates:: But what, now? For the use, or possession of what, would you say that justice were useful in time of peace?

Polemarchus:: For co-partnerships, Socrates.

Socrates:: You call co-partnerships, joint companies, or what else?

Polemarchus:: Joint companies, certainly.

Socrates:: Whether, then, is the just man, or the dice-player, a good and useful co-partner, for playing at dice?

Polemarchus:: The dice-player.

Socrates:: But, in the laying of tiles or stones, is the just man a more useful and a better partner than the mason?

Polemarchus:: By no means.

Socrates:: In what joint company, now, is the just man a better co-partner than the harper, as the harper is better than the just man for touching the strings of a harp?

Polemarchus:: In a joint company about money, as I imagine.

Socrates:: And yet it is likely, Polemarchus, that with regard to the making use of money, when it is necessary jointly to buy or sell a horse, the jockey, as I imagine, is then the better co-partner. Is he not?

Polemarchus:: He would appear so.

Socrates:: And with respect to a ship, the ship-wright, or ship-master?

Polemarchus:: It would seem so.

Socrates:: When then is it, with respect to the joint application of money, that the just man is more useful than others?

Polemarchus:: When it is to be deposited, and be safe, Socrates.

Socrates:: Do you not mean, when there is no need to use it, but to let it lie?

Polemarchus:: Certainly.

Socrates:: When money then is useless, justice is useful with regard to it?

Polemarchus:: It seems so.

Socrates:: And when a pruning-hook is to be kept, justice is useful, both for a community, and for a particular person: but when it is to be used, the art of vine-dressing is useful.

Polemarchus:: It appears so.

Socrates:: And you will say that, when a buckler, or a harp, is to be kept, and not to be used, then justice is useful; but when they are to be used, then the military, and the musical art?

Polemarchus:: Of necessity.

Socrates:: And with reference to all other things, when they are to be used, justice is useless; but when they are not to be used, it is useful?

Polemarchus:: It seems so.

Socrates:: Justice, then, my friend! can be no very important matter, if it is useful only in respect of things, which are not to be used. But let us consider this matter: Is not he who is the most dexterous at striking, whether in battle or in boxing, the same likewise in defending himself?

Polemarchus:: Certainly.

Socrates:: And is not he who is dexterous in warding off and shunning a distemper, most dexterous too in bringing it on?

Polemarchus:: So I imagine.

Socrates:: And he too the best guardian of a camp, who can steal the counsels, and the other operations of the enemy?

Polemarchus:: Certainly.

Socrates:: Of whatever, then, any one is a good guardian, of that likewise he is a dexterous thief.

Polemarchus:: It seems so.

Socrates:: If therefore the just man be dexterous in guarding money, he is dexterous likewise in stealing?

Polemarchus:: So it would appear, from this reasoning.

Socrates:: The just man, then, has appeared to be a sort of thief; and you seem to have learned this from Homer; for he admires Autolycus, the grandfather of Ulysses by his mother, and says that he was distinguished beyond all men for thefts and oaths. It seems, then, according to you, and according to Homer and Simonides, that justice is a sort of thieving, for the profit indeed of friends, and for the hurt of enemies. Did not you say so?

Polemarchus:: No, by no means; nor indeed do I know any longer what I said; yet I still think that justice profits friends, and hurts enemies.

Socrates:: But, whether do you pronounce such to be friends, as seem to be honest? or, such as are so, though they do not seem; and in the same way as to enemies?

Polemarchus:: It is reasonable, to love those whom a man deems to be honest; and to hate those whom he deems to be wicked.

Socrates:: But do not men mistake in this; so as that many who are not honest appear so to them, and many contrariwise?

Polemarchus:: They do mistake.

Socrates:: To such, then the good are enemies, and the bad are friends?

Polemarchus:: Certainly.

Socrates:: But, however, it is then just for them to profit the bad; and to hurt the good.

Polemarchus:: It appears so.

Socrates:: But the good are likewise just, and such as do no ill.

Polemarchus:: True.

Socrates:: But, according to your speech, it is just to do ill to those who do no ill.

Polemarchus:: By no means, Socrates; for the speech seems to be wicked.

Socrates:: It is just, then, to hurt the unjust, and to profit the just.

Polemarchus:: This speech appears more handsome than the other.

Socrates:: Then, it will happen, Polemarchus, to many,—to as many indeed of mankind as have misjudged, that it shall be just to hurt their friends, who are really bad; and to profit their enemies, who are really good; and so we shall say the very reverse of what we affirmed Simonides said?

Polemarchus:: It does, indeed, happen so.

Socrates:: But let us define again; for we seem not to have rightly defined a friend and an enemy. How were they defined, Polemarchus?

Polemarchus:: That he who seems honest is a friend.

Socrates:: But how shall we now define?

Polemarchus:: That he who seems, and likewise is honest, is a friend; but he who seems honest, yet is not, seems, yet is not a friend.

Socrates:: And we must admit the distinction about an enemy to be the very same. The good man, according to this speech, will, as it seems, be the friend; and the wicked man, the enemy.

Polemarchus:: Yes.

Socrates:: Do you now require us to describe what is just, as we did before, when we said it was just to do good to a friend, and ill to an enemy? Or shall we add to the definition, and now say, that it is just to do good to a friend, when he is good; and ill to an enemy, when he is bad?

Polemarchus:: This last, seems to me to be perfectly well expressed.

Socrates:: Is it, then, the part of a just man to hurt any man?

Polemarchus:: By all means, he ought to hurt the wicked, and his enemies.

Socrates:: But, do horses, when they are hurt, become better or worse?

Polemarchus:: Worse.

Socrates:: Whether in the virtue of dogs, or of horses?

Polemarchus:: In that of horses.

Socrates:: And, do not dogs, when they are hurt, become worse in the virtue of dogs, and not of horses?

Polemarchus:: Of necessity.

Socrates:: And shall we not in like manner, my friend, say that men, when they are hurt, become worse in the virtue of a man?

Polemarchus:: Certainly.

Socrates:: But is not justice the virtue of a man?

Polemarchus:: Of necessity this likewise.

Socrates:: Of necessity then, friend, those men who are hurt must become more unjust.

Polemarchus:: It seems so.

Socrates:: But can musicians, by music, make men unmusical?

Polemarchus:: It is impossible.

Socrates:: Or horsemen, by horsemanship, make men unskilled in horsemanship?

Polemarchus:: It cannot be.

Socrates:: Or can the just, by justice, make men unjust? Or in general, can the good, by virtue, make men wicked?

Polemarchus:: It is impossible.

Socrates:: For, it is not, as I imagine, the effect of heat, to make cold, but of its contrary.

Polemarchus:: Yes.

Socrates:: Nor is it the effect of drought, to make moist; but its contrary.

Polemarchus:: Certainly.

Socrates:: Neither is it the part of a good man, to hurt; but of his contrary.

Polemarchus:: It appears so.

Socrates:: But, the just is good.

Polemarchus:: Certainly.

Socrates:: Neither, then, is it the part of a just man, Polemarchus, to hurt either friend, or any other, but the part of his contrary, the unjust man.

Polemarchus:: In all respects, you seem to me, Socrates, to say true.

Socrates:: If, then, any one says that it is just to give every one his due, and thinks this with himself, that hurt is due to enemies from a just man, and profit to his friend; he was not wise who said so, for he spoke not the truth. For it has no where appeared to us, that any just man hurts any one.

Polemarchus:: I agree.

Socrates:: Let us jointly contend, then, if any one shall say that a Simonides, a Bias, a Pittacus, said so; or any other of those wise and happy men.

Polemarchus:: I am ready, to join in the fight.

Socrates:: But do you know, whose saying I fancy it is, That it is just to profit friends, and hurt enemies?

Polemarchus:: Whose?

Socrates:: I fancy it is the saying of Periander, or Perdiccas, or Xerxes, or Ismenius the Theban; or some other rich man, who thought himself able to accomplish great things.

Polemarchus:: You say most true.

Socrates:: Be it so. But as this has not appeared to be justice, nor the just, what else may one assert it to be?

Thrasymachus frequently, during our reasoning, rushed in the midst, to lay hold of the discourse; but was hindered by those who sat near him, and who wanted to hear the conversation to an end. But, when we paused, and I had said these things, he was no longer quiet; but, collecting himself as a wild beast, he came upon us as if he would have torn us in pieces. Both Polemarchus and I, being frightened, were thrown into the utmost consternation: but he, roaring out in the midst:

Thrasymachus:: What trifling, Socrates, is this which long ago possesses you; and why do you thus play the fool together, yielding mutually to one another? But, if you truly want to know what is just, ask not questions only, nor value yourself in confuting, when anyone answers you anything; (knowing this, that it is easier to ask than to answer;) but answer yourself, and tell what it is you call just. And you are not to tell me that it is what is fit; nor what is due, nor what is profitable, nor what is gainful, nor what is advantageous; but, what you mean tell plainly and accurately; for I will not allow it, if you speak such trifles as these.

Socrates:: When I heard this, I was astonished, and, looking at him, was frightened; and I should have become speechless, I imagine, if I had not perceived him before he perceived me. But I had observed him first, when he began to grow fierce at our reasoning; so that I was now able to answer him, and said, trembling: Thrasymachus! be not hard on us; for, if we mistake in our inquiries, Polemarchus and I, be well assured that we mistake unwittingly: for think not that, in searching for gold, we would never willingly yield to one another in the search, and mar the finding it; but that, searching for justice, an affair far more valuable than a great deal of gold, we should yet foolishly yield to each other, and not labor, friend, with the utmost ardor, that we may discover what it really is. But I am afraid we are not able to discover it. It is more reasonable, then, that we be pitied, than be used hardly by you who are men of ability. Having heard this, he laughed aloud in a very coarse manner, and said;

Thrasymachus:: By Hercules! this is Socrates' wonted irony. This I both knew and foretold to these, here, that you never incline to answer if any one ask you any thing.

Socrates:: You are a wise man, therefore, Thrasymachus. For you knew well, that if you asked any one, How many is twelve? and, when you ask, should previously tell him, You are not, friend, to tell me that twelve is twice six; nor that it is three times four; nor that it is four times three; for I will not admit it, if you trifle in such a manner;—I fancy it is plain to you that no man would answer one asking in such a way. But if he should say to you, Wonderful Thrasymachus! how do you mean? May I answer in none of those ways you have told me; not even though the real and true answer happen to be one of them, but I am to say something else than the truth? Or, how is it you mean? What would you say to him in answer to these things?

Thrasymachus:: If they were alike, I should give an answer; but how are they alike?

Socrates:: Nothing hinders it; but, though they were not alike, but should appear so to him who was asked, would he the less readily answer what appeared to him; whether we forbade him or not?

Thrasymachus:: And will you do so now? Will you say in answer some of these things which I forbid you to say?

Socrates:: I should not wonder I did, if it should appear so to me on inquiry.

Thrasymachus:: What then, if I shall show you another and a better answer, besides all these about justice; what will you deserve to suffer?

Socrates:: What else, but what is proper for the ignorant to suffer? And it is proper for them to learn somewhere from a wise man. I shall therefore deserve to suffer this.

Thrasymachus:: You are pleasant now, but together with the learning, do you pay money likewise.

Socrates:: Shall it not be after I have got it?

Glaucon:: But it is here; so as to money, Thrasymachus, say on; for all of us will advance for Socrates.

Thrasymachus:: I truly imagine so, that Socrates may go on in his wonted manner; not answer himself, but, when another answers, he may take up the discourse, and confute.

Socrates:: How, most excellent Thrasymachus, can a man answer? In the first place, when he neither knows, nor says he knows; and, then, if he have any opinion about these matters, he is forbid by no mean man to advance any of his opinions. But it is more reasonable that you speak, as you say you know, and can tell us: Do not decline then, but oblige me in answering, and do not grudge to instruct Glauco here, and the rest of the company. When I had said this, both Glauco and the rest of the company entreated him not to decline it. And Thrasymachus appeared plainly desirous to speak, in order to gain applause; reckoning he had a very fine answer to make; yet pretended to be earnest that I should be the answerer, but at last he agreed. And then;

Thrasymachus:: This, is the wisdom of Socrates: Unwilling himself to teach, he goes about learning from others, and gives no thanks for it.

Socrates:: That, indeed, I learn from others, Thrasymachus, is true; but in saying that I do not give thanks for it, you are mistaken. I pay as much as I am able; and I am only able to commend them; for money I have not: and how readily I do this, when any one appears to me to speak well, you shall perfectly know this moment, when you make an answer; for I imagine you are to speak well.

Thrasymachus:: Hear then; for I say, that what is just, is nothing else but the advantage of the more powerful. But why do not you commend? You are unwilling.

Socrates:: Let me learn first, what you say; for as yet I do not understand it. The advantage of the more powerful, you say, is what is just. What is this which you now say, Thrasymachus? For you certainly do not mean such a thing as this: If Polydamus, the wrestler, be more powerful than we; and if beef be beneficial for his body, that this food is likewise both just and advantageous for us, who are weaker than he.

Thrasymachus:: You are most impudent, Socrates, and lay hold of my speech on that side where you may do it the greatest hurt.

Socrates:: By no means, most excellent Thrasymachus, but tell more plainly what is your meaning.

Thrasymachus:: Do not you then know, that, with reference to states, some are tyrannical; others democratical; and others aristocratical?

Socrates:: Why are they not?

Thrasymachus:: And is not the governing pact in each state the more powerful?

Socrates:: Certainly.

Thrasymachus:: And every government makes laws for its own advantage; a democracy, democratic laws; a tyranny, tyrannic; and others the same way. And when they have made them, they show that to be just for the governed, which is advantageous for themselves; and they punish the transgressor of this as one acting contrary both to law and justice. This, then, most excellent Socrates, is what I say, that, in all states, what is just, and what is advantageous for the established government, are the same; it hath the power. So that it appears to him who reasons rightly, that, in all cases, what is the advantage of the more powerful, the same is just.

Socrates:: Now I have learned, what you say. But whether it be true, or not, I shall endeavor to learn. What is advantageous, then, Thrasymachus, you yourself have affirmed to be likewise just; though you forbid me to give this answer; but, indeed, you have added to it that of the more powerful.

Thrasymachus:: Probably, but a small addition.

Socrates:: It is not yet manifest, whether it is small or great; but it is manifest that this is to be considered, whether you speak the truth; since I too acknowledge that what is just is somewhat that is advantageous: but you add to it, and say, that it is that of the more powerful. This I do not know, but it is to be considered.

Thrasymachus:: Consider then.

Socrates:: That, shall be done. And tell me, do not you say that it is just to obey governors?

Thrasymachus:: I say so.

Socrates:: Whether are the governors in the several states infallible? or are they capable of erring?

Thrasymachus:: Certainly, they are liable to err.

Socrates:: Do they not, then, when they attempt to make laws, make some of them right, and some of them not right?

Thrasymachus:: I imagine so.

Socrates:: To make them right, is it not to make them advantageous for themselves; and to make them not right, disadvantageous? Or what is it you mean?

Thrasymachus:: Entirely so.

Socrates:: And what they enact is to be observed by the governed, and this is what is just?

Thrasymachus:: Why not?

Socrates:: It is, then, according to your reasoning, not only just to do what is advantageous for the more powerful; but also to do the contrary, what is not advantageous.

Thrasymachus:: What do you say?

Socrates:: The same, I imagine, that you say yourself. But let us consider better: have we not acknowledged that governors, in enjoining the governed to do certain things, may sometimes mistake what is best for themselves; and that what the governors enjoin is just for the governed to do? Have not these things been acknowledged?

Thrasymachus:: I think so.

Socrates:: Think, also, then, that you have acknowledged that it is just to do what is disadvantageous to governors, and the more powerful; since governors unwillingly enjoin what is ill for themselves; and you say that it is just for the others to do what these enjoin. Must it not then, most wise Thrasymachus, necessarily happen, that, by this means, it may be just to do the contrary of what you say? For that which is the disadvantage of the more powerful, is sometimes enjoined the inferiors to do?

Polemarchus:: Yes, indeed, Socrates, these things are most manifest.

Clitophon:: Yes, if you bear him witness.

Socrates:: What need, of a witness? For Thrasymachus himself acknowledges that governors do indeed sometimes enjoin what is ill for themselves; but that it is just for the governed to do these things. For it has, Polemarchus, been established by Thrasymachus, to be just to do what is enjoined by the governors; and he has likewise, Clitipho, established that to be just, which is the advantage of the more powerful; and, having established both these things, he has acknowledged likewise, that the more powerful sometimes enjoin the inferiors and governed to do what is disadvantageous for themselves; and, from these concessions, the advantage of the more powerful can no more be just than the disadvantage.

Clitophon:: But, he said the advantage of the more powerful; that is, what the more powerful judged to be advantageous to himself; that this was to be done by the inferior, and this he established as just.

Polemarchus:: But, it was not said so.

Socrates:: There is no difference, Polemarchus. But, if Thrasymachus says so now, we shall allow him to do it. And tell me, Thrasymachus, was this what you meant to say was just? The advantage of the more powerful, such as appeared so to the more powerful, whether it is advantageous, or is not. Shall we say that you spoke thus?

Thrasymachus:: By no means. For, do you imagine I call him the more powerful who misjudges, at the time he misjudges?

Socrates:: I thought, you said this, when you acknowledged that governors were not infallible; but that in some things they even erred.

Thrasymachus:: You are a sycophant, in reasoning, Socrates. For, do you now call him who mistakes about the management of the sick, a physician; as to that very thing in which he mistakes? or, him, who mistakes in reasoning, a reasoner, when he errs, and with reference to that very error? But, I imagine, we say, in common language, that the physician erred; that the reasoner erred, and the grammarian: Thus, however, I imagine, that each of these, as far as he is what we call him, errs not at any time: So that, according to accurate discourse (since you discourse accurately), none of the artists errs: for he who errs, errs by departing from science; and, in this, he is no artist: So that no artist, or wise man, or governor errs; in so far as he is a governor. Yet any one may say the physician erred; the governor erred: Imagine then, it was in this way I now answered you. But the most accurate answer is this: That the governor, in as far as he is governor, errs not; and, as he does not err, he enacts that which is best for himself; and this is to be observed by the governed: So that what I said from the beginning, I maintain, is just—To do what is the advantage of the more powerful.

Socrates:: Be it so, Thrasymachus! Do I appear to you to act the sycophant?

Thrasymachus:: Certainly, indeed.

Socrates:: For you imagine that I spoke as I did, insidiously, and to abuse you.

Thrasymachus:: I know it well, but you shall gain nothing by it; for, whether you abuse me in a concealed manner, or otherwise, you shall not be able to overcome me by your reasoning.

Socrates:: I shall not attempt it, happy Thrasymachus! But, that nothing of this kind may happen to us again, define, whether you speak of a governor, and the more powerful, according to common, or according to accurate discourse, as you now said, whose advantage, as he is the more powerful, it shall be just for the inferior to observe.

Thrasymachus:: I speak of him, who, in the most accurate discourse, is governor. For this, now, abuse me, and act the sycophant, if you are able. I do not shun you; but you cannot do it.

Socrates:: Do you imagine me, to be so mad as to attempt to shave a lion, and act the sycophant with Thrasymachus?

Thrasymachus:: You have now, attempted it, but with no effect.

Socrates:: Enough, of this. But tell me, with reference to him, who, accurately speaking, is a physician, whom you now mentioned, whether is he a gainer of money, or one who takes care of the sick? and speak of him who is really a physician.

Thrasymachus:: He is one who takes care, of the sick.

Socrates:: But what of the pilot, who is a pilot, truly? Whether is he the governor of the sailors, or a sailor?

Thrasymachus:: The governor of the sailors.

Socrates:: That, I think, is not to be considered, that he sails in the ship; nor that he is called a sailor; for it is not for his sailing that he is called pilot, but for his art, and his governing the sailors.

Thrasymachus:: True.

Socrates:: Is there not then something advantageous to each of these?

Thrasymachus:: Certainly.

Socrates:: And does not art, naturally tend to this, to seek out and afford to every thing its advantage?

Thrasymachus:: It tends to this.

Socrates:: Is there, now, any thing else advantageous to each of the arts, but to be the most perfect possible?

Thrasymachus:: How ask you this?

Socrates:: As, if you asked me, whether it sufficed the body to be body, or if it stood in need of any thing,—I would say, that it stood in need of something else. For this reason is the medicinal art invented, because the body is infirm, and is not sufficient for itself in such a state; in order therefore to afford it things for its advantage, for this purpose, art has been provided. Do I seem to you, to say right, or not, in speaking in this manner?

Thrasymachus:: Right.

Socrates:: But what now? This medicinal art itself, or any other, is it imperfect, so long as it is wanting in a certain virtue? As the eyes, when they want seeing; and the ears, hearing; and, for these reasons have they need of a certain art, to perceive, and afford them what is advantageous for these purposes? And is there, still, in art itself, some imperfection; and does every art stand in need of another art, to perceive what is advantageous to it, and this stand in need of another, in like manner, and so on, to infinity? Or shall each art perceive what is advantageous to itself; and stand in need neither of itself, nor of another, to perceive what is for its advantage, with reference to its own imperfection? For there is no imperfection, nor error, in any art. Nor does it belong to it to seek what is advantageous to any thing, but to that of which it is the art. But it is, itself, infallible, and pure, being in the right. So long as each art is an accurate whole, whatever it is. And consider now, according to that accurate discourse, whether it be thus, or otherwise.

Thrasymachus:: Thus, it appears.

Socrates:: The medicinal art, then, does not consider what is advantageous to the medicinal art, but to the body.

Thrasymachus:: Yes.

Socrates:: Nor the art of managing horses, what is advantageous for that art; but what is advantageous for horses. Nor does any other art consider what is advantageous for itself, (For it hath no need,) but what is advantageous for that of which it is the art?

Thrasymachus:: So, it appears.

Socrates:: But, Thrasymachus, the arts rule and govern that of which they are the arts. He yielded this, but with great difficulty. No science, then, considers the advantage of the more powerful, nor enjoins it; but that of the inferior, and of what is governed. He consented to these things at last, though he attempted to contend about them, but afterwards he consented. Why, then, no physician, so far as he is a physician, considers what is advantageous for the physician, nor enjoins it; but what it advantageous for the sick; for it has been agreed, that the accurate physician is one who takes care of sick bodies, and not an amasser of wealth. Has it not been agreed? He assented. And likewise that the accurate pilot is the governor of the sailors, and not a sailor?

Thrasymachus:: It has been agreed.

Socrates:: Such a pilot, then, and governor will not consider and enjoin what is the advantage of the pilot, but what is advantageous to the sailor, and the governed. He consented, with difficulty. Nor, yet, Thrasymachus, does any other, in any government, as far as he is a governor, consider or enjoin his own advantage, but that of the governed, and of those to whom he ministers; and, with an eye to this, and to what is advantageous and suitable to this, he both says what he says, and does what he does.

When we were at this part of the discourse, and it was evident to all that the definition of what was just, stood now on the contrary side, Thrasymachus, instead of replying;

Thrasymachus:: Tell me, Socrates, have you a nurse?

Socrates:: What, ought you not rather to answer, than ask such things?

Thrasymachus:: Because, she neglects you when your nose is stuffed, and does not wipe it when it needs it, you who understand neither what is meant by sheep, nor by shepherd.

Socrates:: For what now is all this?

Thrasymachus:: Because you think that shepherds, and neatherds, ought to consider the good of the sheep, or oxen, to fatten them, and to minister to them, having in their eye, something besides their master's good and their own. And you fancy that those who govern in cities, those who govern truly, are somehow otherwise affected towards the governed than one is towards sheep; and that they are attentive, day and night, to somewhat else than this, how they shall be gainers themselves; and so far are you from the notion of the just and of justice, and of the unjust and injustice, that you do not know that both justice and the just are, in reality, a foreign good, the advantage of the more powerful, and of the governor; but properly, the hurt of the subject, and the inferior; and injustice is the contrary. And justice governs such as are truly simple and just; and the governed do what is for the governor's advantage, he being more powerful, and ministering to him, promote his happiness, but by no means their own. You must thus consider it, most simple Socrates! that, on all occasions, the just man gets less than the unjust. First, in co-partnerships with one another, where the one joins in company with the other, you never can find, on the dissolving of the company, that the just man gets more than the unjust, but less: Then, in civil affairs, where there are taxes to be paid from equal substance; the just man pays more, the other less. But when there is any thing to be gained, the one gains nothing, but the gain of the other is great: For, when each of them governs in any public magistracy this, if no other loss, befalls the just man, that his domestic affairs, at least, are in a worse situation through his neglect; and that he gains nothing from the public, because he is just: Add to this, that he comes to be hated by his domestics and acquaintance, when at no time he will serve them beyond what is just; But all these things are quite otherwise with the unjust; such an one, I mean, as I now mentioned; one who has it greatly in his power to become rich. Consider him, then, if you would judge how much more it is for his private advantage to be unjust than just, and you will most easily understand it if you come to the most finished injustice; such as renders the unjust man most happy, but the injured, and those who are unwilling to do injustice, most wretched; and that is tyranny, which takes away the goods of others, both by secret fraud, and by open violence; both things sacred and holy, both private and public, and these not by degrees, but all at once. In all particular cases of such crimes, when one, committing injustice, is not concealed, he is punished, and suffers the greatest ignominy. For according to the several kinds of the wickedness they commit, they are called sacrilegious, robbers, house-breakers, pilferers, thieves. But when any one, besides these thefts of the substance of his citizens, shall steal and enslave the citizens themselves; instead of those disgraceful names, he is called happy and blest; not by his citizens alone, but likewise by others, as many as are informed that he has committed the most consummate wickedness. For such as revile wickedness, revile it not because they are afraid of doing, but because they are afraid of suffering, unjust things. And thus, Socrates, injustice, when in sufficient measure, is both more powerful, more free, and hath more absolute command than justice: and, (as I said at the beginning,) the advantage of the more powerful, is justice; but injustice is the profit and advantage of oneself.

Socrates:: Thrasymachus having said these things, inclined to go away; like a bath-keeper after he had poured into our ears this rapid and long discourse. These, however, who were present, would not suffer him, but forced him to stay, and give an account of what he had said. I too myself earnestly entreated him, and said, divine Thrasymachus! after throwing in upon us so strange a discourse, do you intend to go away before you teach us sufficiently, or learn yourself, whether the case be as you say, or otherwise? Do you imagine you attempt to determine a small matter, and not the guide of life, by which, each of us being conducted, may lead the most happy life.

Thrasymachus:: But I imagine, that this is otherwise.

Socrates:: You seem truly, to care nothing for us; nor to be any way concerned, whether we shall live well or ill, whilst we are ignorant of what you say you know: But, good Thrasymachus, be readily disposed to show it also to us, nor will the favor be ill placed, whatever you shall bestow on so many of us as are now present. And I, for my own part, tell you, that I am not persuaded, nor do I think that injustice is more profitable than justice; not although it should be permitted to exert itself, and be no way hindered from doing whatever it should incline. But, good Thrasymachus, let him be unjust, let him be able to do unjustly, either in secret, or by force, yet will you not persuade me at least that injustice is more profitable than justice, and probably some other of us here is of the same mind, and I am not single. Convince us then, blest Thrasymachus! that we imagine wrong, when we value justice more than injustice.

Thrasymachus:: But how, shall I convince you? For, if I have not convinced you by what I have said already, what shall I further do for you? shall I enter into your soul, and put my reasoning within you?

Socrates:: God forbid, you shall not do that. But, first of all, whatever you have said, abide by it: or, if you do change, change openly; and do not deceive us. For now you see, Thrasymachus, (for let us still consider what is said above,) that when you first defined the true physician, you did not afterwards think it needful that the true shepherd should, strictly, upon the like principles, keep his flock; but you fancy that, as a shepherd, he may feed his flock, not regarding what is best for the sheep, but as some glutton, who is going to feast on them at some entertainment; or yet to dispose of them as a merchant; and not a shepherd. But the shepherd-art hath certainly no other care, but of that for which it is ordained, to afford it what is best: for its own affairs are already sufficiently provided for; so as to be in the very best state while it needs nothing of the shepherd-art. In the same manner, I at least imagined, there was a necessity for agreeing with us in this, that every government, in as far as it is government, considers what is best for nothing else but for the governed, and those under its charge; both in political and private government. But do you imagine that governors in cities, such as are truly governors, govern willingly?

Thrasymachus:: Truly, as for that, I not only imagine it, but am quite certain.

Socrates:: Why now, Thrasymachus, do you not perceive, as to all other governments, that no one undertakes them willingly, but they ask a reward; as the profit arising from governing is not to be to themselves, but to the governed? Or, tell me this now? do not we say that every particular art is in this distinct, in having a distinct power? And now, blest Thrasymachus, answer not differently from your sentiments, that we may make some progress.

Thrasymachus:: In this, it is distinct.

Socrates:: And does not each of them afford us a certain distinct advantage, and not a common one? As the medicinal affords health, the pilot art, preservation in sailing; and the others in like manner.

Thrasymachus:: Certainly.

Socrates:: And does not the mercenary art afford a reward, for this is its power? Or, do you call both the medicinal art, and the pilot art, one and the same? Or, rather, if you will define them accurately, as you proposed; though one in piloting recover his health, because sailing agrees with him, you will not the more on this account call it the medicinal art?

Thrasymachus:: No, indeed.

Socrates:: Nor will you, I imagine, call the mercenary art the medicinal, though one in gaining a reward, recover his health.

Thrasymachus:: No, indeed.

Socrates:: What now? Will you call the medicinal, the mercenary art, if one in performing a cure gain a reward?

Thrasymachus:: No.

Socrates:: Have we not acknowledged, then, that there is a distinct advantage of every art?

Thrasymachus:: Be it so.

Socrates:: What is that advantage, then, with which all artists in common are advantaged? It is plain it must be in using something common to all that they are advantaged by it.

Thrasymachus:: It seems so.

Socrates:: Yet we say that artists are profited in receiving a reward arising to them from the increase of a lucrative art. He agreed with difficulty. Has not, then, every one this advantage in his art, the receiving a reward. Yet, if we are to consider accurately, the medicinal art produces health, and the mercenary art a reward; masonry, a house, and, the mercenary art accompanying it, a reward. And all the others, in like manner, every one produces its own work, and benefits that for which it was ordained; but, if it meet not with a reward, what is the artist advantaged by his art?

Thrasymachus:: It does not appear.

Socrates:: But does he then no service when he works without reward?

Thrasymachus:: I think he does.

Socrates:: Is not this, then, now evident, Thrasymachus, that no art, nor government, provides what is advantageous for itself; but, as I said long ago, provides and enjoins what is advantageous for the governed; having in view the profit of the inferior, and not that of the more powerful. And, for these reasons, friend Thrasymachus, I likewise said now, that no one is willing to govern, and to undertake to rectify the ills of others, but asks a reward for it; because, whoever will perform the art handsomely, never acts what is best for himself, in ruling according to art, but what is best for the governed; and on this account, it seems, a reward must be given to those who shall be willing to govern; either money, or honour; or punishment, if they will not govern.

Glaucon:: How say you, Socrates; two of the rewards I understand; but this punishment you speak of, and here you mention it in place of a reward, I know not.

Socrates:: You know not, then, the reward of the best of men, on account of which the most worthy govern, when they consent to govern. Or, do you not know, that to be ambitious and covetous, is both deemed a reproach, and really is so?

Glaucon:: I know.

Socrates:: For those reasons, then, good men are not willing to govern, neither for money, nor for honour; for they are neither willing to be called mercenary, in openly receiving a reward for governing, nor to be called thieves, in taking, clandestinely from those under their government; as little are they willing, to govern for honour, for they are not ambitious.—Of necessity then, there must be said on them a fine, that they may consent to govern. And hence, it seems, it hath been accounted dishonorable to enter on government willingly, and not by constraint. And the greatest part of the punishment is to be governed by a base person, if one himself is not willing to govern: and the good seem to me to govern from a fear of this, when they do govern: and then, they enter on the government, not as on any thing good, or as what they are to reap advantage by, but as on a necessary task, and finding none better than themselves, nor like them to entrust with the government: since it would appear that, if there was a city of good men, the contest would be, not to be in the government, as at present it is, to govern: And hence it would be manifest, that he who is indeed the true governor, does not aim at his own advantage, but at that of the governed; so that every understanding man would rather choose to be served, than to have trouble in serving another. This, therefore, I, for my part, will never yield to Thrasymachus; that justice is the advantage of the more powerful; but this we shall consider afterwards. What Thrasymachus says now, seems to me of much more importance, when he says that the life of the unjust man is better than that of the just. You, then, Glauco, which side do you choose; and which seems to you most agreeable to truth?

Glaucon:: The life of the just, I, for my part, deem to be the more profitable.

Socrates:: Have you heard, how many good things Thrasymachus just now enumerated in the life of the unjust?

Glaucon:: I heard, but am not persuaded.

Socrates:: Are you willing, then, that we should persuade him, (if we be able any how to find arguments), that there is no truth in what he says?

Glaucon:: Why not.

Socrates:: If then, pulling on the other side, we advance argument for argument, how many good things there are in being just, and then again, he on the other side, we shall need a third person to compute and estimate what each shall have said on either side; and we shall likewise need some judges to determine the matter. But, if, as now, assenting to one another, we consider these things; we shall be both judges and pleaders ourselves.

Glaucon:: Certainly.

Socrates:: Which way, then, do you choose?

Glaucon:: This way.

Socrates:: Come then, Thrasymachus, answer us from the beginning. Do you say that complete injustice is more profitable than complete justice?

Thrasymachus:: Yes, indeed, I say so. And the reasons for it I have enumerated.

Socrates:: Come now, do you ever affirm any thing of this kind concerning them? Do you call one of them, virtue; and the other, vice?

Thrasymachus:: Why not?

Socrates:: Is not then, justice, virtue; and injustice, vice?

Thrasymachus:: Very likely, most pleasant Socrates! after I say that injustice is profitable; but justice is not;

Socrates:: What then?

Thrasymachus:: The contrary.

Socrates:: Is it justice you call vice?

Thrasymachus:: No, but I call it, altogether genuine simplicity.

Socrates:: Do you, then, call injustice, cunning?

Thrasymachus:: No, but I call it sagacity.

Socrates:: Do the unjust seem to you, Thrasymachus, to be both prudent and good?

Thrasymachus:: Such, at least, as are able to do injustice in perfection; such as are able to subject to themselves states and nations; but you probably imagine I speak of those who cut purses: Even such things as these, are profitable if concealed; but such only as I now mentioned are of any worth.

Socrates:: I understand, what you want to say: But this I have wondered at, that you should deem injustice to be a part of virtue and of wisdom and justice among their contraries.

Thrasymachus:: But I do deem it altogether so.

Socrates:: Your meaning, is now more determined, friend, and it is no longer easy for one to find what to say against it: for, if when you had set forth injustice as profitable, you had still allowed it to be vice or ugly, as some others do, we should have had something to say, speaking according to the received opinions: But now, it is plain, you will call it beautiful and powerful; and all those other things you will attribute to it which we attribute to the just man, since you have dared to class it with virtue and wisdom.

Thrasymachus:: You conjecture, most true.

Socrates:: But, however, I must not grudge, to pursue our inquiry so long as I conceive you speak as you think; for to me you plainly seem now, Thrasymachus, not to be in irony, but to speak what you think concerning the truth.

Thrasymachus:: What is the difference to you, whether I think so or not, if you do not confute my reasoning;

Socrates:: None at all. But endeavor, further, to answer me this likewise—Does a just man seem to you desirous to have more than another just man?

Thrasymachus:: By no means; for otherwise he would not be courteous and simple, as we now supposed him.

Socrates:: But what, will he not desire it in a just action?

Thrasymachus:: Not even in a just action.

Socrates:: But, whether would he deem it proper to exceed the unjust man and count it just? or would he not?

Thrasymachus:: He would, both count it just and deem it proper but would not be able to effect it.

Socrates:: That, I do not ask. But, whether a just man would neither deem it proper, nor incline to exceed a just man, but would deem it proper to exceed the unjust?

Thrasymachus:: This last, is what he would incline to do.

Socrates:: But what would the unjust man do? Would he deem it proper to exceed the just man even in a just action?

Thrasymachus:: Why not, he who deems it proper to exceed all others.

Socrates:: Will not then the unjust man desire to exceed the unjust man likewise, and in an unjust action; and contend that he himself receive more than all others?

Thrasymachus:: Certainly.

Socrates:: Thus, we say, then, the just man does not desire to exceed one like himself, but one unlike. But the unjust man desires to exceed both, one like, and one unlike himself.

Thrasymachus:: You have spoken, perfectly well.

Socrates:: But, the unjust man is both wise and good; but the just man is neither.

Thrasymachus:: This, too, is well said.

Socrates:: Is not, then, the unjust man like the wise and the good, and the just man unlike?

Thrasymachus:: Must he not, be like them, being such an one as we have supposed;

Socrates:: And he who is otherwise, be unlike them?

Thrasymachus:: Excellently.

Socrates:: Each of them is indeed such as those he resembles.

Thrasymachus:: What else?

Socrates:: Be it so, Thrasymachus, Call you one man musical and another unmusical?

Thrasymachus:: I do.

Socrates:: Which of the two call you wise and which unwise?

Thrasymachus:: I call the musical, wise, and the unmusical, unwise.

Socrates:: Is he not good in as much as he is wise, and ill in as much as he is unwise?

Thrasymachus:: Yes.

Socrates:: And what as to the physician? Is not the case the same?

Thrasymachus:: The same.

Socrates:: Do you imagine, then, most excellent Thrasymachus, that any musician, in tuning a harp, wants to exceed, or deems it proper to have more skill than a man who is a musician, with reference to the intention or remission of the strings?

Thrasymachus:: I am not of that opinion.

Socrates:: But what say you of exceeding a man who is no musician?

Thrasymachus:: Of necessity, he will deem it proper to exceed him.

Socrates:: And what as to the physician? In presenting a regimen of meats or drinks does he want to exceed another physician in medical cases?

Thrasymachus:: No indeed.

Socrates:: But to exceed one who is no physician?

Thrasymachus:: Yes.

Socrates:: And as to all science and ignorance does any one appear to you intelligent who wants to grasp at or do or say more than another intelligent in the art; and not to do the same things, in the same affair, which one equally intelligent with himself doth?

Thrasymachus:: Probably there is a necessity, it be so.

Socrates:: But what, as to him who is ignorant; will not he want to exceed the intelligent and the ignorant both alike?

Thrasymachus:: Probably.

Socrates:: But the intelligent is wise?

Thrasymachus:: I say so.

Socrates:: And the wise is good?

Thrasymachus:: I say so.

Socrates:: But the good and the wise will not want to exceed one like himself; but the unlike and contrary?

Thrasymachus:: It seems so.

Socrates:: But the evil and the ignorant wants to exceed both one like himself and his opposite?

Thrasymachus:: It appears so.

Socrates:: Why, then, Thrasymachus, the unjust. desires to exceed both one unlike and one like himself. Do not you say so?

Thrasymachus:: I do.

Socrates:: But the just man will not desire to exceed one like himself, but one unlike?

Thrasymachus:: Yes.

Socrates:: The just man, then, resembles the wise and the good; and the unjust resembles the evil and the ignorant.

Thrasymachus:: It appears so.

Socrates:: But we acknowledged that each of them was such as that which they resembled.

Thrasymachus:: We acknowledged so, indeed.

Socrates:: The just man, then, has appeared to us to be good and wise; and the unjust to be ignorant and depraved. Thrasymachus now confessed all these things not easily, as

I now narrate them, but dragged and with difficulty and prodigious sweat, it being now the summer season. And I then saw, but never before, Thrasymachus blush. After we had acknowledged that justice was virtue and wisdom, and injustice was vice and ignorance, well, let this remain so. But we said likewise that injustice was powerful. Do not you remember, Thrasymachus?

Thrasymachus:: I remember. But what you now say does not please me; and I have some what to say concerning it which I well know you would call declaiming if I should advance it; either, then, suffer me to say what I incline, or if you incline to ask, do it; and I shall answer you “be it so,” as to old women telling stories; and shall assent and dissent.

Socrates:: By no means, contrary to your own opinion.

Thrasymachus:: Just to please you; since you will not allow me to speak. But do you want any thing further?

Socrates:: Nothing, truly: but if you are to do thus, do; I shall ask.

Thrasymachus:: Ask then.

Socrates:: This, then, I ask, which I did just now; (that we may in an orderly way see through our discourse,) of what kind is justice, compared with injustice; for it was surely said that injustice was more powerful and stronger than justice.

Thrasymachus:: It was so said just now.

Socrates:: But, if justice be both virtue and wisdom, it will easily, I imagine, appear to be likewise more powerful than injustice; since injustice is ignorance; of this now none can be ignorant. But I am willing, for my own part, Thrasymachus, to consider it not simply in this manner, but some how thus. Might you not say that a state was unjust, and attempted to enslave other states unjustly, and did enslave them; and had many states in slavery under itself?

Thrasymachus:: Why not: and the best state will chiefly do this, and such as is most completely unjust.

Socrates:: I understand, that this was your speech; but I consider this in it;—Whether this state, which becomes more powerful than the other state, shall hold this power without justice, or must it of necessity be with justice?

Thrasymachus:: With justice, if indeed, as you now said, justice be wisdom; but, if as I said, with injustice.

Socrates:: I am much delighted, Thrasymachus that you do not merely assent and dissent, but that you answer so handsomely.

Thrasymachus:: I do, it to gratify you.

Socrates:: That is obliging in you. But gratify me in this likewise, and tell me; do you imagine that a city, or camp, or robbers, or thieves, or any other community, such as jointly undertakes to do any thing unjustly, is able to effectuate any thing if they injure one another?

Thrasymachus:: No indeed.

Socrates:: But what, if they do not injure one another; will they not do better?

Thrasymachus:: Certainly.

Socrates:: For injustice, some how, Thrasymachus, brings seditions, and hatreds, and fightings among them; but justice affords harmony and friendship. Does it not?

Thrasymachus:: Be it so, that I may not differ from you.

Socrates:: You are very obliging, most excellent Thrasymachus! But tell me this. If this be the work of injustice, wherever it is, to create hatred, will it not then, when happening among free men and slaves, make them hate one another, and grow seditious, and become impotent to do any thing together in company?

Thrasymachus:: Certainly.

Socrates:: But what, in the case of injustice between any two men, will they not differ, and hate, and become enemies to one another, and to just men?

Thrasymachus:: They will become so.

Socrates:: If now, wonderful Thrasymachus, injustice be in one, whether does it lose its power, or will it no less retain it?

Thrasymachus:: Let it, no less retain it.

Socrates:: Does it not then appear to have such a power as this—That wherever it is, whether in a city, or tribe, or camp, or wherever else, in the first place, it renders it unable for action in itself, through seditions and differences; and, besides, makes it an enemy to itself, and to every opponent, and to the just? Is it not thus?

Thrasymachus:: Certainly.

Socrates:: And, when injustice is in one man, it will have, I imagine, all these effects, which it is natural for it to produce. In the first place, it will render him unable for action whilst he is in sedition and disagreement with himself; and next as he is an enemy both to himself, and to the just. Is it not so?

Thrasymachus:: Yes.

Socrates:: But the Gods, friend, are likewise just.

Thrasymachus:: Let them be so.

Socrates:: The unjust man then, Thrasymachus, shall be an enemy also to the Gods; and the just man, a friend.

Thrasymachus:: Feast yourself, with the reasoning boldly; for I will not oppose you, that I may not render myself odious to these Gods.

Socrates:: Come then, and complete to me this feast; answering as you were doing just now: for the just already appear to be wiser, and better, and more powerful to act; but the unjust are not able to act any thing, with one another: and what we said with reference to those who are unjust,—that they are ever at any time able strenuously to act jointly together; this we spoke not altogether true, for they would not spare one another; being thoroughly unjust; but it is plain that there was in them justice, which made them refrain from injuring one another, and those of their party; and by this justice they performed what they did. And they rushed on unjust actions, through injustice; being half wicked; since those who are completely wicked, and perfectly unjust, are likewise perfectly unable to act. This then I understand is the case with reference to these matters, and not as you were establishing at first. But whether the just live better than the unjust, and are more happy (which we proposed to consider afterwards), is now to be considered; and they appear to do so even at present, as I imagine, at least, from what has been said. Let us, however, consider it further. For the discourse is not about an accidental thing, but about this, in what manner we ought to live.

Thrasymachus:: Consider then.

Socrates:: I am considering, and tell me; does there any thing seem to you to be the work of a horse?

Thrasymachus:: Yes.

Socrates:: Would you not call that the work of a horse, or of any one else, which one does with him only, or in the best manner?

Thrasymachus:: I do not understand.

Socrates:: Thus then: Do you see with any thing else but the eyes?

Thrasymachus:: No indeed.

Socrates:: What now, could you hear with any thing but the ears?

Thrasymachus:: By no means.

Socrates:: Do we not justly then call these things the works of these?

Thrasymachus:: Certainly.

Socrates:: But what, could not you with a sword, a knife, and many other things, cut off a branch of a vine?

Thrasymachus:: Why not?

Socrates:: But with nothing, at least I imagine, so handsomely, as with a pruning-hook, which is made for that purpose: shall we not then settle this to be its work?

Thrasymachus:: We shall then settle it.

Socrates:: I imagine, then, you may now understand better what I was asking when I inquired whether the work of each thing were not that which it alone performs, or performs in the best manner.

Thrasymachus:: I understand you; and this does seem to me to be the work of each thing.

Socrates:: Be it so. And is there not likewise a virtue belonging to every thing to which there is a certain work assigned? But let us go over again the same things: We say there is a work belonging to the eyes?

Thrasymachus:: There is.

Socrates:: And is there not a virtue also belonging to the eyes?

Thrasymachus:: A virtue also.

Socrates:: Well then, was there any work of the ears?

Thrasymachus:: Yes.

Socrates:: Is there not then a virtue also?

Thrasymachus:: A virtue also.

Socrates:: And what as to all other things? Is it not thus?

Thrasymachus:: It is.

Socrates:: But come, could the eyes ever handsomely perform their work, not having their own proper virtue; but, instead of virtue, having vice?

Thrasymachus:: How could they, for you probably mean their having blindness instead of sight.

Socrates:: Whatever, be their virtue, for I do not ask this; but, whether it be with their own proper virtue that they handsomely perform their own proper work, whatever things are performed, and by their vice, unhandsomely?

Thrasymachus:: In this at least, you say true.

Socrates:: And will not the ears likewise, when deprived of their virtue, perform their work ill?

Thrasymachus:: Certainly.

Socrates:: And do we settle all other things according to the same reasoning?

Thrasymachus:: So I imagine.

Socrates:: Come, then, after these things, consider this. Is there belonging to the soul a certain work, which, with no one other being whatever, you can perform; such as this, to care for, to govern, to consult, and all such things; is there any other than the soul, to whom we may justly ascribe them, and say they properly belong to it?

Thrasymachus:: No other. But what of this?

Socrates:: To live; shall we say it is the work of the soul?

Thrasymachus:: Most especially.

Socrates:: Do not we say, then, that there is some virtue of the soul, likewise?

Thrasymachus:: We say so.

Socrates:: And shall, then, the soul, ever at all, Thrasymachus, perform her works handsomely, whilst deprived of her proper virtue? or, is this impossible?

Thrasymachus:: It is impossible.

Socrates:: Of necessity, then, a depraved soul must in a bad manner govern, and take care of things; and a good soul perform all these things well.

Thrasymachus:: Of necessity.

Socrates:: But did not we agree that justice was the virtue of the soul; and injustice its vice?

Thrasymachus:: We did agree.

Socrates:: Why, then, the just soul, and the just man, shall live well; and the unjust, ill.

Thrasymachus:: It appears so, according to your reasoning.

Socrates:: But, surely, he who lives well is both blessed and happy, and he who does not is the opposite.

Thrasymachus:: Why not?

Socrates:: The just, then, is happy; and the unjust, miserable.

Thrasymachus:: Let them be so.

Socrates:: But it is not advantageous to be miserable, but to be happy.

Thrasymachus:: Certainly.

Socrates:: At no time, then, blest Thrasymachus, is injustice more advantageous than justice.

Thrasymachus:: Thus, now, Socrates, have you been feasted in Diana's festival.

Socrates:: By you, truly, I have, Thrasymachus; since you are grown meek, and have ceased to be troublesome: I have not feasted handsomely, owing to myself, and not to you: But as voracious guests, snatching still what is bringing before them, taste of it before they have sufficiently enjoyed what went before; so I, as I imagine, before I have found what we first inquired into,—what justice is,—have left this, hurrying to inquire concerning it, whether it be vice and ignorance, or wisdom and virtue. And, a discourse afterwards falling in, that injustice was more profitable than justice, I could not refrain from coming to this from the other: So that, from the dialogue, I have now come to know nothing; for whilst I do not know what justice is, I shall hardly know whether it be some virtue or not, and whether he who possesses it be unhappy or happy.

THE END OF THE FIRST BOOK.

## BOOK II.

Socrates:: When I had said these things I imagined that the debate was at an end; but this it seems was only the introduction: for Glauco, as he is on all occasions most courageous, so truly at that time did not approve of Thrasymachus in giving up the debate; but said;

Glaucon:: Socrates, do you wish to seem to have persuaded us, or to have persuaded us in reality, that in every respect it is better to be just than unjust?

Socrates:: I would choose, to do it in reality, if it depended on me.

Glaucon:: You do not then, do what you desire. For, tell me, does there appear to you any good of this kind, such as we would choose to have; not regarding the consequences, but embracing it for its own sake? as joy, and such pleasures as are harmless; though nothing else arises afterwards from these pleasures, than that the possession gives us delight.

Socrates:: There seems to me, to be something of this kind.

Glaucon:: But what? is there something too, which we both love for its own sake, and also for what arises from it? as wisdom, sight, and health; for we somehow embrace these things on both accounts.

Socrates:: Yes.

Glaucon:: But do you perceive, a third species of good, among which is bodily labor, to be healed when sick, to practice physic, or other lucrative employment? for we say, those things are troublesome, but that they profit us; and we should not choose these things for their own sake, but on account of the rewards and those other advantages which arise from them.

Socrates:: There is then, indeed, likewise this third kind.

Glaucon:: But what now? in which of these, do you place justice?

Socrates:: I imagine, in the most handsome; which, both on its own account, and for the sake of what arises from it, is desired by the man who is in pursuit of happiness.

Glaucon:: It does not, however, seem so to them any, but to be of the troublesome kind, which is pursued for the sake of glory, and on account of rewards and honors; but on its own account is to be shunned, as being difficult.

Socrates:: I know, that it seems so, and it was in this view that Thrasymachus sometimes since despised it, and commended injustice; but it seems I am one of those who are dull in learning.

Glaucon:: Come then, hear me likewise, if this be agreeable to you; for Thrasymachus seems to me to have been charmed by you, like an adder, sooner than was proper: but, with respect to myself, the proof has not yet been made to my satisfaction, in reference to either of the two; for I desire to hear what each is, and what power it has by itself, when in the soul—bidding farewell to the rewards, and the consequences arising from them. I will proceed, therefore, in this manner, if it seem proper to you: I will renew the speech of Thrasymachus; and, first of all, I will tell you what they say justice is, and whence it arises; and, secondly, that all those who pursue it pursue it unwillingly, as necessary, but not as good; thirdly, that they do this reasonably; for, as they say, the life of an unjust man is much better than that of the just. Although, for my own part, to me, Socrates, it does not yet appear so; I am, however, in doubt, having my ears stunned in hearing Thrasymachus and innumerable others. But I have never, hitherto, heard from any one such a discourse as I wish to hear concerning justice, as being better than injustice: I wish then to hear it commended, as it is in itself, and I most especially imagine I shall hear this from you: wherefore, pulling oppositely, I shall speak in commendation of an unjust life; and, in speaking, shall show you in what manner I want to hear you condemn injustice, and commend justice. But see if what I say be agreeable to you.

Socrates:: Extremely so; for what would any man of intellect delight more to speak, and to hear of frequently?

Glaucon:: You speak most handsomely. And hear what I said I was first to speak of; what justice is, and whence it arises; for they say that, according to nature, to do injustice is good; but to suffer injustice is bad; but that the evil which arises from suffering injustice is greater than the good which arises from doing it: so that, after men had done one another injustice, and likewise suffered it, and had experienced both, it seemed proper to those who were not able to shun the one, and choose the other, to agree among themselves, neither to do injustice, nor to be injured: and that hence laws began to be established, and their compacts; and that which was enjoined by law they denominated lawful and just; and that this is the origin and essence of justice: being in the middle between what is best, when he who does injustice is not punished, and of what is worst, when the injured person is unable to punish; and that justice, being thus in the middle of both these, is desired, not as good, but is held in honor from an imbecility in doing injustice: for the man who had ability to do so would never, if really a man, agree with any one either to injure, or to be injured; for otherwise he were mad. This then, Socrates, and of such a kind as this, is the nature of justice; and this, as they say, is its origin. And we shall best perceive that these who pursue it pursue it unwillingly, and from an impotence to injure if we imagine in our mind such a case as this: Let us give liberty to each of them, both to the just and to the unjust, to do whatever they incline; and then let us follow them, observing how their inclination will lead each of them. We should then find the just man, with full inclination, going the same way with the unjust, through a desire of having more than others. This, every nature is made to pursue as good, but by law is forcibly led to an equality. And the liberty which I speak of may be chiefly of this kind; if they happened to have such a power, as they say happened once to Gyges, the progenitor of Lydus: for they say that he was the hired shepherd of the then governor of Lydia; and that a prodigious rain and earthquake happening, part of the earth was rent, and an opening made in the place where he pastured her flocks; that when he beheld, and wondered, he descended, and saw many other wonders, which are mythologically transmitted to us, and a brazen horse likewise hollow and with doors; and, on looking in, he saw within, a dead body larger in appearance than that of a man, which had nothing else upon it but a gold ring on its hand; which ring he took off, and came up again. That when there was a convention of the shepherds, as usual, for reporting to the king what related to their flocks, he also came, having the ring: and whilst he sat with the others, he happened to turn the stone of the ring to the inner part of his hand; and when this was done he became invisible to those who sat by, and they talked of him as absent: that he wondered, and, again handling his ring, turned the stone outward, and on this became visible; and that, having observed this, he made trial of the ring whether it had this power: and that it happened, that on turning the stone inward he became invisible, and on turning it outward he became visible. That, perceiving this, he instantly managed so as to be made one of the embassy to the king, and that on his arrival he debauched his wife; and, with her, assaulting the king, killed him, and possessed the kingdom. If now, there were two such rings, and the just man had the one, and the unjust the other, none, it seems, would be so adamantine as to persevere in justice, and dare to refrain from the things of others, and not to touch them, whilst it was in his power to take, even from the forum, without fear, whatever he pleased; to enter into houses, and embrace any one he pleased; to kill, and to loose from chains, whom he pleased; and to do all other things with the same power as a God among men:—acting in this manner, he is in no respect different from the other; but both of them go the same road. This now, one may say, is a strong proof that no one is just from choice, but by constraint; as it is not a good merely in itself, since every one does injustice wherever he imagines he is able to do it; for every man thinks that injustice is, to the particular person, more profitable than justice; and he thinks justly, according to this way of reasoning: since, if any one with such a liberty would never do any injustice, nor touch the things of others, he would be deemed by men of sense to be most wretched, and most void of understanding; yet would they commend him before one another, imposing on each other from a fear of being injured. Thus much, then, concerning these things. But, with reference to the difference of their lives whom we speak of, we shall be able to discern aright, if we set apart by themselves the most just man, and the most unjust, and not otherwise; and now, what is this separation? Let us take from the unjust man nothing of injustice, nor of justice from the just man; but let us make each of them perfect in his own profession. And first, as to the unjust man, let him act as the able artists; as a complete pilot, or physician, he comprehends the possible and the impossible in the art; the one he attempts, and the other he relinquishes; and, if he fail in any thing, he is able to rectify it: so, in like manner, the unjust man attempting pieces of injustice in a dexterous manner, let him be concealed, if he intend to be exceedingly unjust; but, if he be caught, let him be deemed worthless: for the most complete injustice is, to seem just, not being so. We must give then to the completely unjust the most complete injustice; and not take from him, but allow him, whilst doing the greatest injustice, to procure to himself the highest reputation for justice; and, if in any thing he fail, let him be able to rectify it: and let him be able to speak so as to persuade if any thing of his injustice be spread abroad: let him be able to do by force, what requires force, through his courage and strength, and by means of his friends and his wealth: and having supposed him to be such an one as this, let us place the just man beside him, in our reasoning, a simple and ingenuous man, desiring, according to Æschylus, not the appearance but the reality of goodness: let us take from him the appearance of goodness; for, if he shall appear to be just, he shall have honors and rewards; and thus it may be uncertain whether he be such for the sake of justice, or on account of the rewards and honors: let him be stripped of every thing but justice, and be made completely contrary to the other; whilst he does no injustice, let him have the reputation of doing the greatest; that he may be tortured for justice, not yielding to reproach, and such things as arise from it, but may be immoveable till death; appearing indeed to be unjust through life, yet being really just; that so both of them arriving at the utmost pitch, the one of justice, and the other of injustice, we may judge which of them is the happier.

Socrates:: Strange! friend Glauco, how strenuously you purify each of the men, as a statue which is to be judged of!

Glaucon:: As much, as I am able: whilst then they continue to be such, there will not, as I imagine, be any further difficulty to observe what kind of life remains to each of them.

Socrates:: It must therefore be told.

Glaucon:: And if possibly it should be told with greater rusticity, imagine not, Socrates, that it is I who tell it, but those who commend injustice preferably to justice; and they will say these things: That the just man, being of this disposition, will be scourged, tormented, fettered, have his eyes burnt, and lastly, having suffered all manner of evils, will be crucified; and he shall know, that he should not desire the reality but the appearance of justice: and that it is much more proper to pronounce that saying of Æschylus, concerning the unjust man: for they will in reality say that the unjust man, as being in pursuit of what is real, and living not according to the opinion of men, wants not to have the appearance but the reality of injustice:

> Reaping the hollow furrow of his mind.
> Whence all his glorious councils blossom forth.

In the first place, he holds the magistracy in the state, being thought to be just; next, he marries wherever he inclines, and matches his children with whom he pleases; he joins in partnership and company with whom he inclines; and, besides all this, he will succeed in all his projects for gain; as he does not scruple to do injustice: when then he engages in competitions, he will both in private and in public surpass and exceed his adversaries; and by this means he will be rich, and serve his friends, and hurt his enemies: and he will amply and magnificently render sacrifices and offerings to the Gods, and will honor the Gods, and such men as he chooses, much better than the just man. From whence they reckon, that it is likely he will be more beloved of the Gods than the just man. Thus, they say, Socrates, that both with Gods and men there is a better life prepared for the unjust man than for the just.

Socrates:: When Glauco had said these things, I had a design to say something in reply. But his brother Adimantus said—

Adeimantus:: Socrates, you do not imagine there is yet enough said on the argument.

Socrates:: What further then?

Adeimantus:: That has not yet been spoken, which ought most especially to have been mentioned.

Socrates:: Why then, the proverb is, A brother is help at hand. So do you assist, if he has failed in any thing. Though what has been said by him is sufficient to throw me down, and make me unable to succor justice.

Adeimantus:: You say nothing. But hear this further. For we must go through all the arguments opposite to what he has said, which commend justice and condemn injustice, that what Glauco seems to me to intend may be more manifest. Now, parents surely tell and exhort their sons, as do all those who have the care of any, that it is necessary to be just; not commending justice in itself, but the honors arising from it; that whilst a man is reputed to be just, he may obtain by this reputation magistracies and marriages, and whatever Glauco just now enumerated as the consequence of being reputed just: but these men carry this matter of reputation somewhat further; for, throwing in the approbation of the Gods, they have unspeakable blessings to enumerate to holy persons; which, they say, the Gods bestow. As the generous Hesiod and Homer say, the one, that the Gods cause the oaks to produce to just men

Acorns at top, and in the middle bees;
Their woolly sheep are laden with their fleece;

and a great many other good things of the same nature. In like manner, the other.

The blameless king, who holds a God-like name.
Finds his black should both wheat and barley bear;
With fruit his trees are laden, and his flocks
Bring forth with ease; the sea affords him fish.

But Musæus and his son tell us that the Gods give just men more splendid blessings than these; for, carrying them in his poem into Hades, and placing them in company with holy men at a feast prepared for them, they crown them, and make them pass the whole of their time in drinking, deeming eternal inebriation the finest reward of virtue. But some carry the rewards from the Gods still further; for they say that the offspring of the holy, and the faithful, and their children's children, still remain. With these things, and such as these, they commend justice. But the unholy and unjust they bury in Hades, in a kind of mud, and compel them to carry water in a sieve; and make them, even whilst alive, to live in infamy. Whatever punishments were assigned by Glauco to the just, whilst they were reputed unjust, these they assign to the unjust, but mention no others. This now is the way in which they commend and discommend them severally: but besides this, Socrates, consider another kind of reasoning concerning justice and injustice, mentioned both privately and by the poets: for all of them with one mouth celebrate temperance and justice as indeed excellent, but yet difficult and laborious; and intemperance and injustice as indeed pleasant and easy to attain; but, by opinion only, and by law, abominable: and they say that for the most part unjust actions are more profitable than just. And they are gladly willing, both in public and private, to pay honor to wicked rich men, and such as have power of any kind, and to pronounce them happy, but to contemn and overlook those who are any how weak and poor, even whilst they acknowledge them to be better than the others. But, of all these speeches, the most marvelous are those concerning the Gods, and virtue: as if even the Gods gave to many good men misfortunes and an evil life, and to contrary persons a contrary fate: and mountebanks and prophets, frequenting the gates of the rich, persuade them that they have a power granted them by the Gods, of expiating by sacrifices and songs, with pleasures and with feastings, if any injustice has been committed by any one, or his forefathers: and if he wishes to blast any enemy at a small expense, he shall injure the just in the same manner as the unjust; by certain blandishments and bonds, as they say, persuading the Gods to succor them: and to all these discourses they bring the poets as witnesses; who, mentioning the proneness to vice, say.

> How vice at once, and easily is gain'd;
> The way is smooth, and very nigh it dwells;
> Sweat before virtue stands, so Heav'n ordain'd—

and a certain long and steep way. Others make Homer witness how the Gods are prevailed upon by men, because he says.

> The Gods themselves are turn'd
> With sacrifices and appealing vows;
> Fat off'rings and libation them persuade;
> And for transgressions suppliant pray'r atones.

They show likewise many books of Musæus and Orpheus, the offspring; as they say, of the Moon, and of the Muses;

according to which they perform their sacred rites, persuading not only private persons, but states likewise, that there are absolutions and purgations from iniquities by means of sacrifices, sports and pleasures; and this, for the benefit both of the living and of the dead: these they call the mysteries which absolve us from evils there; but they assert that dreadful things await those who do not offer sacrifice. All these, and so many things of the kind, friend Socrates, being said of virtue and vice, and their reward both with men and Gods; what do we imagine the souls of our youth do, when they hear them; such of them as are well born, and able as it were to rush into all these things which are said, and from all to deliberate, in what sort of character and in what sort of road one may best pass through life? It is likely he might say to himself, according to that of Pindar.

Whether shall I the lofty wall
Of justice try to scale;
Or, hedg'd within the guileful maze
Of vice, encircled dwell?

For, according to what is said, though I be just, if I be not reputed so, there shall be no profit, but manifest troubles and punishments. But the unjust man, who procures to himself the character of justice, is said to have a divine life. Since then the appearance surpasses the reality, as wise men demonstrate to me, and is the primary part of happiness, ought I not to turn wholly to it; and to draw round myself as a covering, and picture, the image of virtue; but to draw after me the cunning and versatile fox of the most wise Archilochus? But perhaps some one will say, It is not easy, being wicked, always to be concealed. Neither is any thing else easy (will we say) which is great. But, however, if we would be happy, thither let us go where the vestiges of the reasonings lead us. For, in order to be concealed, we will make conjurations and associations together; and there are masters of persuasion, who teach a popular and political wisdom; by which means, whilst partly by persuasion and partly by force we seize more than our due, we shall not be punished. But, surely, to be concealed from the Gods, or to overpower them, is impossible.

If then they are not, or care not about human affairs, we need not have any concern about being concealed: but if they really are, and care for us, we neither know nor have heard of them otherwise than from traditions, and from the poets who write their genealogies; and these very persons tell us, that they are to be moved and persuaded by sacrifices, and appeasing vows, and offerings; both of which we are to believe, or neither. If then we are to believe both, we may do injustice, and of the fruits of our injustice offer sacrifice. If we be just, we shall indeed be unpunished by the Gods; but then we shall not have the gains of injustice. But if we be unjust, we shall make gain; and after we have transgressed and offended, we shall appease them by offerings, and be liberated from punishment. But we shall be punished in the other world for our unjust doings here; either we ourselves, or our children's children. But, friend, will the reasoner say, the mysteries can do much; the Gods are exorable, as say the mightiest states, and the children of the Gods, the poets; who are also their prophets, and who declare that these things are so. For what reason, then, should we still prefer justice before the greatest injustice; which if we shall attain to with any deceiving appearance, we shall fare according to our mind, both with reference to Gods and men, both living and dying, according to the speech now mentioned of many and excellent men? From all that has been said, by what means, O Socrates, shall he incline to honor justice, who has any ability of fortune or of wealth, of body or of birth, and not laugh when he hears it commended? So that, though a man were able even to show what we have said to be false, and fully understood that justice is better, he will, however, abundantly pardon and not be angry with the unjust; for he knows, that unless one from a divine nature abhor to do injustice, or from acquired knowledge abstain from it, no one of others is willingly just; but either through cowardice, old-age, or some other weakness, condemns the doing injustice when unable to do it. That it is so is plain. For the first of these who arrives at power is the first to do injustice, as far as he is able. And the reason of all this is no other than that from whence all this discourse proceeded, Socrates, because, O wonderful man! among all those of you that call yourselves the commenders of justice, beginning from those ancient heroes of whom any accounts are left to the men of the present time, no one hath at any time condemned injustice, nor commended justice, otherwise than regarding the reputations, honors and rewards arising from them: but no one has hitherto sufficiently examined, neither in poetry nor in prose discourse, either of them in itself, and subsisting by its own power, in the soul of him who possesses it, and concealed from both Gods and men: how that the one is the greatest of all the evils which the soul hath within it, and justice the greatest good: for, if it had thus from the beginning been spoken of by you all, and you had so persuaded us from our youth, we should not need to watch over our neighbor lest he should do us injustice, but every man would have been the best guardian over himself, afraid lest in doing injustice he should dwell with the greatest evil. These things now, Socrates, and probably much more than these, Thrasymachus or some other might say of justice and injustice, inverting their power, disagreeably as I imagine for my own part. But I (for I want to conceal nothing from you) being desirous to hear you on the opposite side, speak the best I am able, pulling the contrary way. Do not, therefore, only show us in your reasoning that justice is better than injustice; but in what manner each of them by itself, affecting the mind, is, the one evil, and the other good. And take away all opinions, as Glauco likewise enjoined: for, if you do not take away the false opinions on both sides, and add the true ones, we will say you do not commend justice, but the appearance; nor condemn being unjust, but the appearance; that you advise the unjust man to conceal himself; and that you assent to Thrasymachus that justice is a foreign good; the profit of the more powerful; and that injustice is the profit and advantage of oneself, but unprofitable to the inferior. Wherefore, now, after you have acknowledged that justice is among the greatest goods, and such as are worthy to be possessed for what arises from them, and much more in themselves, and for their own sake; such as sight, hearing, wisdom, health, and such other goods as are real in their own nature, and not merely in opinion; in the same manner commend justice; how, in itself, it profits the owner, and injustice hurts him. And leave to others to commend the rewards and opinions; for I could bear with others in this way, commending justice, and condemning injustice, celebrating and reviling their opinions and rewards; but not with you (unless you desire me), because you have passed the whole of life considering nothing else but this. Show us, then, in your discourse, not only that justice is better than injustice; but in what manner each of them by itself affecting the owner, whether he be concealed or not concealed from Gods and men, is, the one good, and the other evil.

Socrates:: On hearing these things, as I always indeed was pleased with the disposition of Glauco and Adimantus, so at that time I was perfectly delighted, and replied: It was not ill said concerning you, sons of that worthy man, by the lover of Glauco, who wrote the beginning of the Elegies, when, celebrating your behavior at the battle of Megara, he sang.

> Aristo’s sons! of an illustrious man.
> The race divine.

This, friend, seems to be well said; for you are truly affected in a divine manner, if you are not persuaded that injustice is better than justice, and yet are able to speak thus in its defense: and to me you seem, truly, not to be persuaded; and I reason from the whole of your other behavior, since, according to your present speeches at least, I should distrust you. But the more I can trust you, the more I am in doubt what argument I shall use. For I can neither think of any assistance I have to give (for I seem to be unable, and my mark is, that you do not accept of what I said to Thrasymachus when I imagined I showed that justice was better than injustice), nor yet can I think of giving no assistance; for I am afraid lest it be an unholy thing to desert justice when I am present, and see it accused, and not assist it whilst I breathe and am able to speak. It is best then to succor it in such a manner as I can. Hereupon Glauco and the rest entreated me, by all means, to assist, and not relinquish the discourse; but to search thoroughly what each of them is, and which way the truth lies, as to their respective advantage. I then said what appeared to me: That the inquiry we were attempting was not contemptible, but was that of one who was sharp-sighted, as I imagined. Since then, we are not very expert, it seems proper to make the inquiry concerning this matter, in such a manner as if it were ordered those who are not very sharp-sighted, to read small letters at a distance; and one should afterwards understand, that the same letters are greater somewhere else, and in a larger field: it would appear eligible, I imagine, first to read these, and thus come to consider the lesser, if they happen to be the same.

Adeimantus:: Perfectly right. But what of this kind, Socrates, do you perceive in the inquiry concerning justice?

Socrates:: I shall tell you. Do not we say there is justice in one man, and there is likewise justice in a whole state?

Adeimantus:: It is certainly so.

Socrates:: Is not a state a greater object than one man?

Adeimantus:: Greater.

Socrates:: It is likely, then, that justice should be greater in what is greater, and be more easy to be understood: we shall first, then, if you incline, inquire what it is in states; and then, after the same manner, we shall consider it in each individual, contemplating the similitude of the greater in the idea of the lesser.

Adeimantus:: You seem to me, to say right.

Socrates:: If then, we contemplate, in our discourse, a state existing, shall we not perceive its justice and injustice existing?

Adeimantus:: Perhaps.

Socrates:: And is there not ground to hope, if this exists, that we shall more easily find what we seek for?

Adeimantus:: Most certainly.

Socrates:: It seems, then, we ought to attempt to succeed, for I imagine this to be a work of no small importance. Consider then.

Adeimantus:: We are considering, and do you no otherwise.

Socrates:: A city, then, as I imagine, takes its rise from this, that none of us happens to be self-sufficient, but is indigent of many things; or, do you imagine there is any other origin of building a city?

Adeimantus:: None other.

Socrates:: Thus, then, one taking in one person for one indigence, and another for another; as they stand in need of many things, they assemble into one habitation many companions and assistants; and to this joint-habitation we give the name city, do we not?

Adeimantus:: Certainly.

Socrates:: And they mutually exchange with one another, each judging that, if he either gives or takes in exchange, it will be for his advantage.

Adeimantus:: Certainly.

Socrates:: Come, then, let us, in our discourse, make a city from the beginning. And, it seems, our indigence has made it.

Adeimantus:: Why not?

Socrates:: But the first and the greatest of wants is the preparation of food, in order to subsist and live.

Adeimantus:: By all means.

Socrates:: The second is of lodging. The third of clothing; and such like.

Adeimantus:: It is so.

Socrates:: But, come, how shall the city be able to make so great a provision? Shall not one be a husbandman, another a mason, some other a weaver? or, shall we add to them a shoe-maker, or some other of those who minister to the necessaries of the body?

Adeimantus:: Certainly.

Socrates:: So that the most indigent city might consist of four or five men?

Adeimantus:: It seems so.

Socrates:: But, what now? must each of those do his work for them all in common? As, the husbandman, being one, shall he prepare food for four; and consume quadruple time, and labor, in preparing food, and sharing it with others? or, neglecting them, shall he for himself alone make the fourth part of this food, in the fourth part of the time? and, of the other three parts of time, shall he employ one in the preparation of a house, the other in that of clothing, the other of shoes, and not give himself trouble in sharing with others, but do his own affairs by himself?

Adeimantus:: —And probably, Socrates, this way is more easy than the other.

Socrates:: No, certainly; it were absurd. For, whilst you are speaking, I consider that we are born not perfectly resembling one another, but differing in disposition; one being fitted for doing one thing, and another for doing another: does it not seem so to you?

Adeimantus:: It does.

Socrates:: But, what now? Whether will a man do better, if, being one, he works in many arts, or in one?

Adeimantus:: When in one.

Socrates:: But this, I imagine, is also plain; that if one miss the season of any work, it is ruined.

Adeimantus:: That is plain.

Socrates:: For, I imagine, the work will not wait upon the leisure of the workman; but of necessity the workman must attend close upon the work, and not in the way of a by-job.

Adeimantus:: Of necessity.

Socrates:: And hence it appears, that more will be done, and better, and with greater ease, when every one does but one thing, according to their genius, and in proper season, and freed from other things.

Adeimantus:: Most certainly.

Socrates:: But we need certainly, Adimantus, more citizens than four, for those provisions we mentioned: for the husbandman, it would seem, will not make a plough for himself, if it is to be handsome; nor yet a spade, nor other instruments of agriculture: as little will the mason; for he, likewise, needs many things: and in the same way, the weaver and the shoe-maker also. Is it not so?

Adeimantus:: True.

Socrates:: Joiners, then, and smiths, and other such workmen, being admitted into our little city, make it throng.

Adeimantus:: Certainly.

Socrates:: But it would be no very great matter, neither, if we did not give them neatherds likewise, and shepherds, and those other herdsmen; in order that both the husbandmen may have oxen for ploughing, and that the masons, with the help of the husbandmen, may use the cattle for their carriages; and that the weavers likewise, and the shoe-makers, may have hides and wool.

Adeimantus:: Nor yet, would it be a very small city, having all these.

Socrates:: But, it is almost impossible to set down such a city in any such place as that it shall need no importations.

Adeimantus:: It is impossible.

Socrates:: It will then certainly want others still, who may import from another state what it needs.

Adeimantus:: It will want them.

Socrates:: And surely this service would be empty, if it carry out nothing which these want, from whom they import what they need themselves. It goes out empty in such a case, does it not?

Adeimantus:: To me it seems so.

Socrates:: But the city ought not only to make what is sufficient for itself; but such things, and so much also, as may answer for those things which they need.

Adeimantus:: It ought.

Socrates:: Our city, then, certainly wants a great many more husbandmen and other workmen?

Adeimantus:: A great many more.

Socrates:: And other servants besides, to import and export the several things; and these are merchants, are they not?

Adeimantus:: Yes.

Socrates:: We shall then want merchants likewise?

Adeimantus:: Yes, indeed.

Socrates:: And if the merchandise is by sea, it will want many others; such as are skilful in sea affairs.

Adeimantus:: Many others, truly.

Socrates:: But what as to the city within itself? How will they exchange with one another the things which they have each of them worked; and for the sake of which, making a community, they have built a city?

Adeimantus:: It is plain, in selling and buying.

Socrates:: Hence we must have a forum, and money, as a symbol, for the sake of exchange.

Adeimantus:: Certainly.

Socrates:: If now the husbandman, or any other workman, bring any of his work to the forum, but come not at the same time with those who want to make exchange with him, must he not, desisting from his work, sit idly in the forum?

Adeimantus:: By no means. But there are some who, observing this, set themselves to this service; and, in well-regulated cities, they are mostly such as are weakest in their body, and unfit to do any other work. There they are to attend about the forum, to give money in exchange for such things as any may want to sell; and things in exchange for money to such as want to buy.

Socrates:: This indigence, procures our city a race of shopkeepers; for, do not we call shopkeepers, those who, fixed in the forum, serve both in selling and buying? but such as travel to other cities we call merchants.

Adeimantus:: Certainly.

Socrates:: There are still, as I imagine, certain other ministers, who, though unfit to serve the public in things which require understanding, have yet strength of body sufficient for labor, who selling the use of their strength, and calling the reward of it hire, are called, as I imagine, hirelings: are they not?

Adeimantus:: Yes, indeed.

Socrates:: Hirelings then are, it seems, the complement of the city?

Adeimantus:: It seems so.

Socrates:: Has our city now, Adimantus, already so increased upon us as to be complete?

Adeimantus:: Perhaps.

Socrates:: Where now, at all, should justice and injustice be in it; and, in which of the things that we have considered does it appear to exist?

Adeimantus:: I do not know, Socrates, if it be not in a certain use, somehow, of these things with one another.

Socrates:: Perhaps, you say right. But we must consider it, and not be weary. First, then, let us consider after what manner those who are thus procured shall be supported. Is it any other way than by making bread and wine, and clothes, and shoes, and building houses? In summer, indeed, they will work for the most part without clothes and shoes; and, in winter, they will be sufficiently furnished with clothes and shoes; they will be nourished, partly with barley, making meal of it, and partly with wheat, making loaves, boiling part and toasting part, putting fine loaves and cakes over a fire of stubble, or over dried leaves; and resting themselves on couches, strawed with smilax and myrtle leaves, they and their children will feast; drinking wine, and crowned, and singing to the Gods, they will pleasantly live together, begetting children, not beyond their substance, guarding against poverty or war.

Glaucon:: You make the men to feast, as it appears, without meats.

Socrates:: You say true; for I forget that they shall have meats likewise. They shall have salt, and olives, and cheese; and they shall boil bulbous roots, and herbs of the field; and we let before them desserts of figs, and vetches, and beans; and they will toast at the fire myrtle berries, and the berries of the beech-tree; drinking in moderation, and thus passing their life in peace and health; and dying, as is likely, in old-age, they will leave to their children another such life.

Glaucon:: If you had been making, Socrates, a city of hogs, what else would you have fed them with but with these things?

Socrates:: But how should we do, Glauco?

Glaucon:: What is usually done. They must, as I imagine, have their beds, and tables, and meats, and desserts, as we now have, if they are not to be miserable.

Socrates:: Be it so; I understand you. We consider, it seems, not only how a city may exist, but how a luxurious city: and perhaps it is not amiss; for, in considering such an one, we may probably see how justice and injustice have their origin in cities. But the true city seems to me to be such an one as we have described; like one who is healthy; but if you incline that we likewise consider a city that is corpulent, nothing hinders it. For these things will not, it seems, please some; nor this sort of life satisfy them; but there shall be beds, and tables, and all other furniture; seasonings, ointments, and perfumes; mistresses, and confections, and various kinds of all these. And we must no longer consider as alone necessary what we mentioned at the first; houses, and clothes, and shoes; but painting too, and all the curious arts must be set a-going, and carving, and gold, and ivory; and all these things must be procured, must they not?

Glaucon:: Yes.

Socrates:: Must not the city, then, be larger? For that healthy one is no longer sufficient, but is already full of luxury, and of a crowd of such as are no way necessary to cities; such as all kinds of sportsmen, and the imitative artists, many of them imitating in figures and colors, and others in music: poets too, and their ministers, rhapsodists, actors, dancers, undertakers, workmen of all sorts of instruments; and what has reference to female ornaments, as well as other things. We shall need likewise many more servants. Do not you think they will require pedagogues, and nurses, and tutors, hairdressers, barbers, victualer too, and cooks? And further still, we shall want swineherds likewise: of these there were none in the other city, (for there needed not) but in this we shall want these, and many other sorts of herds likewise, if any eat the several animals, shall we not?

Glaucon:: Why not?

Socrates:: Shall we not then, in this manner of Life, be much more in need of physicians than formerly?

Glaucon:: Much more.

Socrates:: And the country, which was then sufficient to support the inhabitants, will, instead of being sufficient, become too little; or how shall we say?

Glaucon:: In this way.

Socrates:: Must we not then encroach upon the neighboring country, if we want to have sufficient for plough and pasture, and they, in like manner, on us, if they likewise suffer themselves to accumulate wealth to infinity; going beyond the boundary of necessities?

Glaucon:: There is great necessity for it, Socrates.

Socrates:: Shall we afterwards fight, Glauco, or how shall we do?

Glaucon:: We shall certainly.

Socrates:: But we say nothing, whether war does any evil, or any good; but thus much only, that we have found the origin of war: from whence, most especially, arise the greatest mischiefs to states, both private and public.

Glaucon:: Yes, indeed.

Socrates:: We shall need, then, friend, still a larger city; not for a small, but for a large army, who, in going out, may fight with those who assault them, for their whole substance, and every thing we have now mentioned.

Glaucon:: What, are not these sufficient to fight?

Socrates:: No; if you, at least, and all of us, have rightly agreed, when we formed our city: and we agreed, if you remember, that it was impossible for one to perform many arts handsomely.

Glaucon:: You say true.

Socrates:: What, then, as to that contest of war; does it not appear to require art?

Glaucon:: Very much.

Socrates:: Ought we then to take more care of the art of shoe-making than of the art of making war?

Glaucon:: By no means.

Socrates:: But we charged the shoe-maker neither to undertake at the same time to be a husbandman, nor a weaver, nor a mason, but a shoe-maker; that the work of that art may be done for us handsomely: and, in like manner, we allotted to every one of the rest one thing, to which the genius of each led him, and what each took care of, freed from other things, to do it well, applying to it the whole of his life, and not neglecting the seasons of working. And now, as to the affairs of war, whether is it of the greatest importance, that they be well performed? Or, is this so easy a thing, that one may be a husbandman, and likewise a soldier, and shoe-maker; or be employed in any other art? But not even at chess, or dice, can one ever play skillfully, unless he study this very thing from his childhood, and not make it a by-work. Or, shall one, taking a spear, or any other of the warlike arms and instruments, become instantly an expert combatant, in an encounter in arms, or in any other relating to war? And, shall the taking up of no other instrument make a workman, or a wrestler, nor be useful to him who has neither the knowledge of that particular thing, nor has bestowed the study sufficient for its attainment?

Glaucon:: Such instruments, would truly be very valuable.

Socrates:: By how much then, this work of guards is one of the greatest importance, by so much it should require the greatest leisure from other things, and likewise the greatest art and study.

Glaucon:: I imagine so.

Socrates:: And shall it not likewise require a competent genius for this profession?

Glaucon:: Why not?

Socrates:: It should surely be our business, as it seems, if we be able, to choose who and what kind of geniuses are competent for the guardianship of the city.

Glaucon:: Ours, indeed.

Socrates:: We have truly, undertaken no mean business; but, however, we are not to despair, so long at least as we have any ability.

Glaucon:: No indeed.

Socrates:: Do you think then, that the genius of a generous whelp differs any thing for guardianship, from that of a generous youth?

Glaucon:: What is it you say?

Socrates:: It is this. Must not each of them be acute in the perception, swift to pursue what they perceive, and strong likewise if there is need to conquer what they shall catch?

Glaucon:: There is need, of all these.

Socrates:: And surely he must be brave likewise, if he fight well.

Glaucon:: Why not?

Socrates:: But will he be brave who is not spirited, whether it is a horse, a dog, or any other animal? Or, have you not observed, that the spirit is some what insurmountable and invincible; by the presence of which every soul is, in respect of all things whatever, unterrified and unconquerable?

Glaucon:: I have observed it. It is plain then what sort of a guard we ought to have, with reference to his body. Yes, and with reference to his soul, that he should be spirited. This likewise is plain.

Socrates:: How then, Glauco, will they not be savage towards one another and the other citizens, being of such a temper?

Glaucon:: No truly, not easily.

Socrates:: But yet it is necessary, that towards their friends they be meek, and fierce towards their enemies; for otherwise they will not wait till others destroy them; but they will prevent them, doing it themselves.

Glaucon:: True.

Socrates:: What then, shall we do? Where shall we find, at once, the mild and the magnanimous temper? For the mild disposition is somehow opposite to the spirited.

Glaucon:: It appears so.

Socrates:: But, however, if he be deprived of either of these, he cannot be a good guardian; for it seems to be impossible; and thus it appears, that a good guardian is an impossible thing.

Glaucon:: It seems so.

Socrates:: After hesitating and considering what had passed: Justly, friend, are we in doubt; for we have departed from that image which we first established. How say you? have we not observed, that there are truly such tempers as we were not imagining, who have these opposite things?

Glaucon:: Where then?

Socrates:: One may see it in other animals, and not a little in that one with which we compared our guardian. For this, you know, is the natural temper of generous dogs, to be most mild towards their domestics and their acquaintance, but the reverse to those they know not.

Glaucon:: It is so.

Socrates:: This then, is possible; and it is not against nature that we require our guardian to be such an one.

Glaucon:: It seems not.

Socrates:: Are you, further, of this opinion, that he who is to be our guardian should, besides being spirited, be a philosopher likewise?

Glaucon:: How? for I do not understand you.

Socrates:: This, likewise, you will observe in the dogs; and it is worthy of admiration in the brute.

Glaucon:: As what?

Socrates:: He is angry at whatever unknown person he sees, though he hath never suffered any ill from him before; but he is fond of whatever acquaintance he sees, though he has never at any time received any good from him. Have you not wondered at this?

Glaucon:: I never, much attended to it before; but, that he does this, is plain. But, indeed, this affection of his nature seems to bean excellent disposition, and truly philosophical. As how?

Socrates:: As, it distinguishes between a friendly and unfriendly aspect, by nothing else but this, that it knows the one, but is ignorant of the other. How, now, should not this be deemed the love of learning, which distinguishes what is friendly and what is foreign, by knowledge and ignorance?

Glaucon:: It can no way be shown why it should not.

Socrates:: But, however, to be a lover of learning, and a philosopher, are the same.

Glaucon:: The same.

Socrates:: May we not then boldly settle it, That in man too, if any one is to be of a mild disposition towards his domestics and acquaintance, he must be a philosopher and a lover of learning?

Glaucon:: Let us settle it.

Socrates:: He then who is to be a good and worthy guardian for us, of the city, shall be a philosopher, and spirited, and swift, and strong in his disposition.

Glaucon:: By all means.

Socrates:: Let then our guardian, be such an one. But in what manner shall these be educated for us, and instructed? And will the consideration of this be of any assistance in perceiving that for the sake of which we consider every thing else? In what manner justice and injustice arise in the city, that we may not omit a necessary part of the discourse; nor consider what is superfluous?

The brother of Glauco said:

Adeimantus:: I, for my part, greatly expect that this inquiry will be of assistance to that.

Socrates:: Truly, friend Adimantus, it is not to be omitted, though it should happen to be somewhat tedious.

Adeimantus:: No, truly.

Socrates:: Come then, let us, as if we were talking in the way of fable, and at our leisure, educate these men in our reasoning.

Adeimantus:: It must be done.

Socrates:: What then is the education? Or, is it difficult to find a better than that which was found long ago, which is, gymnastic for the body, and music for the mind?

Adeimantus:: It is indeed.

Socrates:: Shall we not then, first, begin with instructing them in music, rather than in gymnastic?

Adeimantus:: Why not?

Socrates:: When you say music, you mean discourses, do you not? I do: but of discourses there are two kinds; the one true, and the other false.

Adeimantus:: There are.

Socrates:: And they must be educated in them both, and first in the false.

Adeimantus:: I do not understand, what you mean.

Socrates:: Do not you understand, that we first of all tell children fables? And this part of music, somehow, to speak in the general, is false; yet there is truth in them; and we accustom children to fables before their gymnastic exercises.

Adeimantus:: We do so.

Socrates:: This then is what I meant, when I said that children were to begin music before gymnastic.

Adeimantus:: Right.

Socrates:: And do you not know that the beginning of every work is of the greatest importance, especially to any one young and tender? for then truly, in the easiest manner, is formed and taken on the impression which one inclines to imprint on every individual.

Adeimantus:: It is entirely so.

Socrates:: Shall we then suffer the children to hear any kind of fables composed by any kind of persons; and to receive, for the most part, into their minds, opinions contrary to those we judge they ought to have when they are grown up?

Adeimantus:: We shall by no means suffer it.

Socrates:: First of all, then, we must preside over the fable-makers. And whatever beautiful fable they make must be chosen; and what are otherwise must be rejected; and we shall persuade the nurses and mothers to tell the children such fables as shall be chosen; and to fashion their minds by fables much more than their bodies by their hands. But the most of what they tell them at present must be thrown out.

Adeimantus:: As what?

Socrates:: In the greater ones, we shall see the lesser likewise. For the fashion of them must be the same; and both the greater and the lesser must have the same kind of power. Do not you think so?

Adeimantus:: I do: but I do not at all understand which you call the greater one?

Socrates:: Those, which Hesiod and Homer tell us, and the other poets. For they composed false fables to mankind, and told them as they do still.

Adeimantus:: Which, do you mean, and what is it you blame in them?

Socrates:: That, which first of all and most especially ought to be blamed, when one does not falsify handsomely.

Adeimantus:: What is that?

Socrates:: When one, in his composition, gives ill representations of the nature of Gods and heroes: as a painter drawing a picture in no respect resembling what he wished to paint.

Adeimantus:: It is right, to blame such things as these. But how have they failed, say we, and as to what?

Socrates:: First of all, with reference to that greatest lie, and matters of the greatest importance, he did not lie handsomely, who told how Heaven did what Hesiod says he did; and then again how Saturn punished him, and what Saturn did, and what he suffered from his son: For though these things were true, yet I should not imagine they ought to be so plainly told to the unwise and the young, but ought much rather to be concealed. But if there were a necessity to tell them, they should be heard in secrecy, by as few as possible; after they had sacrificed not a hog, but some great and wonderful sacrifice, that thus the fewest possible might chance to hear them.

Adeimantus:: These fables, are indeed truly hurtful.

Socrates:: And not to be mentioned, Adimantus, in our city. Nor is it to be said in the hearing of a youth, that he who does the most extreme wickedness does nothing strange; nor he who in every shape punishes his unjust father, but that he does the same as the first and the greatest of the Gods.

Adeimantus:: No truly, these things do not seem to me proper to be said.

Socrates:: Nor, universally, must it be told how Gods war with Gods, and plot and fight against one another, (for such assertions are not true,)—if, at least, those who are to guard the city for us ought to account it the most shameful thing to hate one another on slight grounds. As little ought we to tell in fables, and embellish to them, the battles of the giants; and many other all-various feuds, both of the Gods and heroes, with their own kindred and relations. But if we are at all to persuade them that at no time should one citizen hate another, and that it is unholy; such things as these are rather to be said to them immediately when they are children, by the old men and women, and by those well advanced in life; and the poets are to be obliged to compose agreeably to these things. But Juno fettered by her son, and Vulcan hurled from heaven by his father for going to assist his mother when beaten, and all those battles of the Gods which Homer has composed, must not be admitted into the city; whether they be composed in the way of allegory, or without allegory; for the young person is not able to judge what is allegory and what is not: but whatever opinions he receives at such an age are with difficulty washed away, and are generally immoveable. On these accounts, one would imagine, that, of all things, we should endeavor that what they are first to hear be composed in the most handsome manner for exciting them to virtue.

Adeimantus:: There is reason for it. But, if any one now should ask us concerning these, what they are, and what kind of fables they are, which should we name?

Socrates:: Adimantus, you and I are not poets at present, but founders of a city; and it belongs to the founders to know the models according to which the poets are to compose their fables; contrary to which if they compose, they are not to be tolerated; but it belongs not to us to make fables for them.

Adeimantus:: Right. But as to this very thing, the models concerning theology, which are they?

Socrates:: Some such as these. God is always to be represented such as he is, whether one represent him in epic, in song, or in tragedy.

Adeimantus:: This, ought to be done.

Socrates:: Is not God essentially good, and is he not to be described as such?

Adeimantus:: Without doubt.

Socrates:: But nothing which is good is hurtful; is it?

Adeimantus:: It does not appear to me that it is.

Socrates:: Does, then, that which is not hurtful ever do hurt?

Adeimantus:: By no means.

Socrates:: Does that which does, no hurt do any evil?

Adeimantus:: Nor this neither.

Socrates:: And what does no evil cannot be the cause of any evil.

Adeimantus:: How can it?

Socrates:: But what? Good is beneficial.

Adeimantus:: Yes.

Socrates:: It is, then, the cause of welfare?

Adeimantus:: Yes.

Socrates:: Good, therefore, is not the cause of all things, but the cause of those things which are in a right state; but is not the cause of those things which are in a wrong.

Adeimantus:: Entirely so.

Socrates:: Neither, then, can God, since he is good, be the cause of all things, as the many say, but he is the cause of a few things to men; but of many things he is not the cause; for our good things are much fewer than our evil: and no other than God is the cause of our good things; but of our evils we must not make God the cause, but seek for some other.

Adeimantus:: You seem to me, to speak most true.

Socrates:: We must not, then, either admit Homer or any other poet trespassing so foolishly with reference to the Gods, and saying, how;

Two vessels on Jove's threshold ever stand,
The source of evil one, and one of good.
The man whose lot Jove mingles out of both,

By good and ill alternately is rul'd.
But he whose portion is unmingled ill,
O'er sacred earth by famine dire is driv'n.

Nor that Jupiter is the dispenser of our good and evil. Nor, if any one say that the violation of oaths and treaties by Pandarus was effected by Minerva and Jupiter, shall we commend it. Nor that dissension among the Gods, and judgment by Themis and Jupiter. Nor yet must we suffer the youth to hear what Æschylus says; how;

Whenever God inclines to raze
A house, himself contrives a cause.

But, if any one make poetical compositions, in which are these iambics, the sufferings of Niobe, of the Pelopides, or the Trojans, or others of a like nature, we must either not suffer them to say they are the works of God; or, if of God, we must find that reason for them which we now require, and we must say that God did what was just and good; and that they were benefited by being chastised: but we must not suffer a poet to say, that they are miserable who are punished; and that it is God who does these things. But if they say that the wicked, as being miserable, needed correction; and that, in being punished, they were profited by God, we may suffer the assertion. But, to say that God, who is good, is the cause of ill to any one, this we must by all means oppose, nor suffer any one to say so in his city; if he wishes to have it well regulated. Nor must we permit any one, either young or old, to hear such things told in fable, either in verse or prose; as they are neither agreeable to sanctity to be told, nor profitable to us, nor consistent with themselves.

Adeimantus:: I vote along with you, in this law, and it pleases me.

Socrates:: This, then, may be one of the laws and models with reference to the Gods: by which it shall be necessary that those who speak, and who compose, shall compose and say that God is not the cause of all things, but of good.

Adeimantus:: Yes, indeed, it is necessary. But what as to this second law?

Socrates:: Think you that God is a buffoon, and insidiously appears, at different times, in different shapes; sometimes like himself; and, at other times, changing his appearance into many shapes; sometimes deceiving us, and making us conceive false opinions of him? Or, do you conceive him to be simple, and departing the least of all things from his proper form?

Adeimantus:: I cannot, at present, at least, say so.

Socrates:: But what as to this? If any thing be changed from its proper form, is there not a necessity that it be changed by itself, or by another?

Adeimantus:: Undoubtedly.

Socrates:: Are not those things which are in the best state, least of all changed and moved by any other thing? as the body, by meats and drinks, and labors: and every vegetable by tempests and winds, and such like accidents. Is not the most sound and vigorous least of all changed?

Adeimantus:: Why not?

Socrates:: And as to the soul itself, will not any perturbation from without, least of all disorder and change the most brave and wise?

Adeimantus:: Yes.

Socrates:: And surely, somehow, all vessels which are made, and buildings, and vestments, according to the same reasoning, such as are properly worked, and in a right state, are least changed by time, or other accidents?

Adeimantus:: They are so, indeed.

Socrates:: Every thing then which is in a good state, either by nature, or art, or both, receives the smallest change from any thing else.

Adeimantus:: It seems so.

Socrates:: But God, and every thing belonging to divinity, are in the best state.

Adeimantus:: Why not?

Socrates:: In this way, then, God should least of all have many shapes. Least of all, truly. But should he change and alter himself?

Adeimantus:: It is plain, if he be changed at all.

Socrates:: Whether then will he change himself to the better and to the more handsome, or to the worse, and the more deformed?

Adeimantus:: Of necessity, to the worse, if he be changed at all; for we shall never at any time say, that God is any way deficient with respect to beauty or excellence.

Socrates:: You say most right. And this being so; do you imagine, Adimantus, that any one, either of Gods or men, would willingly make himself any way worse?

Adeimantus:: It is impossible.

Socrates:: It is impossible, then, for a God to desire to change himself; but each of them, being most beautiful and excellent, continues always, to the utmost of his power, invariably in his own form.

Adeimantus:: This appears to me, at least, wholly necessary.

Socrates:: Let not, then, most excellent Adimantus, any of the poets tell us, how the Gods;

……at times resembling foreign guests,
Wander o’er cities in all-various forms.

Nor let any one belie Proteus and Thetis. Nor bring in Juno, in tragedies or other poems, as having transformed herself like a priestess, and collecting for the life sustaining sons of Inachus the Argive River. Nor let them tell us many other such lies. Nor let the mothers, persuaded by them, affright their children, telling the stories wrong; as, that certain Gods wander by night;

> Resembling various guests, in various forms.

that they may not, at one and the same time, blaspheme against the Gods, and render their children more dastardly.

Adeimantus:: By no means.

Socrates:: But are the Gods, such as, though in themselves they never change, yet make us imagine they appear in various forms, deceiving us, and playing the mountebanks?

Adeimantus:: Perhaps.

Socrates:: But what, can a God cheat; holding forth a phantasm, either in word or deed?

Adeimantus:: I do not know.

Socrates:: Do not you know, that what is truly a cheat, if we may be allowed to say so, both all the Gods and men abhor?

Adeimantus:: How do you say?

Socrates:: Thus: That to offer: a cheat to the most principal part of themselves, and that about their most principal interests, is what none willingly incline to do; but, of all things, every one is most afraid of possessing a cheat there.

Adeimantus:: Neither as yet, do I understand you.

Socrates:: Because, you think I am saying something venerable: but I am saying, that to cheat the soul concerning realities, and to be so cheated, and to be ignorant, and there to have obtained and to keep a cheat, is what every one would least of all choose; and a cheat in the soul is what they most especially hate.

Adeimantus:: Most especially.

Socrates:: But this, as I was now saying, might most justly be called a true cheat,—ignorance in the soul of the cheated person: since a cheat in words is but a kind of imitation of what the soul feels; and an image afterwards arising, and not altogether a pure cheat. Is it not so?

Adeimantus:: Entirely.

Socrates:: But this real lie is not only hated of the Gods, but of men likewise.

Adeimantus:: So it appears. But what now?

Socrates:: With respect to the cheat in words, when has it something of utility, so as not to deserve hatred? Is it not when employed towards our enemies; and some even of those called our friends; when in madness, or other distemper, they attempt to do some mischief? In that case, for a dissuasive, as a drug, it is useful. And in those fables we were now mentioning, as we know not how the truth stands concerning ancient things, making a lie resembling the truth, we render it useful as much as possible. It is, perfectly so. In which then of these cases is a lie useful to God? Whether does he make a lie resembling the truth, as being ignorant of ancient things?

Adeimantus:: That were ridiculous.

Socrates:: God is not then a lying poet. I do not think it. But should he make a lie through fear of his enemies? Far from it. But on account of the folly or madness of his kindred?

Adeimantus:: But, none of the foolish and mad are the friends of God.

Socrates:: There is then no occasion at all for God to make a lie.

Adeimantus:: There is none.

Socrates:: The divine and God-like nature is then, in all respects, without a lie?

Adeimantus:: Altogether.

Socrates:: God then is simple and true, both in word and deed; neither is he changed himself, nor does he deceive others; neither by visions, nor by discourse, nor by the pomp of signs; neither when we are awake, nor when we sleep.

Adeimantus:: So it appears, to me, at least whilst you are speaking.

Socrates:: You agree then, that this shall be the second model, by which we are to speak and to compose concerning the Gods: that they are neither mountebanks, to change themselves; nor to mislead us by lies, either in word or deed?

Adeimantus:: I agree.

Socrates:: Whilst then we commend many other things in Homer, this we shall not commend, the dream sent by Jupiter to Agamemnon; neither shall we commend Æschylus, when he makes Thetis say that Apollo had sung at her marriage, that;

> A comely offspring she should raise,
> From sickness free, of lengthened days:
> Apollo, singing all my fate,
> And praising high my God-like state,
> Rejoic'd my heart; and 'twas my hope,
> That all was true Apollo spoke:
> But he, who, at my marriage feast,
> Extoll'd me thus, and was my guest;
> He who did thus my fate explain,
> Is he who now my son hath slain.

When any one says such things as these of the Gods, we shall show displeasure, and not afford the chorus: nor shall we suffer teachers to make use of such things in the education of the youth; if our guardians are to be pious, and divine men, as far as it is possible for man to be.

Adeimantus:: I agree with you, perfectly, as to these models; and we may use them as laws.

THE END OF THE SECOND BOOK.

## BOOK III.

Socrates:: These things indeed then, and such as these, are, as it seems, what are to be heard, and not heard, concerning the Gods, immediately from childhood, by those who are to honour the Gods and their parents, and who are not to despise friendship with one another.

Adeimantus:: And I imagine, that these things have appeared right.

Socrates:: But, what now? If they are to be brave, must not these things be narrated to them, and such other likewise as may render them least of all afraid of death? Or, do you imagine that any one can ever be brave whilst he has this fear within him?

Adeimantus:: Not I, truly.

Socrates:: But what? do you think that any one can be void of a fear of death, whilst he imagines that there is Hades, and that it is dreadful; and, that in battles he will choose death before defeat and slavery?

Adeimantus:: By no means.

Socrates:: We ought then, as it seems, to give orders likewise to those who under take to discourse about fables of this kind; and to entreat them not to reproach thus in general the things in Hades, but rather to commend them; as they say neither what is true, nor what is profitable to those who are to be soldiers.

Adeimantus:: We ought indeed.

Socrates:: Beginning then, at this verse, we shall leave out all of such kind, as this;

> I'd rather, as a rustic slave, submit
> To some mean man, who had but scanty fare,
> Than govern all the wretched shades below.

And that;

The house, to mortals and immortals, seems
Dreadful and squalid; and what Gods abhor;

And;

O strange! in Pluto's dreary realms to find
Soul and its image, but no spark of mind.

And;

He's wise alone, the rest are flutt'ring shades.

And;

The soul to Hades from its members fled;
And, leaving youth and manhood, wail'd its fate.

And;

……the soul, like smoke, down to the shades
Fled howling….

And;

As, in the hollow of a spacious cave,
The owls fly screaming; if one chance to fall
Down from the rock, they all confus'dly fly;
So these together howling went….

We shall request Homer and the other poets not to be indignant if we raze these things, and such as these; not that they are not poetical, and pleasant to many to be heard; but, the more poetical they are, the less ought they to be heard by children, and men who ought to be free, and more afraid of slavery than of death.

Adeimantus:: By all means, truly.

Socrates:: Further, are not all dreadful and frightful names about these things likewise to be rejected? Cocytus, and Styx, those in the infernal regions, and the dead, and such other appellations, in this form, such as terrify all who hear them. These may perhaps, serve some other purpose: but we are afraid for our guardians; lest, by such a terror, they be rendered more effeminate and soft than they ought to be.

Adeimantus:: We are rightly afraid of it.

Socrates:: Are these then to be taken away?

Adeimantus:: They are.

Socrates:: And they must speak and compose on a contrary model.

Adeimantus:: That is plain.

Socrates:: We shall take away likewise the bewailing and lamentations of illustrious men.

Adeimantus:: This is necessary, if what is above be so.

Socrates:: Consider then, whether we rightly take away, or not. And do not we say, that the worthy man will imagine that to die is not a dreadful thing to the worthy man whose companion he is?

Adeimantus:: We say so.

Socrates:: Neither then will he lament over him, at least, as if his friend suffered something dreadful.

Adeimantus:: No, indeed.

Socrates:: And we say this likewise, that such an one is most of all sufficient in himself, for the purpose of living happily, and that, in a distinguished manner from others, he is least of all indigent.

Adeimantus:: True.

Socrates:: It is to him, then, the least dreadful to be deprived of a son, a brother, wealth, or any other of such-like things.

Adeimantus:: Least of all, indeed.

Socrates:: So that he will least: of all lament; but endure, in the mildest manner, when any such misfortune befalls him.

Adeimantus:: Certainly.

Socrates:: We shall rightly then take away the lamentations of famous men, and assign them to the women, but not to the better sort, and to such of the men as are dastardly; that so those whom we propose to educate for the guardianship of the country may disdain to make lamentations of this kind.

Adeimantus:: Right.

Socrates:: We shall again then entreat Homer, and the other poets, not to say in their compositions, that Achilles, the son of a Goddess;

> Lay sometimes on his side, and then anon
> Supine; then grov'ling; rising then again,
> Lamenting wander'd on the barren shore.

Nor how;

> .... with both his hands
> He pour'd the burning dust upon his head.

Nor the rest of his lamentation, and bewailing; such and so great as he has composed. Nor that Priam, so near to the Gods, so meanly supplicated, and rolled himself in the dirt: "Calling on every soldier by his name."

But still much more must we entreat them not to make the Gods, at least, to bewail, and say;

> Ah wretched me! unfortunately brave
> A son I bore.

And if they are not thus to bring in the Gods, far less should they dare to represent the greatest of the Gods in so unbecoming a manner as this:

> How dear a man, around the town pursu'd,
> Mine eyes behold! for which my heart is griev'd:
> Ah me! 'tis fated that Patroclus kill
> Sarpedon whom, of all men, most I love.

For, if, friend Adimantus, our youth should seriously hear such things as these, and not laugh at them as spoken most unsuitably, hardly would any one think it unworthy of himself, of himself being a man, or check himself, if he should happen either to say or to do any thing of the kind; but, without any shame or endurance, would, on small sufferings, sing many lamentations and moans.

Adeimantus:: You say most true.

Socrates:: They must not, therefore, do in this manner, as our reasoning now has evinced to us; which we must believe, till some one persuade us by some better.

Adeimantus:: They must not, indeed.

Socrates:: But, surely, neither ought we to be given to excessive laughter; for, where a man gives himself to violent laughter, such a disposition commonly requires a violent change.

Adeimantus:: It seems so.

Socrates:: Nor, if anyone shall represent worthy men as overcome, by laughter, must we allow it, much less if he thus represent the Gods.

Adeimantus:: Much less, indeed.

Socrates:: Neither, then, shall we receive such things as these from Homer, concerning the Gods:

> Vulcan ministrant when the Gods beheld,
> Amidst them laughter unextinguish'd rose.

This is not to be admitted, according to your reasoning.

Adeimantus:: If you incline, to call it my reasoning; this, indeed, is not to be admitted.

Socrates:: But surely the truth is much more to be valued. For, if lately we reasoned right, and if indeed a lie be unprofitable to the Gods, but useful to men, in the way of a drug, it is plain that such a thing is to be entrusted only to the physicians, but not to be touched by private persons. It is plain. It belongs then to the governors of the city, if to any others, to make a lie, with reference either to enemies or citizens, for the good of the city; but none of the rest must venture on such a thing. But for a private person to tell a lie to such governors; we will call it the same, and even a greater offence, than for the patient to tell a lie to the physician; or for the man who learns his exercises, not to tell his master the truth as to the indispositions of his body: or for one not to tell the pilot the real state of things, respecting the ship and sailors, in what condition himself and the other sailors are.

Adeimantus:: Most true.

Socrates:: But if you find in the city any one else making a lie;

> ……of those who artists are,
> Or prophet, or physician, or who make
> The shafts of spears….

you shall punish them, as introducing a practice subversive and destructive of the city, as of a ship.

Adeimantus:: We must do so; if indeed it is upon speech that actions are completed.

Socrates:: But what? shall not our youth have need of temperance?

Adeimantus:: Certainly.

Socrates:: And are not such things as these the principal parts of temperance? that they be obedient to their governors; that the governors themselves be temperate in drinking, feasting, and in venereal pleasures. And we shall say, I imagine, that such things as these are well spoken, which Diomed says in Homer:

> Sit thou in silence, and obey my speech.

And what follows; thus;

> The Greeks march'd on in silence, breathing force;
> Revering their commanders; ……

and such like.

Adeimantus:: Well spoken.

Socrates:: But what as to these? “Thou drunkard with dog’s eyes, and heart of deer;” and all of this kind, are these, or such other juvenile things, which any private person may say against their governors, spoken handsomely?

Adeimantus:: Not handsomely.

Socrates:: For I do not imagine that when they are heard they are fit to promote temperance in youth; and though they may afford a pleasure of a different kind, it is no wonder. But what do you think?

Adeimantus:: Just the same way.

Socrates:: But what of this? To make the wisest man say, that it appears to him to be the most beautiful of all things;

……to see the tables full
Of flesh and dainties, and the butler bear
The wine in flagons, and fill up the cup:

is this proper for a youth to hear, in order to obtain a command over himself? Or yet this?

……most miserable it is,
To die of famine, and have adverse fate.

Or that Jupiter, through desire of venereal pleasures, easily forgetting all those things which he alone awake revolved in his mind, whilst other Gods and men were asleep, was so struck, on seeing Juno, as not even to be willing to come into the house, but wanted to embrace her on the ground; and at the same time declaring that he is possessed with such desire, as exceeded what he felt on their first connection with each other;

……Hid from their parents dear.

Nor yet how Mars and Venus were bound by Vulcan, and other such things.

No, by Jupiter. These things do not seem fit.

Socrates:: But if any instances of self-denial, with respect to all these things be told, and practiced by eminent men, these are to be beheld and heard. Such as this:

> He beat his breast and thus reprov'd his heart:
> Endure, my heart! thou heavier fate hail borne.

By all means, we should do thus.

Neither must we suffer men to receive bribes, nor to be covetous.

By no means.

Nor must we sing to them, that

> Gifts gain the Gods and venerable kings.

Nor must we commend Phœnix, the tutor of Achilles, as if he spoke with moderation, in counseling him to accept of presents, and assist the Greeks; but, without presents, not to desist from his wrath. Neither shall we commend Achilles, nor approve of his being so covetous as to receive presents from Agamemnon; and likewise a ransom to give up the dead body of Hector, but not incline to do it otherwise.

Adeimantus:: It is not right, to commend such things as these.

Socrates:: I am unwilling, for Homer's sake, to say it, That neither is it lawful that these things, at least, be said against Achilles, nor that they be believed, when said by others; nor, again, that he spoke thus to Apollo:

> Me thou hast injur'd, thou, far-darting God!
> Most baneful of the powers divine! But know,
> "Were I possest of power, then vengeance should be mine.

And how disobedient he was to the river, though a divinity, and was ready to fight; and again, he says to the river Sperchius, with his sacred locks;

Thy lock to great Patroclus I could give,
Who now is dead.......

Nor are we to believe he did this. And again, the dragging Hector round the sepulcher of Patroclus, and the slaughtering the captives at his funeral pile,—that all these things are true, we will not say; nor will we suffer our people to be persuaded that Achilles, the son of a Goddess, and of Peleus the most temperate of men and the third from Jupiter, and educated by the most wise Chiron was full of such disorder as to have within him two distempers opposite to one another,—the illiberal and covetous disposition, and a contempt both of Gods and of men.

Adeimantus:: You say right.

Socrates:: Neither, let us be persuaded of these things; nor suffer any to say that Theseus the son of Neptune, and Pirithous the son of Jupiter, were impelled to perpetrate such dire rapines; nor that any son of another deity, nor any hero, would dare to do horrible and impious deeds; such as the lies of the poets ascribe to them: but let us compel the poets either to say that these are not the actions of these persons, or that these persons are not the children of the Gods; and not to say both. Nor let us suffer them to attempt to persuade our youth that the Gods create evil; and that heroes are in no respect better than men. For, as we said formerly, these things are neither holy nor true: for we have elsewhere shown, that it is impossible that evil should proceed from the Gods.

Adeimantus:: Why not?

Socrates:: And these things are truly hurtful, to the hearers, at least. For every one will pardon his own depravity, when he is persuaded that even the near relations of the Gods do and have done things of the same kind: such as are near to Jupiter.

> Who, on the top of Ida, have up-rear’d
> To parent Jupiter an altar;—

And.

> Whose blood derived from Gods is not extinct.

On which accounts all such fables must be suppressed; lest they create in our youth a powerful habit of wickedness.

Adeimantus:: We must do so, by all means.

Socrates:: What other species of discourses, have we still remaining, now whilst we are determining what ought to be spoken, and what not? We have already mentioned in what manner we ought to speak of the Gods, and likewise of dæmons and heroes; and of what relates to Hades.

Adeimantus:: Yes, indeed.

Socrates:: Should not, then, what yet remains seem to be concerning men?

Adeimantus:: It is plain.

Socrates:: But it is impossible for us, friend, to regulate this at present.

Adeimantus:: How?

Socrates:: Because, I think, we shall say that the poets and orators speak amiss concerning the greatest affairs of men: as, That most men are unjust, and, notwithstanding this, are happy; and that the just are miserable; and that it is profitable for one to do unjustly, when he is concealed; and that justice is gain indeed to others, but the loss of the just man himself: these, and innumerable other such things, we will forbid them to say; and enjoin them to sing, and compose in fable, the contrary to these. Do not you think so?

Adeimantus:: I know it well.

Socrates:: If then you acknowledge that I say right, shall I not say that you have acknowledged what all along we seek for?

Adeimantus:: You judge right;

Socrates:: Shall we not then grant that such discourses are to be spoken concerning men, whenever we shall have discovered what justice is; and how in its nature it is profitable to the just man to be such, whether he appear to be such or not?

Adeimantus:: Most true.

Socrates:: Concerning the discourses, then, let this suffice. We must now consider, as I imagine, the manner of discourse. And then we shall have completely considered, both what is to be spoken, and the manner how.

Adeimantus:: But I do not understand what you say.

Socrates:: But, it is needful you should. And perhaps you will rather understand it in this way. Is not every thing told by the mythologists, or poets, a narrative of the past, present, or future?

Adeimantus:: What else?

Socrates:: And do not they execute it, either by simple narration, or imitation, or by both?

Adeimantus:: This too, I want to understand more plainly.

Socrates:: I seem, to be a ridiculous and obscure instructor. Therefore, like those who are unable to speak, I will endeavor to explain, not the whole, but, taking up a particular part, show my meaning by this particular. And tell me, Do not you know the beginning of the Iliad? where the poet says that Chryses entreated Agamemnon to set free his daughter; but that he was displeased that Chryses, when he did not succeed, prayed against the Greeks to the God.

Adeimantus:: I know.

Socrates:: You know, then, that down to these verses;

..............The Grecians all he pray'd;
But chief the two commanders, Atreus' sons—

the poet himself speaks, and does not attempt to divert our attention elsewhere; as if any other person were speaking: but what he says after this, he says as if he himself were Chryses, and endeavors as much as possible to make us imagine that the speaker is not Homer, but the priest, an old man; and that in this manner he has composed almost the whole narrative of what happened at Troy, and in Ithaca, and all the adventures in the whole Odyssey.

Adeimantus:: It is certainly so.

Socrates:: Is it not then narration, when he tells the several speeches? and likewise when he tells what intervenes between the speeches?

Adeimantus:: Why not?

Socrates:: But when he makes any speech in the person of another, do not we say that then he assimilates his speech, as much as possible, to each person whom he introduces as speaking?

Adeimantus:: We say so, do we not?

Socrates:: And is not the assimilating one's self to another, either in voice or figure, the imitating him to whom one assimilates himself?

Adeimantus:: Why not?

Socrates:: In such a manner as this, then, it seems, both he and the other poets perform the narrative by means of imitation.

Adeimantus:: Certainly.

Socrates:: But if the poet did not at all conceal himself, his whole action and narrative would be without imitation. And that you may not say you do not again understand how this should be, I shall tell you. If Homer, after relating how Chryses came with his daughter's ransom, beseeching the Greeks, but chiefly the kings, had spoken afterwards, not as Chryses, but still as Homer, you know it would not have been imitation, but simple narration. And it would have been somehow thus: (I shall speak without meter, for I am no poet:) The priest came and prayed, that the Gods might grant they should take Troy, and return base; and begged them to restore him his daughter, accepting the presents, and revering the God. When he had said this, all the rest showed respect, and consented; but Agamemnon was enraged, charging him to depart instantly, and not to return again; lest his scepter and the garlands of the God should be of no avail; and told him, that before he would restore his daughter she should grow old with him in Argos; but ordered him to be gone, and not to irritate him, that he might get home in safety. The old man upon hearing this was afraid, and went away in silence. And when he was retired from the camp he made many supplications to Apollo, rehearsing the names of the God, and reminding him and beseeching him, that if ever he had made any acceptable donation in the building of temples, or the offering of sacrifices,—for the sake of these, to avenge his tears upon the Greeks with his arrows. Thus, friend, the narration is simple, without imitation.

Adeimantus:: I understand.

Socrates:: Understand then, that the opposite of this happens, when one, taking away the poet's part between the speeches, leaves the speeches themselves.

Adeimantus:: This, I likewise understand, that a thing of this kind takes place respecting tragedies.

Socrates:: You apprehend perfectly well. And I think that I now make plain to you what I could not before; that in poetry, and likewise in mythology, one kind is wholly by imitation, such as you say tragedy and comedy are; and another kind by the narration of the poet himself: and you will find this kind most especially in the dithyrambus: and another again by both; as in epic poetry, and in many other cases besides, if you understand me. I understand now, what you meant before. And remember too, that before that we were saying that we had already mentioned what things were to be spoken; but that it yet remained to be considered in what manner they were to be spoken.

Adeimantus:: I remember, indeed.

Socrates:: This then, is what I was saying, that it were necessary we agreed whether we shall suffer the poets to make narratives to us in the way of imitation; or, partly in the way of imitation, and partly not; and, what in each way; or, if they are not to use imitation at all.

Adeimantus:: I conjecture, you are to consider whether we shall receive tragedy and comedy into our city, or not.

Socrates:: Perhaps, and something more too; for I do not as yet know, indeed; but wherever our reasoning, as a gale, bears us, there we must go.

Adeimantus:: And truly, you say well.

Socrates:: Consider this now, Adimantus, whether our guardians ought to practice imitation, or not. Or does this follow from what is above? That each one may handsomely perform one business, but many he cannot: or, if he shall attempt it, in grasping at many things, he shall fail in all; so as to be remarkable in none.

Adeimantus:: Why shall he not?

Socrates:: And is not the reason the same concerning imitation? That one man is not so able to imitate many things well, as one.

Adeimantus:: He is not.

Socrates:: Hardly then shall he perform any part of the more eminent employments, and at the same time imitate many things, and be an imitator; since the same persons are not able to perform handsomely imitations of two different kinds, which seem to resemble each other; as, for instance, they cannot succeed both in comedy and tragedy: or, did you not lately call these two, imitations?

Adeimantus:: I did; and you say true, that the same persons cannot succeed in them.

Socrates:: Nor can they, at the same time, be rhapsodists and actors.

Adeimantus:: True.

Socrates:: Nor can the same persons be actors in comedies and in tragedies. And all these are imitations, are they not?

Adeimantus:: Imitations.

Socrates:: The genius of man seems to me, Adimantus, to be shut up within still lesser bounds than these; so that it is unable to imitate handsomely many things, or do these very things, of which even the imitations are the resemblances.

Adeimantus:: Most true.

Socrates:: If therefore we are to hold to our first reasoning, that our guardians, unoccupied in any manufacture whatever, ought to be the most accurate manufacturers of the liberty of the city, and to mind nothing but what has some reference to this; it were surely proper, they neither did nor imitated any thing else; but, if they shall imitate at all, to imitate immediately from their childhood such things as are correspondent to these; brave, temperate, holy, free men, and all such things as these;—but neither to do, nor to be desirous of imitating, things illiberal or base, lest from imitating they come to be really such. Or have you not observed, that imitations, if from earliest youth they be continued onwards for a long time, are established into the manners and natural temper, both with reference to the body and voice, and likewise the dianoëtic power?

Adeimantus:: Very much so.

Socrates:: We will not surely allow, those we profess to take care of, and who ought to be good men, to imitate a woman, either young or old, either reviling her husband, or quarrelling with the Gods, or speaking boastingly when she imagines herself happy; nor yet to imitate her in her misfortunes, sorrows, and lamentations, when sick, or in love, or in child-bed labor. We shall be far from permitting this.

Adeimantus:: By all means.

Socrates:: Nor to imitate man- or maid-servants in doing what belongs to servants.

Adeimantus:: Nor this neither.

Socrates:: Nor yet to imitate depraved men, as it seems, such as are dastardly, and do the contrary of what we have now been mentioning; reviling and railing at one another; and speaking abominable things, either intoxicated or sober, or any other things such as persons of this sort are guilty of, either in words or actions, either with respect to themselves or one another. Neither must they accustom themselves to resemble mad-men, in words or actions. Even the mad and wicked are to be known, both the men and the women; but none of their actions are to be done, or imitated.

Adeimantus:: Most true.

Socrates:: But what? are they to imitate such as work in brass, or any other handicrafts, or such as are employed in rowing boats, or such as command these; or any thing else appertaining to these things?

Adeimantus:: How can they, as they are not to be allowed to give application to any of those things?

Socrates:: But what? shall they imitate horses neighing, or bulls lowing, or rivers murmuring, or the sea roaring, or thunder, and all such like things?

Adeimantus:: We have forbidden them, to be mad, or to resemble mad-men.

Socrates:: If then I understand, what you say, there is a certain kind of speech, and of narration, in which he who is truly a good and worthy man expresses himself when it is necessary for him to say any thing; and another kind again unlike to this, which he who has been born and educated in an opposite manner always possesses, and in which he expresses himself.

Adeimantus:: But of what kind are these?

Socrates:: It appears to me, that the worthy man, when he comes in his narrative to any speech or action of a good man, will willingly tell it as if he were himself the man, and will not be ashamed of such an imitation; most especially when he imitates a good man acting prudently and without error, and failing seldom, and but little, through diseases, or love, intoxication, or any other misfortune. But when he comes to any thing unworthy of himself, he will not be studious to resemble himself to that which is worse, unless for a short time when it produces some good; but will be ashamed, both as he is unpracticed in the imitation of such character a as these, and likewise as he grudges to degrade himself and stand among the models of baser characters, disdaining it in his dianoëtic part, and doing it only for amusement.

Adeimantus:: It is likely.

Socrates:: He will not then make use of such a narrative as we lately mentioned, with reference to the compositions of Homer: but his composition will participate of both imitation and the other narrative; and but a small part of it will be imitation, in a great quantity of plain narrative. Do I seem to say any thing, or nothing at all?

Adeimantus:: You express, perfectly well what ought to be the model of such an orator.

Socrates:: And, on the other hand, will not the man, who is not such an one, the more depraved he is, be the readier to rehearse every thing whatever; and not think any thing unworthy of him? so that he will undertake to imitate every thing in earnest, and likewise in the presence of many; and such things also as we now mentioned; thunderings, and noises of winds and tempests, and of axles, and wheels, and trumpets, and pipes, and whistles, and sounds of all manner of instruments, and voices of dogs too, and of sheep, and of birds. And the whole expression of all these things shall be by imitation in voices and gestures, having but a small part of it narration.

Adeimantus:: This too, must happen of necessity.

Socrates:: These now, I called the two kinds of diction.

Adeimantus:: They are so.

Socrates:: But has not the one of these small variations? And if the orator afford the becoming harmony and measure to the diction, where he speaks with propriety, the discourse is almost after one and the same manner, and in one harmony; for the variations are but small, and in a measure which accordingly is somehow similar.

Adeimantus:: It is indeed, entirely so.

Socrates:: But what as to the other kind? Does it not require the contrary, all kinds of harmony, all kinds of measure, if it is to be naturally expressed, as it has all sorts of variations? It is perfectly so. Do not now all the poets, and such as speak in any kind, make use of either one or other of these models of diction, or of one compounded of both?

Adeimantus:: Of necessity.

Socrates:: What then shall we do? Whether shall we admit into our city all of these; or one of the unmixed, or the one compounded?

Adeimantus:: If my opinion, prevail, that uncompounded one, which is imitative of what is worthy.

Socrates:: But surely, Adimantus, the mixed is pleasant, at least. And the opposite of what you choose is by far the most pleasant to children and pedagogues, and the crowd.

Adeimantus:: It is most pleasant.

Socrates:: But you will not, probably, think it suitable to our government, because with us no man is to attend to two or more employments, but to be quite simple, as every one does one thing.

Adeimantus:: It is not indeed suitable.

Socrates:: Shall we not then find that in such a city alone, a shoe-maker is only a shoe-maker, and not a pilot along with shoe-making, and that the husbandman is only a husbandman, and not a judge along with husbandry; and that the soldier is a soldier, and not a money-maker besides: and all others in the same way?

Adeimantus:: True.

Socrates:: And it would appear, that if a man, who, through wisdom, were able to become every thing, and to imitate every thing, should come into our city, and should wish to show us his poems, we should revere him as a sacred, admirable, and pleasant person: but we should tell him, that there is no such person with us, in our city, nor is there any such allowed to be: and we should send him to some other city, pouring oil on his head, and crowning him with wool: but we use a more austere poet, and mythologist, for our advantage, who may imitate to us the diction of the worthy manner; and may say whatever he says, according to those models which we established by law a first, when we undertook the education of our soldiers.

Adeimantus:: So we should do, if it depended on us.

Socrates:: It appears, friend, that we have now thoroughly discussed that part of music respecting oratory and fable; for we have already told what is to be spoken, and in what manner.

Adeimantus:: It appears so to me likewise.

Socrates:: Does it not yet remain, that we speak of the manner of song, and of melodies?

Adeimantus:: It is plain.

Socrates:: May not any one discover what we must say of these things; and of what kind these ought to be, if we are to be consistent with what is above mentioned?

Here Glauco laughing: said:

Glaucon:: But I appear, Socrates, to be a stranger to all these matters, for I am not able at present to guess at what we ought to say: I suspect, however.

Socrates:: You are certainly, fully able to say this in the first place, that melody is composed of three things; of sentiment, harmony, and rhythm.

Glaucon:: Yes, this I can say.

Socrates:: And that the part which consists in the sentiment differs in nothing from that sentiment which is not sung, in this respect, that it ought to be performed upon the same models, as we just now said, and in the same manner.

Glaucon:: True.

Socrates:: And surely, then, the harmony and rhythm ought to correspond to the sentiment.

Glaucon:: Why not?

Socrates:: But we observed there was no occasion for wailings and lamentations in compositions.

Glaucon:: No occasion, truly.

Socrates:: Which then are the querulous harmonies? Tell me, for you are a musician.

Glaucon:: The mixed Lydian, and the sharp Lydian; and some others of this kind.

Socrates:: Are not these, then, to be rejected? for they are unprofitable even to women, such as are worthy, and much more to men.

Glaucon:: Certainly.

Socrates:: But intoxication is most unbecoming our guardians; and effeminacy and idleness.

Glaucon:: Why not?

Socrates:: Which then are the effeminate and convivial harmonies?

Glaucon:: The Ionic, and the Lydian, which are called relaxing.

Socrates:: Can you make any use of these, my friend, for military men?

Glaucon:: By no means. But, it seems, you have yet remaining the Doric, and the Phrygian.

Socrates:: I do not know, the harmonies; but leave that harmony, which may, in a becoming manner, imitate the voice and accents of a truly brave man, going on in a military action, and every rough adventure; and bearing his fortune in a determinate and persevering manner, when he fails of success, rushes on wounds, or deaths, or falls into any other distress: and leave that kind of harmony likewise, which is suited to what is peaceable; where there is no violence, but every thing is voluntary; where a man either persuades or beseeches any one, about any thing, either God by prayer, or man by instruction and admonition: or, on the other hand, where one submits himself to another, who beseeches, instructs, and persuades; and, in all these things, ads according to intellect, and does not behave haughtily; demeaning himself soberly and moderately; gladly embracing whatever may happen: leave then these two harmonies, the vehement and the voluntary; which, in the most handsome manner, imitate the voice of the unfortunate and of the fortunate, of the moderate and of the brave.

Glaucon:: You desire, to leave no others but those I now mentioned.

Socrates:: We shall not then, have any need of a great many strings, nor of the Panamanian in our songs and melodies.

Glaucon:: It appears to me, we shall not.

Socrates:: We shall not nourish, then, such workmen as make harps and spinets, and all those instruments which consist of many strings, and produce a variety of harmony.

Glaucon:: We shall not, as it appears.

Socrates:: But what? Will you admit into your city such workmen as make pipes, or pipers? for, are not the instruments which consist of the greatest number of strings, and those that produce all kinds of harmony, imitations of the pipe?

Glaucon:: It is plain.

Socrates:: There are left you still, the lyre and the harp, as useful for your city, and there might likewise be some need for shepherds in the fields.

Glaucon:: Thus reason, shows us.

Socrates:: We then, do nothing dire, if we prefer Apollo, and Apollo's instruments, to Marsyas, and the instruments of that eminent musician.

Glaucon:: Truly, we do not appear to do it.

Socrates:: And by the dog, we have unawares cleansed again our city, which we said was become luxurious.

Glaucon:: And we have wisely done it.

Socrates:: Come then, and let us cleanse what remains; for what concerns rhythm should be suitable to our harmonies; that our citizens pursue not such rhythms as are diversified, and have a variety of cadences; but observe what are the rhythms of a decent and manly life, and, whilst they observe these, make the foot and the melody subservient to sentiment of such a kind; and not the sentiment subservient to the foot and melody. But what these rhythms are, is your business to tell, as you have done the harmonies.

Glaucon:: But by Jupiter, I cannot tell. That there are three species of which the notes are composed, as there are four in sounds, whence the whole of harmony, I can say, as

I have observed it: but which are the imitations of one kind of life, and which of another, I am not able to tell.

Socrates:: But these things, we must consider with Damon's assistance: what notes are suitable to illiberality and insolence, to madness or other ill disposition; and what notes are proper for their opposites. And I remember, but not distinctly, to have heard him calling a certain warrior, composite, a dactyl, and heroic measure; ornamenting him I do not know how, making him equal above and below, in breadth and length: and he called one, as I imagine, Iambus, and another Trochæus, He adapted, besides, the lengths and shortnesses; and, in some of these, I believe, he blamed and commended the measure of the foot, no less than the numbers themselves, or something compounded of both; for I cannot speak of these things; because, as I said, they are to be thrown upon Damon. To speak distinctly, indeed, on these matters, would require no small discourse: do not you think so?

Glaucon:: Not a small one, truly.

Socrates:: But can you determine this, that the propriety or impropriety corresponds to the good or ill rhythm?

Glaucon:: Why not?

Socrates:: But, with respect to the good or ill rhythm, the one corresponds to handsome expression, conforming itself to it; and the other to the reverse. And, in the same way, as to the harmonious, and the discordant: since the rhythm and harmony are subservient to the sentiment, as we just now said; and not the sentiment to these.

Glaucon:: These, indeed, are to be subservient to the sentiment.

Socrates:: But what? As to the manner of expression, and as to the sentiment itself, must it not correspond to the temper of the soul?

Glaucon:: Why not?

Socrates:: And all other things correspond to the expression.

Glaucon:: Yes.

Socrates:: So that the beauty of expression, fine consonancy, and propriety, and excellence of numbers, are subservient to the good disposition; not that stupidity, which in complaisant language we call good temper; but the dianoëtic part, truly adorned with excellent and beautiful manners.

Glaucon:: By all means.

Socrates:: Must not these things be always pursued by the youth, if they are to mind their business?

Glaucon:: They are indeed to be pursued.

Socrates:: But painting too is somehow full of these things; and every other workmanship of the kind; and weaving is full of these; and carving, and architecture, and all workmanship of every kind of vessels: as is moreover the nature of bodies, and of all vegetables: for in all these there is propriety, and impropriety; and the impropriety, discord, and dissonance, are the sisters of ill expression, and depraved manners; and their opposites are the sisters, and imitations, of sober and worthy manners.

Glaucon:: 'Tis entirely so.

Socrates:: Are we then to give injunctions to the poets alone, and oblige them to work into their poems the image of the worthy manners, or not to compose at all with us? or are we to enjoin all other workmen likewise; and restrain this ill, undisciplined, illiberal, indecent manner, that they exhibit it neither in the representations of animals, in buildings, nor in any other workmanship? or, that he who is not able to do this, be not suffered to work with us? lest our guardians, being educated in the midst of ill representations, as in an ill pasture, by every day plucking and eating much of different things, by little and little contract, imperceptibly, some mighty evil in their soul. But we must seek for such workmen as are able, by the help of a good natural genius, to investigate the nature of the beautiful and the decent: that our youth, dwelling as it were in a healthful place, may be profited on all sides; whence, from the beautiful works, something will be conveyed to the sight and hearing, as a breeze bringing health from salutary places; imperceptibly leading them on directly from childhood, to the resemblance, friendship, and harmony with right reason.

Glaucon:: They should thus, said he be educated in the most handsome manner by far.

Socrates:: On these accounts therefore, Glauco, is not education in music of the greatest importance, because rhythm and harmony enter in the strongest manner into the inward part of the soul, and most powerfully affect it, introducing at the same time decorum, and making every one decent if he is properly educated, and the reverse if he is not? And moreover, because the man who has here been educated as he ought, perceives in the quickest manner whatever workmanship is defective, and whatever execution is unhandsome, or whatever productions are of that kind; and being disgusted in a proper manner, he will praise what is beautiful, rejoicing in it; and, receiving it into his soul, be nourished by it, and become a worthy and good man: but whatever is base, he will in a proper manner despise, and hate, whilst yet he is young, and before he is able to be a partaker of reason; and when reason comes, such an one as has been thus educated will embrace it, recognizing it perfectly well, from its intimate familiarity with him.

Glaucon:: It appears to me, that education in music is for the sake of such things as these.

Socrates:: Just as, with reference to letters we are then sufficiently instructed when we are not ignorant of the elements, which are but few in number, wherever they are concerned; and when we do not despise them more or less as unnecessary to be observed, but by all means endeavor to understand them thoroughly, as it is impossible for us to be literary men till we do thus.

Glaucon:: True.

Socrates:: And if the images of letters appeared any where, either in water or in mirrors, should we not know them before we knew the letters themselves? or does this belong to the same art and study?

Glaucon:: By all means.

Socrates:: Is it indeed then according as I say? that we shall never become musicians, neither we ourselves, nor those guardians we say we are to educate, before we understand the images of temperance, fortitude, liberality, and magnificence, and the other sister virtues; and, on the other hand again, the contraries of these, which are every where to be met with; and observe them wheresoever they are, both the virtues themselves, and the images of them, and despise them neither in small nor in great instances; but let us believe that this belongs to the same art and study.

Glaucon:: There is, great necessity for it.

Socrates:: Must not then, the person who shall have in his soul beautiful manners, and in his appearance whatever is proportionable, and corresponding to these, partaking of the same impression, be the most beautiful spectacle to any one who is able to behold it?

Glaucon:: Exceedingly so.

Socrates:: But what is most beautiful is most lovely.

Glaucon:: Why not?

Socrates:: He who is musical should surely love those men who are most eminently of this kind; but if one be unharmonious he shall not love him.

Glaucon:: He shall not, if the person be any way defective as to his soul: if indeed it were in his body, he would bear with it, so as to be willing to associate with him.

Socrates:: I understand, that your favorites are or have been of this kind.

Glaucon:: And I agree to it.

Socrates:: But tell me this, Is there any communion between temperance and excessive pleasure?

Glaucon:: How can there? for such pleasure causes a privation of intellect no less than grief.

Socrates:: But has it communion with any other virtue?

Glaucon:: By no means.

Socrates:: But what, has it communion with insolence and intemperance?

Glaucon:: Most of all.

Socrates:: Can you mention a greater and more acute pleasure than that respecting venereal concerns?

Glaucon:: I cannot, nor yet one that is more insane.

Socrates:: But the right love is of such a nature as to love the beautiful, and the handsome, in a temperate and a musical manner.

Glaucon:: Certainly.

Socrates:: Nothing then which is insane, or allied to intemperance, is to approach to a right love. Neither must pleasure approach to it; nor must the lover, and the person he loves, have communion with it, where they love and are beloved in a right manner.

Glaucon:: No truly; they must not, Socrates, approach to these.

Socrates:: Thus then, as appears, you will establish by law, in the city which is to be established, that the lover is to love, to converse, and associate with the objects of his love, as with his son, for the sake of virtue, if he gain the consent: and as to every thing besides, that every one so converse with him whose love he solicits, as never to appear to associate for any thing beyond what is now mentioned; and that otherwise he shall undergo the reproach of being unmusical, and unacquainted with the beautiful.

Glaucon:: It must be thus.

Socrates:: Does then, the discourse concerning music seem to you to be finished? For it has terminated where it ought to terminate, as the affairs of music ought, somehow, to terminate in the love of the beautiful.

Glaucon:: I agree. But, after music, our youth are to be educated in gymnastic.

Socrates:: But what? It is surely necessary that in this likewise they be accurately disciplined, from their infancy through the whole of life. For the matter, as I imagine, is somehow thus: but do you also consider. For it does not appear to me that whatever body is found, doth, by its own virtue, render the soul good; but contrariwise, that a good soul, by its virtue, renders the body the best which is possible: but how does it appear to you?

Glaucon:: In the same manner to me likewise.

Socrates:: If then, when we have sufficiently cultivated the dianoëtic part, we shall commit to it the accurate management of the concerns of the body; shall not we, as we are only laying down models, (that we may not enlarge) act in a right manner?

Glaucon:: Entirely so.

Socrates:: We say then, that they are to abstain from intoxication; for it is more allowable to any, than to a guardian, to be intoxicated, and not to know where he is.

Glaucon:: It were ridiculous, that the guardian should stand in need of a guardian.

Socrates:: But what as to meats? For these men are wrestlers in the noblest combat: are they not?

Glaucon:: They are.

Socrates:: Would not then the bodily plight of the wrestlers be proper for such as these?

Glaucon:: Probably.

Socrates:: But, it is of a drowsy kind, and dubious as to health: or, do you not observe, that they sleep out their life? and, if they depart but a little from their appointed diet, such wrestlers become greatly and extremely diseased.

Glaucon:: I perceive it.

Socrates:: But some more elegant exercise, is requisite for our military wrestlers; who, as dogs, ought to be wakeful, and to see, and to hear in the most acute manner; and, in their expeditions, to endure many changes of water and of food, of heat and of cold, that so they may not have a dubious state of health.

Glaucon:: To me it appears so.

Socrates:: Is not then the best gymnastic a kind of sister to the simple music, which we a little before described?

Glaucon:: How do you say?

Socrates:: That the gymnastic is to be simple and moderate, and of that kind most especially which pertains to war.

Glaucon:: Of what kind?

Socrates:: Even from Homer, one may learn these things: for you know, that in their warlike expeditions, at the entertainments of their heroes, he never feasts them with fishes, and that even whilst they were by the sea at the Hellespont, nor yet with boiled flesh, but only with roast, as what soldiers can most easily procure: for, in short, one can every where more easily make use of fire, than carry vessels about.

Glaucon:: Yes, indeed.

Socrates:: Neither does Homer, as I imagine, any where make mention of seasonings: and this is what the other wrestlers understand, that the body which is to be in good habit must abstain from all these things. They rightly understand, and abstain. You do not then, friend, as appears, approve of the Syracusian table, and the Sicilian variety of meats, since this other appears to you to be right?

Glaucon:: I do not, as appears.

Socrates:: You will likewise disapprove of a Corinthian girl, as a mistress, for those who are to be of a good habit of body.

Glaucon:: By all means, truly.

Socrates:: And likewise of those delicacies, as they are reckoned, of Attic confections.

Glaucon:: Of necessity.

Socrates:: For all feeding and dieting of this kind, if we compare it to the melody and song produced in the

Panamanian, and in all rhythms, shall not the companion be just?

Glaucon:: Why not?

Socrates:: And does not the diversity in that case create intemperance, and here disease? But simplicity, as to music, creates in the soul temperance; and, as to gymnastic, health in the body.

Glaucon:: Most true.

Socrates:: And when intemperance and diseases multiply in the city, shall we not have many halls of justice and of medicine opened? And will not the arts of justice and of medicine be in request, when many free persons shall earnestly apply to them?

Glaucon:: Why not?

Socrates:: But can you adduce any greater argument of an ill and base education in a city, than that there should be need of physicians and supreme magistrates, and that not only for the contemptible and low handicrafts, but for those who boast of having been educated in a liberal manner? Or, does it not appear to be base, and a great sign of want of education, to be obliged to observe justice pronounced on us by others, as our masters and judges, and to have no sense of it in ourselves?

Glaucon:: Of all things, this, is the most base.

Socrates:: And do you not, deem this to be more base still; when one not only spends a great part of life in courts of justice, as defendant and plaintiff; but, from his ignorance of the beautiful, imagines that he becomes renowned for this very thing; as being dexterous in doing injustice, and able to turn himself through all sorts of windings, and, using every kind of subterfuge, thinks to escape so as to evade justice; and all this for the sake of small and contemptible things; being ignorant how much better and more handsome it were so to regulate his life as not to stand in need of a sleepy judge?

Glaucon:: This, is still more base than the other.

Socrates:: And to stand in need of the medicinal art, not on account of wounds, or some incidental epidemic distempers, but through sloth, and such a diet as we mentioned, being filled with rheums and wind, like lakes; obliging the skilful sons of Æsculapius to invent new names for diseases, such as dropsies and catarrhs. Do not you think this abominable?

Glaucon:: These are truly, very new and strange names of diseases.

Socrates:: Such, as were not, I imagine, in the days of Æsculapius: and I conjecture so from this, that when Eurypylus was wounded at Troy, and was getting Pramnian wine to drink with much flour in it, with the addition of cheese; (all which seem to be phlegmatic,) the sons of Æsculapius neither blamed the woman who presented it, nor reprehended Patroclus, who had presented the cure.

Glaucon:: And surely the potion, is absurd for one in such a case.

Socrates:: No if you consider, that, as they tell us, the descendants of Æsculapius did not, before the days of Herodicus, practice this method of cure now in use, which puts the patient on a regimen: but Herodicus being a teacher of youth, and at the same time infirm in his health, mixing gymnastic and medicine together, he made himself most uneasy in the first place, and afterwards many others besides.

Glaucon:: After what manner?

Socrates:: In procuring to himself, a lingering death; for, whilst he was constantly attentive to his disease, which was mortal, he was not able, as I imagine, to cure himself;

though, neglecting every thing besides, he was still using medicines; and thus he passed his life, still in the greatest uneasiness if he departed in the least from his accustomed diet; and through this wisdom of his, struggling long with death, he arrived at old-age.

Glaucon:: A mighty reward, he reaped of his art!

Socrates:: Such as became one, who did not understand that it was not from ignorance or inexperience of this method of cure that Æsculapius did not discover it to his descendants; but because he knew that, in all well regulated states, there was some certain work enjoined every one in the city, which was necessary to be done, and that no one was to be allowed to have the leisure of being sick through the whole of life, and to be attentive only to the taking of medicines. This we may pleasantly observe in the case of laboring people; but we do not observe it in the case of the rich, and such as are counted happy.

Glaucon:: How?

Socrates:: A smith, when he falls sick, thinks it fit to take from the physician some potion, to throw up his disease, or purge it downwards, or, by means of caustic or amputation, to be freed from the trouble: but if any one prescribe for him a long regimen, putting caps on his head, and other such things, he quickly tells him that he has not leisure to lie sick, nor does it avail him to live in this manner, attentive to his trouble, and negligent of his proper work; and so, bidding such a physician farewell, he returns to his ordinary diet; and, if he recovers his health, he continues to manage his own affairs; but if his body be not able to support the disease, he dies, and is freed from troubles.

Glaucon:: It seems proper, for such an one to use the medicinal art in this manner.

Socrates:: Is it not, because he has a certain business, which if he does not perform, it is not for his advantage to live?

Glaucon:: It is plain.

Socrates:: But the rich man, as we say, has no such work allotted him, from which if he be obliged to refrain, life is not worth the having.

Glaucon:: He is surely said at least to have none.

Socrates:: For you do not, attend to what Phocylides says; that one ought still, whilst there is life, to practice virtue.

Glaucon:: I think, we attended to that formerly.

Socrates:: Let us by no means, differ from him in this. But let us inform ourselves whether this excessive attention to one's disease is to be the business of the rich; and that life is not worth keeping, if he does not give this attention; for that such a life is indeed a hindrance of the mind's application to masonry and other arts; but, with respect to the exhortation of Phocylides, it is no hindrance.

Glaucon:: Yes, by Jupiter, it is, and that in the greatest degree when this excessive care of the body goes beyond gymnastic.

Socrates:: Neither does it agree with attention to private economy, or military expeditions, or sedentary magistracies in the city. But what is of the greatest moment is, that such application to health is ill fitted for any sort of learning, and inquiry, and study, by one's self, whilst one is perpetually dreading certain pains and swimmings of the head, and blaming philosophy as occasioning them; so that where there is this attention to health it is a great obstacle to the practice of virtue and improvement in it; for it makes us always imagine that we are ill, and always complain of the body.

Glaucon:: That is likely.

Socrates:: And shall we not say that Æsculapius too understood these things, when to persons of a healthful constitution, and such as used a wholesome diet, but were afflicted by some particular disease, to these and to such a constitution he prescribed medicine, repelling their diseases by drugs and incisions, and enjoined them their accustomed diet, that the public might suffer no damage? But he did not attempt, by extenuating or nourishing diet, to cure such constitutions as were wholly diseased within; as it would but afford a long and miserable life to the man himself, and the descendants which would spring from him would probably be of the same kind: for he did not imagine the man ought to be cured who could not live in the ordinary course, as he would be neither profitable to himself nor to the state.

Glaucon:: You make Æsculapius, a politician.

Socrates:: It is plain. And his sons may show that he was so. Or do you not see, that at Troy they excelled in war, and likewise practiced medicine in the way I mention? Or do not you remember, that when Menelaus was wounded by Pandarus, they

> Wash'd off the blood, and soft'ning drugs applied?

But, as to what was necessary for him to eat or drink afterwards, they prescribed for him no more than for Eurypylus; deeming external applications sufficient to heal men, who, before they were wounded, were healthful and moderate in their diet, whatever mixture they happened to have drunk at the time. But they judged, that to have a diseased constitution, and to live an intemperate life, was neither profitable to the men themselves nor to others; and that their art ought not to be employed on these, nor to minister to them, not even though they were richer than Midas.

Glaucon:: You make, the sons of Æsculapius truly ingenious.

Socrates:: It is proper; though in opposition to us the writers of tragedy, and Pindar, call indeed Æsculapius the son of Apollo, but say that he was prevailed on by gold to undertake the cure of a rich man, who was already in a deadly state; for which, truly, he was even struck with a thunderbolt: but we, agreeably to what has been formerly said, will not believe them as to both these things; but will aver, that if he was the son of the God, he was not given to filthy lucre; or, if he were given to filthy lucre, he was not a son of the God.

Glaucon:: These things, are most right. But what do you say, Socrates, as to this? Is it not necessary to provide good physicians for the state? and must not these, most likely, be such who have been conversant with the greatest number of healthy and of sickly people? and these, in like manner, be the best judges, who have been conversant with all sorts of dispositions?

Socrates:: I mean now, those who are very good. But do you know whom I deem to be such?

Glaucon:: If you tell me.

Socrates:: I shall endeavor to do it; but you inquire in one question about two different things.

Glaucon:: As how?

Socrates:: Physicians, would become most expert, if, beginning from their infancy, they would, in learning the art, be conversant with the greatest number of bodies, and these the most sickly; and labored themselves under all manner of diseases, and by natural constitution were not quite healthful; for it is not by the body, I imagine, that they cure the body; (else their own bodies could at no time be admitted to be of an ill constitution,) but they cure the body by the soul; which, whilst it is of an ill constitution, is not capable to perform well any cure.

Glaucon:: Right.

Socrates:: But the judge, friend, governs the soul by the soul; which, if from its childhood it has been educated with depraved souls, has been conversant with them, and has itself done all manner of evil, it is not able to come out from among them, so as accurately, by itself, to judge of the evils of others, as happens in the diseases of the body; but it must in its youth be inexperienced and unpolluted with evil manners, if it means to be good and beautiful itself, and to judge foundry of what is just. And hence the virtuous in their youth appear simple, and easily deceived by the unjust, as they have not within themselves dispositions similar to those of the wicked.

Glaucon:: And surely this at least, they do often suffer extremely.

Socrates:: For which reason, the good judge is not to be a young man, but an old, having been late in learning wickedness, what it is; perceiving it not as a kindred possession, residing in his own soul, but as a foreign one, in the souls of others, which he has for a long time studied, and has understood what sort of an evil it is, by the help of science rather than by proper experience.

Glaucon:: Such an one, is like to be the most noble judge.

Socrates:: And likewise a good one; which was what you required. For he who has a good soul is good. But the other notable and suspicious man, who has committed much of iniquity himself, when indeed he converts with his like, being thought to be subtle and wise, he appears a notable man, being extremely cautious, having an eye to those models which he has within himself; but when he approaches the good, and the more aged, he appears foolish, suspicious out of season, and ignorant of integrity of manners, as having within no models of such a kind: but however, being more frequently conversant with the wicked than with the wise, he appears, both to himself and others, to be more wise, rather than more ignorant.

Glaucon:: This, is perfectly true.

Socrates:: We must not, therefore, look for such an one to be a wise and good judge, but the former one; for indeed vice can never at all know both itself and virtue. But virtue, where the temper is instructed by time, shall attain to the knowledge of both itself and depravity. This one, then, and not the wicked, as it appears to me, is the wise man.

Glaucon:: And I, am of the same opinion.

Socrates:: Will you not then establish in the city such a method of medicine as we have mentioned, along with such a method of judicature as shall carefully preserve for you those of your citizens who are naturally well disposed both in mind and in body? and with respect to those who are otherwise, such as are so in their bodies, they shall suffer to die; but such as are of an evil nature, and incurable with respect to their soul, these they shall themselves put to death?

Glaucon:: This, has appeared to be best, both for those who suffer it and for the city.

Socrates:: And it is plain, that your youth will be afraid of needing this judiciary, whilst they are employed in that simple music, which, we say, generates temperance.

Glaucon:: Why will they not?

Socrates:: And, according to the very same steps of reasoning, the musician who is willing to pursue gymnastic, will choose to do it so as not to require any medicine unless there be necessity.

Glaucon:: It appears so to me.

Socrates:: And he will perform his exercises, and his labors, rather looking to the irascible part of his nature, and exciting it by labor, than to strength; and not as the other wrestlers, who eat and drink and engage in labors for the sake of bodily strength.

Glaucon:: Most right.

Socrates:: Why then, Glauco, they who propose to teach music and gymnastic, propose these things, not, for what some imagine, to cure the body by the one, and the soul by the other.

Glaucon:: What then?

Socrates:: They seem, to propose them both chiefly on the soul's account.

Glaucon:: As how?

Socrates:: Do not you perceive, how those are affected as to their dianoëtic part, who have all their life been conversant with gymnastic, but have never applied to music? or how those are affected who have lived in a method the reverse of this?

Glaucon:: What, do you speak of?

Socrates:: Of rusticity, and fierceness, and again of softness and mildness.

Glaucon:: I know, that those who apply themselves immoderately to gymnastic, become more rustic than is proper; and those again who attend to music alone, are more soft than is becoming: for them to be.

Socrates:: And surely, this rusticity, at least, may impart an irascibility of nature, and, when rightly disciplined, may become fortitude; but, when carried further than is becoming, may, as is likely, be both more fierce and troublesome.

Glaucon:: So it appears to me.

Socrates:: But what? does not the philosophic temper partake of the mild? And when this disposition is carried too far, may it not prove more soft than is becoming; but, when rightly disciplined, be really mild and comely?

Glaucon:: These things are so.

Socrates:: But we say that our guardians ought to have both these dispositions.

Glaucon:: They ought.

Socrates:: Ought not then these to be adapted to one another?

Glaucon:: Why not?

Socrates:: And the soul in which they are thus adapted is temperate and brave.

Glaucon:: Certainly.

Socrates:: But the soul in which they are not adapted, is cowardly and savage.

Glaucon:: Extremely so.

Socrates:: And when one yields up himself to be soothed with the charms of music, and pours into his soul through his ears, as through a pipe, those we denominated the soft, effeminate, and plaintive harmonies, and spends the whole of his life chanting and ravished with melody; such an one, at the first, if he has any thing irascible, softens it like iron, and, from being useless and fierce, renders it profitable. But when still persisting he does not desist, but enchants his soul, after this, it melts and dissolves him, till it liquefies his anger, and cuts out, as it were, the nerves of his soul, and renders him an effeminate warrior.

Glaucon:: It is certainly so indeed.

Socrates:: But if, he had from the beginning a temper void of irascibility, this he quickly effectuates; but, if irascible, it renders the mind weak, and easily turned, so as instantly to be enraged at trifles, and again the rage is extinguished: so that, from being irascible, they become outrageous and passionate, and full of the morose.

Glaucon:: So indeed it happens.

Socrates:: But what now? If one labor much in gymnastic, and feast extremely well, but apply not to music and philosophy; shall he not, in the first place, having his body in a good condition, be filled with prudence and courage, and become more brave than he was before?

Glaucon:: Certainly so.

Socrates:: But what, when he does nothing else; nor participates in any thing which is music-like, though there were any love of learning in his soul, as it neither tastes of any study, nor bears a share in any inquiry nor reasoning, nor any thing besides which is musical, must it not become feeble, and deaf, and blind, as his perceptions are neither awakened, nor nourished, nor refined?

Glaucon:: Just so.

Socrates:: Such an one then becomes, as I imagine, a reason-hater, and unmusical; and by no means can be persuaded to any thing by reasoning, but is carried to every thing by force and savageness, as a wild beast; and thus he lives in ignorance and barbarity, out of measure, and unpolished.

Glaucon:: It is, entirely so.

Socrates:: Corresponding then to these two tempers, I would say, that some God, as appears, has given men two arts, those of music and gymnastic, in reference to the irascible and the philosophic temper; not for the soul and body, otherwise than as a by-work, but for that other purpose, that those two tempers might be adapted to one another; being stretched and slackened as far as is fit.

Glaucon:: So indeed it appears.

Socrates:: Whoever then shall in the most handsome manner mingle gymnastic with music, and have these in the justest measure in his soul, him we shall most properly call the most completely musical, and of the best harmony; far more than the man who adjusts to one another musical strings.

Glaucon:: Most reasonably, Socrates.

Socrates:: Shall we not then, Glauco, always have need of such a president for our state, if our government is to be preserved? We shall most especially have need of this. Those then may be the models of education and discipline. For why should one go over the dances, the huntings of wild beasts, both with dogs and with nets, the wrestlings and the horse-races proper for such persons? For it is nearly manifest that these naturally follow of course, and it is no difficult matter to find them.

Glaucon:: It is indeed, not difficult.

Socrates:: Be it so. But what follows next? What was next to be determined by us. Was it, which of these shall govern, and be governed?

Glaucon:: What else?

Socrates:: Is it not plain that the elder ought to be governors, and the younger to be the governed?

Glaucon:: It is plain.

Socrates:: And is it not likewise plain, that the best of them are to govern?

Glaucon:: This too is plain.

Socrates:: But are not the best husbandmen the most assiduous in agriculture?

Glaucon:: They are.

Socrates:: If now our guardians are the best, will they not be most vigilant over the city?

Glaucon:: They will.

Socrates:: Must we not for this purpose make them prudent, and able, and careful likewise of the city?

Glaucon:: We must do so.

Socrates:: But one would seem to be most careful of that which he happens to love. Undoubtedly. And one shall most especially love that to which he thinks the same things are profitable which are so to himself, and with whose good estate he thinks his own connected; and where he is of a contrary opinion, he will be contrariwise affected.

Glaucon:: Just so.

Socrates:: We must choose then from the other guardians such men as shall most of all others appear to us, on observation, to do with the greatest cheerfulness, through the whole of life, whatever they think advantageous for the state, and what appears to be disadvantageous they will not do by any means.

Glaucon:: These are the most proper.

Socrates:: It truly appears to me, that they ought to be observed through every stage of their life, if they be tenacious of this opinion, so as that neither fraud nor force make them inconsiderately throw out this opinion, that they ought to do what is best for the state.

Glaucon:: What throwing out do you mean?

Socrates:: I will tell you. An opinion seems to me to depart from the dianoëtic part voluntarily or involuntarily. A false opinion departs voluntarily from him who unlearns it; but every true opinion departs involuntarily.

Glaucon:: The case of the voluntary one, I understand; but that of the involuntary I want to learn.

Socrates:: What now? Do not you think, that men are involuntarily deprived of good things; but voluntarily of evil things? Or, is it not an evil to deviate from the truth, and a good to form true opinion? Or, does it not appear to you, that to conceive of things as they really are, is to form true opinion?

Glaucon:: You say rightly indeed.

Socrates:: They do seem to me to be deprived unwillingly of true opinion. Do they not then suffer this, either in the way of theft, enchantment, or force?

Glaucon:: I do not now, understand you.

Socrates:: I seem, to speak theatrically. But, I say, those have their opinions stolen away, who are persuaded to change their opinions, and also those who forget them; in the one case, they are imperceptibly taken away by time, and in the other by reasoning. Do you now understand in any measure?

Glaucon:: Yes.

Socrates:: And those, I say, have their opinions forced from them, whom grief or agony obliges to change them. This, I understand, and you say right. And those, I imagine, you will say, are enchanted out of their opinions, who change them, being bewitched by pleasure, or seduced by fear, being afraid of something.

Glaucon:: It seems, that every thing magically beguiles which deceives us.

Socrates:: That then which I was now mentioning must be sought for: who are the best guardians of this opinion; that that is to be done which is best for the state: and they must be observed immediately from their childhood, setting before them such pieces of work in which they may most readily forget a thing of this kind, and be deluded; and he who is mindful, and hard to be deluded, is to be chosen, and he who is otherwise is to be rejected. Is it not so?

Glaucon:: Yes.

Socrates:: And we must appoint them trials of labors and of pains, in which we must observe the same things.

Glaucon:: Right.

Socrates:: Must we not, appoint them a third contest, that of the mountebank kind; and observe them as those do, who, when they lead on young horses against noises and tumults, observe whether they are frightened? So must they, whilst young, be led into dreadful things, and again be thrown into pleasures, trying them more than gold in the fire, whether one is hard to be beguiled with mountebank tricks, and appear composed amidst all, being a good guardian of himself, and of that music which he learned, showing himself in all these things to be in just measure and harmony. Being of such a kind as this, he would truly be of the greatest advantage both to himself and to the state. And the man who in childhood, in youth, and in manhood, has been thus tried, and has come out pure, is to be appointed governor and guardian of the state; and honors are to be paid him whilst alive, and when dead he should receive the highest rewards of public funeral and other memorials. And he who is not such an one is to be rejected. Of such a kind, Glauco, as it appears to me, is to be the choice and establishment of our governors and guardians, as in a sketch, and not accurately.

Glaucon:: And I, am of the same opinion.

Socrates:: Is it not then truly most just, to call these the most complete guardians, both with reference to enemies abroad, and to friends at home; so as that the one shall not have the will, nor the other have the power to do any mischief? And the youth (whom we now called guardians) will be allies and auxiliaries to the decrees of the governors.

Glaucon:: I imagine so.

Socrates:: What now, may be the contrivance of those lies, which are made on occasion, and of which we were lately saying that it is a most generous part, in making lies, to persuade the governors themselves most especially; or, if not these, the rest of the state?

Glaucon:: What sort do you mean?

Socrates:: Nothing new, but somewhat Phoenician, which has frequently happened heretofore, as the poets tell us, and have persuaded us, but has not happened in our times, nor do I know if ever it shall happen: to persuade one of it surely requires a subtitle persuasion.

Glaucon:: How like you are, to one who is a verse to speak!

Socrates:: I shall appear, to be a verse with very good reason, after I tell it.

Glaucon:: Speak, and do not fear.

Socrates:: I speak then, though I know not with what courage, and using what expressions, I shall tell it. And I shall attempt, first of all, to persuade the governors themselves, and the soldiers, and afterwards the rest of the state, that, whatever we educated and instructed them in, all these particulars seemed to happen to them and to befall them as dreams; but that they were in truth at that time formed and educated within the earth; both they themselves, and their armor and their other utensils, being there likewise fabricated. And after they were completely fashioned, that the earth, who is their mother, brought them forth; and now they ought to be affected towards the country where they are, as to their mother and nurse; to defend her, if any invade her; and to consider the rest of the citizens as being their brothers, and sprung from their mother earth.

Glaucon:: It was not without reason, that some time since you was ashamed to tell this falsehood.

Socrates:: I had truly reason, But hear however the rest of the fable. All of you now in the state are brothers (as we shall tell them in way of fable); but the God, when he formed you, mixed gold in the formation of such of you as are able to govern; therefore are they the most honorable. And silver, in such as are auxiliaries; and iron and brass in the husbandmen and other handicrafts. As you are all of the same kind, you for the most part resemble one another: and it sometimes happens, that of the gold is generated the silver, and of the silver there is a golden descendant; and thus every different way are they generated of one another. The God gives in charge, first of all, and chiefly to the governors, that of nothing are they to be so good guardians, nor are they so strongly to keep watch over any thing, as over their children; to know what of those principles is mixed in their souls; and if their descendant shall be of the brazen or iron kind, they shall by no means have compassion; but, assigning him honour proportioned to his natural temper, they shall push him down to the craftsmen or husbandmen. And if again any from among these shall be born of a golden or silver kind, they shall pay them honour, and prefer them; those to the guardianship, and these to the auxiliary rank: it being pronounced by the oracle, that the state is then to perish when iron or brass shall have the guardianship of it. Have you now any contrivance to persuade them of this fable?

Glaucon:: None, to persuade these men themselves; but I can contrive how that their sons and posterity, and all mankind afterwards shall believe it.

Socrates:: Even this, would do well towards making them more concerned about the state, and one another; for I almost understand what you say. And this truly will lead the same way as the oracle. But let us, having armed these earthborn sons, lead them forwards under their leaders; and when they are come into the city, let them consider where it is best to place their camp, so as best to keep in order those who are within, if any one should want to disobey the laws; and likewise defend against those without, if any enemy, as a wolf, should come upon the fold. And when they have marked out their camp, and performed sacrifices to the proper divinities, let them erect their tents: or, how are they to do?

Glaucon:: Just so.

Socrates:: Shall they not be such as may be sufficient to defend them, both from winter and summer?

Glaucon:: Why not? for you seem, to mean houses.

Socrates:: Yes, but military ones; not such as are costly.

Glaucon:: What do you say, is the difference between the one and the other?

Socrates:: I will endeavor, to tell you; for, of all things, it is the most dreadful, and the most shameful to shepherds, to breed such kind of dogs, and in such a manner, as auxiliaries of the flocks, as either through intemperance or famine, or some other ill disposition, the dogs themselves should attempt to hurt the sheep; and, instead of dogs, resemble wolves.

Glaucon:: That is dreadful, why is it not?

Socrates:: Must we not then, by all means, take care lest our allies do such a thing towards our citizens, as they are more powerful; and, instead of generous allies, resemble savage lords?

Glaucon:: We must take care.

Socrates:: Would they not be prepared, as to the greatest part of the care, if they were really well educated?

Glaucon:: But they are so at least.

Socrates:: That is not proper to be confidently affirmed, friend Glauco; but that is proper which we were now saying, that they ought to have good education, whatever it is, if they are to have what is of the greatest consequence towards rendering them mild, both among themselves and towards those who are guarded by them.

Glaucon:: Very right.

Socrates:: Besides then this education, any one of understanding would say, that their houses, and all their other substance, ought to be so contrived, as not to hinder their guardians from being the very best of men, and not to stir them up to injure the other citizens.

Glaucon:: And he will say true.

Socrates:: If then they intend to be such, consider, whether they ought to live and dwell in some such manner as this: First, then, let none possess any substance privately, unless there be the greatest necessity for it: next, let none have any dwelling, or store-house, into which whoever inclines may not enter: as for necessaries, let them be such as temperate and brave warriors may require; and as they are instituted by the other citizens, let them receive such a reward of their guardianship, as to have neither overplus nor deficiency at the year's end. Let them have public meals, as in encampments, and live in common. They must be told, that they have from the Gods a divine gold and silver at all times in their souls; and have no need of the human. And that it were profane to pollute the possession of the divine kind, by mixing it with the possession of this mortal gold; because the money of the vulgar has produced many impious deeds, but that of these men is incorruptible. And of all the men in the city, they alone are not allowed to handle or touch gold and silver; nor to bring it under their roof; nor carry it about with them; nor to drink out of silver or gold: and that thus they are to preserve themselves and the state. But whenever they shall possess lands, and houses, and money, in a private way, they shall become stewards and farmers instead of guardians, hateful lords instead of allies to the other citizens: hating and being hated, plotting and being plotted against, they shall pass the whole of their life; much oftener and more afraid of the enemies from within than from without, they and the rest of the state hastening speedily to destruction. For all which reasons, let us affirm, that our guardians are thus to be constituted with reference both to their houses and to other things. And let us settle these things by law. Shall we?

Glaucon:: By all means.

THE END OF THE THIRD BOOK.

## BOOK IV.

Socrates:: Adimantus hereupon replying;

Adeimantus:: What now, Socrates, will you say in your own defense, if one shall say that you do not make these men very happy? for, though it is owing to these men that the city really exists, yet they enjoy no advantage in the city, such as others do who possess lands, build beautiful and large houses, purchase suitable furniture, offer sacrifices at their own expense, give public entertainments to strangers, and possess what you was now mentioning, gold and silver, and every thing which is reckoned to contribute towards the rendering men happy. But one may readily say, that, like hired auxiliaries, they seem to possess nothing in the city but the employment of keeping guard.

Socrates:: Yes; and that too only for their maintenance, without receiving, as all others do, any reward besides. So that they are not allowed so much as to travel privately any where abroad, though they should incline to it; nor to bestow money on others, nor to spend it in such other methods as those do who are counted happy. These and many such things you leave out of the accusation.

Adeimantus:: But let these things too, be charged against them.

Socrates:: You ask then, what we shall say in our defense?

Adeimantus:: I do.

Socrates:: Whilst we go on in the same road, we shall find, as I imagine, what may be said: for we shall say, that it were nothing strange if these men, even in these circumstances, should be the happiest possible. Yet it was not with an eye to this that we established the city; to have any one tribe in it remarkably happy beyond the rest; but that the whole city might be in the happiest condition; for we judged, that in such an one we should most especially find justice, and injustice in the city the worst established: and that, upon thoroughly examining these, we should determine what we have for some time been in search of. Now then, as I imagine, we are forming a happy state, not selecting some few persons to make them alone happy; but are establishing the universal happiness of the whole: and we shall next consider a state which is the reverse. As if then we were painting human figures, and one approaching should blame us, saying, that we do not place the most beautiful colors on the most beautiful parts of the creature; for that the eyes, the most beautiful part, were not painted with purple, but with black; should we not seem to apologize sufficiently to him, by saying, Wonderful critic! do not imagine that we ought to paint the eyes beautiful, in such a way as that they would not appear to be eyes; and so with reference to all other parts. But consider, whether, in giving each particular part its due, we make the whole beautiful. And so now, do not oblige us to confer such a happiness on our guardians as shall make them any thing rather than guardians: for we know too, how to array the husbandmen in rich and costly robes, and to enjoin them to cultivate the ground only with a view to pleasure; and in like manner, those who make earthen ware, to lie at their ease by the fire, to drink and feast, neglecting the wheel, and working only so much as they incline: and we know how to confer a felicity of this nature on every individual, in order to render the whole state happy. But do not advise us to act after this manner; since, if we obey you, neither would the husbandman really be a husbandman, nor the potter be a potter; nor would any other really be of any of those professions of which the city is composed. But, as to others, it is of less consequence; for, when shoe-makers become bad, and are degenerate, and profess to be shoemakers when they are not, no great mischief happens to the state: but when the guardians of the law and of the state are not so in reality, but only in appearance, you see how they entirely destroy the whole constitution; if they alone shall have the privilege of an affluent and happy life. If we then are for appointing men who shall be really guardians of the city, the least of all hurtful to it; and he who makes the objection is for having them rather as certain farmers, and as in a festival-meeting, not in a city, certain public entertainers, indulging in jollity, he must mean something else than a city: we must then consider whether we establish guardians with this view, that they may have the greatest happiness; or if we establish them with a view to the happiness of the whole city, let us see whether this takes place; and let us oblige these allies and guardians to do this, and we must persuade them they shall thus become the best performers of their own particular work; and we must act towards all others in the same manner. And thus the whole city being increased, and well constituted, let us allow the several tribes to participate of happiness as their natures admit.

Adeimantus:: You seem to me, to say well.

Socrates:: Shall I appear to you, to speak right in what is akin to this?

Adeimantus:: What is that?

Socrates:: Consider whether other artificers are corrupted by these things, so as to be made bad workmen.

Adeimantus:: What things do you mean?

Socrates:: Riches, and poverty.

Adeimantus:: As how?

Socrates:: Thus: Does the potter, after he becomes rich, seem still to mind his art?

Adeimantus:: By no means.

Socrates:: But will he not become more idle and careless than formerly?

Adeimantus:: Much more so.

Socrates:: Shall he not then become a more unskillful potter?

Adeimantus:: Much more so, likewise.

Socrates:: And surely, being unable through poverty to furnish himself with tools, or any thing else requisite to his art, his workmanship shall be more imperfectly executed, and his sons, or those others whom he instructs, shall be inferior artists.

Adeimantus:: How should they not?

Socrates:: Through both these, now, poverty and riches, the workmanship in the arts is rendered less perfect, and the artists themselves become less expert.

Adeimantus:: It appears so.

Socrates:: We have then, it seems, discovered other things, which our guardians must by all means watch against, that they may in no respect escape their notice, and steal into the city.

Adeimantus:: What kind of things are these?

Socrates:: Riches, and poverty: as the one is productive of luxury, idleness, and a love of novelty; and the other, besides a love of novelty, is illiberal, and productive of mischief.

Adeimantus:: They are entirely so. But consider this, Socrates. How shall our city be able to engage in war, since she is possessed of no money, especially if she be obliged to wage war against a great and opulent state?

Socrates:: It is plain, that to fight against one of this kind is somewhat difficult; but to fight against two is a more easy matter.

Adeimantus:: How say you?

Socrates:: First of all, now, if they have at all occasion to fight, will they not, being expert in the art of war, fight against rich men?

Adeimantus:: They will.

Socrates:: What then, Adimantus, do not you think that one boxer, who is fitted out in the best manner possible for this exercise, is easily able to fight against two who are not expert boxers, but, on the contrary, are rich and unwieldy?

Adeimantus:: He would not perhaps easily fight with both at once.

Socrates:: Would he not, though he had it in his power to retire a little, and then turn on the one who should he the furthest advanced towards him, and strike him, and by doing this frequently in the sun and heat? Might not a person of this kind easily defeat many such as these?

Adeimantus:: Certainly; that would be no great wonder.

Socrates:: But do not you think that the rich have more knowledge and experience of boxing than of the military art?

Adeimantus:: I do.

Socrates:: Easily then, as it plainly appears, will our athletics combat with double and triple their number.

Adeimantus:: I will agree with you; for you seem to me to say right.

Socrates:: But what if they should send an embassy to another state, informing them of the true situation of the affair, telling them, We make no use of gold or silver, neither is it lawful for us to use them, but with you it is lawful; if then you become our allies in the war, you will receive the spoils of all the other states: do you imagine that any, on hearing these things, would choose to fight against strong and resolute dogs, rather than in alliance with the dogs to fight against fat and tender sheep?

Adeimantus:: I do not think it; but, if the riches of others be amassed into one state, see that it does not endanger that which is poor.

Socrates:: You are happy, that you imagine any other deserves to be called a state besides such an one as we have established.

Adeimantus:: Why not?

Socrates:: We must give others, a more magnificent appellation; for each of them consists of many states, and is not one, as is said in way of irony: for there are always in them two parties at war with each other, the poor and the rich; and in each of these again there are very many: to which if you apply as to one, you are mistaken entirely; but if, as to many, you put one part in possession of the goods and power of another, or even deliver up the one to the other, you shall always have the many for your allies, and the few for enemies; and, so long as your state shall continue temperately, as now established, it shall be the greatest. I do not say it shall be accounted so, but shall be really the greatest, though its defenders were no more than one thousand; for one state so great you will not easily find, either among the Greeks or Barbarians, but many which are accounted many times larger than such an one as this. Are you of a different opinion?

Adeimantus:: No, truly.

Socrates:: Might not this, then, be the best mark for our rulers how large to make the city, and what extent of ground to mark off for it in proportion to its bulk, without attending to any thing further?

Adeimantus:: What mark?

Socrates:: I imagine, this: So long as the city, on its increase, continues to be one, so long it may be increased, but not beyond it.

Adeimantus:: Very right.

Socrates:: Shall we not then lay this further injunction on our guardians, to take care by all means that the city be neither small nor great, but of moderate extent, and be one city?

Adeimantus:: We shall probably, enjoin them a trifling affair.

Socrates:: A more trifling affair still than this, is that we mentioned above, when we observed, that if any descendant of the guardians be depraved, he ought to be dismissed to the other classes; and if any descendant of the others be worthy, he is to be raised to the rank of the guardians; and this was intended to show that all the other citizens ought to apply themselves each to that particular art for which he has a natural genius, that so every one minding his own proper work may not be many, but be one; and so likewise the whole state may become one, and not be many.

Adeimantus:: This indeed, is still a more trifling matter than the other.

Socrates:: We do not here, good Adimantus, as one may imagine, enjoin them many and great matters, but such as are all trifling, if they take care of one grand point, as the saying is, or rather that which is sufficient in place of the grand.

Adeimantus:: What is that?

Socrates:: Education, and nurture; for If, being well educated, they become temperate men, they will easily see through all these things, and such other things as we omit at present, respecting women, marriages, and the propagation of the species. For these things ought all, according to the proverb, to be made entirely common among friends.

Adeimantus:: That, would be most right.

Socrates:: And surely, if once a republic is set a-going, it proceeds happily, increasing as a circle. And whilst good education and nurture are preserved, they produce good geniuses; and good geniuses, partaking of such education, produce still better than the former, as well in other respects as with reference to propagation, as in the case of other animals.

Adeimantus:: It is likely.

Socrates:: To speak then briefly, this the guardians of the state must oppose, that it may not, escaping their notice, hurt the constitution; nay, above all things, they must guard against this, not to make any innovations in gymnastic and music, contrary to the established order of the state, but to maintain this order as much as possible; being afraid lest, whilst a man adopts that poetical expression;

> …….men most admire that song,
> Which most partakes of novelty.

one should frequently imagine, that the poet means not new songs, but a new method of the song, and should commend this. Such a thing is neither to be commended nor admitted; for, to receive a new kind of music is to be guarded against, as endangering the whole of the constitution: for never are the measures of music altered without the greatest politic laws, according to Damon, with whom I agree.

Adeimantus:: You may place me likewise, among those who are of that opinion.

Socrates:: We must erect then, some barrier, as would seem, somewhere here, for our guardians themselves, with regard to music.

Adeimantus:: A transgression here, easily indeed steals in imperceptibly.

Socrates:: It does, in the way of diversion, and as productive of no mischief.

Adeimantus:: For neither indeed does it produce any other, but that becoming familiar by degrees it insensibly runs into the manners and pursuits; and from thence, in intercourse of dealings one with another, it becomes greater; and from this intercourse it enters into laws and policies with much impudence, Socrates, till at last it overturns all things, both private and public.

Socrates:: Well, let it be allowed to be so.

Adeimantus:: It appears so to me.

Socrates:: Ought not then our children, as I said at the beginning, to receive directly from their infancy an education more agreeable to the laws of the constitution? because, if their education be such as is contrary to law, and the children be of such a nature themselves, it is impossible that they should ever grow up to be worthy men, and observant of the laws.

Adeimantus:: Why, is it not?

Socrates:: But when handsome amusements are appointed them from their infancy, and when, by means of the music, they embrace that amusement which is according to law (contrariwise to those others), this music attends them in every thing else, and grows with them, and raises up in the city whatever formerly was fallen down.

Adeimantus:: It is true, indeed.

Socrates:: And these men, discover those establishments which appear trifling, and which those others destroyed altogether.

Adeimantus:: What establishments?

Socrates:: Such as these: Silence of the younger before the elder, which is proper; and the giving them place, and rising up before them, and reverence of parents; likewise what shaving, what clothes and shoes are proper, with the whole dress of the body, and every thing else of the kind. Are you not of this opinion?

Adeimantus:: I am.

Socrates:: But to establish these things by law, would, I imagine, be a silly thing, nor is it done any where; nor would it stand, though established both by word and writing.

Adeimantus:: For, how is it possible?

Socrates:: It seems then, Adimantus, that a man's character and conduct will always be according to his education, let him apply himself afterwards to what he will: or, does not the like always produce the like?

Adeimantus:: Why not?

Socrates:: And we may say, I imagine, that at last it arrives at somewhat complete and vigorous, either good, or what is the reverse.

Adeimantus:: Why not?

Socrates:: I would not then, for these reasons, as yet, undertake to settle by law such things as these.

Adeimantus:: Right.

Socrates:: But what now, by the gods, as to those laws relative to matters of exchange, and to their traffic one with another in the forum, and, if you please, their traffic likewise among their handicrafts, their scandals, bodily hurt, and raising of lawsuits; their institution of judges, and likewise such imports and payments of taxes as may be necessary either in the forum or at shores; or in general whatever laws are municipal, civil, or marine, or what other laws there may be of this kind; shall we dare to establish any of these?

Adeimantus:: It is improper, to prescribe these to good and worthy men; for they will easily find out the most of them, such as ought to be established by law.

Socrates:: Yes, friend, if at least God grant them the preservation of the laws we formerly explained.

Adeimantus:: And if not, they will spend the whole of their life making and amending many such laws as these, imagining that they shall thus attain to that which is best.

Socrates:: You say that such as these shall lead a life, like those who are sick, and at the same time unwilling, through intemperance, to quit an unwholesome diet.

Adeimantus:: Entirely so.

Socrates:: And these truly must live very pleasantly; for, though they deal with physicians, they gain nothing, but render their diseases greater and more complex; and they still hope, that when any one recommends any medicine to them, they shall, by means of it, be made whole.

Adeimantus:: This is entirely the situation of such diseased persons as these.

Socrates:: But what, is not this pleasant in them? to count that man the most hateful of all, who tells them the truth; that, till one give over drunkenness and gluttony, and unchaste pleasure, and laziness, neither drugs nor caustics, nor amputations, nor charms, nor applications, nor any other such things as these, will be of any avail.

Adeimantus:: That, is not quite pleasant; for to be enraged at one who tells us what is right, has nothing pleasant in it.

Socrates:: You are no admirer, as it would seem, of this sort of men.

Adeimantus:: No, truly.

Socrates:: Neither then, though the whole of the city (as we were lately saying) should do such a thing, would you commend them: or, is not the same thing which is done by these people, done by all those cities, which, being ill-governed, enjoin their citizens not to alter any part of the constitution, for that whoever shall do such a thing is to be put to death; but, that whoever shall with the greatest cheerfulness reverence those who govern in this fashion, and shall gratify them in the most obsequious manner; and, anticipating their desires, be most dexterous in satisfying them, shall be reckoned both worthy and wise in matters of highest importance; and be held by them in the greatest honour?

Adeimantus:: They seem to me at least, to do the very same thing, and by no means do I commend them.

Socrates:: But what again as to those who desire to have the management of such states, and are even fond of it, are you not delighted with their courage and dexterity? I am; excepting such as are imposed on by them, and fancy that they are really politicians, because they are commended as such by the multitude.

Adeimantus:: How do you mean?

Socrates:: Do you not pardon those men? Or do you even think it is possible for a man who cannot measure himself, when he hears many other such men telling him that he is four cubits, not to believe this of himself?

Adeimantus:: It is impossible.

Socrates:: Then be not angry in this case; for such men as these are of all the most ridiculous, since, always making laws about such things as we now mentioned, and always amending, they imagine that they shall find some period of these frauds respecting commerce, and those other things I now spoke of, being ignorant that they are in reality attempting to destroy a hydra.

Adeimantus:: They are surely, doing nothing else.

Socrates:: I imagine then, that a true lawgiver ought not to give himself much disturbance about such a species of laws and police, either in an ill or well-regulated state; in the one, because it is unprofitable and of no avail; in the other, because any one can find out some of the laws, and others of them flow of course from the habits arising from their early education.

Adeimantus:: What part then of the institutions of law, have we yet remaining?

Socrates:: To us indeed there is nothing remaining; but, however, to the Delphian Apollo there remains the greatest, noblest, and most important of legal institutions.

Adeimantus:: Of what kind?

Socrates:: The institutions of temples, sacrifices, and other worship of the Gods, dæmons, and heroes; likewise the depositing the dead, and what other rites ought to be performed to them, so as to make them propitious. For truly such things as these, we ourselves neither know; nor, in founding the state, will we entrust them to any other, if we be wise; nor will we make use of any other interpreter, except the God of the country. For this God is the interpreter in every country to all men in these things, who interprets to them sitting in the middle of the earth.

Adeimantus:: And it is well established, and we must do accordingly.

Socrates:: Thus now, son of Aristo, is the city established for you. And, in the next place, having procured somehow sufficient light, do you yourself observe, and call on your brother and on Polemarchus and these others to assist us, if by any means we may at all perceive where justice is, and where injustice; and in what respect they differ from each other: and which of them the man ought to acquire, who proposes to himself to be happy, whether he be concealed or not concealed both from Gods and men.

Glaucon:: But you say nothing to the purpose; for you yourself promised to inquire into this, deeming it impious for you not to assist the cause of justice by every possible means.

Socrates:: It is true, what you remind me of, and I must do accordingly. But it is proper that you too should assist in the inquiry.

Glaucon:: We shall do so.

Socrates:: I hope then, to discover it in this manner. I think that our city, if it be rightly established, is perfectly good.

Glaucon:: Of necessity.

Socrates:: Then it is plain, that it is wise, and brave, and temperate, and just.

Glaucon:: It manifestly is so.

Socrates:: Whichever then of these we shall find in it, shall there not remain behind that which is not found?

Glaucon:: Why not?

Socrates:: For as if we were in quest of one, of any other four, in any thing whatever, if we discovered this one at the first, we would be satisfied; but if we should first discover the other three from this itself, that which we were inquiring after would be known; for it is plain it would be no other but that which remained.

Glaucon:: You say right.

Socrates:: Since then there are in our state those four above mentioned, shall we not inquire about them, according to the same manner?

Glaucon:: It is plain we ought.

Socrates:: First of all, then, to me at least, wisdom appears to be conspicuous in it; and concerning it there appears something very uncommon.

Glaucon:: What is that?

Socrates:: Surely this city which we have described appears to me to be wise, for its councils are wise; are they not?

Glaucon:: They are.

Socrates:: And surely this very thing, the ability of counseling well, is plainly a certain science; for men nowhere counsel well through ignorance, but through science.

Glaucon:: It is plain.

Socrates:: But there are many and various species of science in the state.

Glaucon:: Why, are there not?

Socrates:: Is it then from the science of the carpenters, that the state is to be denominated wise and well-counseled?

Glaucon:: By no means from this, is it said to be wise, but to be mechanical.

Socrates:: Is then the state to be denominated wise, when it consults wisely through its knowledge in utensils of wood, how to have these in the best manner possible?

Glaucon:: Nor this neither.

Socrates:: But what, is it for its knowledge of these in brass, or for any thing else of this kind?

Glaucon:: For none of these.

Socrates:: Nor yet for its knowledge of the fruits of the earth is it said to be wise, but to be skilled in agriculture.

Glaucon:: It seems so to me.

Socrates:: But what, is there any science among any of the citizens in this city which we have founded, which deliberates, not about any particular thing in the city, but about the whole, how it may, in the best manner, behave towards itself, and towards other cities?

Glaucon:: There is truly.

Socrates:: What is it, and among whom is it to be found?

Glaucon:: This very guardianship, is it, and it is among these governors, whom we lately denominated complete guardians.

Socrates:: What now do you denominate the state on account of this knowledge?

Glaucon:: Well-counseled, and really wise.

Socrates:: Whether then, do you imagine the brass-smiths, or these true guardians, will be most numerous in the state?

Glaucon:: The brass-smiths, will be much more numerous.

Socrates:: And of all, as many as, having any knowledge are of any account, will not these guardians be the fewest in number?

Glaucon:: By much.

Socrates:: From this smallest tribe then, and part of the state, and from that presiding and governing science in it, is the whole city wisely established according to nature; and this tribe, as it appears, is by nature the smallest, to whom it belongs to share in this science, which of all others ought alone to be denominated wisdom.

Glaucon:: You say, perfectly true.

Socrates:: This one, then, of the four, we have found, I know not how, both what it is, and in what part of the state it resides.

Glaucon:: And it seems to me, to be sufficiently described.

Socrates:: But surely as to fortitude, at least, it is no difficult matter, both to find out itself, and the particular part of the city in which it resides, on account of which virtue the city is denominated brave.

Glaucon:: As how?

Socrates:: Doth any one, call a city brave or cowardly, with reference to any other than that particular part of it which makes war and fights in its defense?

Glaucon:: No one, calls it such, with reference to any other part.

Socrates:: For I do not think, that the other tribes who are in it, whether they be cowardly or brave, have power to render the city either the one or the other.

Glaucon:: No, indeed.

Socrates:: The city then is brave likewise in one particular part of itself, because it has within it a power of such a nature as shall always preserve their opinions about things which are dreadful, that they are both these very things, and of the very same kind which the lawgiver inculcated on them in their education? Do not you call this fortitude?

Glaucon:: I have not, entirely comprehended what you say; but tell it over again.

Socrates:: I call fortitude, a certain preservative.

Glaucon:: What sort of preservative?

Socrates:: A preservative of opinion formed by law in a course of education about things which, are dreadful, what these are, and of what kind: I called it a preservative at all times, because they were to retain it in pains and in pleasures, in desires and fears, and never to cast it off; and, if you are willing, I shall liken it to what in my opinion it bears a near resemblance.

Glaucon:: I am willing.

Socrates:: Do not you know then, that the dyers, when they want to dye their wool, so as to be of a purple color, out of all the colors they first make choice of the white; and then, with no trifling apparatus, they prepare and manage it, so as best of all to take on the purest color, and thus they dye it; and whatever is tinged in this manner is of an indelible dye; and no washing, either without or with soap, is able to take away the pure color: but such wool as is not managed in this manner, you know what sort it proves, whether one is dyeing other colors, or this, without the due preparation beforehand.

Glaucon:: I know, that they are easily washed out, and are ridiculous.

Socrates:: Imagine then, that we too, according to our ability, were aiming at such a thing as this, when we were choosing out our soldiers, and were instructing them in music and gymnastic: and do not imagine we had any thing else in view, but that, in obedience to us, they should in the best manner imbibe the laws as a color; in order that their opinion, about what is dreadful, and about other things, might be indelible, both by means of natural temper and suitable education: and that these washes, however powerful in effacing, may not be able to wash away their dye, pleasure, which is more powerful in effecting this than all soap and ashes, pain and fear, and desire, which exceed every other cosmetic. Such a power now, and perpetual preservation of right opinion, and such as is according to law, about things which are dreadful, and which are not, I call and constitute fortitude, unless you offer something else.

Glaucon:: But I offer, nothing else: for you seem to me to reckon that such right opinion of these things, as arises without education, is both savage and servile, and not at all according to law, and you call it something else than fortitude.

Socrates:: You say most true.

Glaucon:: I admit then, that this is fortitude.

Socrates:: Admit it further, to be political fortitude, and you shall admit rightly: but, if you please, we shall inquire about it more perfectly another time; for, at present, it is not this, but justice we were seeking; and with regard to the inquiry concerning this, it has, in my opinion, been carried far enough.

Glaucon:: You speak very well.

Socrates:: There yet remain, two things in the city which we must search out: both temperance, and that for the sake of which we have been searching after all the rest, to wit, justice.

Glaucon:: By all means.

Socrates:: How now can we find out justice, that we may not be further troubled about temperance?

Glaucon:: I truly neither know, nor do I wish it to appear first, if we are to dismiss altogether the consideration of temperance; but, if you please to gratify me, consider this before the other.

Socrates:: I am indeed pleased, if I be not doing an injury.

Glaucon:: Consider then.

Socrates:: We must consider; and as it appears from this point of view, it seems to resemble a certain symphony and harmony more than those things formerly mentioned.

Glaucon:: How?

Socrates:: Temperance, is somehow a certain ornament, and a government, as they say, of certain pleasures and desires; and to appear superior to oneself, I know not how, and other such things, are mentioned as vestiges of it; are they not?

Glaucon:: These are the principal vestiges of it.

Socrates:: Is not then the expression, 'superior to oneself,' ridiculous? For he who is superior to himself must somehow be likewise inferior to himself, and the inferior be the superior; for the same person is spoken of in all these cases.

Glaucon:: Why not?

Socrates:: But to me, the expression seems to denote, that in the same man, with respect to his soul, there is one part better, and another worse; and that when the part more excellent in his nature is that which governs the inferior part, this is called being superior to himself, and expresses a commendation; but when through ill education, or any kind of converse, that better part, which is smaller, is conquered by the crowd, the worse part; this, by way of reproach, both expresses blame, and denotes the person thus affected to be inferior to himself, and altogether licentious.

Glaucon:: So it appears.

Socrates:: Observe then, our new city, and you shall find one of these in it: for you will own, it may justly be said to be superior to itself, if, where the better part governs the worse, that state is said to be temperate, and superior to itself.

Glaucon:: I observe, and you say true.

Socrates:: And surely one may find a great many and various desires and pleasures and pains more especially among children and women and domestics, and among the greatest and most depraved part of those who are called free.

Glaucon:: It is perfectly so.

Socrates:: But the simple and the moderate desires, and such as are led by intellect, and the judgment of right opinion, you will meet with both in the few, and those of the best natural temper, and of the best education.

Glaucon:: True.

Socrates:: And do not you see those things in our city, that there too the desires of the many, and of the baser part, are governed by the desires and by the prudence of the smaller and more moderate part?

Glaucon:: I see it.

Socrates:: If then any city ought to be called superior to pleasures and desires, and to itself, this one is to be called so.

Glaucon:: By all means.

Socrates:: And is it not on all these accounts temperate?

Glaucon:: Very much so.

Socrates:: And if, in any other city, there is the same opinion in the governors and the governed about this point, who ought to govern, it is to be found in this, do not you think so?

Glaucon:: I am strongly of that opinion.

Socrates:: In whom then of the citizens will you say that temperance resides, when they are thus affected, in the governors, or the governed?

Glaucon:: In both of them somehow.

Socrates:: You see then, that we justly conjectured of late, that temperance resembles a kind of harmony.

Glaucon:: For what?

Socrates:: Because not as fortitude and wisdom, which reside each of them in a certain part, the one of them making the city wise, and the other courageous, not after this manner doth it render the city temperate; but it is naturally diffused through the whole, connecting the weakest, and those in the middle, all in one symphony, either as to wisdom if you will, or if you will in strength, or in substance, or in any other of those things; so that most justly may we say, that this concord is temperance: a symphony of that which is naturally the worse and the better part, with reference to this, which of them ought to govern in the city, and in every individual.

Glaucon:: I am entirely, of the same opinion.

Socrates:: Be it so then. There are now three things in the city, it would seem, clearly discovered: but with respect to that other species which remains, by which the city partakes of virtue; what at all can it be? Is it not plain that it is justice?

Glaucon:: It is plain.

Socrates:: Ought we not now, Glauco, like some huntsmen, to surround the thicket, carefully attending lest justice somehow escape, and, disappearing, remain undiscovered? For it is plain that she is somewhere here. Look, therefore, and be eager to perceive her, if any how you see her sooner than I, and point her out to me.

Glaucon:: I wish I could; but if you employ me as an attendant rather, and one who is able to perceive what is pointed out to him, you will treat me perfectly well.

Socrates:: Follow, after you have offered prayers along with me.

Glaucon:: I will do so; only, lead you the way.

Socrates:: To me this seems, to be a place somehow of difficult access, and shady: It is therefore dark, and difficult to be scrutinized; we must however go on.

Glaucon:: We must go.

Socrates:: Iö! Iö! Glauco, we seem to have somewhat which appears to be a footstep; and I imagine that something shall not very long escape us.

Glaucon:: You tell good news.

Socrates:: We are truly, of a slow disposition.

Glaucon:: As how?

Socrates:: It appears, O blessed man! to have been long since rolling at our feet, from the beginning, and we perceived it not, but made the most ridiculous figure, like those who seek sometimes for what they have in their hand; so we did not perceive it, but were looking somewhere off at a distance, and in this way perhaps it escaped us.

Glaucon:: How do you say?

Socrates:: Thus, that we seem to me to have been speaking and hearing of it long since, and not to understand ourselves, that in some measure we expressed it.

Glaucon:: A long preamble, to one who is eager to hear.

Socrates:: Hear then, if I say any thing. For that which we at first established, when we regulated the city, as what ought always to be done, that, as it appears to me, or a species of it, is justice. For we somewhere established it, and often spoke of it, if you remember; that every one ought to apply himself to one thing, relating to the city, to which his genius was naturally most adapted.

Glaucon:: We did speak of it.

Socrates:: And that to do one's own affairs, and not to be pragmatical, is justice. This we have both heard from many others, and have often spoken of it ourselves.

Glaucon:: We have indeed spoken of it.

Socrates:: This then, friend. I, appears to be in a certain manner justice; to do one's own affairs. Do you know whence I conjecture this?

Glaucon:: No; but tell.

Socrates:: Besides those things we have already considered in the city, viz. temperance, fortitude, and wisdom; this, seems to remain, which gives power to all these, both to have a being in the state, and, whilst they exist in it, to afford it safety; and we said too, that justice would be that which would remain, if we found the other three.

Glaucon:: There is necessity for it.

Socrates:: But if, it be necessary to judge which of these, when subsisting in the city, shall in the greatest measure render it good; it would be difficult to determine whether the agreement between the governors and the governed, or the maintaining of sound opinion by the soldiers about what things are dreadful, and what are not; or wisdom and guardianship in the rulers; or whether this, when it exists in the city, renders it in the greatest measure good, viz. when child and woman, bond and free, artificer, magistrate and subject, when every one does their own affairs, and is not pragmatical.

Glaucon:: It is difficult to determine: How should it not be so?

Socrates:: This power then, by which every one in the city performs his own office, is co-rival it seems for the perfection of the city, along with its wisdom, temperance, and fortitude.

Glaucon:: Extremely so.

Socrates:: Will you not then constitute justice to be this co-rival with these, for the perfection of the city?

Glaucon:: By all means.

Socrates:: Consider it likewise in this manner, whether it shall thus appear to you. Will you enjoin the rulers to give just decisions in judgment?

Glaucon:: Why not?

Socrates:: But will they give just judgment, if they aim at any thing preferable to this, that no one shall have what belongs to others, nor be deprived of his own?

Glaucon:: No; but they can only give just judgment, when they aim at this.

Socrates:: And do they not aim at this as being just?

Glaucon:: Yes.

Socrates:: And thus justice is acknowledged to be the habitual practice of one's own proper and natural work.

Glaucon:: It is so.

Socrates:: See then if you agree with me. If a carpenter take in hand to do the work of a shoe-maker, or a shoemaker the work of a carpenter, or exchange either their utensils or prices; or if the same man take in hand to do both, and all else be exchanged; do you imagine the state would be anyway greatly injured?

Glaucon:: Not very much.

Socrates:: But I imagine, that when one who is a craftsman, or who is born to any lucrative employment, shall, afterwards being puffed up by riches, by the mob, or by strength, or any other such thing, attempt to go into the rank of counselor and guardian, when unworthy of it; and when these shall exchange utensils and rewards with one another; or when the same man shall take in hand to do all these things at once; then I imagine you will be of opinion that this interchange of these things, and this variety of employments practiced by one, is the destruction of the state.

Glaucon:: By all means.

Socrates:: Pragmaticalness then in these three species, and their change into one another, is the greatest hurt to the state, and may most justly be called its depravity.

Glaucon:: It may so truly.

Socrates:: But will not you say that injustice is the greatest ill of the state?

Glaucon:: Why not?

Socrates:: This then is injustice. But let us again speak of it in this manner. When the craftsman, the auxiliary and the guardian-band do their proper work, each of them doing their own work in the city; this is the contrary of the other, that is justice, and renders the city just.

Glaucon:: It seems to me, to be no otherwise than thus.

Socrates:: But let us not, affirm it very strongly: but if it shall be allowed us that this species of these, when it enters into any individual, is likewise justice in him, we shall then be agreed; (for what shall we say?) if not, we shall consider something else. But now let us finish that speculation, which we thought proper, when we judged that, if we attempted, first to contemplate justice in some of the greater objects which possess it, it would more easily be seen in one man; and a city appeared to us to be the most proper object of this kind. And so we established the very best we could, well knowing that justice would be in a good one. Let us now transfer and apply to a single person what has there appeared to us with, respect to a whole city: and, if the same things correspond, it shall be well; but, if any thing different appear in the individual, going back again to the city, we shall put it to the proof; and, instantly considering them, when placed by one another, and striking them, we shall make justice shine out as from flints; and, when it is become manifest, we shall firmly establish it among ourselves.

Glaucon:: You say quite in the right way, and we must do so.

Socrates:: Why then, when we denominate any thing the same, though different in degrees, is it dissimilar in that respect in which we call it the same, or is it similar?

Glaucon:: It is similar.

Socrates:: The just man then, will differ nothing from the just city, according to the idea of justice, but will be similar to it.

Glaucon:: He will be similar to it.

Socrates:: But indeed with respect to this inquiry, the city at least appeared then to be just, when the three species of dispositions in it did each of them its own work, viz. the temperate, the brave, and the wise, by virtue of their own proper natures, and not according to any other affections and habits.

Glaucon:: True.

Socrates:: And shall we not, friend, judge it proper, that the individual, who has in his soul the same principles (viz. temperance, fortitude, wisdom), shall, from having the same affections with those in the city, be called by the same names?

Glaucon:: By all means.

Socrates:: We have again, O wonderful man! fallen into no mean speculation concerning the soul; whether it contain in itself those three principles or not.

Glaucon:: Into no mean one, as I imagine. And it is likely, Socrates, that the common saying is true, that things excellent are difficult.

Socrates:: It appears so. But know well, Glauco, that, according to my opinion, we shall never comprehend this matter accurately, in the methods we are now using in these reasonings, for the road leading to it is greater and longer: we may however, it is likely, speak of it in such a manner as may be worthy of our former disquisitions and speculations.

Glaucon:: Is not that desirable? This would satisfy me for my own part, at present, at least.

Socrates:: This, shall to me too be quite sufficient.

Glaucon:: Do not then give over, but pursue your inquiry.

Socrates:: Are we not, then, under a necessity, of acknowledging that there are in every one of us the same forms and manners which are in the city? for from no where else did they arrive thither. For it were ridiculous if one should imagine that the irascible disposition did not arise from the individuals in cities, who have this blemish, as those of Thrace, Scythia, and, in some measure, almost all the higher region; and the same thing may be said with respect to the love of learning, which one may chiefly ascribe to this country or with reference to the love of riches, which we may say prevailed especially among the Phœnicians and the inhabitants of Egypt.

Glaucon:: Very much so.

Socrates:: This then is so; nor is it difficult to be known.

Glaucon:: No, indeed.

Socrates:: But this is difficult to determine, whether we perform each of these by the same power; or, as they are three, we perform one by one power, and another by another; that is, we learn by one, we are angry by another, and by a certain third we desire those pleasures relating to nutrition and propagation, and the other pleasures of affinity to these. Or do we, in each of these, when we apply to them, act with the whole soul?

Glaucon:: These things are difficult to be determined in a manner worthy of the subject. So it seems to me.

Socrates:: Let us then, in this manner, attempt to determine these things, whether they are the same with one another, or different. How are we to do it?

Glaucon:: It is plain, that one and the same thing cannot, at one and the same time, do or suffer contrary things in the same respect, and with reference to the same object; so that, if we any where find these circumstances existing among them, we shall know that it was not one and the same thing, but several.

Socrates:: Be it so. Consider then what I am saying.

Glaucon:: Proceed.

Socrates:: Is it possible for the same thing to stand and to be moved at once in the same respect?

Glaucon:: By no means.

Socrates:: Let us determine this more accurately still; lest, as we proceed, we be any way uncertain about it. For, if one should say that when a man stands, yet moves his hands and his head, that the same person at once stands and is moved, we should not, I imagine, think it proper to speak in this manner; but that one part of him stood, and another part was moved. Should we not speaking this manner?

Glaucon:: In this manner.

Socrates:: But if one who says these things should, in a more jocose humor still, and facetiously caviling, allege that tops stand wholly, and are at the same time moved, when their centre is fixed on one point, and they are whirled about,—or that any thing else going round in a circle in the same position doth this,—we should not admit it, as it is not in the same respect that they stand still and are moved: but we should say, that they have in them the straight line and the periphery; and that, with relation to the straight line, they stood; (for towards no side they declined); but with relation to the periphery, they moved in a circle. But, when its perpendicularity declines either to the right or left hand, forwards or backwards, whilst it is at the same time whirling round; then in no respect doth it stand.

Glaucon:: Very right.

Socrates:: Nothing then of this kind shall move us, when it is said: nor shall anyone persuade us, as if any thing, being one and the same thing, could do and suffer contraries at one and the same time, with reference to the same object, and in the same respect.

Glaucon:: He shall not persuade me.

Socrates:: But however, that we may not be obliged to be tedious in going over all these quibbles, and in evincing them to be false, let us proceed on this supposition, that so it is; after we have agreed that, if at any time these things appear otherwise than as we now settle them, we shall yield up again all we shall gain by it.

Glaucon:: It is necessary, to do so.

Socrates:: Would not you then, deem these things among those which are opposite to one another; whether they be actions or passions, for in this there is no difference; to assent, to wit, and to dissent, to desire to obtain a thing, and to reject it; to bring towards oneself, and to push away?

Glaucon:: I would deem these, among the things which are opposite to each other.

Socrates:: What then, with respect to thirsting, to hungering, and in general with respect to all the passions; and further, to desire, to will, and all these, may they not somehow be placed among those species which have now been mentioned? As for example, will you not always say that the soul of one who has desire goes out after that which it desires, or brings near to it that which it wishes to have? Or again, in so far as it wants something to be afforded it, like one who only sees an object, that it intimates by signs, to have it brought near, desiring the actual possession of it?

Glaucon:: I would say so.

Socrates:: But what, to be unwilling, not to wish, nor to desire. shall we not deem these of the same kind, as to push away from the soul, and drive off, and every thing else which is opposite to the former?

Glaucon:: Why not?

Socrates:: This being the case, shall we say there is a certain species of the desires? and that the most conspicuous are those which we call thirst and hunger?

Glaucon:: We shall say so.

Socrates:: Is not the one the desire of drinking, and the other of eating?

Glaucon:: Yes.

Socrates:: Is it then, when considered as thirst, a desire in the soul of something further than of drink?

Glaucon:: It is according to the nature of the thirst.

Socrates:: Is there then a thirst of a hot drink, or of a cold, of much or of little, or in short of some particular kind of drink? for, if there be any heat accompanying the thirst, it readily occasions a desire of a cold drink; but if cold accompanies it, then there is excited a desire of a warm drink: if the thirst be great, through many circumstances, it occasions a desire of much drink, but if small, a desire of a little drink: but the desire itself to thirst never creates the desire of any thing else, but of drink itself, as its nature prompts; and in like manner of the appetite of hunger with relation to meat.

Glaucon:: Thus every desire, in itself, is of that alone of which it is the desire; but to be a desire of such or such a particular species, are adventitious circumstances.

Socrates:: Let not then any one, create us any trouble, as if we were inadvertent; that no one desired drink, but good drink; or meat, but good meat: for indeed all men desire that which is good. If then thirst be a desire, it is of what is good; whether it be of drink, or of whatever else it is the desire. And in the same way of all the other, desires.

Glaucon:: Perhaps, the man who should mention these things would seem to say something material.

Socrates:: But however, whatever things are of such a nature as to belong to any genus, have a general reference to the genus; but each particular of these refers to a particular species of that genus.

Glaucon:: I have not understood you.

Socrates:: Have you not understood, that greater is of such a kind as to be greater than somewhat?

Glaucon:: Yes, indeed.

Socrates:: Is it not greater than the lesser?

Glaucon:: Yes.

Socrates:: And that which is considerably greater than that which is considerably lesser; is it not?

Glaucon:: Yes.

Socrates:: And that which was formerly greater than that which was formerly lesser; and that which is to be greater than that which is to be lesser?

Glaucon:: What else?

Socrates:: And after the same manner, what is more numerous with respect to what is less numerous, and what is double with reference to what is half, and all such like things; and further, what is heavier with respect to lighter, and swifter to slower, and further still, hot to cold; and all such like things, are they not after this manner?

Glaucon:: Entirely so.

Socrates:: But what as to the sciences? Is not the case the same? For, science itself is the science of learning itself, or of whatever else you think proper to make it the science: but a certain particular science, and of such a particular kind, refers to a certain particular object, and of such a kind. What I mean is this. After the science of building houses arose, did it not separate from other sciences, so as to be called architecture?

Glaucon:: What else?

Socrates:: Was it not from its being of such a kind as none of others were?

Glaucon:: Yes.

Socrates:: Was it not then from its being the art of such a particular thing, that itself became such a particular art? And all other arts and sciences in like manner?

Glaucon:: They are so.

Socrates:: Allow then, that this is what I wanted to express, if you have now understood it; where things are considered as having reference to other things, generals alone refer to generals, and particulars to particulars. I do not however say that the science altogether resembles that of which it is the science; (as if, for example, the science of healthy and sickly were itself healthy and sickly; or that the science of good and evil were itself good and evil.) But as science is not constituted the science of that thing in general of which it is the science, but only of a certain quality of it (to wit, of its healthy and sickly state), so itself comes to be a certain particular science; and this causes it to be called no longer simply a science, but the medicinal science; the particular species to which it belongs being superadded.

Glaucon:: I have understood you, and it appears to me to be so.

Socrates:: But will not you, make thirst now, whatever it be, to be one of those things which respect somewhat else, considered as what it is, and it is surely thirst?

Glaucon:: I will, and it respects drink.

Socrates:: And does not a particular thirst desire a particular drink? But thirst in general is neither of much nor of little, nor of good nor bad, nor, in one word, of any particular kind; but of drink in general alone is thirst in general naturally the desire.

Glaucon:: Entirely so, indeed.

Socrates:: The soul of the man then who thirsts, so far as he thirsts, inclines for nothing further than to drink; this he desires, to this he hastens.

Glaucon:: It is plain.

Socrates:: If then at any time any thing draw back the thirsting soul, it must be some different part of it from that which thirsts, and leads it as a wild beast to drink: for, have we not said that it is impossible for the same thing, in the same respects, and with the same parts of it, to do at once contrary things?

Glaucon:: It is indeed impossible.

Socrates:: In the same manner, I imagine, as it is not proper to say of an archer, that his hands at once push out and likewise pull in the bow; but that the one hand is that which pushes out, and the other that which pulls in.

Glaucon:: Entirely so.

Socrates:: But whether may we say, that there are some who when athirst are not willing to drink?

Glaucon:: Yes, indeed, there are many, and many times that is the case.

Socrates:: What now, may one say of these persons? Might it not be said, that there was in their soul somewhat prompting them to drink, and likewise something hindering them, different from the other, and superior to the prompting principle?

Glaucon:: It seems so to me.

Socrates:: Does not then the restraining principle arise from reason when it arises; but those which push, and drive forwards, proceed from passions and diseases?

Glaucon:: It appears so.

Socrates:: We shall then, not unreasonably account these to be two, and different from one another; calling the one part which reasons, the rational part of the soul; but that part with which it loves, and hungers, and thirsts, and those other appetites, the irrational and concupiscible part, the friend of certain gratifications and pleasures.

Glaucon:: We shall not; but we may most reasonably consider them in this light.

Socrates:: Let these then, be allowed to be distinct species in the soul. But as to that of anger, is it a third principle, or has it affinity to one of those two?

Glaucon:: Perhaps it has, to the concupiscible part.

Socrates:: But I believe, what I have somewhere heard, how that Leontius, the son of Aglaion, as he returned from the Pyræum, perceived some dead bodies lying in the sewer, below the outside of the north wall, and had both a desire to look at them, and at the same time was averse from it, and turned himself away; and for a while he struggled with his desire, and covered his eyes; but, at last, being overcome by his appetite, with eager eyes, running towards the dead bodies, Lo now, you wretched eyes! glut yourselves with this fine spectacle.

Glaucon:: I too, have heard it.

Socrates:: This speech now, shows that anger sometimes opposes the appetites, as being different one from another.

Glaucon:: It shows it, indeed.

Socrates:: And do not we often perceive, when, the appetites compel any one contrary to reason, that he reproaches himself, and is angry at the compelling principle within him? And when the rational and concupiscible are in a state of sedition, anger in such a person becomes as it were an ally to reason: but when the appetite goes along with reason, then anger gives no opposition. You will say, I imagine, that you have perceived nothing of this kind in yourself at any time, nor yet in another.

Glaucon:: No, by Jupiter.

Socrates:: What now, when: one imagines he does an injury, the more generous he is, is he not so much the less apt to be angry, when he suffers hunger and cold, or any other such things, from one who inflicts, as he imagines, these things with, justice? And, as I have said, his anger will not incline him to rise up against such an one.

Glaucon:: True.

Socrates:: But what? when a man imagines he is injured, does not anger in such an one burn? is he not indignant? and does he not fight, as an ally, on the side of what appears to be just? and under all the sufferings of hunger, cold, and such like, does he not bear up? and conquer; and cease not from his generous toils, till either he accomplish, them, or die, or be restrained by the rational principle within him, like a dog by the shepherd, and is rendered mild?

Glaucon:: It perfectly resembles, what you say; for, in our city, we appointed the auxiliaries to be obedient, as dogs, to the rulers of the city, as to shepherds.

Socrates:: You rightly understand, what I would say. But have you besides considered this?

Glaucon:: As what?

Socrates:: That here the reverse appears concerning the irascible from that in the former case: for there we were deeming it the same with the concupiscible; but now we say it is far from it; or that, in the sedition of the soul, it much rather joins its arms with the rational part.

Glaucon:: Entirely so.

Socrates:: Is it then as something different from it, or as a species of the rational? so as that there are not three species, but only two in the soul, the rational and concupiscible. Or, as there were three species which completed the city, the lucrative, the auxiliary, the legislative; so, in the soul, this irascible is a third thing, naturally an auxiliary to the rational, if it be not corrupted by bad education?

Glaucon:: Of necessity it is, a third.

Socrates:: Yes, if at least it appear to be any way different from the rational, as it appeared to be distinct from the concupiscible. But that is not difficult, to be seen. For one may see this, even in little children, that immediately from their infancy they are full of anger; but some appear, to me at least, never at all to participate of reason; and the most arrive at it but late.

Glaucon:: Yes, truly, you say right.

Socrates:: And one may yet further observe in the brute creatures, that what you say is really the case: and besides this, it is likewise attested by what we formerly mentioned from Homer;

> His breast he struck, and thus his heart reproved.

For, in that passage, Homer has plainly made one part reprehend another; the part which reasons about good and evil, reprehend the part which is unreasonably angry.

Glaucon:: You say perfectly right.

Socrates:: These things, we have with difficulty agreed to; and it is now sufficiently acknowledged, that the same species of principles as are in a city are in every individual, and in the same number.

Glaucon:: They are so.

Socrates:: Must it not therefore of necessity follow, that after what manner the city was wise, and in what respect, after the same manner, and in the same respect, is the individual wise also.

Glaucon:: Why not?

Socrates:: And in what respects, and after what manner, the individual is brave, in the same respect, and after the same manner, is a city brave. And so in all other respects, both of them are the same as to virtue.

Glaucon:: Of necessity.

Socrates:: And I think, Glauco, we shall say that a man is just in the same way as we said a city was so? This likewise is quite necessary. But have we not somehow forgot this, that the city was just, when every one of the three species in it did each its own work?

Glaucon:: We do not appear to me, to have forgot it.

Socrates:: We must then remember likewise, that each one of us will be just, and do his own work, when he doth his own affairs within himself.

Glaucon:: We must, carefully remember it.

Socrates:: Is it not then proper that the rational part should govern, as it is wise, and hath the care of the whole soul? and that the irascible part should be obedient, and an auxiliary of the other?

Glaucon:: Certainly.

Socrates:: Shall not then the mixture, as we observed, of music and gymnastic make these two harmonious, raising and nourishing the one with beautiful reasonings and disciplines, and unbending the other, soothing and rendering it mild by harmony and rhythm?

Glaucon:: Most perfectly.

Socrates:: And when those two are in this manner nourished, and have been truly taught, and instructed in their own affairs, let them be set over the concupiscible part, which in every one is the greater part of the soul, and in its nature most insatiably desirous of being gratified: and let them take care of this part, lest, being filled with these bodily pleasures, as they are called, it become great and vigorous, and do not its own work, but attempt to enslave and rule over those it ought not, and overturn the whole life of all in general.

Glaucon:: Entirely so.

Socrates:: And might he not, by this principle, guard likewise in the best manner against enemies from without, by its influence both over the whole soul and body likewise, the one deliberating, and the other fighting in obedience to its leader, and executing with fortitude the things deliberated?

Glaucon:: It is so.

Socrates:: And I think that we call a man brave, when, through all the pains and pleasures of life, the irascible part preserves the opinion dictated by reason concerning what is terrible, and what is not.

Glaucon:: Right.

Socrates:: And we call him wise, from that small part which governs in him, and dictates these things, having in it the knowledge of what is advantageous for each one, and for the whole community of the three themselves.

Glaucon:: Perfectly so.

Socrates:: But what, do we not call him temperate, moreover, from the friendship and harmony of these very things, when the governing and governed agree in one, that reason ought to govern, and when they do not raise sedition?

Glaucon:: Temperance, is no other than this, both as to the city and the individual.

Socrates:: But, as we have often said, he shall be just, by these things, and in this manner.

Glaucon:: It is quite necessary.

Socrates:: What then, has any thing blunted us, that we should think justice to be any thing else than what it has appeared to be in a city?

Glaucon:: Nothing appears to me at least, to have done it.

Socrates:: But in this manner, let us, by all means, confirm ourselves, if there yet remain any doubt in the soul, that can be an objection to this principle, by bringing the man into difficult circumstances.

Glaucon:: As what?

Socrates:: Such as this: if we were obliged to declare concerning such a city, and concerning a man born and educated conformably to it, whether we thought such a one, when entrusted with gold or silver, would embezzle it; do you imagine that any one would think such a one would do it sooner than those who are not of such a kind?

Glaucon:: No one.

Socrates:: Will not such a one then be free of sacrileges, thefts, treacheries, against companions in private, or the city in public?

Glaucon:: He will be free.

Socrates:: Nor will he ever, in any shape, be faithless, either as to his oaths, or other declarations.

Glaucon:: How can he?

Socrates:: Adulteries, and neglect of parents, impiety against the Gods, will belong to every one else, sooner than to such an one.

Glaucon:: They will belong to every one else, truly.

Socrates:: And is not this the cause of all these things, that, of all the parts within him, each one thing does its own work, as to governing and being, governed?

Glaucon:: This, is it, and nothing else.

Socrates:: Do you desire justice to be any thing else, but such a power as produces such men and cities?

Glaucon:: Not I, truly, for my part.

Socrates:: Our dream then which we conjectured is at last accomplished that when we first began to build our city, we seemed, by some God's assistance, to have got to a beginning and pattern of justice.

Glaucon:: Entirely so.

Socrates:: And that, Glauco, was a certain image of justice, according to which, it behooved the man who was fitted by nature for the office of a shoe-maker, to perform properly that office, and to do nothing else, and he who is a carpenter to perform that office, and all others in the same way.

Glaucon:: It appears so.

Socrates:: And of such a kind truly was justice, as it appeared to us, I do not mean as to external action, but concerning that which is really internal, relating to the man himself, and those things which are properly his own; not allowing any principle in himself to attempt to do what belongs to others, nor the principles to be pragmatical, engaging in one another's affairs; but in reality well establishing his own proper affairs, and holding the government of himself, adorning himself, and becoming his own friend, and attuning those three principles in the most natural manner, as three musical strings, base, tenor, and treble, or whatever others may chance to intervene. Thus he will be led to combine, all these together, and become of many an entire one, temperate and attuned, and in that manner to perform whatever is done, either in the way of acquiring wealth, or concerning the management of the body, or any public affair or private bargain; and in all these cases to account and call that action just and handsome, which always sustains and promotes this habit; and to call the knowledge which presides over this action, wisdom: but to call that an unjust action which dissolves this habit, and the opinion which presides over this, folly.

Glaucon:: You say perfectly true, Socrates.

Socrates:: Be it so. If then we should say that we have found out a just man and city, and what justice is in them, I do not think we should seem to be altogether telling a lie.

Glaucon:: No, by Jupiter.

Socrates:: May we say so?

Glaucon:: We may say it.

Socrates:: Be it so. But we were next, I think, to consider injustice.

Glaucon:: That is plain.

Socrates:: Must it not then be some sedition among the three principles, some Pragmaticalness and intermeddling in things foreign to their proper business, and an insurrection of some one principle against the whole soul, to govern in it when it does not belong to it, but which is of such a nature, as what really ought to be in subjection to the governing principle? I imagine then we shall call their tumult and mistake by such names as these, injustice, intemperance, cowardice and folly, and in general all vice.

Glaucon:: These things, are so.

Socrates:: To do injustice then, and to be injurious, and likewise to do justly, all these must be very manifest, if, to wit, injustice and justice are so.

Glaucon:: As how?

Socrates:: Because they are no way different from what is salutary or noxious: as these are in the body, so are the others in the soul.

Glaucon:: How?

Socrates:: Such things as are healthy constitute health, and such as are noxious produce disease.

Glaucon:: Yes.

Socrates:: And must not the doing justly produce justice, and doing unjustly produce injustice?

Glaucon:: Of necessity.

Socrates:: But to produce health, is to establish all in the body according to nature; to govern and to be governed of one another; and to produce disease, is to govern and be governed, one part by another, contrary to nature.

Glaucon:: It is indeed.

Socrates:: Then again, to produce justice, is it not to establish all in the soul according to nature, to govern and be governed by one another? And injustice is to govern and be governed by one another, contrary to nature.

Glaucon:: Plainly so.

Socrates:: Virtue then, it seems, is a sort, of health, and beauty, and good habit of the soul; and vice the disease, and deformity, and infirmity.

Glaucon:: It is so.

Socrates:: Do not then honorable pursuits lead to the acquisition of virtue? but dishonorable ones to that of vice?

Glaucon:: Of necessity.

Socrates:: What remains then for us, as seems, to consider, is, whether it be profitable to do justly, and to pursue what is honorable, and to be just; whether a man under such a character be unknown or not? Or to do unjustly, and to be unjust, though one be never punished, nor by chastisement become better?

Glaucon:: But, Socrates, this speculation seems now, to me at least, to be ridiculous. For If, when the nature of the body is corrupted, it be thought that life is not worth having, not even though one had all kinds of meats and drinks, all kind of wealth, all kind of dominion; when the nature of that by which we live is disordered, and thoroughly corrupted, shall life then be worth having, though one can do every thing else which he inclines, except ascertaining, how he shall be liberated from vice and injustice, and acquire justice and virtue, since, to wit, both these things have appeared as we have represented them?

Socrates:: It would be truly ridiculous. But, however, as we have arrived at such a point as enables us most distinctly to perceive that these things are so, we must not be weary.

Glaucon:: We must, by Jupiter, the least of all things desist.

Socrates:: Come then, that you may likewise see how many principles vice possesses, principles which, as I imagine, are worthy of attention.

Glaucon:: I attend, only tell me.

Socrates:: And truly now, since we have reached this part of our discourse, it appears to me as from a lofty place of survey, that there is one principle of virtue, but those of vice are infinite. Of which there are four, which deserve to be mentioned.

Glaucon:: How do you say?

Socrates:: There seem to be as many species of soul as there are of republics.

Glaucon:: How many then?

Socrates:: There are five, of republics, and five of the soul.

Glaucon:: Tell, what these are.

Socrates:: I say, that this, which we have gone through, is one species of a republic; and it may have a two-fold appellation; for, if among the rulers there be one surpassing the rest, it may be called a Monarchy; if there be several, an Aristocracy.

Glaucon:: True.

Socrates:: I call this then, one species; for, whether they be several, or but one, who govern, they will never alter the principal laws of the city; observing the nurture and education we have described.

Glaucon:: It is not likely.

THE END OF THE FOURTH BOOK.

## BOOK V.

Socrates:: I denominate then indeed both such a city and republic, and such a man as we have described, good and upright; and if this republic be an upright one, I deem the others bad and erroneous, both as to the regulations in cities, and the establishing the temper of soul of individuals, and that in four species of depravity.

Glaucon:: Of what kind are these?

Socrates:: I was then proceeding to mention them in order, as they appeared to me to rise out of one another: but Polemarchus stretching out his hand (for he sat a little further off than Adimantus) caught him by the robe at his shoulder, and drew him near; and, bending himself towards him, spoke something in a whisper, of which we heard nothing but this:

Polemarchus:: Shall we let pass then? or what shall we do?

Socrates:: Adeimantus, speaking now aloud;

Adeimantus:: Not at all.

Socrates:: What then will not you let pass?

Adeimantus:: You, for it was to you I alluded. You seem to us to be growing negligent, and to steal a whole branch of the discourse, and that not the least considerable, that you may not have the trouble of going through it; and you imagine that you escaped our notice, when you made this speech so simply, viz. that, both as to, wives and children, it is manifest to every one that these things will be common among friends.

Socrates:: Did not I say right, Adimantus?

Adeimantus:: Yes: but this, which was rightly said, like other parts of your discourse, requires explanation: to show what is the manner of their being common; for there may be many kinds of it. Do not omit then to tell which is the method you spoke of; for we have been in expectation for some time past, imagining you would, on some occasion, make mention of the propagation of children, in what way they should be propagated; and, when they are born, how they should be nurtured; and every thing relative to what you spoke concerning wives and children being in common; for we imagine, that it is of considerable, nay, of the utmost importance to the state, when this is rightly performed, or otherwise. But now when you are entering on the consideration of another constitution, before you have sufficiently discussed these things, it seemed proper to us what you now heard, not to let you pass, before you went over all these things, as you did the others.

Glaucon:: And you may count me too, as joining in this vote.

Thrasymachus:: You may easily judge, Socrates, that this is the opinion of us all.

Socrates:: What is this, you have done, laying hold of me? What a mighty discourse do you again raise, as you did at the beginning, about a republic, in which I was rejoicing as having now completed it, being pleased if any one would have let these things pass, and been content with what was then said! But you know not what a swarm of reasonings you raise by what you now challenge, which I foreseeing passed by at that time, lest it should occasion great disturbance.

Thrasymachus:: What then, do you imagine that these are now come hither to melt gold, and not to hear reasonings?

Socrates:: Yes, but in measure.

Glaucon:: The whole of life, Socrates, is with the wise, the measure of hearing such reasonings as these. But pass what relates to us, and do not at all grudge to explain your opinion concerning the object of our inquiry,—What sort of community of wives and children is to be observed by our guardians, and concerning the nurture of the latter while very young, in the period between their generation and their education, which seems to be the most troublesome of all. Endeavor then to tell us in what manner it should be done.

Socrates:: It is not easy, happy Glauco, to go through these things; for there are many of them hard to be believed, whether the things we say be possible; and though they could easily be effected, whether they would be for the best might still be doubted: wherefore, dear companion, I grudge somewhat to touch on these things, lest our reasonings appear to be rather what were to be wished for, than what could take place.

Glaucon:: Do not at all grudge; for your hearers are neither stupid, nor incredulous, nor ill-affected towards you.

Socrates:: Do you say this, most excellent Glauco, with a desire to encourage me?

Glaucon:: I do.

Socrates:: Then your discourse has a quite contrary effect; for, if I trusted to myself, that I understood what I am to say, your encouragement would do well. For one who understands the truth, about the greatest and the most interesting affairs, speaks with safety and confidence among the wise and friendly; but to be diffident of oneself, and doubtful of the truth, and at the same time to be haranguing as I do now, is both dreadful and dangerous; not only lest he should be exposed to ridicule (for that is but a trifling thing), but lest that, mistaking the truth, I not only fall myself, but draw my friends along with me into an error about things in which we ought least of all to be mistaken. I adore therefore Adrastia, for the sake of what, Glauco, I am going to say. For I trust it is a smaller offence to be a man-slayer without intention, than to be an impostor with regard to what is good and excellent, just and lawful: and it were better to hazard such a thing among enemies than friends; so that you must give me better encouragement.

Then Glauco, laughing:

Glaucon:: But, Socrates, if we suffer any thing amiss from your discourse, we shall acquit you as clear of any man-slaughter, and as no impostor: so proceed boldly.

Socrates:: But indeed, he who is acquitted at a court of justice is deemed clear of the crime, as the law says; and if it be so in that case, 'tis reasonable it should be so in this.

Glaucon:: For this reason then, proceed.

Socrates:: We must now, return again to what it seems should, according to method, have been recited before; and perhaps it is right to proceed in this manner, that, after having entirely finished the drama reflecting the men, we go over that which concerns the women; especially since you challenge me to proceed in this manner. For, in my opinion, men who have been born and educated in such a manner as we have described, can have no right possession and enjoyment of children and wives, but in pursuing the same track in which we have proceeded from the beginning; for we have endeavored, in our reasoning, to form somehow men as the guardians of a flock.

Glaucon:: We have.

Socrates:: Let us proceed then, having established likewise affairs relating to propagation and education in a manner similar to that of the males; and let us consider whether it be proper for us to do so or not.

Glaucon:: How do you mean?

Socrates:: Thus: Whether shall we judge it proper for the females of our guardian dogs, to watch likewise in the same manner as the males do, and to hunt along with them, and do every thing else in common? Or shall we judge it proper for them to manage domestic affairs within doors, as being unable for the other exercises, because of the bringing forth and the nursing the whelps; and the males to labor, and to have the whole care of the flocks?

Glaucon:: They are to do all, in common. Only we are to employ the females as the weaker, and the males as the stronger.

Socrates:: Is it possible then, to employ any creature for the same purposes with another, unless you give it the same nurture and education as you give the other?

Glaucon:: It is not possible.

Socrates:: If then we shall employ the women for the same purposes as we do the men, must we not likewise teach them the same things?

Glaucon:: We must.

Socrates:: Were not both music and gymnastic bestowed on the males?

Glaucon:: They were.

Socrates:: These two arts therefore, and those likewise relating to war, must be bestowed also on the women, and they must be employed about the same things.

Glaucon:: It is reasonable, from what you say.

Socrates:: Yet as these things are contrary perhaps to custom, many of these things we are now speaking of may appear ridiculous, if practiced in the way we mention.

Glaucon:: Extremely so.

Socrates:: What, do you perceive as the most ridiculous part? Or is it plainly because that you see the women naked in the Palæstra wrestling with the men, and not only the young women, but even the more advanced in years, in the same manner as old men in the wrestling-schools, when they are wrinkled, and not at all handsome to the eye, yet still fond of the exercises?

Glaucon:: Yes, by Jupiter. Because it might indeed appear ridiculous, at least as matters stand at present.

Socrates:: Must we not therefore, since we have entered upon this discourse, be afraid of the raillery's of the men of pleasantry, whatever things they may say with regard to such a revolution being introduced, as well in gymnastic as in music, and particularly in the use of arms, and the management of horses?

Glaucon:: You say right.

Socrates:: But since we have entered on this discourse, we must go to the rigor of the law, and beg these men not to follow their own customs, but to think seriously, and remember, that it is not long ago since these things appeared base and ridiculous to the Greeks, which are only so now to the most of the barbarians: such as to see naked men. And when first the Cretans, and afterwards the Lacedæmonians, began their exercises, it was in the power of the men of humor of that time to turn all these things into ridicule. Do not you think so?

Glaucon:: I do.

Socrates:: But I imagine, that when upon experience it appeared better to strip themselves of all these things, than to be wrapped in them, what was ridiculous indeed to the eye, was removed by the idea of the best, mentioned in our reasoning; and this too showed manifestly, that he is a fool who deems any thing ridiculous but what is bad, and attempts to rally upon any other idea of the ridiculous but that of the foolish and the vicious, or to be serious in any other pursuit but that of the good.

Glaucon:: By all means.

Socrates:: Is not this then first of all to be agreed on, whether these things be possible or not? And we must allow it to be a matter of dispute, if any one, either in jest or earnest, incline to doubt, whether the human nature in the female sex be able, in every thing, to bear a share with the male? or if it be not in any one thing? or if it be able in some things, but not in others? and among which of these are the affairs of war? Would not the man who thus sets out in the most: handsome manner conclude too, as it seems, most handsomely?

Glaucon:: By far.

Socrates:: Are you willing, then, that we ourselves, instead of others, dispute about these things, that the opposite side may not be destitute of a defense?

Glaucon:: Nothing hinders.

Socrates:: Let us then say this for them: That there is no need, Socrates and Glauco, of others to dispute with you about this matter; for yourselves in the beginning of your establishment, when you established your city, agreed, that it was necessary for each individual to practice one business, according to their several genius.

Glaucon:: I think we acknowledged it; for why should they not?

Socrates:: Does not then the genius of the male differ widely from that of the female?

Glaucon:: Why does it not differ?

Socrates:: And is it not fit to enjoin each a different work, according to their genius?

Glaucon:: Why not?

Socrates:: Are not you then in the wrong now, and contradict yourselves, when you say that men and women ought to do the same things, whilst their nature is extremely different? Can you in answer to these objections, admirable Glauco, make any defense?

Glaucon:: It is not quite an easy matter, to do it immediately; but I will entreat you, and do now entreat you, to go through the arguments on our side, whatever they may be.

Socrates:: These are the things, Glauco, and many other such like, which I long ago foreseeing, was both afraid and backward to touch on the law concerning the possession of wives, and the education of children.

Glaucon:: It is not easy, by Jupiter.

Socrates:: It is not. But the case is thus: If a man fall into a small fish-pond, or into the middle of the greatest sea, he must still swim in the one no less than in the other.

Glaucon:: Entirely so.

Socrates:: Must not we swim then, and endeavor to escape from this reasoning, expecting that either some dolphin is to carry us out, or that we shall have some other remarkable deliverance?

Glaucon:: It seems we must do so.

Socrates:: Come then, let us see if we can any where find an out-gate; for we did acknowledge that different natures ought to study different things; but the nature of man and woman is different; yet now we say that different natures ought to study the same things: these are the things which you accuse us of.

Glaucon:: Certainly.

Socrates:: How generous, Glauco, is the power of the art of contradicting!

Glaucon:: How?

Socrates:: Because, many seem to fall into it unwillingly, and imagine that they are not caviling, but reasoning truly, because they are not able to understand the subject, by dividing it into its proper parts; and under this arguing will pursue the opposite of their subject, using caviling instead of reasoning.

Glaucon:: This is indeed, the case with many; but does it at present extend likewise to us?

Socrates:: Entirely so. We seem then unwillingly to have fallen into a contradiction.

Glaucon:: How?

Socrates:: Because we have very strenuously and very keenly asserted, that when the nature is not the same, they ought not to have the same employments; but we have not in any respect considered what is the characteristic of the sameness or diversity of nature, nor to what it points: we stopped then, when we had assigned different pursuits to different natures, and to the same natures the same pursuits.

Glaucon:: We have never indeed, considered it.

Socrates:: It is therefore, still in our power, as appears, to question ourselves, whether the nature of the bald, or of those who wear their hair, be the same, and not different? And after we should agree that it was different, whether, if the bald made shoes, we should allow those who wear hair to make them? or, if those who wear hair made them, whether we should allow the others?

Glaucon:: That were ridiculous.

Socrates:: Is it in any other respect, ridiculous then, that we did not wholly determine the sameness and diversity of nature, but attended only to that species of diversity and sameness which respects the employments themselves; just as we say that the physician, and the man who has a medical soul, have one and the same nature? Do not you think so?

Glaucon:: I do.

Socrates:: But that the physician and architect have a different nature.

Glaucon:: Entirely.

Socrates:: And so, of the nature of men and of women, if it appear different, in respect to any art, or other employment, we shall say, that this different employment is to be assigned to each separately. But if their nature appear different only in this, that the female brings forth, and the male begets, we shall not say that this has at all shown the men to be different from the woman in the respect we speak of. But we shall still be of opinion, that both our guardians and their wives ought to pursue the same employments.

Glaucon:: And with reason.

Socrates:: Shall we not then henceforth desire any one who says the contrary, to instruct us in this point, what is that art or study respecting the establishment of a city, where the nature of the man and woman is not the same, but different?

Glaucon:: It is reasonable, truly.

Socrates:: Possibly some one may say, as you was saying some time since, that it is not easy to tell this sufficiently on the sudden, but that it is not difficult to one who has considered it.

Glaucon:: One might indeed say so.

Socrates:: Are you willing then that we desire such an opponent to listen to us, if by any means we shall show him that there is in the administration of the city no employment peculiar to the women?

Glaucon:: By all means.

Socrates:: Come on then, (shall we say to him) answer us. Is not this your meaning? That one man has a good genius for any thing, and another a bad, in this respect, that the one learns any thing easily, and the other with difficulty; and the one with a little instruction discovers much in what he learns; but the other, when he obtains much instruction and care, does not retain even what he has learned: with the one, the body is duly subservient to the mind; with the other, it opposes its improvement: are there any other marks than these by which you would determine one to have a good genius for any thing, and another to have a bad one?

Glaucon:: No one, would mention any other.

Socrates:: Know you then of any thing which is managed by mankind, with reference to which the men have not all these marks in a more excellent degree than the women? Or, should we not be tedious, if we mentioned particularly the weaving art, and the dressing pot-herbs and victuals, in which the female genius seems to be somewhat considerable, and is most: ridiculous where it is surpassed?

Glaucon:: You say true, that in the general, in every thing the one genius is superior to the other, yet there are many women who in many things excel many men: but, on the whole, it is as you say.

Socrates:: There is not then, my friend, any office among the whole inhabitants of the city peculiar to the woman, considered as woman, nor to the man, considered as man;

but the geniuses are indiscriminately diffused through both: the woman is naturally fitted for sharing in all offices, and so is the man; but in all the woman is weaker than the man.

Glaucon:: Perfectly so.

Socrates:: Shall we then commit every thing to the care of the men, and nothing to the care of the women?

Glaucon:: How shall we do so?

Socrates:: It is therefore, I imagine, as we say, that one woman too is fitted by natural genius for being a physician, and another is not; one is naturally a musician, and another is not?

Glaucon:: What else?

Socrates:: And one is naturally fitted for gymnastic, and another is not; one is fitted for war, and another is not.

Glaucon:: I at least am of this opinion.

Socrates:: And is not one likewise a lover of philosophy, and another averse to it; one of high spirits, and another of low?

Glaucon:: This likewise is true.

Socrates:: And has not one woman a natural genius for being a guardian, and another not? And have not we made choice of such a genius as this for our guardian men?

Glaucon:: Of such a genius as this.

Socrates:: The nature then of the woman and of the man for the guardianship of the city is the same, only that the one is weaker, and the other stronger.

Glaucon:: It appears so.

Socrates:: And such women as these are to be chosen to dwell with these men, and be guardians along with them, as they are naturally fit for them, and of a kindred genius.

Glaucon:: Entirely so.

Socrates:: And must not the same employments be assigned to the same natures?

Glaucon:: The same.

Socrates:: We are now arrived by a circular progression at what we formerly mentioned; and, we allow that it is not contrary to nature, to appoint for the wives of our guardians music and gymnastic.

Glaucon:: By all means.

Socrates:: We are not then establishing things impossible, or such as can only be wished for, since we establish the law according to nature; and what is at present contrary to these things, is contrary to nature rather, as appears.

Glaucon:: It seems so.

Socrates:: Was not our inquiry to hear of what was possible and best?

Glaucon:: It was.

Socrates:: And we have agreed, that these things are possible.

Glaucon:: We have.

Socrates:: And we must next agree, that they are best.

Glaucon:: It is plain we must.

Socrates:: In order therefore to make a guardian woman, at least the education will not be different from that of the men, especially as she has received the same natural genius.

Glaucon:: It will not be different.

Socrates:: What do you think then of such an opinion as this?

Glaucon:: Of what?

Socrates:: That of imagining with yourself one man to be better, and another worse,—or do you deem them to be all alike?

Glaucon:: By no means.

Socrates:: In the city now which we establish, whether do you judge, that our guardians with this education we have described, or shoe-makers with education in their art, will be rendered the better men?

Glaucon:: The question, is ridiculous.

Socrates:: I understand you. But what? Of all the other citizens, are not they the best?

Glaucon:: By far.

Socrates:: But what? Will not these women too be the best, of women?

Glaucon:: They will be so, by far.

Socrates:: Is there any thing better in a city than that both the women and the men be rendered the very best?

Glaucon:: There is not.

Socrates:: This then will be effected by music and gymnastic, being afforded them according as we have described.

Glaucon:: Why will it not?

Socrates:: We have then established a law which is not only possible, but moreover best for the state.

Glaucon:: We have.

Socrates:: The wives, then, of our guardians must be unclothed, since they are to put on virtue for clothes; and they must bear a part in war, and the other guardianship of the city, and do nothing else. But the lightest part of these services is to be allotted to the women rather than to the men, on account of the weakness of their sex. And the man who laughs at naked women, whilst performing the exercises for the sake of what is best, reaps the empty fruit of a ridiculous wisdom, and in no respect knows, as appears, at what he laughs, nor why he does it. For that ever was and will be deemed a noble saying, That what is profitable is beautiful, and what is hurtful is base.

Glaucon:: By all means.

Socrates:: Let us say then, that we have escaped one wave; as it were, having thus settled the law with respect to the women, without being wholly overwhelmed, ordaining that our male and female guardians are to manage all things in common: but our reasoning has been consistent with itself, as it respects both what is possible and likewise advantageous.

Glaucon:: It is truly no small wave you have escaped.

Socrates:: You will not, call it a great one, when you see what follows.

Glaucon:: Mention it, that I may see.

Socrates:: That law, and those others formerly mentioned, are adopted, as I imagine, by the following.

Glaucon:: Which?

Socrates:: That these women must all be common to all these men, and that no one woman dwell with any man privately, and that their children likewise be common; that neither the parent know his own children, nor the children their parent.

Glaucon:: This is much greater than the other, as to the incredibility, both of its being possible, and at the same time advantageous.

Socrates:: I do not believe, that any one will doubt of its utility, at least, as if it were not the greatest good to have the women and children in common, if it were but possible.

But I think the greatest question will be, whether it be possible or not?

Glaucon:: One may very readily, dispute as to both.

Socrates:: You mention, a crowd of disputes. But I thought that I should at least have escaped from the one, if its utility had been agreed on, and that it should have only remained to consider its possibility.

Glaucon:: But you have not, escaped unobserved; give then an account of both.

Socrates:: I must then, submit to a trial. But, however, indulge me thus far: allow me to feast myself, as those are wont to feast themselves who are sluggish in their dianoëtic part, when they walk alone. For men of this sort, sometimes before they find out how they shall attain what they desire; waving that inquiry, that they may not fatigue themselves in deliberating about the possibility or impossibility of it, suppose they have obtained what they desire, and then go through what remains. And they delight in running over what they will do when their desire is obtained, rendering their soul, otherwise indolent, more indolent still, I am now effeminate after this manner, and wish to defer those debates, and to inquire afterwards whether these things be possible. But at present, holding them possible, if you allow me, I will consider in what manner our rulers shall regulate these things, when they take place, that they may be done in the most advantageous manner, both to the state and the guardians. These things I shall endeavor, in the first place, to go over with your assistance, and the others afterwards, if you allow me.

Glaucon:: I allow, and inquire accordingly.

Socrates:: I imagine then, that if our rulers are worthy of that name, and in like manner these who are their auxiliaries, their ministers in the government, the latter will be disposed to do whatever is enjoined them, and the former will be ready to command; enjoining them some things in direct obedience to the law, and imitating the law in whatever things are entrusted to them.

Glaucon:: It is likely.

Socrates:: Do you now, who are their lawgiver, in the same manner as you have chosen out the men, choose out likewise the women, making their genius as similar as possible: and as they dwell and eat together in common; and as no one possesses any of these things privately, they will meet together; and being mingled in their exercises and other conversation, they will be led from an innate necessity, as I imagine, to mutual embraces. Do not I seem to say what will necessarily happen?

Glaucon:: Not, by any geometrical, but amatory necessity, which seems to be more pungent than the other, to persuade and draw the bulk of mankind.

Socrates:: Much more. But after this, Glauco, to mix together in a disorderly manner, or to do any thing else, is neither holy in a city of happy persons, nor will the rulers permit it.

Glaucon:: It were not just.

Socrates:: It is plain then, that after this we must make marriages as much as possible sacred; but the most advantageous would be sacred.

Glaucon:: By all means.

Socrates:: How then shall they be most advantageous? Tell me that, Glauco, for I see in your houses dogs of chase, and a great many excellent birds. Have you then indeed ever attended at all, in any respect, to their marriages, and the propagation of their species?

Glaucon:: How?

Socrates:: First of all, that among these, although they be excellent themselves, are there not some who are most excellent?

Glaucon:: There are.

Socrates:: Whether then do you breed from all of them alike? or are you careful to breed chiefly from the best?

Glaucon:: From the best.

Socrates:: But how?

Glaucon:: From the youngest or from the oldest, or from those who are most in their prime?

Socrates:: From those in their prime. And if the breed be not of this kind, you reckon that the race of birds and dogs greatly degenerates.

Glaucon:: I reckon so.

Socrates:: And what think you as to horses, and other animals? is the case any otherwise with respect to these?

Glaucon:: That, were absurd.

Socrates:: Strange, my friend! What extremely perfect governors must we have, if the case be the same with respect to the human race!

Glaucon:: However, it is so; but what then?

Socrates:: Because there is a necessity, for their using many medicines: for where bodies have no occasion for medicines, but are ready to subject themselves to a regimen of diet, we reckon that a weaker physician may suffice; but when there is a necessity for medicines, we know that a more able physician is then requisite.

Glaucon:: True; but with what view do you say this?

Socrates:: With this view. It appears that our rulers are obliged to use much fiction and deceit for the advantage of the governed; and we said somewhere, that all these things were useful in the way of medicines. And rightly. This piece of right now seems not to be the most inconsiderable in marriages, and the propagation of children.

Glaucon:: How now?

Socrates:: It is proper, from what we have acknowledged, that the best men embrace for the most part the best women; and the most depraved men, on the contrary, the most depraved women; and the offspring of the former is to be educated, but not that of the latter, if you desire to have the flock of the most perfect kind; and this must be performed in such a manner as to escape the notice of all but the governors themselves, if you would have the whole herd of the guardians to be as free from sedition as possible.

Glaucon:: Most right.

Socrates:: Shall there not then be some festivals by law established, in which we shall draw together the brides and bridegrooms? Sacrifices too must be performed, and hymns composed by our poets suitable to the marriages which are making. But the number of the marriages we shall commit to the rulers, that as much as possible they may preserve the same number of men, having an eye to the wars, diseases, and every thing else of this kind, and that as far as possible our city may be neither too great nor too little.

Glaucon:: Right.

Socrates:: And certain lots too, I imagine, should be made so artificial, that the depraved man may, on every embrace, accuse his fortune, and not the governors.

Glaucon:: By all means.

Socrates:: And those of the youth who distinguish themselves, whether in war or any where else, ought to have rewards and prizes given them, and the most ample liberty of embracing women, that so, under this pretext likewise, the greatest number of children may be generated of such persons.

Glaucon:: Right.

Socrates:: And shall the children always as they are born be received by magistrates appointed for these purposes, whether men or women, or both? for the magistracies are in common to women as to men.

Glaucon:: They are so.

Socrates:: And when they receive the children of worthy persons, they will carry them, I imagine, to the nursery, to certain nurses dwelling apart in a certain place of the city. But the children of the more depraved, and such others as are any way same, they will hide in some secret and obscure place, as is proper. If they want, the race of guardians to be pure. And shall not these take care likewise of their nursing, in bringing to the nursery the mothers when their breasts are full, practicing every art, that no one know her own child, and in providing others who have milk, if these shall prove insufficient? And they shall likewise take care of these nurses, that they suckle a competent time: and they shall appoint the nurses and keepers to be wakeful, and to take every other necessary toil.

Glaucon:: You speak, of great ease to the wives of our guardians, in the breeding of children.

Socrates:: It is fit. But let us in the next place discuss that which we chiefly intended. We said that true offspring ought to be generated of persons in their prime. Are you then of opinion with me, that the proper season of vigor is twenty years to a woman, and thirty to a man?

Glaucon:: Of what continuance are these seasons?

Socrates:: The woman, beginning at twenty, is to bear children to the state until the age of forty; and the man, after he has passed the most raging part of his course, from that period, is to beget children to the state until the age of fifty-five.

Glaucon:: This indeed is the acme, in both sexes, both of body and of mind.

Socrates:: If then any one who is older or younger than these shall meddle in generating for the public, we shall say the trespass is neither holy nor just, as he begets to the state a child, which, if it be concealed, is born and grows up not from sacrifices and prayers, (which, upon every marriage, the priestesses and priests, and the whole of the city, shall offer, that the descendants of the good may be still more good, and from useful descendants still more useful may arise); but is born from darkness, and with a dreadful intemperance.

Glaucon:: Right.

Socrates:: And the law, must be the same. If any of those men, who are yet of the age for generating, shall touch women of a proper age, without the concurrence of the magistrate, we shall consider him as having raised to the state a bastardly, illegitimate and unhallowed child.

Glaucon:: Most right.

Socrates:: And I imagine, that when the women and men exceed the age of generating, we shall permit the men to cohabit with any woman they incline, besides their daughter and mother, and those who are the children of their daughters, or those upwards from their mother: and so likewise the women to embrace any but a son and father, and the children of these, either downwards or upwards: all this liberty we will allow them, after we have enjoined them to attend carefully, in the first place, if any thing should be conceived, not to bring it to the light; but if, by any accident, it should be brought forth, to expose it as a creature for which no provision is made.

Glaucon:: All these things, are reasonably said.

Socrates:: But how shall fathers and daughters, and those other relations you now mentioned, be known of one another?

Glaucon:: They shall not be known at all.

Socrates:: But from the day on which any one is a bridegroom, whatever children are born in the tenth or in the seventh month; after it, all these he shall call, the male his sons, and the female his daughters, and they shall call him father. And in the same way again, he shall call the children of these grandchildren, and they again shall call them grandfathers, and grandmothers: and those who were born in that period in which their fathers and mothers were begetting children, they shall call sisters and brothers, so as not to touch each other, as I just now said. But the law shall allow brothers and sisters to live together, if their lot so fall out, and the Pythian oracle give consent.

Glaucon:: Most right.

Socrates:: This, Glauco, and such as this, is the community of women and children, among your city guardians: and that it is both consonant to the other parts of our polity, and by far the best, we must, in the next place, establish from reason; or how shall we do?

Glaucon:: Just so, by Jupiter.

Socrates:: Did not we then agree on this at the beginning? to inquire what we can mention as the greatest good with relation to the establishment of a state, with an eye to which the lawgiver ought to enact the laws, and what is the greatest evil; and then to inquire, whether what we have hitherto gone over contributes towards leading us in the steps of this good, and away from that evil?

Glaucon:: By all means.

Socrates:: Is there, then, any greater ill to a city than that which lacerates it; and, instead of one, makes it many? Or, is there any greater good than that which binds it together, and makes it one?

Glaucon:: There is not.

Socrates:: Does not then the communion of pleasure and pain bind them together, when the whole of the citizens as much as possible rejoice and mourn in the same manner, for the same things when they are obtained, and when they are lost?

Glaucon:: By all means so.

Socrates:: But a separate feeling of these things destroys it, when some of the citizens are extremely grieved, and others extremely glad, at the same sufferings of the city, or of those who are in it.

Glaucon:: Why not?

Socrates:: Does not then such an evil as the following arise from this, when they do not all jointly in the state pronounce these words, mine, and not mine? And will not that city be best regulated, when every individual, with regard to the concerns of another, in the same way with him, pronounces these words, mine, and not mine?

Glaucon:: By far.

Socrates:: And it is such as comes nearest to one man. As when our finger is any how hurt; the whole common feeling spread through the body to the soul, with one coordination of its governing part, perceives it, and the entire whole mourns along with the distressed part: and so we say that the man is distressed in his finger: and the reasoning is the same as to any other part of a man, both with respect to grief, when any part is in pain; or with respect to pleasure, when any part is at ease.

Glaucon:: It is the same.

Socrates:: And to return to your question, the city which comes nearest to this is governed in the best manner; and when any one of the citizens receives any good or ill, such a city, I imagine, will most especially say, that she herself receives it, and the whole city rejoice or mourn together.

Glaucon:: Of necessity, this must prevail in a city governed by good laws.

Socrates:: It may be time for us to go back to our city, and consider how those things are in it which we have agreed on in our reasoning, whether they prevail most in our city, or more in some other.

Glaucon:: We must do so.

Socrates:: What now? Are there not, in other cities, governors and people? And are there not likewise in this?

Glaucon:: There are.

Socrates:: And will not all these call one another citizens?

Glaucon:: Why not?

Socrates:: But besides this of citizens, what does the people call their governors in other states?

Glaucon:: Masters or lords in most states, and, in democracies, this very name, governors.

Socrates:: But in our city, besides that of citizens, what does the people call their governors?

Glaucon:: Their preservers, and helpers.

Socrates:: And what do they call the people?

Glaucon:: Rewarders, and nourishers.

Socrates:: And in other cities, what do the governors call their people?

Glaucon:: Slaves.

Socrates:: And what do the governors call one another?

Glaucon:: Fellow rulers.

Socrates:: And ours, what?

Glaucon:: Fellow guardians.

Socrates:: Can you tell, whether any one of the governors in other cities can address one of their fellow governors as his kinsman, and another as a stranger?

Glaucon:: Very many so.

Socrates:: Does he not then reckon and call the kindred one his own, and the stranger one as not his own?

Glaucon:: Just so.

Socrates:: But how is it with your guardians? Is there so much as any one of them, who can deem and call any one of their fellow guardians a stranger?

Glaucon:: By no means; for, with whomsoever any one meets, he reckons he meets with a brother or sister, a father or mother, a son or daughter, or the descendants or ancestors of these.

Socrates:: You speak most beautifully. But further, tell me this likewise, whether will you only establish among them, by law, these kindred names? or will you also enjoin them to perform all their actions in conformity to these names? With respect to parents, whatever the law enjoins to be performed to parents, such as reverence, and care, and obedience. And that otherwise it will not be for his advantage, neither in the sight of Gods nor of men, as he acts what is neither holy nor just, if he do other things than these. Shall these, or any other speeches from all our citizens, resound directly in the ears of our children, both concerning their parents, whom any one shall point out to them, and concerning other relations?

Glaucon:: These things shall be said; for it were ridiculous, if friendly names alone resounded, without any actions accompanying them.

Socrates:: Of all cities, then, there will be the greatest harmony in it, when any one individual is either well or ill, as to the expression we lately mentioned, viz. mine is well, or mine is ill.

Glaucon:: Most true.

Socrates:: Did not we say too, that their common pleasures and pains will accompany this opinion and expression?

Glaucon:: And we said rightly.

Socrates:: Will not then our citizens most especially have this in common which they call my own; and, having this in common, they will of all others most especially have in common pleasure and pain?

Glaucon:: Extremely so.

Socrates:: And along with the other parts of the constitution, is not the community of women and children among the guardians the cause of these things?

Glaucon:: This is it most especially.

Socrates:: But we agreed, that this was the greatest good of a city, likening a well established city to a body, in its being affected with the pleasure and pain of any part.

Glaucon:: And we rightly, agreed on this.

Socrates:: This community, then, of women and children among our auxiliaries, has appeared to us to be the cause of the greatest good to the city.

Glaucon:: Extremely so.

Socrates:: And surely we agree at least with what went before; for we some where said, that they ought neither to have houses of their own, nor land, nor any possession;

but, receiving their subsistence from others, as a reward for their guardianship, they should all spend it in common, if they intended really to be guardians.

Glaucon:: Right.

Socrates:: Do not therefore, as I say, both these things which were formerly mentioned, and still more what we now speak of, render them real guardians, and prevent the city from being lacerated, by their not at all calling one and the same thing their own; but one one thing, and another another; one drawing to his own house whatever he can possess, separate from others, and another to his, which is different from the other; and having both wives and children different, which occasion different pleasures and pains, which are private, as belonging to private persons: but being of one opinion concerning their home, and all of them pointing towards the same thing, as far as possible, to have one common feeling of pleasure and pain?

Glaucon:: Extremely so.

Socrates:: But what? shall lawsuits and accusations against one another be banished from among them, so to speak, by their possessing nothing as private property but their body, and every thing else being common, from whence they shall be liberated from all those disturbances which men raise about money, children or relations?

Glaucon:: They will of necessity be liberated from these.

Socrates:: Neither indeed can there be reasonably among them any actions raised for violence or unseemly treatment. For, making the protection of their persons a necessary thing, we will own it to be handsome and just for those of equal age to help one another.

Glaucon:: Right.

Socrates:: And this law, hath this right in it likewise: that if any one be in a passion, gratifying his passion in this manner, he is less apt to raise greater seditions.

Glaucon:: It is entirely so.

Socrates:: The elder shall be enjoined both to govern and to chastise the younger.

Glaucon:: That is plain.

Socrates:: And surely the younger, as becomes them, shall never attempt to beat the elder, or in any other way to offer violence to him, unless appointed by the governors; nor will they, I imagine, in any sort, dishonor them; for there are sufficient guardians to hinder it, both fear and reverence;—reverence on the one hand restraining them from assaulting, as it were, their parents, and fear on the other; lest others shall assist the sufferer; some as sons, others as brothers, and others as fathers.

Glaucon:: It happens so.

Socrates:: In every respect then, as far as relates to the laws, the men shall live peaceably with one another.

Glaucon:: Very much so.

Socrates:: And while these have no seditions among themselves, there is no danger of any other city raising disturbance against these, or that they shall split into factions.

Glaucon:: There is not.

Socrates:: As for the lesser evils, from which surely they will be freed, I do not choose, because of the impropriety of it, so much as to mention them. That flattery of the rich; that indigence and solicitude in the education of their children, and in procuring money for the necessary support of their family, which is the portion of the poor; sometimes borrowing, and sometimes being despised, and sometimes using all manner of shifts, in procuring provisions, which they give to the management of their wives and domestics: how many slavish and mean things, my friend, they suffer in all these respects, are not even worthy to be mentioned.

Glaucon:: And they are manifest, to one blind.

Socrates:: They will be delivered from all these things, and will live more blessedly than that most blessed life which those live who gain the prize in the Olympic games.

Glaucon:: How?

Socrates:: Those are esteemed happy, on account of a small part of what these enjoy. But the victory of these is more noble, and their maintenance from the public is more complete; for the victory they gain is the safety of the whole city; and both they and their children are crowned with their maintenance, and all the other necessaries of life, as laurels, and receive honour from their city while alive, and at their death an honorable funeral.

Glaucon:: The most noble rewards!

Socrates:: Do you remember then, that in our former reasonings, I do not know who it was objected to us, that we were not making our guardians happy, who, though they had it in their power to have the whole wealth of their citizens, had nevertheless nothing at all? and we proposed to consider of this afterwards, if it fell in our way; but that at the present we were making our guardians only guardians, and the city itself as happy as possible, but without regarding one particular tribe in it, with a view to make it happy.

Glaucon:: I remember it.

Socrates:: What think you now of the life of our auxiliaries, which appears far more noble and happy than that of those who gain the prize at the Olympic games? It does not at all appear to resemble the life of the leather-cutter, the handicraft, or farmer.

Glaucon:: I do not think it.

Socrates:: But however, it is proper that I mention here what I likewise said on a former occasion, that if the guardian shall attempt to be happy in such a way as to be no longer, a guardian, nor be content with this moderate, and steady, and, as we say, best life; but, being seized with a foolish and youthful opinion about happiness, shall, because he has it in his power, be driven to make himself the master of every thing in the city, he shall know that Hesiod was truly wise, in saying that the half is somehow more than the whole.

Glaucon:: If he take me, for his counselor, he will remain in such a life.

Socrates:: You allow then, that the women act in common with the men, as we have explained, with respect to education and the breeding of children, and the guardianship of the other citizens; both in remaining in the city, and in going forth to war; and that along with the men they ought to keep guard, and to hunt like dogs, and in every case to take a share in all things as far as they can; and that while they do these things they will do what is best, and no way contrary to the nature of the female, with respect to the male, by which nature they are made to act jointly with one another.

Glaucon:: I agree.

Socrates:: Does not then this, remain to be discussed, whether It be possible that this community take place among men likewise, as among other animals? and how far it is possible.

Glaucon:: You have prevented me, in mentioning what I was going to ask.

Socrates:: For, with relation to warlike affairs, it is plain, I imagine, how they will fight.

Glaucon:: How?

Socrates:: That they will jointly go out on their military expeditions, and besides will carry along with them such of their children as are grown up, that, like those of other artists, they may see what it will be necessary for them to practice when they are grown up; and, besides seeing, that they may serve and administer in every thing with relation to the war, and assist both their fathers and mothers. Or, have you not observed what happens in the common arts? as for instance, that the children, of the potters, ministering to them for a long time, look on before they apply themselves to the making earthen ware?

Glaucon:: Yes, indeed.

Socrates:: Whether now are these or our guardians to instruct their children with greater care, by the practice and view of what belongs to their office?

Glaucon:: To suppose those, should take greater care than our guardians, were ridiculous. But every creature fights more remarkably in the presence of its offspring. The case is so; but there is no small danger, Socrates, when they are defeated, as is often the case in war, that when their children, as well as themselves, are cut off, it shall be impossible to raise another city.

Socrates:: You say true; but you imagine we ought, first of all, to take care never to run any risk.

Glaucon:: No, by no means.

Socrates:: What then, if they are at all to hazard themselves in any case, is it not where, if they succeed, they shall become better men?

Glaucon:: That is plain.

Socrates:: But do you imagine it a small matter, and not worthy of the risk, whether children, who are destined to be military men, see affairs relating to war, or not?

Glaucon:: No; it is a matter of consequence with respect to what you mention.

Socrates:: We must, then, first endeavor to make our children spectators of the war, but contrive for them a place of safety—and then it shall do well, shall it not?

Glaucon:: Yes.

Socrates:: And shall not then, our parents, in the first place, as being men, not be ignorant, but understand which of the camps are, and which are not dangerous?

Glaucon:: It is likely.

Socrates:: And they shall bring them into the one, but with respect to the other they will be on their guard.

Glaucon:: Right.

Socrates:: And they will probably set governors over them; not such as are the most depraved, but such as by experience and years are able leaders and pedagogues.

Glaucon:: It is very proper.

Socrates:: But we will say many things have happened contrary to expectation.

Glaucon:: Very many.

Socrates:: With reference therefore to such events as these, it is proper that whilst they are children they procure wings, that so, in any necessity, they may escape by flight.

Glaucon:: How do you mean?

Socrates:: They must, when extremely young, be mounted on horses, and taught to ride on horse-back, and brought to see the battle, not on high-mettled and warlike horses, but on the fleetest, and those that are the most obedient to the rein; for thus they shall, in the best manner, observe their proper work, and, on any necessity, shall escape with the greatest safety, following the aged leaders.

Glaucon:: You seem to me, to say right.

Socrates:: But what, as to the affairs of war? how are you to manage your soldiers, both with respect to one another and their enemies? have I imagined rightly or not?

Glaucon:: As to what?

Socrates:: That whoever of them, leaves his rank, throws away his arms, or does any such thing from cowardice, must he not be made a handicraft, or land-laborer?

Glaucon:: By all means.

Socrates:: And shall not the man who is taken alive by the enemy be given gratis to any who incline to employ him in the country just as they please?

Glaucon:: By all means.

Socrates:: And are you of opinion, that he who gains a character, and excels, ought, in the first place, in the expedition itself, to be crowned in some measure by every one of the youths and boys who are his fellow soldiers? or think you otherwise?

Glaucon:: I am of opinion, for my part, they ought to be crowned.

Socrates:: But what, and get the right hand likewise?

Glaucon:: This likewise.

Socrates:: But this further, I imagine, you are not yet satisfied about.

Glaucon:: What?

Socrates:: That they embrace and be embraced by every one.

Glaucon:: They should most of all others: and I will add to this law, that whilst they are upon this expedition no one shall be allowed to refute them, whoever they incline to embrace, that if any happen to be in love with any one, male or female, he may be the more animated to win the prizes.

Socrates:: Very well; for we have already said that there are more marriages provided for the good citizen than for others, and more frequent choice in such matters allowed them than others, that the descendants of such an one may be as numerous as possible.

Glaucon:: We have already said so.

Socrates:: But surely, even according to Homer's opinion, it is just that such of the youth as are brave be honored in this way. For Homer says that Ajax, who excelled in war, was rewarded with a large share at the entertainments, this being the most natural reward to a brave man in the bloom of youth, by which he at the same time acquired honour and strength.

Glaucon:: Most right.

Socrates:: We shall then obey Homer, at least, in these things. And we shall honour the good, both at our sacrifices, and on all such occasions, in as far as they appear to be deserving, with hymns likewise, and with those things we lately mentioned; and besides these things, with seats, and dishes, and full cup; that at the same time we may both honour and exercise the virtue of worthy men and women.

Glaucon:: You say most admirably well.

Socrates:: Be it so. If any one of those who die in the army shall have distinguished himself, shall we not, in the first place, say that he is of the golden race?

Glaucon:: Most especially.

Socrates:: And shall we not believe Hesiod, telling us, that when any of these die;

> Good, holy, earthly dæmons, they become,
> Expelling evils, guardians of mankind?

Glaucon:: We shall believe him.

Socrates:: And we shall ask the oracle in what manner we ought to bury dæmoniacal and divine men, and with what marks of distinction; and thus shall we bury them in that very manner which shall be explained.

Glaucon:: Why shall we not?

Socrates:: And we shall in all after time reverence and worship their tombs as those of dæmons. And we shall enact by law, that the same things be performed, and in the same manner, to any who shall have been deemed to have remarkably distinguished themselves in life, when they die of old-age, or any thing else?

Glaucon:: It is right.

Socrates:: But what now? How shall our soldiers behave towards enemies?

Glaucon:: As to what?

Socrates:: First, as to bringing into slavery. Do you think it just that Greeks should enslave Greek cities? or rather, as far as they are able, not suffer any other to do it, and accustom themselves to this, to be sparing of the Grecian tribe, being greatly on their guard against being enslaved by the Barbarians?

Glaucon:: It is, in general, and in every particular case, best to be sparing.

Socrates:: Are they not to acquire any Grecian slave themselves, and to counsel the other Greeks to act in the same manner?

Glaucon:: By all means. They will the more, at least, by such a conduct, turn themselves against the Barbarians, and abstain from one another.

Socrates:: But what? To strip the dead, of any thing but their arms after they conquer them, is it handsome or not? It gives a pretence to cowards not to go against the enemy who is alive, as being necessarily occupied when they are thus employed about the one who is dead; and many armies have been lost by this plundering.

Glaucon:: Very many.

Socrates:: And does it not appear to you to be illiberal and sordid, and the part of a womanish and little mind, to strip the dead body, and deem the body of the deceased an enemy, when the enemy is fled off, and there is only left behind that with which he sought? Or, do you imagine that they who act in this manner do any way different from dogs, who are in a rage at the stones which are thrown at them, not touching the man who throws them?

Glaucon:: Not in the least.

Socrates:: We must let alone then this stripping the dead, and these hindrances arising from the carrying off booty.

Glaucon:: Truly, these must be banished.

Socrates:: Nor shall we at any time bring the arms into the temples, as if we were to dedicate them, at least not the arms of Grecians, if we have any concern to obtain the benevolence of the other Greeks: but we shall rather be afraid, lest it should be a kind of profanation to bring into the temple such things as these from our own kinsman, unless the oracle shall say otherwise.

Glaucon:: Most right.

Socrates:: But what, with reference to the laying waste Grecian lands, and burning of houses, how shall your soldiers behave towards their enemies?

Glaucon:: I should be glad, to hear you signifying your opinion.

Socrates:: Truly then, in my opinion, neither of these ought to be done, but only one year's produce to be carried off. And would you have me tell you the reason why this should be done?

Glaucon:: By all means.

Socrates:: It appears to me, that as these two words, war and sedition, are different, so they are two different things which are signified by them: I call them two different things, because the one is domestic and akin, the other foreign and strange. When hatred is among ourselves, it is called sedition; when it respects foreigners, it is called war.

Glaucon:: What you say, is no way unreasonable.

Socrates:: But consider now, if I say this likewise reasonably: for I aver that the Greek nation is friendly and akin to itself, but is foreign and strange to the Barbarian.

Glaucon:: This too is right.

Socrates:: When then the Greeks fight with the Barbarians, and the Barbarians with the Greeks, we shall say they wage war, and are naturally enemies; and this hatred is to be called war. But when Greeks do any such thing to Greeks, we shall say that they are friends by nature, and that Greece in such a case is distempered, and in sedition; and such a hatred is to be called a sedition.

Glaucon:: I agree, to account for it in the same manner.

Socrates:: Consider then, that in the sedition now mentioned, wherever such a thing happens, and the city is disjointed, if they sequester the lands, and burn the houses of one another, how destructive the sedition appears, and neither of them seem to be lovers of their country: for otherwise they would never dare to say waste their nurse and mother; but it would suffice the victors to carry off the fruits of the vanquished, and to consider they are to be reconciled, and not perpetually to be at war.

Glaucon:: This indeed is by much a more mild sentiment than the other.

Socrates:: But what now? Is not this city you are establishing a Greek one?

Glaucon:: It should be so.

Socrates:: And shall not they be good and mild?

Glaucon:: By all means.

Socrates:: And shall they not be lovers of Greeks? And shall they not account Greece akin to them? And shall they not have the same religious rites with the rest of the Greeks?

Glaucon:: By all means.

Socrates:: A difference then with Greeks, as with kinsmen, will they not denominate a sedition, and not a war?

Glaucon:: They will.

Socrates:: And they will behave as those who are to be reconciled.

Glaucon:: By all means.

Socrates:: They shall then be mild and moderate, not punishing so far as to enslave or destroy, since they are moderate, and not hostile.

Glaucon:: Just so.

Socrates:: Neither then, as they are Greeks, will they sequester Grecian lands, nor burn their houses; nor will they allow that in every city all are their enemies, men, women, and children; but that always a few only are enemies, the authors of the quarrel: and on all these accounts they will neither choose to say waste lands, as the greatest number are their friends; nor will they overturn the houses, but will carry on the war so far as till the guilty be obliged by the innocent, whom they distress, to make reparation.

Glaucon:: I agree, that we ought to behave so towards our own citizens when we are set against one another; and to behave so towards the Barbarians as the Greeks at present do to one another.

Socrates:: Let us then likewise establish this law for our guardians,—neither to say waste the lands, nor burn the houses.

Glaucon:: Let us establish it, and this further, that these things, and those too you mentioned formerly, are right: but it appears to me, Socrates, if one is to allow you to speak in this manner, that you will never remember what you formerly passed by, when you entered on all that you have now said; viz. how far such a government is possible? and in what way it is at all possible? For, if it be at all possible, I will allow that all these good things will belong to that city, and the following likewise which you have omitted;—that they will, in the best manner, fight against their enemies, and of all others least abandon one another, recognizing these names, and calling one another by these,—fathers, sons, and brothers; and if the female shall encamp along with them, whether in the same rank, or drawn up behind them, that they will strike terror into the enemies, and at the same time assist if ever there be necessity for it, I know that in this way they will entirely be invincible. And I plainly see too what advantages they have at home, which we have omitted. But speak no more about this government, as I allow that all these, and ten thousand other things, will belong to it, if it actually exist. But let us endeavor to persuade one another of this itself, whether it be possible, and in what respect it is so; and let us omit those other things.

Socrates:: You have suddenly, made an assault on my reasoning, and make no allowance for one who is fighting; for perhaps you do not advert, that, with difficulty, I am escaped from two waves, and now you are bringing upon me the greatest and most dangerous of the three. After you have seen and heard this, you will entirely forgive me; allowing, that I with reason grudged, and was afraid to mention so great a paradox, and undertake to examine it.

Glaucon:: The more, you mention these things, the less will you be freed from explaining in what respect this government is possible. Proceed then, and do not delay.

Socrates:: Must not this then, in the first place, be remembered, that we are come hither in search of justice, what it is? and what injustice is?

Glaucon:: It must. But what is this to the purpose?

Socrates:: Nothing. But if we discover what justice is, shall we then judge that the just man ought in no respect to differ from it, but in every respect to be such as justice is? and shall we be satisfied if he approach the nearest to it, and, of all others, partake of it the most?

Glaucon:: We shall, be thus satisfied.

Socrates:: As a model then, we were inquiring into this, what kind of thing justice is; and we likewise were in quest of a just man; and considered what sort of man he should be, if he did exist. We likewise inquired what injustice is, and what too the most unjust men—in order that, looking into these two models, what kind of men they appeared with respect to happiness and its opposite, we might be obliged to acknowledge concerning ourselves that whoever should most resemble them in character shall have a fortune the most resembling theirs; and not for this end, to show that these things are possible or not.

Glaucon:: In this, you say true.

Socrates:: Do you imagine then that the painter is in any degree the less excellent, who having painted a model of the most beautiful man, and brought every thing fully into his piece, is yet unable to show that such a man does really exist?

Glaucon:: By Jupiter, I do not.

Socrates:: What then, have we not made in our reasonings (shall we say) a model of a good city?

Glaucon:: Yes, indeed.

Socrates:: Have we then spoken any thing the worse, do you imagine, on this account, that we are not able to show, that it is possible for a city to be established such as we have described?

Glaucon:: No, indeed.

Socrates:: This then, is the truth of the case. But if truly I must now likewise, on your account, hasten to this, to show how especially, and in what respects, it is most possible, in order to this discovery, you must again grant the same things as formerly.

Glaucon:: What things?

Socrates:: Is it possible for any thing to be executed so perfectly as it is described? or, is such the nature of practice, that it approaches not so near the truth as theory, though some may think otherwise? But whether will you allow this or not?

Glaucon:: I allow it.

Socrates:: Do not then oblige me to show you all these things, and in every respect, existing in fact, so perfectly as we have described in our reasoning; but if we be able to find out how a city may be established the nearest possible to what we have mentioned, you will say we have discovered that these things which you require are possible? Or will you not even be satisfied if this be obtained? For my own part, I should be satisfied.

Glaucon:: And I too.

Socrates:: We are now, it seems, in the next place, to endeavor to find out and to show what, at all, is the evil which is now practiced in cities through which they are not established in this manner we have described; and what is that smallest change, which, if made, would bring the city to this model of government; and let us chiefly see, if this can be effected by the change of one thing, if not by the change of two, if not that, by the change of the fewest things in number, and the smallest in power.

Glaucon:: By all means.

Socrates:: Upon the change then of one thing, I am able I think to show that the state can fall into this model of government. But the change is not indeed small nor easy, yet it is possible.

Glaucon:: What is it?

Socrates:: I am now come, to what I compared to the greatest wave: and it shall now be mentioned, though, like a breaking wave, it should overwhelm us with excessive laughter and unbelief. But consider what I am going to say.

Glaucon:: Proceed.

Socrates:: Unless either philosophers, govern in cities, or those who are at present called kings and governors philosophize genuinely and sufficiently, and these two, the political power and philosophy, unite in one; and till the bulk of those who at present pursue each of these separately are of necessity excluded, there shall be no end, Glauco, to the miseries of cities, nor yet, as I imagine, to those of the human race; nor till then shall ever this republic, which we have gone over in our reasonings, spring up to a possibility, and behold the light of the sun. But this is that which all along made me grudge to mention it, that I saw what a paradox I was to utter: For it is difficult to be convinced that no other but this republic can enjoy happiness, whether public or private.

Glaucon:: You have thrown out, Socrates, such an expression and argument, as you may imagine will bring on you a great many, and these courageous to such a degree as to put off their clothes, and naked to snatch whatever weapon fortune affords each of them; and, as if they were to perform prodigies, rush upon you in battle array. And unless, mowing them down with argument, you make your escape, you will pay for it by suffering most severe ridicule.

Socrates:: And are not you the cause of all this?

Glaucon:: But in acting handsomely at least. However, in this affair, I will not betray you, but defend you with such things as I am able. And I am able both by my goodwill and by encouraging you, and probably I will answer your questions more carefully than any other; only do you endeavor, with the help of such an assistant, to show those who are backward to believe these things, that the case really is as you represent it.

Socrates:: I must endeavor, since even you afford so great an alliance. And here it seems to me to be necessary, if we are any how to make our escape from those you mention, accurately to define to them what kind of men these are whom we call philosophers, when we dare to assert that they alone ought to govern, in order that, when they are made perfectly manifest, any one may be able to defend himself, when he asserts that to these it naturally belongs both to apply themselves to philosophy, and likewise to take upon them the government of the state: but others are to apply themselves neither to philosophy nor government, but to obey their leader.

Glaucon:: It is proper, to define them.

Socrates:: Come then, follow me this way, if together any how we shall sufficiently explain this matter.

Glaucon:: Lead on then.

Socrates:: Will it then be needful, to remind you, or do you remember it, that when we say of any one, that he loves any thing, when we speak with propriety, he must not appear to love one part of it, and not another, but to have an affection for the whole?

Glaucon:: I need, it seems, to be put in mind; for I do not understand it perfectly.

Socrates:: It might become another, Glauco, to say what you say; but it does not become a man who is a lover, to forget that all those who are in their bloom sting somehow, and give emotion to one who is amorous, and a lover, as they are deemed worthy both of respect and of being saluted. Or do you not behave in this manner towards the beautiful? One, because flat-nosed, shall be called agreeable, and be commended by you; and the hook-nose of the other, you say, is princely; and that which is in the middle of these is according to the exactest symmetry: the black are said to be manly to behold; and the fair to be the children of the Gods:—but this appellation of pale green, do you imagine it is the invention of any other than of a flattering lover, and one who easily bears with the paleness, provided it is in the bloom of youth? And, in one word, you make all kinds of pretences and say every thing so as never to reject any one who is of a blooming age?

Glaucon:: If you incline to judge by me of other lovers, that they act in this manner, I agree to it for the sake of the argument.

Socrates:: And what, with respect to the lovers of wine; do you not observe them acting in the same manner, cheerfully drinking every kind of wine upon every pretext?

Glaucon:: Yes, indeed.

Socrates:: And you perceive, as I imagine, that the ambitious likewise, if they cannot obtain the command of a whole army, will take the third command; and, if they cannot be honored by greater and better men, are content if they be honored by the lower and more contemptible, being desirous of honour at any rate?

Glaucon:: It is perfectly so.

Socrates:: Agree to this or not: if we say, one is desirous of any thing, shall we say that he desires the whole species, or that he desires one part of it, but not another?

Glaucon:: The whole.

Socrates:: Shall we not then likewise say, that the philosopher is desirous of wisdom, and that not of one part only, but of the whole?

Glaucon:: True.

Socrates:: He then who is averse to disciplines, especially if he be young, and has not at all understanding to discern what is good, and what is otherwise, shall not be called a lover of learning, nor a philosopher; in the same manner as we say of one who is disgusted with meats, that he neither hungers after nor desires meats, nor is a lover but a hater of them.

Glaucon:: And we shall say right.

Socrates:: But the man who readily inclines to taste of every discipline, and with pleasure enters on the study of it, and is insatiable of it, this man we shall with justice call a philosopher: shall we not?

Glaucon:: There will be many such philosophers as those very absurd: for all your lovers of shows appear to me to be of this kind, from their taking a pleasure in learning; and your story lovers are the most stupid of all to be reckoned among philosophers at least. These indeed would not willingly attend on such reasonings, and such a disquisition as this. But yet, as if they had hired out their ears to listen to every chorus, they run about to the Bacchanalia, omitting neither those of cities nor villages. Shall all these then, and others studious of such things, and those who apply to the inferior arts, be called by us philosophers?

Socrates:: By no means, but resembling philosophers.

Glaucon:: But whom, do you call the true ones?

Socrates:: Those, who are desirous of discerning the truth.

Glaucon:: This likewise, is right. But how do you mean?

Socrates:: It is not easy, to tell it to another; but you, I imagine, will agree with me in this.

Glaucon:: In what?

Socrates:: That since the beautiful is opposite to the deformed, these are two things.

Glaucon:: Why are they not?

Socrates:: And if they are two, then each of them is one.

Glaucon:: This also is granted.

Socrates:: And the reasoning is the same concerning justice and injustice, good and evil. And concerning every other species of things the argument is the same—that each of them is one in itself, but appears to be many, being every where diversified by their communication with action and body, and with one another.

Glaucon:: You say right.

Socrates:: In this manner then, I separate these, and set apart those you now mentioned, the lovers of public shows, of handicrafts, and mechanics; and then apart from these I set those of whom we discourse at present, whom alone we may properly call philosophers.

Glaucon:: How do you say?

Socrates:: The lovers of common stories and of spectacles delight in fine sounds, colors, and figures, and every thing which is compounded of these; but the nature of beauty itself their dianoëtic part is unable to discern and admire.

Glaucon:: Indeed the case is so.

Socrates:: But as to those then who are able to approach this beauty itself, and to behold it as it is in itself, must they not be few in number?

Glaucon:: Extremely so.

Socrates:: He then who accounts some things beautiful, but neither knows beauty itself, nor is able to follow if one were to lead him to the knowledge of it, does he seem to you to live in a dream, or to be awake? Consider now, what is it to dream? Is it not this, when a man, whether asleep or awake, imagines the similitude of a thing is not the similitude, but really the thing itself which it resembles?

Glaucon:: I for my part would aver, that such a person is really in a dream.

Socrates:: But what now as to him who judges opposite to this, who understands what beauty is itself, and is able to discern both it and such things as participate of it, and neither deems the participants to be beauty, nor beauty to be the participants? whether does such an one seem to you to live awake, or in a dream?

Glaucon:: Perfectly awake.

Socrates:: May we not then properly call this man's dianoëtic perception, as he really knows, knowledge, but that of the other, opinion, as he only opines?

Glaucon:: By all means.

Socrates:: But what if the person who we say only opines things, but does not really know them, be enraged at us, and dispute with us, alleging that what we say is not true; shall we have any method of soothing and persuading him, in a gentle manner, by concealing that he is not in a sound state?

Glaucon:: At least there is need of it.

Socrates:: Come now, consider what we shall say to him. Or do you incline we shall thus interrogate him? telling him, that if he knows any thing, no one envies him for it, but we shall gladly see him possessed of some knowledge; but only tell us this, does the man who has knowledge, know something or nothing? Do you now answer me for him?

Glaucon:: I will answer, that he knows something.

Socrates:: Whether something which really exists, or which does not?

Glaucon:: What does really exist: for how can that be known which has no real existence?

Socrates:: We have then examined this sufficiently, though we might have considered it more fully; that what really is, may be really known; but what does not at all exist, cannot at all be known.

Glaucon:: We have examined it most sufficiently.

Socrates:: Be it so. But if there be any thing of such a kind, as both to be and not to be, must it not lie between that which perfectly is, and that which is not at all?

Glaucon:: Between them.

Socrates:: As to what really is, then, is there not knowledge? and as to that which is not at all, is there not of necessity ignorance? And for that which is between these, we must seek for something between ignorance and science, if there be any such thing.

Glaucon:: By all means.

Socrates:: Do we say then that opinion is any thing?

Glaucon:: Why not?

Socrates:: Whether is it a different power from science, or the same?

Glaucon:: Different.

Socrates:: Is opinion then conversant about one thing, and science about another, by virtue of the same power, or each of them by virtue of a power of its own?

Glaucon:: This last.

Socrates:: Is not the power of science conversant about what really exist, to know that it is? Or rather it seems to me to be necessary to distinguish in this manner.

Glaucon:: How?

Socrates:: We shall say, that powers are a certain species of real existences, by which we can both do whatever we can do, and every being else whatever it can do. Thus, I say, that seeing and hearing are among these powers, if you understand what I mean to call a species.

Glaucon:: I understand.

Socrates:: Hear then what appears to me concerning them. For I do not see any color of a power, nor figure, nor any of such qualities, as of many other things, with reference to which I distinguish some things with myself, that they are different from one another. But as to power, I regard that alone about which it is conversant, and what it effects; and on this account I have called each of these a power. And the power which is conversant about and effects one and the same thing, I call the same power, but that conversant about and effecting a different thing, I call a different power: but what say you? In what manner do you call it?

Glaucon:: Just so.

Socrates:: But come again, excellent Glauco, whether do you say that science is itself a certain power, or to what class do you refer it?

Glaucon:: I refer it to this class of power, as it is of all powers the most strong. But what now?

Socrates:: Shall we refer opinion to power, or to some other species?

Glaucon:: By no means to power; for that by which we form opinions is nothing else but opinion.

Socrates:: But you owned some time since, that science and opinion were not the same.

Glaucon:: How, can ever any one who possesses intellect reduce under one, that which is infallible, and that which is not infallible?

Socrates:: You say right. And it is plain that we have allowed opinion to be a different thing from science.

Glaucon:: We have.

Socrates:: Each of them then has naturally a different power over a different thing.

Glaucon:: Of necessity.

Socrates:: Science has a power over being itself, in knowing real existence, how it exists.

Glaucon:: Yes.

Socrates:: But we say that opinion opines.

Glaucon:: Yes.

Socrates:: Whether does it know the same thing which science knows? and shall that which is known, and that which is opined, be the same? or is this impossible?

Glaucon:: Impossible, from what we have allowed: since they are naturally powers of different things, and both of them are powers, opinion and science, and each of them different from the other, as we have said from these things it cannot be, that what is opined is the same with that which is known.

Socrates:: If then being itself be known, must it not be different from the being which is perceived by opinion?

Glaucon:: Different.

Socrates:: Does he then who opines, opine that which has no existence? Or is it impossible to opine that which doth not exist at all? Consider now, does not the man who opines, refer his opinion to somewhat? Or is it possible to opine, and yet opine nothing at all?

Glaucon:: Impossible.

Socrates:: But whoever opines, opines some one thing.

Glaucon:: Yes.

Socrates:: But surely that which does not exist, cannot be called any one thing, but most properly nothing at all.

Glaucon:: Certainly so.

Socrates:: But we necessarily referred ignorance to that which does not exist, but knowledge to real existence.

Glaucon:: Right.

Socrates:: Neither therefore does he opine being, nor yet that which is not.

Glaucon:: He does not.

Socrates:: Opinion then is neither knowledge, nor is it ignorance.

Glaucon:: It appears it is not.

Socrates:: Does it then exceed these, either knowledge in perspicuity, or ignorance in obscurity?

Glaucon:: It does neither.

Socrates:: But does opinion, seem to you to be more obscure than knowledge, but more perspicuous than ignorance?

Glaucon:: By much.

Socrates:: But does it lie between them both then?

Glaucon:: It does.

Socrates:: Opinion then is in the middle of these two.

Glaucon:: Entirely so.

Socrates:: And have we not already said, that if any thing appeared of such a kind, as at the same time to be, and yet not to be, such a thing would lie between that which has really an existence, and that which does not at all exist, and that neither science nor ignorance would be conversant about it, but that which appeared to be between ignorance and science?

Glaucon:: Right.

Socrates:: And now that which we call opinion, has appeared to be between them.

Glaucon:: It has appeared.

Socrates:: It yet remains for us, as it seems, to discover that which participates, of both these, of being, and of non-being, and which with propriety can be called neither of them perfectly, that if it appear to be that which is opined, we may justly call it so, assigning to the extremes what is extreme, and to the middle what is in the middle. Shall we not do thus?

Glaucon:: Thus.

Socrates:: These things being determined, let this worthy man, I will say, tell and answer me, he who reckons that beauty, and a certain idea of beauty there is none, always the same, and in the same respects; but this lover of beautiful objects reckons there are many beautiful things, but can never endure to be told that there is one beautiful, and one just, and so of others. Of all these many things, excellent man! shall we say to him, is there any which will not appear deformed, and of those just which will not appear unjust, of those holy which will not appear profane?

Glaucon:: No; but of necessity, the beautiful things themselves must in some respects appear even deformed, and others in like manner.

Socrates:: But what? many things which are double, or two-fold, do they less really appear to be halves than doubles?

Glaucon:: No less.

Socrates:: And things great and small, light and heavy, shall they be denominated what we call them, any more than the opposite?

Glaucon:: No; but each of them, always participates of both.

Socrates:: Whether then is each of these many things that which it is said to be, or is it not?

Glaucon:: It is like their riddles at feasts, and the riddle of children about the eunuch’s striking the bat, puzzling one another in what manner and how far he strikes it. For all these things have a double meaning, and it is impossible to know accurately that they are, or are not, that they are both, or neither of the two.

Socrates:: How can you do with them then? or have you a better class for them than a medium between being and non-being? For nothing seems more obscure than non-being in respect of having no being at all, nor more perspicuous than being in respect of real being.

Glaucon:: Most true.

Socrates:: We have then discovered, it seems, that most of the maxims of the multitude concerning the beautiful, and those other things, roll somehow between being and non-being.

Glaucon:: We have accurately discovered it.

Socrates:: But we formerly agreed, that if any such thing should appear, it ought to be called that which is opined, and not what is known; and that which fluctuates between the two is to be perceived by the power between the two.

Glaucon:: We agreed.

Socrates:: Those then who contemplate many beautiful things, but who never perceive beauty itself, nor are able to follow another leading them to it; and many just things, but never justice itself, and all other things in like manner, we will say that they opine all things, but know none of the things which they opine.

Glaucon:: Of necessity.

Socrates:: But what now? Those who perceive each of the things themselves, always existing in the same manner, and in the same respect, shall we not say that they know, and do not opine?

Glaucon:: Of necessity this likewise.

Socrates:: And shall we not say, that these embrace and love the things of which they have knowledge, and the others the things of which they have opinion? Or do we not remember, that we said they beheld and loved fine sounds and colors, and such things; but that beauty itself they do not admit of as any real being?

Glaucon:: We remember.

Socrates:: Shall we then act wrong in calling them lovers of opinion, rather than philosophers? And yet they will be greatly enraged at us if we call them so.

Glaucon:: Not, if they be persuaded by me; for it is not lawful to be enraged at the truth.

Socrates:: Those then who admire every thing which has a real being, are to be called philosophers, and not lovers of opinion.

Glaucon:: By all means.

THE END OF THE FIFTH BOOK.

## BOOK VI.

Socrates:: Those now who are philosophers, Glauco, and those who are not, have, through a long compass of discourse, with difficulty discovered themselves what they severally are.

Glaucon:: Because, perhaps, it was not easy, in a short one.

Socrates:: So it appears. But I still think they would have better discovered themselves, if it had been requisite to speak concerning this alone, and not to have discussed that multitude of other things, when we were to consider what difference there is between a just life and an unjust.

Glaucon:: What then, are we to treat of next?

Socrates:: What else, but of that which is next in order? Since those are philosophers who are able to pass into contact with that which always subsists similarly according to the same; but those who are not able to accomplish this, but who wander amidst many things, and such as are every way shifting, are not philosophers; which of these ought to be the governors of the city?

Glaucon:: Which way, shall we determine in this, and determine reasonably?

Socrates:: Whichever of them, appear capable of preserving the laws and institutions of cities, these are to be made guardians.

Glaucon:: Right.

Socrates:: This now, is certainly plain; whether a blind or quick-sighted guardian be proper for guarding any thing.

Glaucon:: Why is it not plain?

Socrates:: Whether then do those appear to you to differ from the blind, who are in reality deprived of the knowledge of each particular being, and have neither a clear paradigm in their soul, nor are able, as painters looking up to the truest paradigm, and always referring themselves thither, and contemplating it in the most accurate manner possible, to establish here too in like manner just maxims of the beautiful, and just, and good, if there be occasion to establish them, and to guard and preserve such as are already established?

Glaucon:: No, by Jupiter.

Socrates:: They do not differ much. Shall we then appoint those to be guardians, or those who know each being, and who in experience are nothing behind those others, nor inferior to them in any other part of virtue?

Glaucon:: It were absurd, to choose others, at least if these are not deficient in other things; for in this, which is almost the greatest, they excel.

Socrates:: Shall we not then speak to this point,—In what manner the same persons shall be able to have both the one and the other of those things?

Glaucon:: By all means.

Socrates:: It is then first of all necessary, as we observed in the beginning of this discourse, thoroughly to understand their genius; and I think if we sufficiently agree respecting it, we shall likewise agree that the same persons be able to possess both these things, and that no others but these ought to be the governors of cities.

Glaucon:: How so?

Socrates:: Let this now be agreed among us concerning the philosophic geniuses, that they are always desirous of such learning as may discover to them that essence which always is, and is not changed by generation or corruption.

Glaucon:: Let it be agreed.

Socrates:: And likewise, that they are desirous of the whole of such learning, and that they will not willingly omit any part of it, neither small nor great, more honorable or more dishonorable, as we formerly observed concerning the ambitious, and concerning lovers.

Glaucon:: You say right.

Socrates:: Consider then, in the next place, if, besides what we have mentioned, it be necessary that this also should subsist in the genius of those who are to be such as we have described.

Glaucon:: What?

Socrates:: That they be void of falsehood, nor willingly at any time receive a lie; but hate it, and love the truth.

Glaucon:: It is likely.

Socrates:: It is not only likely, my friend, but is perfectly necessary, that one who is naturally in love with any thing should love every thing allied and belonging to the objects of his affection.

Glaucon:: Right.

Socrates:: Can you then find any thing more allied to wisdom than truth?

Glaucon:: How can we?

Socrates:: Is it possible then that the same genius can be philosophic, and at the same time a lover of falsehood?

Glaucon:: By no means.

Socrates:: He then who is in reality a lover of learning, ought immediately from his infancy to be in the greatest measure desirous of all truth.

Glaucon:: By all means.

Socrates:: But we know somehow, that whoever has his desires vehemently verging to one thing, has them upon this very account weaker as to other things, as a current diverted from its channel.

Glaucon:: Why are they not?

Socrates:: But whosoever hath his desires running out after learning, and every thing of this kind, would be conversant, I think, about the pleasure of the soul itself, and would forsake those pleasures which arise from the body, provided he be not a counterfeit, but some real philosopher.

Glaucon:: This follows by a mighty necessity.

Socrates:: And such an one is moderate, and by no means a lover of money. For the reasons why money is with so much trouble anxiously sought after, have weight with any other than such an one to make him solicitous.

Glaucon:: Certainly.

Socrates:: And surely somehow you must likewise consider this when you are to judge what is a philosophic genius, and what is not.

Glaucon:: What?

Socrates:: That it do not without your knowledge partake of an illiberal turn: for pusillanimity is most opposite to a soul which is always to pursue earnestly the whole and every thing of that which is divine and human.

Glaucon:: Most true.

Socrates:: Do you then suppose that he who possesses magnificent conceptions in his dianoëtic part, and a contemplation of the whole of time, and the whole of being, can possibly consider human life as a thing of great consequence.

Glaucon:: It is impossible.

Socrates:: Such an one then will not account death any thing terrible.

Glaucon:: Least of all.

Socrates:: A cowardly and illiberal genius, then, will not, it seems, readily participate of true philosophy.

Glaucon:: It does not appear to me that it will.

Socrates:: What now, can the moderate man, and one who is not a lover of money, nor illiberal, nor arrogant, nor cowardly, ever possibly be an ill co-partner, or unjust?

Glaucon:: It is impossible.

Socrates:: And you will likewise consider this, when you are viewing from its infancy what is the philosophic soul, and what is not, whether it be just and mild, or unsocial and savage.

Glaucon:: By all means.

Socrates:: Neither indeed, as I think, will you omit this.

Glaucon:: What?

Socrates:: Whether it learn with facility or difficulty. Or do you expect that ever any one will love any thing sufficiently, in performing which he performs with uneasiness and with difficulty, making small progress?

Glaucon:: It cannot be.

Socrates:: But what if he can retain nothing of what he learns, being quite forgetful, is it possible for him not to be void of science?

Glaucon:: How is it possible?

Socrates:: And when he labors unprofitably, do you not imagine he will be obliged at last to hate both himself and such practice?

Glaucon:: Why must he not?

Socrates:: We shall never then reckon a forgetful soul among those who are thoroughly philosophic, but we shall require it to be of a good memory.

Glaucon:: By all means.

Socrates:: But never shall we say this at least, that an unmusical and indecent genius leads anywhere else but towards intemperance.

Glaucon:: Where else?

Socrates:: But whether do you reckon truth allied to intemperance or to temperance?

Glaucon:: To temperance.

Socrates:: Let us require then among other things a dianoëtic part naturally temperate and graceful, as a proper guide towards spontaneously attaining the idea of each particular being.

Glaucon:: Why not?

Socrates:: What now? Do we not in some measure seem to you to have discussed the necessary qualifications, and such as are consequent to each other, in a soul which is to apprehend being sufficiently, and in perfection?

Glaucon:: The most necessary.

Socrates:: Is it possible then for you in any measure to blame such a study as this, which a man can never be able sufficiently to apply to, unless he be naturally possessed of a good memory, learn with facility, be magnificent, graceful, and the friend and ally of truth, justice, fortitude and temperance?

Glaucon:: Not even Momus himself, could find fault with such a study.

Socrates:: But, will it not be to these alone, when they are perfected by education and age, that you will entrust the city?

Adeimantus:: Indeed, Socrates, no one is able to contradict you as to these things; but all who hear you at any time advancing what you do at present, are somehow affected in this manner. Being led off a little by your reasoning on each question, through their inexperience in this method of question and answer, when all these littles are collected together, at the close of your reasonings, they reckon that the mistake appears considerable, and the contrary of their first concessions; and like those who play at talus with such as are dexterous, but are themselves unskillful, they are in the end shut up, and can do no more; so your hearers have nothing to say, being shut up by this other kind of game, not with pieces, but with your reasonings. Though the truth at least is not by this any way advanced: I say this with reference to the present inquiry; for one may tell you that he has nothing to oppose to each of your questions by way of argument, but that in fact he sees that all those who plunge into philosophy, applying to it not with this view, that being early instructed they may be liberated from it when in their prime, but that they may continue in it much longer, become the most of them quite awkward, not to say altogether depraved; and those of them who appear the most worthy, do yet suffer thus much from this study you so much commend, that they become useless to the public.

Socrates:: When I had heard this, Do you imagine then, that such as say these things are telling a falsehood?

Adeimantus:: I do not know, but would gladly hear your opinion.

Socrates:: You would then hear that they appear to me to say true.

Adeimantus:: How then, is it right to say that the miseries of cities shall never have an end till they be governed by philosophers, whom we are now acknowledging to be useless to them?

Socrates:: You ask a question, which needs an answer through an image.

Adeimantus:: And you, are not wont, I think, to speak through images.

Socrates:: Be it so. You jest now, when you have brought me on a subject which is so difficult to be explained. But attend to the image, that you may see further with what difficulty I assimilate; for the sufferings of the most worthy philosophers in the management of public affairs are so grievous, that there is not any one other suffering so severe: but in making our simile, and in apologizing for them, we must collect from many particulars, in the same manner as painters mix the figures of two different animals together, and paint a creature which is both goat and stag in one, and others of this kind. Conceive now that such an one as this is the pilot of a fleet, or of a single ship, one who exceeds all in the ship, both in bulk and in strength, but is somewhat deaf, and sees in like manner but a short way, and whose skill in sea affairs is much of the same kind. Conceive likewise that the sailors are all in sedition among themselves, contending for the pilotship, each imagining he ought to be pilot, though he never learned the art, nor is able to show who was his master, nor at what time he learned it. That besides this, all of them say that the art itself cannot be taught, and are ready to cut in pieces any one who says that it can. Imagine further, that they continually surround the pilot himself, begging, and doing every thing that he may put the helm into their hands; and that even sometimes when they are not so successful in persuading him as others are, they either kill these others, or throw them overboard; and after they have by mandragora, or wine, or some other thing, rendered the noble pilot incapable, they manage the ship with the assistance of the crew, and whilst they drink and feast in this manner, they sail as it may be expected of such people. And besides these things, if any one be dexterous in assisting them to get the government into their own hands, and in setting aside the pilot, either by persuasion or force, they commend such an one, calling him sailor and pilot, and intelligent in navigation; but they contemn as useless every one who is not of this kind, whilst they never in the least think that the true pilot must necessarily pay attention to the year, the seasons, the heavens, and stars, and winds, and every thing belonging to the art, if he intends to be a governor of a ship in reality: but the art and practice of governing men, whether some be willing or not, they think impossible for a man to attain in conjunction with the art of navigation. Whilst affairs are in this situation with regard to the ships, do you not think that the true pilot will be called by the sailors aboard of ships fitted out in this manner, a star-gazer, insignificant, and unprofitable to them?

Adeimantus:: Undoubtedly.

Socrates:: I think then, that you will not want any explanation of the image, to see that it represents how they are affected in cities towards true philosophers, but that you understand what I say.

Adeimantus:: Perfectly.

Socrates:: First of all then with respect to this, if any one wonders that philosophers are not honored in cities, teach him our image, and endeavor to persuade him that it would be much more wonderful if they were honored.

Adeimantus:: I will teach him so.

Socrates:: And further, that it is indeed true, what you now was observing, that the best of those who apply to philosophy are useless to the bulk of mankind; but however, for this, bid them blame such as make no use of these philosophers, and not these philosophers themselves. For it is not natural for the pilot to entreat the sailors to allow him to govern them, nor for the wise to be resorting to the gates of the rich. But whoever pleasantly said this was mistaken; for this is truly the natural method, that whoever is sick, whether rich or poor, must of necessity go to the gates of the physician, and whoever wants to be governed must wait on him who is able to govern; for it is not natural that the governor who is really of any value should entreat the governed to subject themselves to his government. But you will not greatly err, when you compare our present political governors to those sailors we now mentioned, and those who are called by them insignificant and star-gazers to those who are truly pilots.

Adeimantus:: Most right.

Socrates:: From hence then it would seem that the best pursuit is not likely to be held in esteem among those who pursue studies of an opposite nature; but by far the greatest and most violent accusation of philosophy is occasioned by means of those who profess to study it; the most of whom, you say, your accuser of philosophy calls altogether depraved, and the very best of them of no advantage to the state; and I agreed that you say the truth, did I not?

Adeimantus:: You did.

Socrates:: And have we not fully explained the cause why the best of them are of no advantage?

Adeimantus:: We have.

Socrates:: Would you choose then, that we should in the next place explain the reason why the most of them must of necessity be depraved, and that we endeavor to demonstrate, that of this, philosophy is by no means the cause.

Adeimantus:: Entirely so.

Socrates:: Let us attend then, and begin our reasoning, calling to mind what we formerly observed concerning the natural genius which necessarily belongs to the good and worthy.—And what was a leading part in it, if you remember, was truth, which he must by all means wholly pursue, or else be a vain boaster, and never partake of true philosophy.

Adeimantus:: It was so said.

Socrates:: Is not this one part of his character perfectly contrary to the present opinions of him?

Adeimantus:: It is very much so.

Socrates:: Will it not then be no small defense, if we be able to show that the true lover of learning is naturally made to aspire to the knowledge of real being, and not to rest in the many particular things which are the objects of opinion, but goes on, and is not blunted, nor ceases from his love of truth till he comes into contact with the nature of every thing which is, by that part of the soul whose office it is to come into contact with a thing of this kind. But it is the office of that part of the soul which is allied to real being; to which when this true lover of learning approaches, and is mingled with it, having generated intellect and truth, he will then have true knowledge, and truly live and be nourished, and then he becomes liberated from the pains of parturition, but not before.

Adeimantus:: This, will be a most reasonable defense.

Socrates:: What now, will it be the part of such an one to love falsehood, or, entirely the contrary, to hate it?

Adeimantus:: To hate it.

Socrates:: But whilst truth indeed leads the way, we can never, I think, say that any band of evils follows in her train.

Adeimantus:: How can we?

Socrates:: But, on the contrary, we may aver that she is followed by sound and moderate manners, and such as are accompanied with temperance.

Adeimantus:: Right.

Socrates:: Why, now, need we go over again and range in order the whole qualities of the philosophic genius? for you no doubt remember that there belong to men of this character fortitude, magnanimity, facility of learning, and memory: and when you replied that every one would be obliged to agree to what we said, we quitted that subject, and turned to that which is the subject of discourse at present, on your saying that you observed some of the philosophers were insignificant, and many of them altogether depraved. And while we were examining into the cause of that calumny, we are now come to this, whence it is that many of them are depraved. And on this account we have gone over again the genius of true philosophers, and have necessarily defined what it is.

Adeimantus:: It is so.

Socrates:: It is necessary now, that we consider the corruptions of this genius, and in what manner it is destroyed in the most; but one small particular escapes us: who those are that they call not depraved, but useless. And next, what those geniuses are which counterfeit the philosophic nature, and pretend to its pursuit: and what is the nature of those souls who aspire to a pursuit which does not belong to them, and is above their reach: for these, by their manifold errors, have every where, and among all men, introduced this opinion of philosophy which you mention.

Adeimantus:: What sort of corruptions, do you mean?

Socrates:: I shall endeavor to rehearse them, if I be able. And this now, I think, every one will allow us, that such a genius, with all those qualifications we have enjoined one who is to be a perfect philosopher, rarely arises among men, and that there are but few of them: do not you think so?

Adeimantus:: Entirely so.

Socrates:: And of those few, consider how many and how great are the causes of corruption.

Adeimantus:: What are they?

Socrates:: That which is most of all wonderful to hear, that each of those things we commended in the genius of a philosopher, corrupts the soul which possesses them, and withdraws it from philosophy; fortitude, I mean, and temperance, and all those other qualifications which we have discussed.

Adeimantus:: That is strange to hear.

Socrates:: And further still, besides these things, all those which are commonly called good, such as beauty, riches, strength of body, a powerful alliance in the city, and every thing akin to these, corrupt and withdraw it from philosophy; for you have now a specimen of what I mean.

Adeimantus:: I have; and would gladly understand more accurately what you say.

Socrates:: Understand then, the whole of it aright, and it will appear manifest, and what we formerly said will not seem to be absurd.

Adeimantus:: How then, do you bid me act?

Socrates:: With respect to every kind of seed, or plant, whether of vegetables or animals, we know, that whatever does not meet with the proper nourishment, nor season, nor place belonging to it, the more vigorous it is by nature, the more it is defective in the excellencies of its kind; for evil is more contrary to good, than to that which is not good.

Adeimantus:: Why is it not?

Socrates:: It is then reasonable, I think, that the best genius, when meeting with nourishment foreign to it, shall be more changed to what is evil, than a bad genius.

Adeimantus:: It is.

Socrates:: And shall we not, Adimantus, in the same manner, say that souls naturally the best, when they meet with bad education, become remarkably depraved? Or do you think that great iniquity, and the extremist wickedness, arise from a weak genius, and not from a vigorous one ruined in its education; but that an imbecile genius will never be the cause either of mighty good or evil?

Adeimantus:: I do not think it will, but the case is as you say.

Socrates:: If then this philosophic genius, which we have established, meet with suitable instruction, it will, I think, necessarily grow up, and attain to every virtue; but if, when sown in an improper soil, it grow up and be nourished accordingly, it will on the other hand become perfectly the reverse, unless some one of the Gods afford it assistance. Or do you think, with the multitude, that certain of the youth are corrupted by the sophists, and that the corruptors are certain private sophists, which is worthy of our notice? Or think you rather, that the persons who say these things are themselves the greatest sophists, conveying their instruction in the most powerful manner, and rendering young and old, men and women, such as they wish to be?

Adeimantus:: When do they effect this?

Socrates:: When many of them, are set down, crowded together in an assembly, in their courts of justice, the theatre, or the camp, or any other public meeting of the people, with much tumult they blame some of the speeches and actions, and commend others, roaring and vociferating the one and the other beyond measure. And besides this, the rocks and the place where they are resounding, the tumult is redoubled, whilst they thus blame and applaud. In such a situation now, what kind of heart, as we say, do you think the youth are to have? Or what private instruction can make him withstand, so as not to be perfectly overwhelmed by such blame or applause, and, giving way, be borne along the stream wherever it carries him, and say that things are beautiful and base, according as these people say, and pursue the things they pursue, and become of the very same kind himself?

Adeimantus:: This, must by an abundant necessity happen, Socrates.

Socrates:: But, we have not yet mentioned, what must of the greatest necessity be the case.

Adeimantus:: What is that?

Socrates:: That which these instructors and sophists superadd by action, not being able to persuade by speech: or, do you not know, that they punish with disgraces, and fines, and deaths, the man whom they cannot persuade?

Adeimantus:: I know that, extremely well.

Socrates:: What other sophist then, or what private reasonings do you think capable, drawing opposite to these, to overpower them?

Adeimantus:: I know none.

Socrates:: But is it not besides, great folly even to attempt it? For there neither is, nor was, nor ever can be, a different method of attaining virtue, besides this education by these sophists. I mean a human method, my friend; for a divine one, according to the proverb, I keep out of the question: for you must know well, with respect to whatever temper is preserved, and becomes such as it ought to be in such a constitution of politics, that you will not say amiss when you say that it is preserved by a divine destiny.

Adeimantus:: Nor and, of a different opinion.

Socrates:: But further now, besides these things, you must likewise be of this opinion.

Adeimantus:: Of what?

Socrates:: That each of these private hirelings, which these men call sophists, and deem the rivals of their art, teach no other things but those dogmas of the vulgar, which they approve when they are assembled together, and call it wisdom. Just as if a man had learned what were the wrathful emotions and desires of a great and strong animal he were nourishing, how it must be approached, how touched, and when it is most fierce or most mild; and from what causes, and the sounds which on these several occasions it was wont to utter, and at what sounds uttered by another, the animal is rendered both mild and savage; and, having learned all these things by associating with the animal for a long time, should call this wisdom; and, as if he had established an art, should apply himself to the teaching it; whilst yet, with reference to these dogmas and desires, he knows not in reality what is beautiful, or base, or good, or ill, or just, or unjust, but should pronounce all these according to the opinions of the great animal, calling those things good in which it delighted, and that evil with which it was vexed, and should have no other measure as to these things. Let us likewise suppose that he calls those things which are necessary, beautiful and just, but that he hath never discovered himself, nor is able to show to another, the nature of the necessary and the good, how much they really differ from each other. Whilst he is such an one, does he not, by Jupiter, appear to you an absurd teacher?

Adeimantus:: To me he appears so.

Socrates:: And from this man, think you, does he any way differ, who deems it wisdom to have understood the auger and the pleasures of the multitude, and of assemblies of all kinds of men, whether with relation to painting, music, or politics? For, if any one converses with these, and shows them either a poem, or any other production of art, or piece of administration respecting the city, and makes the multitude the judges of it, he is under what is called a Diomedæan necessity, which is above all other necessities, of doing whatever they commend. But to show that these things are in reality good and beautiful, have you at any time heard any of them advance a reason that was not quite ridiculous?

Adeimantus:: Nor do I think, I ever shall.

Socrates:: Whilst you attend then to all these things, bear this in mind, that the multitude never will admit or reckon that there is the one beautiful itself, and not many beautifuls, one *thing itself which has a single subsistence*, and not many such things.

Adeimantus:: They will be the, last to do so.

Socrates:: It is impossible then for the multitude to be philosophers.

Adeimantus:: Impossible.

Socrates:: And those who philosophize must of necessity be reproached by them.

Adeimantus:: Of necessity.

Socrates:: And likewise by those private persons, who, in conversing with the multitude, desire to please them.

Adeimantus:: It is plain.

Socrates:: From, this state of things, now, what safety do you see for the philosophic genius to continue in its pursuit, and arrive at perfection? And consider from what was formerly said, for we have allowed that facility in learning, memory, fortitude, and magnanimity belong to this genius.

Adeimantus:: We have.

Socrates:: And shall not such an one, of all men, immediately be the first in every thing, especially if he has a body naturally adapted to the soul?

Adeimantus:: Why shall he not?

Socrates:: And when he becomes more advanced in age, his kindred and citizens, I think, will incline to employ him in their affairs.

Adeimantus:: Why will they not?

Socrates:: And making supplications to him, and paying him homage, they will submit to him, and anticipate and flatter beforehand his growing power.

Adeimantus:: Thus, it usually happens.

Socrates:: What now, do you think such an one will do, in such a case, especially if he happen to belong to a great city, and be rich, and of a noble descent, and withal beautiful and of a large stature? Will he not be filled with extravagant hopes, deeming himself capable of managing both the affairs of Greeks and Barbarians, and on these accounts carry himself loftily, without any solid judgment, full of ostentation and vain conceit?

Adeimantus:: Extremely so.

Socrates:: If one should gently approach a man of this disposition, and tell him the truth, that he has no judgment, yet needs it; but that it is not to be acquired but by one who subjects himself to this acquisition, do you think that, with all these evils about him, he would be ready to hearken?

Adeimantus:: Far from if.

Socrates:: If now, through a good natural temper, and an innate disposition to reason, any one should somehow be made sensible, and be bent and drawn towards philosophy, what do we imagine those others will do, when they reckon they shall lose his company, and the benefit which they received from him? Will they not by every action, and every speech, say and do every thing to the man not to suffer himself to be persuaded; and to his adviser, to render him incapable by ensnaring him in private, and bringing him to public trial?

Adeimantus:: This, must of necessity happen.

Socrates:: Is it likely now such an one will philosophize?

Adeimantus:: Not altogether.

Socrates:: You see then, that we were not wrong when we said that even the very parts of the philosophic genius, when they meet with bad education, are in some measure the cause of a falling off from this pursuit, as well as those vulgarly reputed goods, riches, and all furniture of this kind.

Adeimantus:: We were not, but it was rightly said.

Socrates:: Such then, admirable friend! is the ruin, such and so great the corruption of the best genius for the noblest pursuit, and which besides but rarely happens, as we observed; and from among such as these are the men who do the greatest mischiefs to cities, and to private persons, and likewise they who do the greatest good, such as happen to be drawn to this side. But a little genius never did any thing remarkable to any one, neither to a private person nor to a city.

Adeimantus:: Most true.

Socrates:: These indeed, then, whose business it chiefly was to apply to philosophy, having thus fallen off, leaving her desolate and imperfect, lead themselves a life neither becoming nor genuine; whilst other unworthy persons, intruding themselves on philosophy, abandoned in a manner by her kindred, have disgraced her, and loaded her with reproaches, such as these you say her reproachers reproach her with: viz. that of those who converse with her, some are of no value, and most of them worthy of the greatest punishments.

Adeimantus:: These things, are commonly said.

Socrates:: And with reason, they are said. For other contemptible men seeing the field unoccupied, and that the possession of it is attended with dignities and honorable names, like persons who make their escape from prisons to temples, these likewise gladly leap from their handicrafts to philosophy; I mean such of them as are of the greatest address in their own little art. For, even in this situation of philosophy, her remaining dignity, in comparison with all the other arts, still surpasses in magnificence; of which dignity many are desirous, who by natural disposition are unfit for it, and whose bodies are not only deformed by their arts and handicrafts, but whose souls also are in like manner confused, and crushed by their servile works. Must it not of necessity be so?

Adeimantus:: Undoubtedly.

Socrates:: Does it then appear to you, that they are any way different in appearance from a blacksmith, who has made a little money, bald and puny, recently liberated from chains, and washed in the bath, with a new robe on him, just decked out as a bridegroom, presuming to marry the daughter of his master, encouraged by the poverty and forlorn circumstances with which he sees him oppressed?

Adeimantus:: There is, no great difference.

Socrates:: What sort of a race must such as these produce? Must it not be bastardly and abject?

Adeimantus:: By an abundant necessity.

Socrates:: But what now? When men who are unworthy of instruction apply to it, and are conversant in it, in an unworthy manner, what kind of sentiments and opinions shall we say are produced? Must they not be such as ought properly to be termed sophisms, and which possess nothing genuine, or worthy of true prudence?

Adeimantus:: By all means so.

Socrates:: A very small number now, Adimantus, remains of those who worthily are conversant in philosophy, who happen either to be detained somehow in banishment, and whose generous and well cultivated disposition persists in the study of philosophy, being removed from every thing which tends to corrupt it; or else when? in a small city, a mighty soul arises, who despising the honors of the state entirely neglects them, and likewise with justice despising any small thing arising from the other arts, his well-born soul returns to philosophy. These the bridle of our friend Theagis will be sufficient to restrain; for all other things conspire to withdraw Theagis from philosophy, but the care of his health excluding him from politics makes him attentive to that alone. For as to my genius, it is not worth while to mention the dæmoniacal sign; for certainly it has happened heretofore to but one other, or to none at all. And even of these few, such as are tasting, and have tasted, how sweet and blessed the acquisition of philosophy is, and have withal sufficiently seen the madness of the multitude, and how none of them, as I may say, effects any thing salutary in the affairs of cities, and that there is no ally with whom a man might go to the assistance of the just and be base; but that he is like one sailing among wild beasts, being neither willing to join them in injustice, nor able, as he is but one, to oppose the whole savage crew; but, before he can benefit the city or his friends, is destroyed, and is unprofitable both to himself and others: reasoning on all these things, lying quiet, and attending to his own affairs, as in a tempest, when the dust is driven, and the sea agitated by winds, standing under a wall, beholding others overwhelmed in iniquity, he is satisfied if he shall himself anyhow pass his life here pure from injustice and unholy deeds, and make his exit hence in good hopes cheerful and benignant. And he shall make his exit, after having done none of the smallest matters. Nor the greatest neither, whilst he has not met with a republic that is suitable to him; for, in a suitable one, he shall both make a greater proficiency himself, and shall preserve the affairs of private persons as well as of the public. It appears then, to me, that we have now sufficiently told whence it happens that philosophy is accused, and that it is so unjustly, unless you have something else to offer.

Adeimantus:: But, I say nothing further about this point. But which of the present republics do you say is adapted to philosophy?

Socrates:: Not one indeed; but this is what I complain of, that there is no constitution of a city at present worthy of the philosophic genius, which is therefore turned and altered, as a foreign seed sown in an improper soil, which degenerates to what is usually produced in that soil. After the same manner this race, as it has not at present its proper power, degenerates to a foreign species: but should it meet with the best republic, as it is the best in itself, then shall it indeed discover that it is really divine, and that all besides are human, both as to their genius and their pursuits. But now you seem plainly to be going to ask which is this republic.

Adeimantus:: You are mistaken; for this I was not going to ask: but whether it was this which we have described in establishing our city, or another.

Socrates:: As to other things, it is this one, and this very thing was then mentioned, that there must always be in the city something which shall have the same regard for the republic which you the legislator have when you establish the laws.

Adeimantus:: It was mentioned.

Socrates:: But it was not, made sufficiently plain, through fears which preoccupied you, when you signified that the illustration of the thing would be both tedious and difficult; and it is not indeed altogether easy to discuss what remains.

Adeimantus:: What is that?

Socrates:: In what manner a city shall attempt philosophy and not be destroyed; for all grand things are dangerous, and, as the saying is, fine things are truly difficult.

Adeimantus:: But however, let our disquisition be completed in making this evident.

Socrates:: Want of inclination, shall not hinder, though want of ability may. And being present, you shall know my alacrity, and consider now how readily and adventurously I am going to say, that a city ought to attempt this study in a way opposite to that at present.

Adeimantus:: How?

Socrates:: At present, those who engage in it are striplings, who immediately from their childhood, amidst their domestic affairs and lucrative employments, apply themselves to the most abstruse parts of philosophy, and then they depart most consummate philosophers. I call the most difficult part, that respecting the art of reasoning. And in all after time, if, when they are invited by others who practice this art, they are pleased to become hearers, they think it a great condescension, reckoning they ought to do it as a by-work:—but when they approach to old-age, besides some few, they are extinguished much more than the Heraclitean sun, because they are never again rekindled.

Adeimantus:: But how should they act?

Socrates:: Quite the reverse. Whilst they are lads and boys they should apply to juvenile instruction and philosophy, and, in taking proper care of their body, whilst it shoots and grows to firmness, provide for philosophy a proper assistant: and then, as that age advances in which the soul begins to be perfected, they ought vigorously to apply to her exercises; and when strength decays, and is no longer adapted for civil and military employments, they should then be dismissed, and live at pleasure, and, excepting a by-work, do nothing else but philosophize, if they propose to live happy, and, when they die, to possess in the other world a destiny adapted to the life they have led in this.

Adeimantus:: How truly, Socrates, do you seem to me to speak with zeal! Yet, I think, the greater part of your hearers will still more zealously oppose you, and by no means be persuaded, and that Thrasymachus will be the first of them.

Socrates:: Do not divide, Thrasymachus and me, who are now become friends; nor were we enemies heretofore. For we shall no way desist from our attempts, till we either persuade both him and the rest, or make some advances towards that life at which when they arrive they shall again meet with such discourses as these.

Adeimantus:: You have spoken, but a short time.

Socrates:: None at all, with respect at least to the whole of time: but that the multitude are not persuaded by what is said, is not wonderful; for they have never at any time seen existing what has now been mentioned, but rather such discourses as have been industriously composed, and have not fallen in spontaneously as these do at present. But as for the man who has arrived at the model of virtue, and is rendered similar to it in the most perfect manner possible both in word and in deed, they have never at any time seen such a man, neither one nor more of the kind. Or do you think they have?

Adeimantus:: By no means.

Socrates:: Neither yet, O blessed man! have they sufficiently attended to beautiful and liberal reasonings, so as ardently to investigate the truth, by every method, for the sake of knowing it, saluting only at a distance such intricate and contentions debates, as tend to nothing else but to opinion and strife, both in their courts of justice and in their private meetings.

Adeimantus:: The case is just so.

Socrates:: On these accounts then, and foreseeing these things, we were formerly afraid. However, being compelled by the truth, we did assert, that neither city nor republic, nor even a man in the same way, would ever become perfect, till some necessity of fortune oblige these few philosophers, who are at present called not depraved, but useless, to take the government of the city whether they will or not, and compel the city to be obedient to them; or till the sons of those who are now in the offices of power and magistracies, or they themselves, by some divine inspiration, be possessed with a genuine love of genuine philosophy: and I aver that no one has reason to think that either of these, or both, are impossible; for thus might we justly be laughed at, as saying things which are otherwise only similar to wishes. Is it not so?

Adeimantus:: It is.

Socrates:: If then, in the infinite series of past ages, the greatest necessity has obliged men that have arrived at the summit of philosophy to take the government of a state, or such men now govern in some barbarous region, remote from our observation, or shall hereafter, we are ready in that case to contend in our reasoning, that this republic we have described has existed and subsists, and shall arise at least when this our muse shall obtain the government of the state: for this is neither impossible to happen, nor do we speak of impossibilities, though we ourselves confess that they are difficult.

Adeimantus:: I am likewise, of the same opinion.

Socrates:: But you will say, that the multitude do not think so too.

Adeimantus:: It is likely.

Socrates:: O blessed man! do not thus altogether accuse the multitude; but, whatever opinion they may have, without upbraiding them, but rather encouraging them, and removing the reproach thrown on philosophy, point out to them the persons you call philosophers, and define distinctly, as at present, both their genius and their pursuits, that they may not think you speak of such as they call philosophers; or, if they mean the same men, you will tell them they have conceived a different opinion of the men from what you have, and give very different answers about them from yours. Or, do you think that one man can be enraged at another, who is not in a passion? or, that a man shall envy the envious, who is himself both void of envy, and is of a mild disposition?—I will prevent you, and say that I think there is in some few such a naturally bad temper, but not in the greater part of mankind.

Adeimantus:: I likewise, think so.

Socrates:: Are you not then of the same opinion with me in this? That these men are the cause of the multitude being ill affected towards philosophy, who openly revile what is no way becoming them, behaving in a scoffing and distasteful manner towards the multitude, always making discourses about particular men, and doing what is least of all becoming philosophy.

Adeimantus:: Certainly.

Socrates:: For somehow, Adimantus, the man at least who really applies his dianoëtic part to true being, has not leisure to look down to the little affairs of mankind, and, in fighting with them, to be filled with envy and ill nature; but, beholding and contemplating such objects as are orderly, and always subsist in the same manner, such as neither injure nor are injured by each other, but are in all respects beautiful, and according to reason, these he imitates and resembles as far as possible; or, do you think it possible by any contrivance that a man should not imitate that, in conversing with which he is filled with admiration?

Adeimantus:: It is impossible.

Socrates:: The philosopher then who converses with that which is decorous and divine, as far as is possible for man, becomes himself decorous and divine. But calumny is powerful in every thing.

Adeimantus:: It is entirely so.

Socrates:: If then, he be under any necessity, not merely of forming himself alone, but likewise of endeavoring to introduce any thing he beholds there among mankind, in order to form their manners, both in private and in public life, would he prove, think you, a bad artist of temperance and of justice, and of every social virtue?

Adeimantus:: Not at all.

Socrates:: But if now the multitude perceive that we say the truth of such an one, will they be angry at philosophers, and disbelieve us when we say, that the city can never otherwise be happy unless it be drawn by those painters who follow a divine original?

Adeimantus:: They will not be angry, if they perceive so: but what method of painting do you mean?

Socrates:: When they have obtained, the city and the manners of men as their canvass, they would first make it pure; which is not altogether an easy matter. But in this, you know, they differ from others, that they are unwilling to meddle either with a private man or city, or to prescribe laws, till once they either receive these pure, or purify them themselves.

Adeimantus:: And rightly.

Socrates:: And after this, do not you think they will draw a sketch of the republic?

Adeimantus:: Why not?

Socrates:: Afterwards, I think, as they proceed in their work, they will frequently look both ways, both to what is naturally just and beautiful, and temperate and the like; and likewise again to that which they can establish among mankind, blending and compounding their human form from different human characters and pursuits, drawing from this which Homer calls the divine likeness, and the divine resemblance subsisting among men.

Adeimantus:: Right.

Socrates:: They will then, I think, strike out one thing and insert another, till they have rendered human manners, as far as is possible, dear to the Gods.

Adeimantus:: It will thus, be the most beautiful picture.

Socrates:: Do we now then, any way persuade these men, who, you said, were coming upon us in battle array, that such a painter of republics is the man we then recommended to them, and on whose account they were enraged at us, that we committed cities to him, and will they now be more mild when they hear us mentioning it?

Adeimantus:: Certainly, if they be wise: for what is there now they can further question?

Socrates:: Will they say that philosophers are not lovers of real being and of truth?

Adeimantus:: That, were absurd.

Socrates:: Or that their genius, as we described it, is not allied to that which is best?

Adeimantus:: Nor this neither.

Socrates:: What then? Whilst their genius is such as this, and meets with suitable exercises, shall it not become perfectly good and philosophic, if any other be so? or, will you say those will be more so whom we set aside?

Adeimantus:: Not at all.

Socrates:: Will they still then be enraged at us when we say that till the philosophic race have the government of the city, neither the miseries of the city nor of the citizens shall have an end, nor shall this republic, which we speak of in the way of fable, arrive in reality at perfection?

Adeimantus:: Perhaps, they will be less enraged.

Socrates:: Are you willing then, that we say not of them they are less enraged at us, but that they are altogether appeased, and persuaded, that if we make no more of them, they may at least consent by their blushing?

Adeimantus:: By all means.

Socrates:: Let them then, be persuaded of this. But is there any one who will call this into question, that those of the philosophic genius do not usually spring from kings and sovereigns?

Adeimantus:: Not one, would allege that.

Socrates:: And though they were born with a philosophic genius, one may say they are under a great necessity of being corrupted; for indeed that it is a difficult matter for these geniuses to be preserved untainted, even we ourselves agree. But that in the infinite series of time, of the whole of the human race, there should never be so much as a single one preserved pure and untainted, is there any who will contend?

Adeimantus:: How can there be any one?

Socrates:: But surely, a single one is sufficient, if he exists, and has a city subject to him, to accomplish every thing now so much disbelieved.

Adeimantus:: He is sufficient.

Socrates:: And when the governor, has established the laws and customs we have recited, it is not at all impossible that the citizens should be willing to obey him.

Adeimantus:: Not at all.

Socrates:: But is it wonderful or impossible, that what appears to us should also appear to others?

Adeimantus:: I do not think it.

Socrates:: And that these things are best, if they be possible, we have sufficiently, as I think, explained in the preceding part of our discourse.

Adeimantus:: Sufficiently indeed.

Socrates:: Now then it seems we are agreed about our legislation; that the laws we mention are the best, if they could exist; but that it is difficult to establish them, not, however, impossible.

Adeimantus:: We are agreed.

Socrates:: After this has with difficulty been brought to a conclusion, shall we not in the next place consider what follows? In what manner, and from what disciplines and studies, they shall become the preservers of our republic? and in what periods of life they shall each of them apply to the several branches of education?

Adeimantus:: We must indeed consider that.

Socrates:: I acted not wisely, when in the former part of our discourse I left untouched the difficulty attending the possession of women, and the propagation of the species, and the establishing governors, knowing with what envy and difficulty they must be introduced, or be carried no further than theory. For now we are under no less a necessity of discussing these things at present. What relates to women and children is already finished; and we must now go over again, as from the beginning, what refers to governors. We said, if you remember, that they should appear to be lovers of the city, and be tried both by pleasures and by pains, and appear to quit this dogma neither through toils nor fears, nor any other change; and that he who was not able to do this was to be rejected; but he who came forth altogether pure, as gold tried in the fire, was to be appointed ruler, and to have honors and rewards paid him both alive and dead. Such were the things we said whilst our reasoning passed over, and concealed itself, as afraid to rouse the present argument.

Adeimantus:: You say most truly, for I remember, it.

Socrates:: For I was averse, my friend, to say, what I must now venture to assert; but now we must even dare to assert this: that the most complete guardians must be made philosophers.

Adeimantus:: Let this be agreed upon.

Socrates:: But consider that you will probably have but few of them: for such a genius as we said they must of necessity have, is wont but seldom in all its parts to meet in one man; but its different parts generally spring up in different persons.

Adeimantus:: How do you say?

Socrates:: That such as learn with facility, have a good memory, are sagacious and acute, and endued with whatever qualifications are allied to these, are not at the same time strenuous and magnificent in their dianoëtic part, so as to live orderly, with quietness and liability, but that such are carried by their acuteness wherever it happens, and every thing that is stable departs from them.

Adeimantus:: You say true.

Socrates:: With regard then to these firm habits of the mind, which are not at all versatile, and which one might rather employ as trusty, and which are difficult to be moved at dangers in war, are they not of the same temper with reference to learning? They move heavily, and with difficulty learn, as if they were benumbed, and are oppressed with sleep and yawning, when they are obliged to labor at any thing of this kind.

Adeimantus:: It is so.

Socrates:: But we said that he must partake of both these well and handsomely, or else he ought not to share in the most accurate education, nor magistracy, nor honors of the state.

Adeimantus:: Right.

Socrates:: Do not you think this will but rarely happen?

Adeimantus:: How should it not?

Socrates:: They must be tried then both in the things we formerly mentioned in labors, in fears, and in pleasures; and likewise in what we then passed over, and are now mentioning; we must exercise them in various kinds of learning, whilst we consider whether their genius be capable of sustaining the greatest disciplines, or whether it fails, as those who fail in the other things.

Adeimantus:: It is proper now, to consider this question at least in this manner.

Socrates:: But what do you call the greatest disciplines? You remember in some measure, that when we had distinguished the soul into three parts, we determined concerning justice, temperance, fortitude, and wisdom, what each of them is.

Adeimantus:: If I did not remember, it were just I should not hear what remains.

Socrates:: Do you likewise remember what was said before that?

Adeimantus:: What was it?

Socrates:: We some where said, that it was possible to behold these in their most beautiful forms, but that the journey would be a tedious which he must make, who would see them conspicuously; that it was possible, however, to approach towards them in the way of our demonstrations above mentioned; and you said that these were sufficient; so what was then advanced came to be spoken far short, in my own opinion, of accuracy; but, if agreeably to you, you may say so.

Adeimantus:: To me at least, they seemed to be discussed in measure; and the rest seemed to think so too.

Socrates:: But, friend, in speaking of things of this kind, such a measure as leaves out any part whatever of the truth is not altogether in measure. For nothing that is imperfect is the measure of any thing. Though some at times are of opinion, that things are sufficiently well when thus circumstanced, and that there is no necessity for further inquiry.

Adeimantus:: Very many, are thus affected through indolence.

Socrates:: But the guardian of the city and of the laws, has least of all need of that passion.

Adeimantus:: It appears so.

Socrates:: Such an one, then, my friend, must make the more ample circuit, and labor no less in learning than in the exercises: otherwise, as we were now saying, he will never arrive at the perfection of the greatest and most suitable learning.

Adeimantus:: But are not these, the greatest? Or is there yet any thing greater than justice, and those virtues which we discussed?

Socrates:: There is something greater. And even of these we must not contemplate only the rude description, but we must not omit the highest finishing. Or is it not ridiculous in other things of small account to employ our whole labor, and strive to have them the most accurate and perfect, and not deem the highest and most important affairs worthy of our highest attention, in order to render them the most perfect?

Adeimantus:: The sentiment, is very just. But, however, do you think, that any one will dismiss you without asking you, what indeed is this greatest discipline, and about what is it conversant, when you call it so?

Socrates:: Not at all, but do you yourself ask me; for assuredly you have not seldom heard it, and at present you either do not attend, or you intend to occasion me trouble in raising opposition. This I rather think, since you have often heard at least, that the idea of the good is the greatest discipline: which idea when justice and the other virtues employ, they become useful and advantageous. You now almost know that this is what I mean to say, and besides this, that we do not sufficiently know that idea, and that without this knowledge, though we understood every thing else in the highest degree, you know that it is of no advantage to us: in the same manner as it would avail us nothing though we possessed any thing whatever without the possession of the good: or do you think there is any greater profit in possessing all things without the possession of the good, than in knowing all things without the knowledge of the good, knowing nothing at all that is beautiful and good?

Adeimantus:: By Jupiter, not I.

Socrates:: But surely this too at least you know, that to the multitude pleasure seems to be the good; and to the more elegant it seems to be prudence.

Adeimantus:: And very ridiculously.

Socrates:: How indeed can it be otherwise? if, when they upbraid us that we know not what is the good, they tell us that they know, and call it the prudence of what is good, as if we understood what they say when they pronounce the word good.

Adeimantus:: Most true.

Socrates:: But what? those who define pleasure to be good, do they less err than the others? or are not these too obliged to confess that pleasures are evil?

Adeimantus:: Extremely so.

Socrates:: It happens then, I think, that they acknowledge the same things are both good and evil, do they not?

Adeimantus:: Undoubtedly.

Socrates:: Is it not evident, then, that there are great and manifold doubts about it?

Adeimantus:: Why are there not?

Socrates:: But what? is it not also evident, that with reference to things just and beautiful, the multitude choose the apparent, even though they be not really so? yet they act, and possess, and appear to possess them; but the acquisition of goods, that were only the apparent, never yet satisfied any one; but in this they seek what is real, and here every one despises what is only the apparent.

Adeimantus:: Extremely so.

Socrates:: This then is that which every soul pursues, and for the sake of this it does every thing, prophesying that it is something, but being dubious, and unable to comprehend sufficiently what it is, and to possess the same stable belief respecting it as of other things; and thus are they unsuccessful also in other things, if there be in them any profit. About a thing now of such a kind, and of such mighty consequence, shall we say that even these our best men in the city, and to whom we commit the management of every thing, shall be thus in the dark?

Adeimantus:: As little at least as possible.

Socrates:: I think then, that whilst it is unknown in what manner the just and beautiful are good, they are not of any great value to a guardian to possess, if it be likely he shall know these, whilst he is ignorant of this; but I prophesy that no one will arrive at the knowledge of these before he sufficiently knows what the good is.

Adeimantus:: You prophesy well.

Socrates:: Shall not then our republic be completely adorned, if such a guardian be placed over it as is scientifically knowing in these things?

Adeimantus:: It must of necessity. But with respect to yourself, whether, Socrates, do you say that the good is science, or pleasure, or something else besides these?

Socrates:: You was ever, a worthy man, and manifestly showed of old that you was not to be satisfied with the opinions of others about these things.

Adeimantus:: Nor does it appear to me just, Socrates, that a man should be able to relate the dogmas of others, but not his own, after having spent so much time in inquiring about these particulars.

Socrates:: But what, does it then appear to you just for a man to speak of things of which he is ignorant, as if he knew them?

Adeimantus:: By no means, as if he knew them; yet however, according as he thinks, those things which he thinks he should be willing to tell us.

Socrates:: But what, have you not observed of opinions void of science how deformed they all are, and that the best of them are blind? Or do those who without intellect form right opinion seem to you, ill any respect, to differ from those who are blind, and at the same time walk straight on the road?

Adeimantus:: In no respect.

Socrates:: Are you willing, then, that we should examine things deformed, blind, and crooked, having it in our power to hear from others what is clear and beautiful?

Glaucon:: Do not, by Jupiter, Socrates, desist at the end; for it will suffice us, if in the same way as you have spoken of justice and temperance, and those other virtues, you likewise discourse concerning the good.

Socrates:: And I too shall be very well satisfied, my friend; but I am afraid I shall not be able; and, by appearing readily disposed. I shall incur the ridicule of the unmannerly. But, O blessed man! let us at present dismiss this inquiry, what the good is; (For it appears to me a greater thing than we can arrive at, according to our present impulse,) but I am willing to tell you what the offspring of the good appears to be, and what most resembles it, if this be agreeable to you; and if not, I shall dismiss it.

Glaucon:: But tell us; for you shall afterwards explain to us what the father is.

Socrates:: I could wish, both that I were able to give that explanation, and you to receive it, and not as now the offspring only. Receive now then this child and offspring of the good itself. Yet take care however that unwillingly I deceive you not, in any respect, giving an adulterate account of this offspring.

Glaucon:: We shall take care, to the best of our ability; only tell us.

Socrates:: I shall tell, then, after we have thoroughly assented, and I have reminded you of what was mentioned in our preceding discourse, and has, been frequently said on other occasions.

Glaucon:: What is it?

Socrates:: That there are many things, beautiful, and many good, and each of these we say is so, and we distinguish them in our reasoning.

Glaucon:: We say so.

Socrates:: But as to the beautiful itself, and the good itself, and in like manner concerning all those things which we then considered as many, now again establishing them according to one idea of each particular, as being one, we assign to each that appellation which belongs to it; and these indeed we say are seen by the eye, but are not objects of intellectual perception; but that the ideas are perceived by the intellect, but are not seen by the eye.

Glaucon:: Perfectly so.

Socrates:: By what part then of ourselves do we see things visible?

Glaucon:: By the sight.

Socrates:: And is it not, by hearing, that we perceive what is heard; and by the other senses, all the other objects of sense?

Glaucon:: Why not?

Socrates:: But have you not observed, with regard to the artificer of the senses, how he has formed the power of sight, and of being visible, in the most perfect manner?

Glaucon:: I have not entirely perceived it.

Socrates:: But consider it in this manner. Is there any other species, which hearing and sound require, in order that the one may hear, and the other be heard, which third thing if it be not present, the one shall not hear, and the other not be heard?

Glaucon:: There is nothing.

Socrates:: Imagine then, that neither do many others (that I may not say none) require any such thing: or can you mention any one that does require it?

Glaucon:: Not I.

Socrates:: But with reference to the sense of seeing, and the object of sight, do not you perceive that they require something?

Glaucon:: How?

Socrates:: When there is sight in the eyes, and when he who has it attempts to use it, and when there is color in the objects before him, unless there concur some third genus, naturally formed for the purpose, you know that the sight will see nothing, and the colors will be invisible.

Glaucon:: What is that you speak of?

Socrates:: What you call light.

Glaucon:: You say true.

Socrates:: This species then is not despicable; and by no small idea are the sense of seeing, and the power of being seen, connected together; but by a bond the most honorable of all bonds, if light be not dishonorable. But it is far, from being dishonorable. Whom then of the Gods in heaven can you assign as the cause of this, that light makes our sight to see, and visible objects to be seen, in the best manner?

Glaucon:: The same as you, and others do; for it is evident that you mean the sun.

Socrates:: Is not the sight then naturally formed in this manner with reference to this God?

Glaucon:: How?

Socrates:: The sight is not the sun, nor is that the sun in which sight is ingenerated, which we call the eye.

Glaucon:: It is not.

Socrates:: But yet I think that of all the organs of sense it is most solar-form.

Glaucon:: Very much so.

Socrates:: And the power which it possesses, does it not possess as dispensed and flowing from hence?

Glaucon:: Perfectly so.

Socrates:: Is not then the sun, which indeed is not light itself, yet as it is the cause of it, seen by sight itself?

Glaucon:: It is so.

Socrates:: Conceive then, that this is what I called the offspring of *the good*, which *the good* generates, analogous to itself; and that what this is in the intelligible place, with respect to intellect, and the objects of intellect, that the sun is in the visible place with respect to sight and visible things.

Glaucon:: How is it? explain to me yet further.

Socrates:: You know that the eyes, when they are no longer directed towards objects whose colors are shone upon by the light of day, but by the splendor of the night, grow dim, and appear almost blind, as if they had in them no pure sight.

Glaucon:: Just so.

Socrates:: But when they turn to objects which the sun illuminates, then I think they see clearly, and in those very eyes there appears now to be light.

Glaucon:: There does.

Socrates:: Understand then, in the same manner, with reference to the soul. When it firmly adheres to that which truth and real being enlighten, then it understands and knows it, and appears to possess intellect: but when it adheres to that which is blended with darkness, which is generated, and which perishes, it is then conversant with opinion, its vision becomes blunted, it wanders from one opinion to another, and resembles one without intellect. It has such a resemblance. That therefore which imparts truth to what is known, and dispenses the power to him who knows, you may call the idea of the good, being the cause of science and of truth, as being known through intellect. And as both these two, knowledge and truth, are so beautiful, when you think that the good is something different, you and still more beautiful than these, you shall think aright. Science and truth here are as light and sight there, which we rightly judged to be solar-form, but that we were not to think they were the sun. So here it is right to judge, that both these partake of the form of the good; but to suppose that either of them is the good, is not right, but the good itself is worthy of still greater honour.

Glaucon:: You speak, of an inestimable beauty, since it affords science and truth, but is itself superior to these in beauty. And you never any where said that it was pleasure.

Socrates:: Predict better things, and in this manner rather consider its image yet further.

Glaucon:: How?

Socrates:: You will say, I think, that the sun imparts to things which are seen, not only their visibility, but likewise their generation, growth and nourishment, not being itself generation.

Glaucon:: Why not?

Socrates:: We may say, therefore, that things which are known have not only this from the good, that they are known, but likewise that their being and essence are thence derived, whilst the good itself is not essence, but beyond essence, transcending it both in dignity and in power. Here Glauco, laughing very much, said;

Glaucon:: By Apollo this is a divine transcendency indeed!

Socrates:: You yourself, are the cause, having obliged me to relate what appears to me respecting it.

Glaucon:: And by no means, stop, if something does not hinder you, but again discuss the resemblance relating to the sun, if you have omitted any thing.

Socrates:: But I omit, many things.

Glaucon:: Do not omit, the smallest particular.

Socrates:: I think, that much will be omitted: however, as far I am able at present, I shall not willingly omit any thing.

Glaucon:: Do not.

Socrates:: Understand then, that we say these are two; and that the one reigns over the intelligible genus and place, and the other over the visible, not to say the heavens, lest I should seem to you to employ sophistry in the expression: you understand then these two species, the visible and the intelligible?

Glaucon:: I do.

Socrates:: As if then you took a line, cut into two unequal parts, and cut over again each section according to the same ratio, both that of the visible species, and that of the intelligible, you will then have perspicuity and obscurity placed by each other. In the visible species you will have in one section images: but I call images, in the first place, shadows, in the next, the appearances in water, and such as subsist in bodies which are dense, polished and bright, and every thing of this kind, if you understand me.

Glaucon:: I do.

Socrates:: Suppose now the other section of the visible which this resembles, such as the animals around us, and every kind of plant, and whatever has a composite nature.

Glaucon:: I suppose it.

Socrates:: Are you willing then that this section appear to be divided into true and untrue? And that the same proportion, which the object of opinion has to the object of knowledge, the very same proportion has the resemblance to that of which it is the resemblance?

Glaucon:: I am, indeed, extremely willing.

Socrates:: But consider now again the section of the intelligible, how it was divided.

Glaucon:: How?

Socrates:: That with respect to one part of it, the soul uses the former sections as images; and is obliged to investigate from hypotheses, not proceeding to the beginning, but to the conclusion: and the other part, again, is that where the soul proceeds from hypothesis to an unhypothetical principle, and without those images about it, by the species themselves, makes its way through them.

Glaucon:: I have not, sufficiently understood you in these things.

Socrates:: But again, for you will more easily understand me, these things having been premised. For I think you are not ignorant, that those who are conversant in geometry, and computations, and such like, after they have said down hypotheses of the odd and the even, and figures, and three species of angles, and other things the sisters of these, according to each method, they then proceed upon these things as known, having said down all these as hypotheses, and do not give any further reason about them, neither to themselves nor others, as being things obvious to all. But, beginning from these, they directly discuss the rest, and with full consent end at that which their inquiry pursued.

Glaucon:: I know this, perfectly well.

Socrates:: And do you not likewise know, that when they use the visible species, and reason about them, their dianoëtic power is not employed about these species, but about those of which they are the resemblances, employing; their reasonings about the square itself, and the diameter itself, and not about that which they describe? And, in the same manner, with reference to other particulars, those very things which they form and describe, in which number, shadows and images in water are to be reckoned, these they use as images, seeking to behold those very things, which a man can no otherwise see than by his dianoëtic part.

Glaucon:: You say true.

Socrates:: This then I called a species of the intelligible; but observed that the soul was obliged to use hypotheses in the investigation of it, not going back to the principle, as not being able to ascend higher than hypotheses, but made use of images formed from things below, to lead to those above, as perspicuous, as objects of opinion, and distinct from the things themselves.

Glaucon:: I understand, that you speak of things pertaining to the geometrical, and other sister arts.

Socrates:: Understand now, that by the other section of the intelligible, I mean that which reason itself attains, making hypotheses by its own reasoning power, not as principles, but really hypotheses, as steps and handles, that, proceeding as far as to that which is unhypothetical, viz. the principle of the universe, and coming into contact with it, again adhering to those things which adhere to the principle, it may thus descend to the end; using no where any thing which is sensible, but forms themselves, proceeding through some to others, and at length in forms terminating its progression.

Glaucon:: I understand, but not sufficiently. For you seem to me to speak of an arduous undertaking: but you want, however, to determine that the perception of real being, and that which is intelligible, by the science of reasoning, are more conspicuous than the discoveries made by the arts, as they are called, which have hypotheses for their first principles; and that those who behold these are obliged to behold them with their dianoëtic power, and not with their senses. But as they are not able to perceive, by ascending to the principle, but from hypotheses, they appear to you not to possess intellect respecting them, though they are intelligible in conjunction with the principle. You also appear to me to call the habit of geometrical and such like concerns, the dianoëtic part, and not intellect; the dianoëtic part subsisting between opinion and intellect.

Socrates:: You have comprehended, most sufficiently: and conceive now, that corresponding to the four sections there are these four passions in the soul; intelligence answering to the highest, the dianoëtic part to the second; and assign faith to the third; and to the last assimilation. Arrange them likewise analogously; conceiving that as their objects participate of truth, so these participate of perspicuity.

Glaucon:: I understand, and I assent, and I arrange them as you say.

THE END OF THE SIXTH BOOK.

# BOOK VII.

Socrates:: After these things now, assimilate, with reference to erudition, and the want of erudition, our nature to such a condition as follows. Consider men as in a subterraneous habitation, resembling a cave, with its entrance expanding to the light, and answering to the whole extent of the cave. Suppose them to have been in this cave from their childhood, with chains both on their legs and necks, so as to remain there, and only be able to look before them, but by the chain incapable to turn their heads round. Suppose them likewise to have the light of a fire, burning far above and behind them and that between the fire and the fettered men there is a road above. Along this road, observe a low wall built, like that which hedges in the stage of mountebanks on which they exhibit their wonderful tricks.

Glaucon:: I observe it.

Socrates:: Behold now, along this wall, men bearing all sorts of utensils, raised above the wall, and human statues, and other animals, in wood and stone, and furniture of every kind. And, as is likely, some of those who are carrying these are speaking, and others silent.

Glaucon:: You mention, a wonderful comparison, and wonderful fettered men.

Socrates:: But such, however, as resemble us; for, in the first place, do you think that such as these see any thing of themselves, or of one another, but the shadows formed by the fire, falling on the opposite part of the cave? How can they, if through the whole of life they be under a necessity, at least, of having their heads unmoved? But what do they see of what is carrying along? Is it not the very same?

Glaucon:: Why not?

Socrates:: If then they were able to converse with one another, do not you think they would deem it proper to give names to those very things which they saw before them?

Glaucon:: Of necessity they must.

Socrates:: And what if the opposite part of this prison had an echo, when any of those who passed along spoke, do you imagine they would reckon that what spoke was any thing else than the passing shadow?

Glaucon:: Not I, by Jupiter!

Socrates:: Such as these then, will entirely judge that there is nothing true but the shadows of utensils.

Glaucon:: By an abundant necessity.

Socrates:: With reference then, both to their freedom from these chains, and their cure of this ignorance, consider the nature of it, if such a thing should happen to them. When any one should be loosed, and obliged on a sudden to rise up, turn round his neck, and walk and look up towards the light; and in doing all these things should be pained, and unable, from the splendors, to behold the things of which he formerly saw the shadows, what do you think he would say, if one should tell him that formerly he had seen trifles, but now, being somewhat nearer to reality, and turned toward what was more real, he saw with more rectitude; and so, pointing out to him each of the things passing along, should question him, and oblige him to tell what it were; do not you think he would be both in doubt, and would deem what he had formerly seen to be more true than what was now pointed out to him?

Glaucon:: By far.

Socrates:: And if he should oblige him to look to the light itself, would not he find pain in his eyes, and shun it; and, turning to such things as he is able to behold, reckon that these are really more clear than those pointed out?

Glaucon:: Just so.

Socrates:: But if one, should drag him from thence violently through a rough and steep ascent, and never stop till he drew him up to the light of the sun, would he not, whilst he was thus drawn, both be in torment, and be filled with indignation? And after he had even come to the light, having his eyes filled with splendor, he would be able to see none of these things now called true.

Glaucon:: He would not, suddenly at least.

Socrates:: But he would require, I think, to be accustomed to it some time, if he were to perceive things above. And, first of all, he would most easily perceive shadows, afterwards the images of men and of other things in water, and after that the things themselves. And, with reference to these, he would more easily see the things in the heavens, and the heavens themselves, by looking in the night to the light of the stars, and the moon, than by day looking on the sun, and the light of the sun.

Glaucon:: How can it be otherwise?

Socrates:: And, last of all, he may be able, I think, to perceive and contemplate the sun himself, not in water, nor resemblances of him, in a foreign seat, but himself by himself, in his own proper region.

Glaucon:: Of necessity.

Socrates:: And after this, he would now reason with himself concerning him, that it is he who gives the seasons, and years, and governs all things in the visible place; and that of all those things which he formerly saw, he is in a certain manner the cause.

Glaucon:: It is evident, that after these things he may arrive at such reasonings as these.

Socrates:: But what? when he remembers his first habitation, and the wisdom which was there, and those who were then his companions in bonds, do you not think he will esteem himself happy by the change, and pity them? And that greatly. And if there were there any honors and encomiums and rewards among themselves, for him who most acutely perceived what passed along, and best remembered which of them were wont to pass foremost. which latest, and which of them went together; and from these observations were most able to presage what was to happen; does it appear to you that he will be desirous of such honors, or envy those who among these are honored, and in power? Or, will he not rather wish to suffer that of Homer, and vehemently desire

> As laborer to some ignoble man
> To work for hire............

and rather suffer any thing than to possess such opinions, and live after such a manner?

Glaucon:: I think so, that he would suffer, and embrace any thing rather than live in that manner.

Socrates:: But consider this further: If such an one should descend, and sit down again in the same seat, would not his eyes be filled with darkness, in consequence of coming suddenly from the sun?

Glaucon:: Very much so.

Socrates:: And should he now again be obliged to give his opinion of those shadows, and to dispute about them with those who are there eternally chained, whilst yet his eyes were dazzled, and before they recovered their former state, (which would not be effected in a short time) would he not afford them laughter? and would it not be said of him, that, having ascended, he was returned with vitiated eyes, and that it was not proper even to attempt to go above, and that whoever should attempt to liberate them, and lead them up, if ever they were able to get him into their hands, should be put to death?

Glaucon:: They would by all means, put him to death.

Socrates:: The whole of this image now, friend Glauco, is to be applied to our preceding discourse; for, if you compare this region, which is seen by the sight, to the habitation of the prison; and the light of the fire in it, to the power of the sun; and the ascent above, and the vision of things above, to the soul's ascent into the intelligible place; you will apprehend my meaning, since you want to hear it. But God knows whether it be true. Appearances then present themselves to my view as follows. In the intelligible place, the idea of the good is the last object of vision, and is scarcely to be seen; but if it be seen, we must collect by reasoning that it is the cause to all of every thing right and beautiful, generating in the visible place, light, and its lord the sun; and in the intelligible place, it is itself the lord, producing truth and intellect; and this must be beheld by him who is to act wisely, either privately or in public.

Glaucon:: I agree with you, as far as I am able.

Socrates:: Come now, and agree with me likewise in this. And do not wonder that such as arrive hither are unwilling to act in human affairs, but their souls always hasten to converse with things above; for it is somehow reasonable it should be so, if these things take place according to our above-mentioned image.

Glaucon:: It is indeed reasonable.

Socrates:: But what? do you think that this is any thing wonderful, that when a man comes from divine contemplations to human evils, he should behave awkwardly and appear extremely ridiculous, whilst he is yet dazzled, and is obliged, before he is sufficiently accustomed to the present darkness, to contend in courts of justice, or elsewhere, about the shadows of justice, or those statues which occasion the shadows; and to dispute about this point, how these things are apprehended by those who have never at any time beheld justice itself?

Glaucon:: This is not at all wonderful.

Socrates:: But if a man possesses intellect, he must remember, that there is a twofold disturbance of the sight, and arising from two causes, when we betake ourselves from light to darkness, and from darkness to light: and when a man considers that these very things happen with reference also to the soul, whenever he sees any one disturbed, and unable to perceive any thing, he will not laugh in an unreasonable manner, but will consider, whether the soul, coming from a more splendid life, be darkened by ignorance, or, going from abundant ignorance to one more luminous, be filled with the dazzling splendor, and so will congratulate the one on its fate and life, and compassionate the life and fate of the other. And if he wishes to laugh at the soul that goes from darkness to light, his laughter would be less improper, than if he were to laugh at the soul which descends from the light to darkness.

Glaucon:: You say very reasonably.

Socrates:: It is proper then, that we judge of them after such a manner as this, if those things be true. That education is not such a thing as some announce it to be; for they somehow say, that whilst there is no science in the soul, they will insert it, as if they were inserting sight in blind eyes.

Glaucon:: They say so.

Socrates:: But our present reasoning, now shows, that this power being in the soul of every one, and the organ by which every one learns, and being in the same condition as the eye, if it were unable otherwise, than with the whole body, to turn from darkness to light, must, in like manner, with the whole soul, be turned from generation, till it be able to endure the contemplation of being itself, and the most splendid of being; and this we call the good. Do we not?

Glaucon:: We do.

Socrates:: This then, would appear to be the art of his conversion, in what manner he shall, with greatest ease and advantage, be turned. Not to implant in him the power of seeing, but considering him as possessed of it, only improperly situated, and not looking at what he ought, to contrive some method by which this may be accomplished.

Glaucon:: It seems so.

Socrates:: The other virtues now then of the soul, as they are called, seem to be somewhat resembling those of the body (for when, in reality, they were not in it formerly, they are afterwards produced in it by habits and exercises); but that of wisdom, as it seems, happens to be of a nature somewhat more divine than any other; as it never loses its power, but, according as it is turned, is useful and advantageous, or useless and hurtful. Or have you not observed of those who are said to be wicked, yet wise, how sharply the little soul sees, and how acutely it comprehends every thing to which it is turned, as having no contemptible sight, but compelled to be subservient to wickedness: so that the more acutely it sees, so much the more productive is it of wickedness?

Glaucon:: Entirely so.

Socrates:: But however, with reference to this part of such a genius; if, immediately from childhood, it should be stripped of every thing allied to generation, as leaden weights, and of all those pleasures and lusts which relate to feastings and such like, which turn the sight of the soul to things downwards; from all these, if the soul, being freed, should turn itself towards truth, the very same principle in the same men would most acutely see those things as it now does these to which it is turned.

Glaucon:: It is likely.

Socrates:: But what? is not this likely, and necessarily deduced from what has been mentioned? that neither those who are uninstructed and unacquainted with truth can ever sufficiently take care of the city; nor yet those who allow themselves to spend the whole of their time in learning. The former, because they have no one scope in life, aiming at which they ought to do whatever they do, both in private and in public; and the latter, because they are not willing to manage civil affairs, thinking that whilst they are yet alive, they inhabit the islands of the blessed.

Glaucon:: True.

Socrates:: It is our business then, to oblige those of the inhabitants who have the best geniuses, to apply to that learning which we formerly said was the greatest, both to view the good, and to ascend that ascent; and when they have ascended and sufficiently viewed it, we are not to allow them what is now allowed them.

Glaucon:: What is that?

Socrates:: To continue there, and be unwilling to descend again to those fettered men, or share with them in their toils and honors, whether more trifling or more important.

Glaucon:: Shall we then, act unjustly towards them, and make them live a worse life when they have it in their power to live a better?

Socrates:: You have again forgot, friend, that this is not the legislator's concern, in what manner any one tribe in the city shall live remarkably happy; but this he endeavors to effectuate in the whole city, connecting the citizens together; and by necessity, and by persuasion, making them share the advantage with one another with which they are severally able to benefit the community: and the legislator, when he makes such men in the city, does it not that he may permit them to go where each may incline, but that himself may employ them for connecting the city together.

Glaucon:: True, I forgot, indeed.

Socrates:: Consider then, Glauco, that we shall no way injure the philosophers who arise among us, but tell them what is just, when we oblige them to take care of others, and to be guardians. We will allow indeed, that those who in other cities become philosophers, with reason do not participate of the toils of public offices in the state (for they spring up of themselves, the policy of each city opposing them, and it is just, that what springs of itself, owing its growth to none, should not be forward to pay for its nurture to any one); but you have we generated both for yourselves, and for the rest of the state, as the leaders and kings in a hive, and have educated you better, and in a more perfect manner than they, and made you more capable of sharing both in the rewards and labors attending public offices. Every one then must, in part, descend to the dwelling of the others, and accustom himself to behold obscure objects: for, when you are accustomed to them, you will infinitely better perceive things there, and will fully know the several images what they are, and of what, from your having perceived the truth concerning things beautiful, and just, and good. And thus, as a real vision, both to us and you, shall the city he inhabited, and not as a dream, as most cities are at present inhabited by such as both fight with one another about shadows, and raise sedition about governing, as if it were some mighty good. But the truth is as follows: In whatever city those who are to govern, are the most averse to undertake government, that city, of necessity, will be the best established, and the most free from sedition and that city, whose governors are of a contrary character, will be in a contrary condition.

Glaucon:: Entirely so.

Socrates:: Do you think then that our pupils will disobey us, when they hear these injunctions, and be unwilling to labor jointly in the city, each bearing a part, but spend the most of their time with one another, free from public affairs?

Glaucon:: Impossible. For we prescribe just things to just men. And each of them enters on magistracy from this consideration beyond all others, that they are under a necessity of governing after a manner contrary to all the present governors of all other cities.

Socrates:: For thus it is, my companion, if you discover a life for those who are to be our governors, better than that of governing, then it will be possible for you to have the city well established; for in it alone shall those govern who are truly rich, not in gold, but in that in which a happy man ought to be rich, in a good and prudent life. But if, whilst they are poor, and destitute of goods of their own, they come to the public, thinking they ought thence to pillage good, it is not possible to have the city rightly established. For the contest being who shall govern, such a war being domestic, and within them, it destroys both themselves and the rest of the city.

Glaucon:: Most true.

Socrates:: Have you then, any other kind of life which despises public magistracies, but that of true philosophy?

No, by Jupiter! But, however, they ought at least not to be fond of governing who enter on it, otherwise the rivals will fight about it.

Glaucon:: How can it be otherwise?

Socrates:: Whom else then will you oblige to enter on the guardianship of the city, but such as are most intelligent in those things by which the city is best established, and who have other honors, and a life better than the political one?

Glaucon:: No others.

Socrates:: Are you willing then, that we now consider this, by what means such men shall be produced, and how one shall bring them into the light, as some are said, from Hades, to have ascended to the Gods?

Glaucon:: Why should I not be willing?

Socrates:: This now, as it seems, is not the turning of a shell; but the conversion of the soul coming from some benighted day, to the true re-ascent to real being, which we say is true philosophy.

Glaucon:: Entirely so.

Socrates:: Ought we not then to consider which of the disciplines possesses such a power?

Glaucon:: Why not?

Socrates:: What now, Glauco, may that discipline of the soul be, which draws her from that which is generated towards being itself? But this I consider whilst I am speaking. Did not we indeed say, that it was necessary for them, whilst young, to be wrestlers in war?

Glaucon:: We said so.

Socrates:: It is proper then, that this discipline likewise be added to that which is now the object of our inquiry. Which? Not to be useless to military men. It must indeed, be added if possible. They were some where in our former discourse instructed by us in gymnastic and music.

Glaucon:: They were.

Socrates:: Gymnastic indeed somehow respects what is generated and destroyed, For it presides over the increase and corruption of body.

Glaucon:: It seems so.

Socrates:: This then cannot be the discipline which we investigate.

Glaucon:: It cannot.

Socrates:: Is it music then, such as we formerly described?

Glaucon:: But it was, as a counterpart of gymnastic, if you remember, by habits instructing our guardians, imparting no science, but only with respect to harmony, a certain propriety, and with regard to rhythm, a certain propriety of rhythm, and in discourses, certain other habits the sisters of these, both in such discourses as are fabulous, and in such as are nearer to truth. But as to a discipline respecting such a good as you now investigate, there was nothing of this in that music.

Socrates:: You have, most accurately, reminded me; for it treated, in reality, of no such thing. But, divine Glauco, what may this discipline be? For all the arts have somehow appeared to be mechanical and illiberal.

Glaucon:: How should they not? And what other discipline remains distinct from music, gymnastic, and the arts?

Socrates:: Come, if we have nothing yet further besides these to take, let us take something in these which extends over them all.

Glaucon:: What is that?

Socrates:: Such as this general thing, which all arts, and dianoëtic powers, and sciences employ, and which every one ought, in the first place, necessarily to learn.

Glaucon:: What is that?

Socrates:: This trifling thing, to know completely one, and two, and three: I call this summarily number, and computation. Or is it not thus with reference to these, that every art, and likewise every science, must of necessity participate of these?

Glaucon:: They must of necessity.

Socrates:: And must not the art of war likewise participate of them?

Glaucon:: Of necessity.

Socrates:: Palamedes then, in the tragedies, shows every where Agamemnon to have been at least a most ridiculous general; or have you not observed how he says, that having invented numeration, he adjusted the ranks in the camp at Troy, and numbered up both the ships, and all the other forces which were not numbered before; and Agamemnon, as it seems, did not even know how many foot he had, as he understood not how to number them: but what kind of general do you imagine him to be?

Glaucon:: Some absurd one, for my part, if this were true.

Socrates:: Is there any other discipline then, which we shall establish as more necessary to a military man, than to be able to compute and to number?

Glaucon:: This most of all, if he would any way understand how to range his troops, and still more if he is to be a man.

Socrates:: Do you perceive then, with regard to this discipline the same thing as I do?

Glaucon:: What is that?

Socrates:: It seems to belong to those things which we are investigating, which naturally lead to intelligence, but that no one uses it aright, being entirely a conductor towards real being.

Glaucon:: How do you say?

Socrates:: I shall endeavor, to explain at least my own opinion. With reference to those things which I distinguish with myself into such as lead towards intelligence, and such as do not, do you consider them along with me, and either agree or dissent, in order that we may more distinctly see, whether this be such as I conjecture respecting it.

Glaucon:: Show me.

Socrates:: I show you then, if you perceive some things with relation to the senses, which call not intelligence to the inquiry, as they are sufficiently determined by sense, but other things which by all means call upon it to inquire, as sense does nothing sane.

Glaucon:: You plainly mean, such things as appear at a distance, and such as are painted.

Socrates:: You have not altogether, apprehended my meaning.

Glaucon:: Which then, do you mean?

Socrates:: Those things, call not upon intelligence, which do not issue in a contrary sensation at one and the same time; but such as issue in this manner, I establish to be those which call upon intelligence: since here sense manifests the one sensation no more than its contrary, whether it meet with it near, or at a distance. But you will understand my meaning more plainly in this manner. These, we say, are three fingers, the little finger, the next to it, and the middle finger.

Glaucon:: Plainly so.

Socrates:: Consider me then as speaking of them when seen near, and take notice of this concerning them.

Glaucon:: What?

Socrates:: Each of them alike appears to be a finger, and in this there is no difference, whether it be seen in the middle or in the end; whether it be white or black, thick or slender, or any thing else of this kind; for in all these, the soul of the multitude is under no necessity to question their intellect: what is a finger; for never does sight itself at the same time intimate finger to be finger, and its contrary.

Glaucon:: It does not.

Socrates:: Is it not likely then, that such a case as this at least shall neither call upon nor excite intelligence?

Glaucon:: It is likely.

Socrates:: But what? with reference to their being great and small, does the sight sufficiently perceive this, and makes it no difference to it, that one of them is situated in the middle, or at the end; and in like manner with reference to their thickness and slenderness, their softness and hardness, does the touch sufficiently perceive these things; and in like manner the other senses, do they no way defectively manifest such things? Or does each of them act in this manner? First of all, must not that sense which relates to hard, of necessity relate likewise to soft; and feeling these, it reports to the soul, as if both hard and soft were one and the same?

Glaucon:: It does.

Socrates:: And must not then the soul again, in such cases, of necessity be in doubt, what the sense points out to it as hard, since it calls the same thing soft likewise; and so with reference to the sense relating to light and heavy; the soul must be in doubt what is light and what is heavy;

if the sense intimates that heavy is light, and that light is heavy?

Glaucon:: These at least, are truly absurd reports to the soul, and stand in need of examination.

Socrates:: It is likely then, that first of all, in such cases as these, the soul, calling in reason and intelligence, endeavors to discover, whether the things reported be one, or whether they be two.

Glaucon:: Why not?

Socrates:: And if they appear to be two, each of them appears to be one, and distinct from the other.

Glaucon:: It does.

Socrates:: And if each of them be one, and both of them two, he will by intelligence perceive two distinct; for, if they were not distinct, he could not perceive two, but only one.

Glaucon:: Right.

Socrates:: The sight in like manner, we say, perceives great and small, but not as distinct from each other, but as something confused, Does it not?

Glaucon:: It does.

Socrates:: In order to obtain perspicuity in this affair, intelligence is obliged again to consider great and small, not as confused, but distinct, after a manner contrary to the sense of sight.

Glaucon:: True.

Socrates:: And is it not from hence, somehow, that it begins to question us, What then is great, and what is small?

Glaucon:: By all means.

Socrates:: And so we have called the one intelligible, and the other visible.

Glaucon:: Very right.

Socrates:: This then is what I was just now endeavoring to express, when I said, that some things call on the dianoëtic part, and others do not: and such as fall on the sense at the same time with their contraries, I define to be such as require intelligence, but such as do not, do not excite intelligence.

Glaucon:: I understand now, and it appears so to me.

Socrates:: What now? with reference to number and unity, to which of the two classes do you think they belong?

Glaucon:: I do not understand.

Socrates:: But reason by analogy, from what we have already said: for, if unity be of itself sufficiently seen, or be apprehended by any other sense, it will not lead towards real being, as we said concerning finger. But if there be always seen at the same time something contrary to it, so as that it shall no more appear unity than the contrary, it would then require some one to judge of it: and the soul would be under a necessity to doubt within itself, and to inquire, exciting the conception within itself, and to interrogate it what this unity is. And thus the discipline which relates to unity would be of the class of those which lead, and turn the soul to the contemplation of real being.

Glaucon:: But indeed this at least, is what the very sight of it effects in no small degree: for we behold the same thing, at one and the same time, as one and as an infinite multitude.

Socrates:: And if this be the case with reference to unity, will not every number be affected in the same manner?

Glaucon:: Why not?

Socrates:: But surely both computation and arithmetic wholly relate to number.

Glaucon:: Very much so.

Socrates:: These then seem to lead to truth.

Glaucon:: Transcendently so.

Socrates:: They belong then, as it seems, to those disciplines which we are investigating. For the soldier must necessarily learn these things, for the disposing of his ranks; and the philosopher for the attaining to real being, emerging from generation, or he can never become a reasoner.

Glaucon:: It is so.

Socrates:: But our guardian at least happens to be both a soldier and a philosopher.

Glaucon:: Undoubtedly.

Socrates:: It were proper then, Glauco, to establish by law this discipline, and to persuade those who are to manage the greatest affairs of the city to apply to computation, and study it, not in a common way, but till by intelligence itself they arrive at the contemplation of the nature of numbers, not for the sake of buying, nor of selling, as merchants and retailers, but both for war, and for facility in the energies of the soul itself, and its conversion from generation to truth and essence.

Glaucon:: Most beautifully said.

Socrates:: And surely now, I perceive likewise, at present whilst this discipline respecting computations is mentioned, how elegant it is, and every way advantageous towards our purpose, if one applies to it for the sake of knowledge, and not with a view to traffic!

Glaucon:: Which way?

Socrates:: This very thing which we now mentioned, how vehemently does it somehow lead up the soul, and compel it to reason about numbers themselves, by no means admitting, if a man in reasoning with it shall produce numbers which have visible and tangible bodies! For you know of some who are skilled in these things, and who, if a man in reasoning should attempt to divide unity itself, would both ridicule him, and not admit it; but if you divide it into parts, they multiply them, afraid lest anyhow unity should appear not to be unity, but many parts.

Glaucon:: You say, most true.

Socrates:: What think you now, Glauco, if one should ask them: O admirable men! about what kind of numbers are you reasoning? in which there is unity, such as you think fit to approve, each whole equal to each whole, and not differing in the smallest degree, having no part in itself, what do you think they would answer?

Glaucon:: This, as I suppose; that they mean such numbers as can be conceived by the dianoëtic part alone, but cannot be comprehended in any other way.

Socrates:: You see then, my friend, that in reality this discipline appears to be necessary for us, since it seems to compel the soul to employ intelligence itself in the perception of truth itself.

Glaucon:: And surely now it effects this in a very powerful degree.

Socrates:: But what? have you hitherto considered this? that those who are naturally skilled in computation appear to be acute in all disciplines; and such as are naturally slow, if they be instructed and exercised in this, though they derive no other advantage, yet at the same time all of them proceed so far as to become more acute than they were before.

Glaucon:: It is so.

Socrates:: And surely, as I think, you will not easily find any thing, and not at all many, which occasion greater labor to the learner and student than this.

Glaucon:: No, indeed.

Socrates:: On all these accounts, then, this discipline is not to be omitted. but the best geniuses are to be instructed in it.

Glaucon:: I agree.

Socrates:: Let this one thing then, be established among us; and, in the next place, let us consider if that which is consequent to this in any respect pertains to us.

Glaucon:: What is it? or, do you mean geometry?

Socrates:: That very thing.

Glaucon:: As far, as it relates to warlike affairs, it is plain that it belongs to us; for, as to encampments, and the occupying of ground, contracting and extending an army, and all those figures into which they form armies, both in battles and in marches, the same man would differ from himself when he is a geometrician, and when he is not.

Socrates:: But surely now, for such purposes as these, some little geometry and some portion of computation might suffice: but we must inquire, whether much of it, and great advances in it, would contribute any thing to this great end, to make us more easily perceive the idea of the good. And we say that every thing contributes to this, that obliges the soul to turn itself towards that region in which is the most divine of being, which it must by all means perceive.

Glaucon:: You say right.

Socrates:: If therefore it compel the soul to contemplate essence, it belongs to us; but if it oblige it to contemplate generation, it does not belong to us.

Glaucon:: We say so indeed.

Socrates:: Those then who are but a little conversant in geometry, will not dispute with us this point at least, that this science is perfectly contrary to the common modes of speech, employed in it by those who practice it.

Glaucon:: How?

Socrates:: They speak somehow very ridiculously, and through necessity: for all the discourse they employ in it appears to be with a view to operation, and to practice. Thus they speak of making a square, of prolonging, of adjoining, and the like. But yet the whole of this discipline is somehow studied for the sake of knowledge.

Glaucon:: By all means indeed.

Socrates:: Must not this further be assented to?

Glaucon:: What?

Socrates:: That it is the knowledge of that which always is, and not of that which is sometimes generated and destroyed. This, must be granted; for geometrical knowledge is of that which always is It would seem then, generous Glauco, to draw the soul towards truth, and to be productive of a dianoëtic energy adapted to a philosopher, so as to raise this power of the soul to things above, instead of causing it improperly, as at present, to contemplate things below.

Glaucon:: As much as possible.

Socrates:: As much as possible then, must we give orders, that those in this most beautiful city of yours by no means omit geometry; for even its by-works are not inconsiderable.

Glaucon:: What by-works?

Socrates:: Those, which you mentioned relating to war; and indeed with reference to all disciplines, as to the understanding of them more handsomely, we know somehow, that the having learned geometry or not, makes every way an entire difference.

Glaucon:: Everyway, by Jupiter!

Socrates:: Let us then establish this second discipline for the youth.

Glaucon:: Let us establish it.

Socrates:: But what? shall we, in the third place, establish astronomy? or are you of a different opinion?

Glaucon:: I am, of the same: for to be well skilled in the seasons of months and years, belongs not only to agriculture and navigation, but equally to the military art.

Socrates:: You are pleasant, as you seem to be afraid of the multitude, lest you should appear to enjoin useless disciplines: but this is not altogether a contemptible thing, though it is difficult to persuade them, that by each of these disciplines a certain organ of the soul is both purified and resuscitated, which is blinded and buried by studies of another kind; an organ better worth saving than ten thousand eyes, since truth is perceived by this alone. To such therefore as are of the same opinion, you will very readily appear to reason admirably well: but such as have never observed this will probably think you say nothing at all: for they perceive no other advantage in these things worthy of attention. Consider now from this point, with which of these two you will reason; or carry on the reasonings with neither of them, but principally for your own sake, yet envy not another, if any one shall be able to be benefited by them.

Glaucon:: In this manner, I choose, on my own account principally both to reason, and to question and answer.

Socrates:: Come then, let us go back again: for we have not rightly taken that which is consequent to geometry.

Glaucon:: How have we taken?

Socrates:: After a plain surface, we have taken a solid, moving in a circle, before we considered it by itself: but if we had proceeded rightly we should have taken the third argument immediately after the second, and that is somehow the argument of cubes, and what participates of depth.

Glaucon:: It is so. But these things, Socrates, seem not yet to be discovered.

Socrates:: The reason of it, is two-fold. Because there is no city which sufficiently honors them, they are slightly investigated, being difficult; and besides, those who do investigate them want a leader, without which they cannot discover them. And this leader is in the first place hard to be obtained; and when he is obtained, as things are at present, those who investigate these particulars, as they conceive magnificently of themselves, will not obey him. But if the whole city presided over these things, and held them in esteem, such as inquired into them would be obedient, and their inquiries, being carried on with assiduity and vigor, would discover themselves what they were since even now, whilst they are on the one hand despised and mutilated by the multitude, and on the other by those who study them without being able to give any account of their utility, they yet forcibly, under all these disadvantages, increase through their native grace: nor is it wonderful that they do so.

Glaucon:: Because truly, this grace is very remarkable. But tell me more plainly what you were just now saying; for somehow that study which respects a plain surface you called geometry.

Socrates:: I did. And then, you mentioned astronomy in the first place after it. But afterwards you drew back. Because, whilst I am hastening, to discuss all things rapidly, I advance more slowly. For that augment by depth which was next according to method we passed over, because the investigation of it is ridiculous; and after geometry we mentioned astronomy, which is the circular motion of a solid.

Glaucon:: You say right.

Socrates:: We establish then, astronomy as the fourth discipline, supposing that to subsist which we have now omitted, if the city shall enter upon it.

Glaucon:: It is reasonable. And now that you agree with me, Socrates, I proceed in my commendation of astronomy, which you formerly reproved as unseasonable. For it is evident, I conceive, to every one, that this discipline compels the soul to look to that which is above, and from the things here conducts it thither.

Socrates:: It is probable, that it is evident to every one but to me. For to me it does not appear so.

Glaucon:: How then do you think of it?

Socrates:: In the way it is now pursued by those who introduce it into philosophy, it entirely makes the soul to look downwards.

Glaucon:: How do you say?

Socrates:: You seem to me, to have formed with yourself no ignoble opinion of the discipline respecting things above, what it is: for you seem to think, that if any one contemplates the various bodies in the firmament, and, by earnestly looking up, apprehends every thing, you think that he has intelligence of these things; and does not merely see them with his eyes; and perhaps you judge right, and I foolishly. For I, on the other hand, am not able to conceive, that any other discipline can make the soul look upwards, but that which respects being, and that which is invisible; and if a man undertakes to learn any thing of sensible objects, whether he gape upwards, or bellow downwards, never shall I say that he learns; for I aver he has no science of these things, nor shall I say that his soul looks upwards, but downwards, even though he should learn lying on his back, either at land or at sea.

Glaucon:: I am punished; for you have justly reproved me. But which was the proper way, said you, of learning astronomy different from the methods adopted at present, if they mean to learn it with advantage for the purposes we speak of?

Socrates:: In this manner, that these variegated bodies in the heavens, as they are varied in a visible subject, be deemed the most beautiful and the most accurate of the kind, but far inferior to real beings, according to those orbits in which real velocity, and real slowness, in true number, and in all true figures, are carried with respect to one another, and carry all things that are within them. Which things truly are to be comprehended by reason and the dianoëtic power, but not by sight; or do you think they can?

Glaucon:: By no means.

Socrates:: Is not then, that variety in the heavens to be made use of as a paradigm for learning those real things, in the same manner as if one should meet with geometrical figures, drawn remarkably well and elaborately by Dædalus, or some other artist or painter? For a man who was skilled in geometry, on seeing these, would truly think the workmanship most excellent, yet would esteem it ridiculous to consider these things seriously, as if from thence he were to learn the truth, as to what were in equal, in duplicate, or in any other proportion.

Glaucon:: Why would it not be ridiculous?

Socrates:: And do not you then think, that he who is truly an astronomer is affected in the same manner, when he looks up to the orbits of the planets? And that he reckons that the heavens and all in them are indeed established by the demiurgus of the heavens, in the most beautiful manner possible for such works to be established; but would not he deem him absurd, who should imagine that this proportion of night with day, and of both these to a month, and of a month to a year, and of other stars to such like things, and towards one another, existed always in the same manner, and in no way suffered any change, though they have a body, and are visible; and search by every method to apprehend the truth of these things?

Glaucon:: So it appears to me, whilst I am hearing you.

Socrates:: Let us then make use of problems, in the study of astronomy, as in geometry. And let us dismiss the heavenly bodies, if we intend truly to apprehend astronomy, and render profitable instead of unprofitable that part of the soul which is naturally wise.

Glaucon:: You truly enjoin a much harder task on astronomers, than is enjoined them at present.

Socrates:: And I think, that we must likewise enjoin other things, in the same manner, if we are to be of any service as lawgivers. But can you suggest any of the proper disciplines?

Glaucon:: I can suggest none, at present at least.

Socrates:: Lation, as it appears to me, affords us not one indeed, but many species of discipline. All of which any wise man can probably tell; but those which occur to me are two.

Glaucon:: What are they?

Socrates:: Together with this, there is its counterpart.

Glaucon:: Which?

Socrates:: As the eyes, seem to be fitted to astronomy, so the ears seem to be fitted to harmonious lation. And these seem to be sister sciences to one another, both as the Pythagoreans say, and we, Glauco, agree with them, or how shall we do?

Glaucon:: Just so.

Socrates:: Shall we not, since this is their great work, inquire how they speak concerning them—and, if there be any other thing besides these, inquire into it likewise? But above all these things, we will still guard that which is our own.

Glaucon:: What is that?

Socrates:: That those we educate never attempt at any time to learn any of those things in an imperfect manner, and not pointing always at that mark to which all ought to be directed: as we now mentioned with reference to astronomy. Or do not you know that they do the same thing with regard to harmony, as in astronomy? For, whilst they measure one with another the symphonies and sounds which are heard, they labor like the astronomers unprofitably.

Glaucon:: Nay, by the gods, and ridiculously too, whilst they frequently repeat certain notes, and listen with their ears to catch the sound as from a neighboring place; and some of them say they hear some middle note, but that the interval which measures them is the smallest; and others again doubt this, and say that the notes are the same as were sounded before; and both parties subject the intellect to the ears.

Socrates:: But you speak, of the lucrative musicians, who perpetually harass and torment their strings, and turn them on the pegs. But that the comparison may not be too tedious, I shall say nothing of their complaints of the strings, their refusals and stubbornness, but bring the image to an end. But I say we ought not to choose these to speak of harmony, but those true musicians whom we mentioned. For these do the same things here as the others did in astronomy; for in these symphonies which are heard, they search for numbers, but they pass not thence to the problems, to inquire what numbers are symphonious, and what are not, and the reason why they are either the one or the other.

Glaucon:: You speak, of a divine work.

Socrates:: It is then indeed profitable, in the search of the beautiful and good, but if pursued in another manner it is unprofitable.

Glaucon:: It is likely.

Socrates:: But I think, that the proper method of inquiry into all these things, if it reach their communion and alliance with each other, and reason in what respects they are akin to one another, will contribute something to what we want, and our labor will not be unprofitable; otherwise it will. I likewise, prophesy the same thing.

Glaucon:: But you speak, Socrates, of a very mighty work.

Socrates:: Do you mean the introduction, or what else? Or do we not know that all these things are introductory to the law itself? which we ought to learn; for even those that are skilled in dialectic do not appear expert as to these things.

Glaucon:: No, by Jupiter, unless a very few of all I have met with.

Socrates:: But whilst they are not able, to impart and receive reason, will they ever be able to know any thing of what we say is necessary to be known?

Glaucon:: Never will they be able to do this.

Socrates:: Is not this itself then, Glauco, the law? To give perfection to dialectic; which being intelligible, may be said to be imitated by the power of sight; which power endeavors, as we observed, first to look at animals, then at the stars, and last of all at the sun himself. So when any one attempts to discuss a subject without any of the senses, by reasoning he is impelled to that which each particular is; and if he does not desist till he apprehends by intelligence what is the good itself, he then arrives at the end of the intelligible, as the other does at the end of the visible.

Glaucon:: Entirely so. What now? Do not you call this progression dialectic?

Socrates:: What else? And now, as in our former comparison you had the liberation from chains, and turning from shadows towards images, and the light, and an ascent from the cavern to the sun; and when there, the looking at images in water, from an inability at first to behold animals and plants, and the light of the sun; so here you have the contemplation of divine phantasm, and the shadows of real beings, and not the shadows of images shadowed out by another light of a similar kind, as by the sun. And all this business respecting the arts which we have discussed, has this power, to lead back again that which is best in the soul, to the contemplation of that which is best in beings; as in the former case, that which is brightest in the body is led to that which is most splendid in the corporeal and visible place.

Glaucon:: I admit, of these things; though truly it appears to me extremely difficult to admit of them, and in another respect it is difficult not to admit of them. But however (for we shall hear these things not only now at present, but often again discuss them), establishing these things as now expressed, let us go to the law itself, and discuss it as we have finished the introduction. Say then what is the mode of the power of dialectic, and into what species is it divided, and what are the paths leading to it? For these, it is likely, conduct us to that place, at which when we are arrived, we shall find a resting-place, and the end of the journey.

Socrates:: You will not as yet, friend Glauco, be able to follow; for otherwise no zeal should be wanting on my part; nor should you any longer only see the image of that of which we are speaking, but the truth itself. But this is what to me at least it appears; whether it be so in reality or not, this it is not proper strenuously to affirm; but that indeed it is somewhat of this kind may be strenuously affirmed. May it not?

Glaucon:: Why not?

Socrates:: And further that it is the power of dialectic alone, which can discover this to one who is skilled in the things we have discussed, and that by no other power it is possible.

Glaucon:: This also, we may strenuously affirm.

Socrates:: This at least no one, will dispute with us: That no other method can attempt to comprehend, in any orderly way, what each particular being is; for all the other arts respect either the opinions and desires of men, or generations, and compositions, or are all employed in the culture of things generated and compounded. Those others, which we said participated somewhat of being, geometry, and such as are connected with her, we see as dreaming indeed about being; but it is impossible for them to have a true vision, so long as employing hypotheses they preserve these immoveable, without being able to assign a reason for their subsistence. For where the principle is that which is unknown, and the conclusion and intermediate steps are connected with that unknown principle, by what contrivance can an assent of such a kind ever become science?

Glaucon:: By none.

Socrates:: Does not then, the dialectic method proceed in this way alone, to the principle itself, removing all hypotheses, that it may firmly establish it, and gradually drawing and leading upwards the eye of the soul, which was truly buried in a certain barbaric mire, using as assistants and circular leaders those arts we have mentioned, which through custom we frequently call sciences, but which require another appellation more clear than opinion, but more obscure than science? We have somewhere in the former part of our discourse termed it the dianoëtic power. But the controversy is not, as it appears to me, about a name, with those who inquire into things of such great importance as those now before us.

Glaucon:: It is not.

Socrates:: Do you agree then, as formerly, to call the first part science, the second the dianoëtic power, the third faith, and the fourth assimilation? and both these last opinion? and the two former intelligence? And that opinion is employed about generation, and intelligence about essence? Likewise, that as essence is to generation, so is intelligence to opinion, science to faith, and the dianoëtic power to assimilation? But as for the analogy of the things which these powers respect, and the two-fold division of each, viz. of the object of opinion, and of intellect, these we omit, Glauco, that we may not be more prolix here than in our former reasonings.

Glaucon:: As for me, with reference to those other things, as far as I am able to follow, I am of the same opinion.

Socrates:: But do not you call him skilled in dialectic, who apprehends the reason of the essence of each particular: And as for the man who is not able to give a reason to himself and to another, so far as he is not able, so far will you not say he wants intelligence of the thing?

Glaucon:: Why should I not say so?

Socrates:: And is not the case the same with reference to the good? Whosoever cannot define it by reason, separating the idea of the good from all others, and as in a battle piercing through all arguments, eagerly driving to confute, not according to opinion, but according to essence, and in all these marching forward with undeviating reason,—such an one knows nothing of the good itself, nor of any good whatever: but if he has attained to any image of the good, we must say he has attained to it by opinion, not by science; that in the present life he is sleeping, and conversant with dreams; and that before he is roused he will descend to Hades, and there be profoundly and perfectly said asleep.

Glaucon:: By Jupiter, I will strongly aver all these things.

Socrates:: But surely you will not, I think, allow your own children at least whom you nourished and educated in reasoning, if ever in reality you educate them, to have the supreme government of the most important affairs in the state, whilst they are void of reason, as letters of the alphabet.

Glaucon:: By no means.

Socrates:: You will then lay down this to them as a law: That in a most especial manner they attain to that part of education, by which they may become able to question and answer in the most scientific manner.

Glaucon:: I will settle it by law, with your assistance at least.

Socrates:: Does it then appear to you, that dialectic is to be placed on high as a bulwark to disciplines? and that no other discipline can with propriety be raised higher than this; but that every thing respecting disciplines is now finished?

Glaucon:: I agree.

Socrates:: There now remains for you, the distribution: To whom shall we assign these disciplines, and after what manner?

Glaucon:: That is evident.

Socrates:: Do you remember then our former election of rulers, what kind we chose?

Glaucon:: How should I not?

Socrates:: As to other things then, conceive, that such geniuses as these ought to be selected. For the most firm and brave are to be preferred, and, as far as possible, the most graceful; and besides, we must not only seek for those whose manners are generous and stern, but they must be possessed of every other natural disposition conducive to this education.

Glaucon:: Which dispositions do you recommend?

Socrates:: They must have, O blessed man! acuteness with respect to disciplines, that they may not learn with difficulty. For souls are much more intimidated in robust disciplines, than in strenuous exercises of the body; for their proper labor, and which is not in common with the body, is more domestic to them.

Glaucon:: True.

Socrates:: And we must seek for one of good memory, untainted, and every way laborious: or how else do you think any one will be willing to endure the fatigue of the body, and to accomplish at the same time such learning and study?

Glaucon:: No one, unless he be in all respects of a naturally good disposition.

Socrates:: The mistake then about philosophy, and the contempt of it, have been occasioned through these things, because, as I formerly said, it is not applied to in a manner suitable to its dignity: For it ought not to be applied to by the bastardly, but the legitimate.

Glaucon:: How?

Socrates:: In the first place, he who is to apply to philosophy ought not, to be lame as to his love of labor, being laborious in some things, and averse to labor in others. But this takes place when a man loves wrestling and hunting, and all exercises of the body, but is not a lover of learning, and loves neither to hear nor to inquire, but in all these respects has an aversion to labor. He likewise is lame, in a different manner from this man, who dislikes all bodily exercise.

Glaucon:: You say most true.

Socrates:: And shall we not, in like manner account that soul lame as to truth, which hates indeed a voluntary falsehood, and bears it ill in itself, and is beyond measure enraged when others tell a lie; but easily admits the involuntary lie; and, though at any time it be found ignorant, is not displeased, but like a savage sow willingly wallows in ignorance?

Glaucon:: By all means.

Socrates:: And in like manner, as to temperance and fortitude, and magnanimity, and all the parts of virtue, we must no less carefully attend to what is bastardly, and what is legitimate; for when either any private person or city understands not how to attend to all these things, they unawares employ the lame and the bastardly for whatever they have occasion; private persons employ them as friends, and cities as governors.

Glaucon:: The case is entirely so.

Socrates:: But we, must beware of all such things; for, if we take such as are entire in body and in mind for such extensive learning, and exercise and instruct them, justice: herself will not blame us, and we shall preserve both the city and its constitution: but if we introduce persons of a different description into these affairs, we shall do every thing the reverse, and bring philosophy under still greater ridicule.

Glaucon:: That indeed were shameful.

Socrates:: Certainly. But I myself seem at present to be somewhat ridiculous.

Glaucon:: How so?

Socrates:: I forgot, that we were amusing ourselves, and spoke with too great keenness; for, whilst I was speaking, I looked towards philosophy; and seeing her most unworthily abused, I seem to have been filled with indignation, and, as being enraged at those who are the cause of it, to have spoken more earnestly what I said.

Glaucon:: No truly, not to me your hearer at least.

Socrates:: But for me, the speaker. But let us not forget this, that in our former election we made choice of old men; but in this election it will not be allowed us. For we must not believe Solon, that one who is old is able to learn many things; but he is less able to effect this than to run. All mighty and numerous labors belong to the young.

Glaucon:: Of necessity.

Socrates:: Every thing then relating to arithmetic and geometry, and all that previous instruction which they should be taught before they learn dialectic, ought to be set before them whilst they are children, and that method of teaching observed, which will make them learn without compulsion.

Glaucon:: Why so?

Socrates:: Because, a free man ought to learn no discipline with slavery: for the labors of the body when endured through compulsion render the body nothing worse: but no compelled discipline is lasting in the soul.

Glaucon:: True.

Socrates:: Do not then, O best of men! compel boys in their learning; but train them up, amusing themselves, that you may be better able to discern to what the genius of each naturally tends.

Glaucon:: What you say, is reasonable.

Socrates:: Do not you remember then, that we said the boys are even to be carried to war, as spectators, on horse-back, and that they are to be brought nearer, if they can with safety, and like young hounds taste the blood?

Glaucon:: I remember.

Socrates:: Whoever then, shall appear the most forward in all these labors, disciplines, and terrors, are to be selected into a certain number.

Glaucon:: At what age?

Socrates:: When they have, finished their necessary exercises; for during this time, whilst it continues, for two or three years, it is impossible to accomplish anything else; for fatigue and sleep are enemies to learning; and this too is none of the least of their trials, what each of them appears to be in his exercises.

Glaucon:: Certainly.

Socrates:: And after this period, let such as formerly have been selected of the age of twenty receive greater honors than others, and let those disciplines which in their youth they learned separately, be brought before them in one view, that they may see the alliance of the disciplines with each other, and with, the nature of real being.

Glaucon:: This discipline indeed will alone, remain, firm in those in whom it is ingenerated.

Socrates:: And this, is the greatest trial for distinguishing between those geniuses which are naturally fitted for dialectic, and those which are not. He who perceives, this alliance is skilled in dialectic; he who does not, is not.

Glaucon:: I am of the same opinion.

Socrates:: It will then be necessary for you, after you have observed these things, and seen who are most approved in these, being stable in disciplines, and stable in war, and in the other things established by law, to make choice of such after they exceed thirty years, selecting from those chosen formerly, and advance them to greater honors. You must likewise observe them, trying them by the power of dialectic so as to ascertain which of them without the assistance of his eyes, or any other sense, is able to proceed with truth to being itself. And here, my companion, is a work of great caution.

Glaucon:: In what principally?

Socrates:: Do not you perceive, the evil which at present attends dialectic, how great it is?

Glaucon:: What is it, you mean?

Socrates:: How it is somehow, full of what is contrary to law.

Glaucon:: Greatly so.

Socrates:: Do you think then, they suffer some wonderful thing, and will you not forgive them?

Glaucon:: How do you mean?

Socrates:: Just as if, a certain supposititious child were educated in great opulence in a rich and noble family, and amidst many flatterers, and should perceive, when grown up to manhood, that he is not descended of those who are said to be his parents, but yet should not discover his real parents; can you divine how such an one would be affected both towards his flatterers, and towards his supposed parents, both at the time when he knew nothing of the cheat, and at that time again when he came to perceive it? Or are you willing to hear me while I presage it?

Glaucon:: I am willing.

Socrates:: I prophesy then, that he will pay more honour to his father and mother, and his other supposed relations, than to the flatterers, and that he will less neglect them when they are in any want, and be less apt to do or say anything amiss to them, and in matters of consequence be less disobedient to them than to these flatterers, during that period in which he knows not the truth.

Glaucon:: It is likely.

Socrates:: But when he perceives the real state of the affair, I again prophesy, he will then slacken in his honour and respect for them, and attend to the flatterers, and be remarkably more persuaded by them now than formerly, and truly live according to their manner, converting with them openly. But for that father, and those supposed relations, if he be not of an entirely good natural disposition, he will have no regard.

Glaucon:: You say every thing, as it would happen.

Socrates:: But in what manner does this comparison respect those who are conversant with dialectic?

Glaucon:: In this.

Socrates:: We have certain dogmas from our childhood concerning things just and beautiful, in which we have been nourished as by parents, obeying and honouring them.

Glaucon:: We have.

Socrates:: Are there not likewise other pursuits opposite to these, with pleasures flattering our souls, and drawing them towards these? They do not however persuade those who are in any degree moderate, but they honour those their relations, and obey them.

Glaucon:: These things are so.

Socrates:: What now, when to one who is thus affected the question is proposed, What is the beautiful? and when he, answering what he has heard from the lawgiver, is refuted by reason; and reason frequently and every way convincing him, reduces him to the opinion, that this is no more beautiful than it is deformed; and in the same manner, as to what is just and good, and whatever else he held in highest esteem, what do you think such an one will after this do, with regard to these things, as to honouring and obeying them?

Glaucon:: Of necessity, he will neither honour nor obey them any longer in the same manner as formerly.

Socrates:: When then he no longer deems, these things honorable, and allied to him as formerly, and cannot discover those which really are so, is it possible he can readily join himself to any other life than the flattering one?

Glaucon:: It is not possible.

Socrates:: And from being an observer of the law, he shall, I think, appear to be a transgressor.

Glaucon:: Of necessity.

Socrates:: Is it not likely then, that those shall be thus affected who in this situation apply to reasoning, and that they should deserve, as I was just now saying, great forgiveness?

Glaucon:: And pity too.

Socrates:: Whilst you take care then, lest this compassionable case befall these of the age of thirty, ought they not by every method to apply themselves to reasoning?

Glaucon:: Certainly.

Socrates:: And is not this one prudent caution? that they taste not reasonings, whilst they are young: for you have not forgot, I suppose, that the youth, when they first taste of reasonings, abuse them in the way of amusement, whilst they employ them always for the purpose of contradiction. And imitating those who are refuters, they themselves refute others, delighting like whelps in dragging and tearing to pieces, in their reasonings, those always who are near them.

Glaucon:: Extremely so.

Socrates:: And after they have confuted many, and been themselves confuted by many, do they not vehemently and speedily lay aside all the opinions they formerly possessed? And by these means they themselves, and the whole of philosophy, are calumniated by others.

Glaucon:: Most true.

Socrates:: But he who is of a riper age, will not he disposed to share in such a madness, but will rather imitate him who inclines to reason and inquire after truth, than one who, for the sake of diversion, amuses himself, and contradicts. He will likewise be more modest himself, and render the practice of disputing more honorable instead of being more dishonorable.

Glaucon:: Right.

Socrates:: Were not then all our former remarks rightly made, in the way of precaution, as to this point, that those geniuses ought to be decent and stable, to whom dialectic is to be imparted, and not as at present, when every common genius, and such as is not at all proper, is admitted to it?

Glaucon:: Certainly.

Socrates:: Will not then the double of the former period suffice a man to remain in acquiring the art of dialectic with perseverance and application, and doing nothing else but in way of counterpart exercising himself in all bodily exercises?

Glaucon:: Do you mean six years, or four?

Socrates:: 'Tis of no consequence, make it five. After this you must compel them to descend to that cave again, and oblige them to govern both in things relating to war, and such other magistracies as require youth, that the, may not fall short of others in experience. And they must be still further tried among these, whether, being drawn to every different quarter, they will continue firm, or whether they will in any measure be drawn aside.

Glaucon:: And for how long a time, do you appoint this?

Socrates:: For fifteen years. And when they are of the age of fifty, such of them as are preserved, and as have excelled in all these things, in actions, and in the sciences, are now to be led to the end, and are to be obliged, inclining the ray of their soul, to look towards that which imparts light to all things, and, when they have viewed the good itself, to use it as a paradigm, each of them, in their turn, in adorning both the city and private persons, and themselves, during the remainder of their life. For the most part indeed they must be occupied in philosophy; and when it is their turn, they must toil in political affairs, and take the government, each for the good of the city, performing this office, not as any thing honorable, but as a thing necessary. And after they have educated others in the same manner still, and lest such as resemble themselves to be the guardians of the city, they depart to inhabit the islands of the blest. But the city will publicly erect for them monuments, and offer sacrifices, if the oracle assent, as to superior beings; and if it do not, as to happy and divine men.

Glaucon:: You have, Socrates, like a statuary, made our governors all-beautiful.

Socrates:: And our governesses likewise, Glauco. For do not suppose that I have spoken what I have said any more concerning the men than concerning the women,—such of them as are of a sufficient genius.

Glaucon:: Right, if at least they are to share in all things equally with the men, as we related.

Socrates:: What then, do you agree, that with reference to the city and republic, we have not altogether spoken what can only be considered as wishes; but such things as are indeed difficult, yet possible in a certain respect, and in no other way than what has been mentioned, viz. when those who are truly philosophers, whether more of them or a single one, becoming governors in a city, shall despise those present honors, considering them as illiberal and of no value; but esteeming rectitude and the honors, which are derived from it above all things; accounting the just as a thing of all others the greatest, and most absolutely necessary; and ministering to it, and, increasing it, thoroughly regulate the constitution of their own city?

Glaucon:: How?

Socrates:: As many, of the more advanced in life as have lived ten years in the city they will send into the country, and, removing their children away from those habits which the domestics possess at present, they will educate them in their own manners and laws, which are what we formerly mentioned: and the city and republic we have described being thus established in the speediest and easiest manner, it will both be happy itself, and be of the greatest advantage to that people among whom it is established.

Glaucon:: Very much so indeed. And you seem to me, Socrates, to have told very well how this city shall arise, if it arise at all.

Socrates:: Are not now then, our discourses sufficient both concerning such a city as this, and concerning a man similar to it? For it is also now evident what kind of a man we shall say he ought to be.

Glaucon:: It is evident; and your inquiry seems to me to be at an end.

THE END OF THE SEVENTH BOOK.

## BOOK VIII.

Socrates:: Be it so. These things, Glauco, we have now assented to; that in this city, which is to be established in a perfect manner, the women are to be common, the children common, and likewise the whole of education. In like manner, their employments both in peace and war are to be common; and their kings are to be such as excel all others both in philosophy and in the arts of war.

Glaucon:: These things, have been assented to.

Socrates:: And surely we likewise granted, that when the governors are marching with the soldiers, and settle themselves, they shall dwell in such habitations as we formerly mentioned, which have nothing peculiar to any one, but are common to all: and besides these houses, we likewise, if you remember, agreed what sort of possessions they shall have.

Glaucon:: I remember, that we were of opinion, none of them ought to possess any thing as others do at present; but, as wrestlers in war and guardians, they were to receive a reward for their guardianship from others, or a yearly maintenance on these accounts, and were to take care of themselves and the rest of the city.

Socrates:: You say right. But since we have finished this, let us recollect whence we made this digression; that we may now proceed again in the same way.

Glaucon:: That is not difficult: for you were mentioning much the same things of the city with those you have done at present; saying that you considered such a city to be good, as it was at that time described, and the man to be good who resembles it; whilst yet it seems you are able to describe a better city, and a better man. And you said moreover, that all the others were wrong, if this was right. Of the other republics, you said, as I remember, there were four species, which deserved to be considered, and to have the errors in them, and the lawless people in them, observed; in order that when we have beheld the whole of them, and when we have agreed which is the best, and which is the worst man, we may inquire whether the best man be the happiest, and the worst the most miserable, or otherwise. And when I asked you, which you call the four republics, Polemarchus and Adimantus hereupon interrupted; and you, in this manner having resumed the subject, are come to this part of the reasoning.

Socrates:: You have recollected, most accurately.

Glaucon:: Again therefore afford me the same opportunity, and, whilst I ask you the same question, endeavor to say what you then intended to assert.

Socrates:: If indeed I am able.

Glaucon:: And I am truly desirous, for my part, to hear which you call the four republics.

Socrates:: You shall hear that, without difficulty. For they are these I mention, and they have names too. There is that which is commended by many, the Cretan and the Spartan. There is, secondly, that which has a secondary praise, called Oligarchy, a republic full of many evils; that which is different from this, and follows next in order, a Democracy; and then genuine Tyranny, different from all these, the fourth and last disease of a city. Or have you any other form of a republic belonging to any distinct: species? For your little principalities and venal kingdoms, and such like republics, are somehow of a middle kind between these, and one may find of them as many among the barbarians as among the Greeks.

Glaucon:: They are indeed, said to be very many, and very strange ones.

Socrates:: Do you know now, that there is somehow a necessity that there be as many species of men as of republics? Or do you imagine that republics are generated somehow of an oak, or a rock, and not of the manners of those who are in the city, to which, as into a current, every thing else likewise is drawn?

Glaucon:: By no means do I imagine, they are generated from any thing but from hence.

Socrates:: If then there be five species of cities, the species of souls in individuals shall be likewise five.

Glaucon:: Why not?

Socrates:: We have already discussed that which resembles an Aristocracy, which we have rightly pronounced to be both good and just.

Glaucon:: We have so.

Socrates:: Are we now, in the next place, to go over the worse species, the contentious and the ambitious man, who is formed according to the Spartan republic; then him resembling an Oligarchy; and then the Democratic and the Tyrannic, that we may contemplate the most unjust, and oppose him to the most just, that our inquiry may be completed? viz. how the most finished justice is in comparison of the most finished injustice, as to the happiness or misery of the possessor? that so we may either follow injustice, being persuaded by Thrasymachus, or justice, yielding to the present reasoning?

Glaucon:: By all means, we must do so.

Socrates:: Shall we then, in the same manner as we began, consider the manners in republics, before we consider them in private persons, as being there more conspicuous? And according to this method the ambitious republic is first to be considered (for I have no other name to call it by, but it may be denominated either a Timocracy, or a Timarchy), and together with it we shall counter a man resembling it; afterwards we shall consider an Oligarchy, and a man resembling Oligarchy; then again, when we have viewed a Democracy, we shall contemplate a Democratic man; and then in the fourth place, when we come to Tyranny, and contemplate it, and likewise a tyrannic soul, we shall endeavor to become competent judges of what we proposed.

Glaucon:: Both our contemplation and judgment, would in this manner at least be agreeable to reason.

Socrates:: Come then, let us endeavor to relate in what manner a Timocracy arises out of an Aristocracy. Or is not this plain, that every republic changes, by means of that part which possesses the magistracies, when in this itself there arises sedition; but whilst this agrees with itself, though the state be extremely small, it is impossible to be changed?

Glaucon:: It is so, indeed.

Socrates:: How then, Glauco, shall our city be changed? Or in what shape shall our allies and rulers fall into sedition with one another, and among themselves? Or are you willing, that, like Homer, we invoke the Mules to tell us, “How first sedition rose?”—And man we say, that whilst they talk tragically, playing with us, and rallying us as children, they yet talk seriously and sublimely?

Glaucon:: In what manner?

Socrates:: Somehow thus. It is indeed difficult for a city thus constituted to be changed. But as every thing which is generated is obnoxious to corruption, neither will such a constitution as this remain forever, but be dissolved. And its dissolution is this. Not only with respect to terrestrial plants, but likewise in terrestrial animals, a fertility and sterility of soul as well as of body takes place, when the revolutions of the heavenly bodies complete the periphery of their respective orbits; which are shorter to the shorter lived, and contrariwise to such as are the contrary: and with reference to the fertility and sterility of our race, although those are wise that you have educated to be governors of cities, yet will they never, by reason in conjunction with sense, observe the proper seasons, but overlook them, and sometimes generate children when they ought not. But the period to that which is divinely generated is that which the perfect number comprehends; and to that which is generated by man, that in which the augmentations surpassing and surpassed, when they shall have received three restitutions and four boundaries of things assimilating and dissimilating, increasing and decreasing, shall render all things correspondent and effable; of which the sesquiternian progeny, when conjoined with the pentad, and thrice increased, affords two harmonies. One of these, the equally equal, a hundred times a hundred; but the other, of equal length indeed, but more oblong, is of a hundred numbers from effable diameters of pentads, each being deficient by unity, and from two numbers that are ineffable; and from a hundred cubes of the triad. But the whole geometric number of this kind is the author of better and worse generations. Of which when our governors being ignorant, join our couples together unseasonably, the children shall neither be of a good genius, nor fortunate. And though the former governors shall install the best of them in the office, they nevertheless being unworthy of it, and coming to have guardianship, in the first place esteeming music less than they ought, and in the next place the gymnic exercises. Hence our youth will become less acquainted with music. And the guardians which shall be appointed from among these will not be altogether expert guardians, to distinguish, according to Hesiod and us, the several species of geniuses, the golden, the silver, the brazen, and the iron: but whilst iron is mixed with silver and brass with gold, dissimilitude arises, and unharmonious inequality. And when these arise, wherever they prevail, they perpetually generate war and enmity. To such a race of men as this, we must suppose them to say, that sedition belongs whenever it happens to rise.

Glaucon:: And we shall say that they have answered justly.

Socrates:: And of necessity, for they are Muses.

Glaucon:: What then, do the Muses say next?

Socrates:: When sedition is risen, two of the species of geniuses, the iron and the brazen, will be drawn to gain, and the acquisition of lands and houses, of gold and silver. But the golden and the silver geniuses, as they are not in want, but naturally rich, will lead souls towards virtue and the original constitution; yet as they live in a violent manner, and raw contrary to one another, they will make an agreement to divide their lands and houses between them, and to dwell apart from one another: and then enslaving those who were formerly kept by them as freemen, as friends, and tutors, they will keep them as domestics and slaves, for service in war and for their own protection.

Glaucon:: This revolution, seems to me thus to arise.

Socrates:: Shall not then this republic, be somewhat in the middle between an Aristocracy and Oligarchy?

Glaucon:: Certainly.

Socrates:: And the change shall happen in this manner, and on this change what sort of life shall it lead? Or is it not plain, that in some things it shall imitate the former republic, and in others Oligarchy, as being in the middle of the two, and shall likewise have somewhat peculiar to itself?

Glaucon:: Just so.

Socrates:: Shall they not then, in honouring their rulers, and in this that their military abstain from agriculture, from mechanical and other gainful employments, in their establishing common meals, and in studying both gymnastic exercises and contests of war, in all these things shall they not imitate the former republic?

Glaucon:: Yes.

Socrates:: But in this, that they are afraid to bring wise men into the magistracy, as having no longer any such as are truly simple and inflexible, but such as are of a mixed kind; and in that they incline for those who are more forward and rough, whose natural genius is rather fitted for war than peace, and in that they esteem tricks and stratagems, and spend the whole of their time in continual war, in all these respects shall it not have many things peculiar to itself?

Glaucon:: Yes.

Socrates:: And such as these, shall be desirous of wealth, as those who live in Oligarchies, and in an illiberal manner, value gold and silver concealed in darkness, as having repositories of their own, and domestic treasuries, where they hoard and hide them, and have their houses circularly enclosed, where, as in nests altogether peculiar, they squander every thing profusely, together with their wives and such others as they fancy.

Glaucon:: Most true.

Socrates:: And will they not likewise be sparing of their substance, as valuing it highly, and acquiring it not in an open manner, but love to squander the substance of others, through their dissoluteness, and secretly indulging their pleasures? They will likewise fly from the law, as children from their father, who have been educated not by persuasion but by force, having neglected the true muse, which is accompanied with reason and philosophy, and honored gymnastic more than music.

Glaucon:: You describe entirely, a mixed republic, compounded of good and ill.

Socrates:: It is indeed mixed. One thing is most remarkable in it, from the prevalence of the irascible temper, contention, and ambition.

Glaucon:: Exceedingly.

Socrates:: Does not then, this republic arise in this manner? And is it not of such a kind as this, as far as the form of a republic can be described in words where there is not perfect accuracy; as it suffices us to contemplate in description likewise the most just and the most unjust man; and it were a work of prodigious length to discuss all republics, and all the various manners of men, without omitting any thing?

Glaucon:: Very right.

Socrates:: What now will the man be who corresponds to this republic? how shall he be formed, and of what kind?

Adeimantus:: I think, he will be somewhat like Glauco here, at least in a love of contention.

Socrates:: Perhaps, as to this particular. But in other respects he does not seem to me to have a natural resemblance of him.

Adeimantus:: In what?

Socrates:: He must necessarily, be more arrogant, and unapt to music, but fond of it: and fond of hearing, but by no means a rhetorician: and such an one will be rough towards certain slaves, without despising them, as he does who is sufficiently educated. He will be mild towards such as are free, and extremely submissive to governors; a lover of dominion, and a lover of honour, not thinking it proper to govern by eloquence, nor any thing of the kind, but by political management and military performances, being a lover of gymnastic and hunting.

Adeimantus:: This indeed, is the temper of that republic.

Socrates:: And shall not such an one, despise money, whilst he is young? But the older he grows, the more he will always value it, because he partakes of the covetous genius, and is not sincerely affected towards virtue, because destitute of the best guardian.

Adeimantus:: Of what guardian?

Socrates:: Reason, accompanied with music, which being the only inbred preservative of virtue, dwells with the possessor through the whole of life.

Adeimantus:: You say well.

Socrates:: And surely at least such a timocratic youth, resembles such a city.

Adeimantus:: Certainly.

Socrates:: And such an one, is formed somehow in this manner. He happens sometimes to be the young son of a worthy father, who dwells in an ill regulated city, and who shuns honors and magistracies, and lawsuits, and all such public business, and is willing to live neglected in obscurity, that he may have no trouble.

Adeimantus:: In what manner then, is he formed?

Socrates:: When first of all, he hears his mother venting her indignation, because her husband is not in the magistracy, and complaining that she is on this account neglected among other women, and that she observes him not extremely attentive to the acquisition of wealth, not fighting and reviling privately and publicly in courts of justice; but behaving on all these occasions indolently, and perceiving him always attentive to himself, and treating her neither with extreme respect nor contempt; on all these accounts, being filled with indignation, she tells her son that his father is unmanly, and extremely remiss, and such other things as wives are wont to cant over concerning such husbands.

Adeimantus:: They are very many, truly, and very much in their spirit.

Socrates:: And you know, that the domestics likewise of such families, such of them as appear good-natured, sometimes privately say the same things to the sons; and if they see any one either owing money whom the father does not file at law, or in any other way doing injustice, they exhort him to punish all such persons when he comes to be a man, and to be more of a man than his father. And when he goes abroad, he hears other such like things. And he sees that such in the city as attend to their own affairs are called simple, and held in little esteem, and that such as do not attend to their affairs are both honored and commended. The young man now hearing and seeing all these things, and then again hearing the speeches of his father, and observing his pursuits in a near view, in comparison with those of others; being drawn by both these, his father watering and increasing the rational part in his soul, and these others the concupiscible and irascible; and being naturally no bad man, but spoiled by the bad conversations of others, he is brought to a mean between the two, and delivers up the government within himself to a middle power, that which is fond of contention and irascible, and so he becomes a haughty and ambitious man.

Adeimantus:: You seem, to have accurately explained the formation of such an one.

Socrates:: We have now then, the second republic and the second man.

Adeimantus:: We have.

Socrates:: Shall we not after this say with Æschylus?

> "With different cities diff'rent men accord."

Or, rather, according to our plan, shall we first establish the cities?

Adeimantus:: By all means so.

Socrates:: It would be an Oligarchy then, I think, which succeeds this republic.

Adeimantus:: But what constitution, is it you call an Oligarchy?

Socrates:: That republic, which is founded on men's valuations, in which the rich bear rule, and the poor have no share in the government.

Adeimantus:: I understand.

Socrates:: Must we not relate, first, how the change is made from a Timocracy to an Oligarchy?

Adeimantus:: We must.

Socrates:: And surely at least how this change is made, is manifest even to the blind.

Adeimantus:: How?

Socrates:: That treasury, which every one has filled with gold destroys such a republic; for, first of all, they find out for themselves methods of expense, and to this purpose strain the laws, both they and their wives disobeying them.

Adeimantus:: That is likely.

Socrates:: And afterwards, I think, one observing another, and coming to rival one another, the multitude of them are rendered of this kind.

Adeimantus:: It is likely.

Socrates:: And from hence then, proceeding still to a greater desire of acquiring wealth, the more honorable they account this to be, the more will virtue be thought dishonorable: or is not virtue so different from wealth, that, if each of them be placed in the opposite arm of a balance, they always weigh opposite to each other?

Adeimantus:: Entirely so.

Socrates:: But whilst wealth and the wealthy are honored in the city, both virtue and the good must be more dishonored.

Adeimantus:: It is plain.

Socrates:: And what is honored is always pursued, and what is dishonored is neglected.

Adeimantus:: Just so.

Socrates:: Instead then of contentious and ambitious men, they will at last become lovers of gain and of wealth: and they will praise and admire the rich, and bring them into the magistracy, but the poor man they will despise.

Adeimantus:: Certainly.

Socrates:: And do they not then make laws, marking out the boundary of the Oligarchic constitution, and regulating the quantity of Oligarchic power according to the quantity of wealth, more to the more wealthy, and less to the less, intimating that he who has not the valuation settled by law is to have no share in the government? And do they not transact these things violently, by force of arms, or establish such a republic after they have previously terrified them? Is it not thus?

Adeimantus:: Thus indeed.

Socrates:: This then in short is the constitution.

Adeimantus:: It is. But what now is the nature of the republic, and what are the faults we ascribed to it?

Socrates:: First of all, this very thing, the constitution itself, what think you of this? For consider, if a man should in this manner appoint pilots of ships, according to their valuations, but never entrust one with a poor man, though better skilled in piloting, what would be the consequence?

Adeimantus:: They would, make very bad navigation.

Socrates:: And is it not in the same manner with reference to any other thing, or any government whatever?

Adeimantus:: I think so.

Socrates:: Is it so in all cases but in a city? or is it so with reference to a city likewise?

Adeimantus:: There most especially, in as much as it is the most difficult, and the greatest government.

Socrates:: Oligarchy then would seem to have this, which is so great a fault.

Adeimantus:: It appears so.

Socrates:: But what? Is this fault any thing less?

Adeimantus:: What?

Socrates:: That such a city is not one, but of necessity two; one consisting of the poor, and the other of the rich, dwelling in one place, and always plotting against one another.

Adeimantus:: By Jupiter, it is in no respect less.

Socrates:: But surely neither is this a handsome thing, to be incapable to wage any war, because of the necessity they are under, either of employing the armed multitude, and of dreading them more than the enemy themselves; or not employing them, to appear in battle itself truly

Oligarchic, and at the same time to be unwilling to advance money for the public service, through a natural disposition of covetousness.

Adeimantus:: This is not handsome.

Socrates:: But what? with reference to what we long ago condemned, the engaging in a multiplicity of different things, the same persons, at the same time, attending in such a republic to agriculture, lucrative employments, and military affairs, does this appear to be right?

Adeimantus:: Not in any degree.

Socrates:: But see now whether this form of republic be the first which introduces this greatest of all evils.

Adeimantus:: What is that?

Socrates:: That one shall be allowed to dispose of the whole of his effects, and another to purchase them from him, and the seller be allowed to dwell in the city, whilst he belongs to no one class in the city, and is neither called a maker of money, nor mechanic, nor horseman, nor foot-soldier, but poor and destitute.

Adeimantus:: It is the first.

Socrates:: But yet such an one shall not be prohibited in Oligarchic governments; for otherwise some of them would not be over-rich, and others altogether poor.

Adeimantus:: Right.

Socrates:: But consider this likewise. When such a rich man as this is spends of his substance, was it of any more advantage to the city with reference to the purposes we now mentioned? or did he appear to be indeed one of the magistrates, but was in truth neither magistrate of the city, nor servant to it, but a waster of substance?

Adeimantus:: So he appeared. He was nothing but a waster.

Socrates:: Are you willing then, that we say of him, that as when a drone is in a bee-hive, it is the disease of the swarm; in like manner such an one, when a drone in his house, is the disease of the city?

Adeimantus:: Entirely so, Socrates.

Socrates:: And has not God, Adimantus, made all the winged drones without any sting; but these with feet, some of them without stings, and some of them with dreadful stings? And of those who are without stings, are they who continue poor to old-age; and of those who have stings, are all these who are called mischievous.

Adeimantus:: Most true.

Socrates:: It is plain then, that in a city where you observe there are poor, there are somewhere in that place concealed thieves and purse-cutters, and sacrilegious persons, and workers of all other such evils.

Adeimantus:: It is plain.

Socrates:: What then? Do not you perceive poor people in cities under Oligarchic government?

Adeimantus:: They are almost all so, except the governors.

Socrates:: And do we not think, that there are many mischievous persons in them with stings, whom the magistracy by diligence and by force restrains?

Adeimantus:: We think so indeed.

Socrates:: And shall we not say, that through want of education, through bad nurture, and a corrupt constitution of state, such sort of persons are there produced?

Adeimantus:: We shall say so.

Socrates:: Is not then the city which is under Oligarchy of such a kind as this, and hath it not such evils as these, and probably more too?

Adeimantus:: It is nearly so.

Socrates:: We have now finished, this republic likewise, which they call Oligarchy, having its governors according to valuation. And let us now consider the man who resembles it, in what manner he arises, and what sort of man he is.

Adeimantus:: By all means.

Socrates:: And is not the change from the Timocratic to the Oligarchic chiefly in this manner?

Adeimantus:: How?

Socrates:: When such a one has a son, first of all, he both emulates his father, and follows his steps; afterwards he sees him, on a sudden, dashed on the city, as on a rock, and wasting both his substance and himself, either in the office of a general, or some other principal magistracy; then falling into courts of justice, destroyed by sycophants, and either put to death, or stripped of his dignities, disgraced, and losing all his substance.

Adeimantus:: It is likely.

Socrates:: When he has seen and suffered those things, friend, and has lost his substance, he instantly in a terror pushes headlong from the throne of his soul that ambitious and animated disposition, and, being humbled by his poverty, turns his attention to gain, lives meanly and sparingly, and, applying to work, collects wealth. Or do you not think that such a man will then seat in that throne the covetous and avaricious disposition, and make it a mighty king within himself, begirt with tiaras, and bracelets, and scepters?

Adeimantus:: I think so.

Socrates:: But he, I imagine, having placed both the rational and the ambitious disposition low on the ground on either side, and having enslaved them under it, the one he allows to reason on nothing, nor ever to inquire, but in what way lesser substance shall be made greater; and the other again he permits to admire and honour nothing but riches and the rich, and to receive honour on no other account but the acquisition of money, or whatever contributes towards it.

Adeimantus:: There is no other change, of an ambitious youth to a covetous one so sudden and so powerful as this.

Socrates:: Is not this, then, the Oligarchic man? And the change into such an one is from a man resembling that republic from which the Oligarchic republic arises. Let us consider, now, if he any way resembles it.

Adeimantus:: Let us consider.

Socrates:: Does he not, in the first place, resemble it in valuing money above all things?

Adeimantus:: Why does he not?

Socrates:: And surely at least in being sparing and laborious, satisfying only his necessary desires, and not allowing of any other expenses, but subduing the other desires as foolish.

Adeimantus:: Certainly.

Socrates:: And being, an emaciated man, and making gain of every thing, a man intent on hoarding, such as the multitude extols—will not this be the man who resembles such a republic?

Adeimantus:: It appears so to me. Riches then must be most valued both by the city and by such a man.

Socrates:: For I do not think, that such a man has attended to education.

Adeimantus:: I do not think he has; for he would not have taken a blind one to be the leader of his life.

Socrates:: But further still, consider this attentively, Shall we not say that there are in him, from the want of education, the desires of the drone, some of them beggarly, and some of them mischievous, forcibly kept in by some other pursuit?

Adeimantus:: Entirely so.

Socrates:: Do you know then, where you will best observe their wickedness?

Adeimantus:: Where?

Socrates:: In their tutelages of orphans, or in whatever else of this kind comes in their way, where they have it much in their power to do injustice.

Adeimantus:: True.

Socrates:: And is not this now manifest, that in every other commerce of life, wherever such an one acts so as to be approved, appearing to be just, and, by a certain moderate behavior, restrains the other wrong desires within him, he does so, not from any persuasion that it is not better to indulge them, nor from sober reason, but from necessity and fear, trembling for the rest of his substance.

Adeimantus:: Entirely so.

Socrates:: And truly, friend, you shall find in most of them desires partaking of the nature of the drone, where there is occasion to spend the property of others.

Adeimantus:: Very much so.

Socrates:: Such a one as this, then, will not be without sedition within himself; nor be one, but a kind of double man; he will, however, have for the most part desires governing other desires, the better governing the worse.

Adeimantus:: It is so.

Socrates:: And on these accounts such a one, as I imagine, will be more decent than many others, but the true virtue of a harmonized and confident soul would far escape him.

Adeimantus:: It appears so to me.

Socrates:: And the parsimonious man will, in private life, be but a poor rival for any victory, or in any contest of the honorable kind. And being unwilling, for the sake of good reputation, or for any such contests, to spend his substance, being afraid to waken up expensive desires, or any alliance or contest of this kind, fighting with a small part of his forces in an Oligarchic manner, he is generally defeated, and increases his wealth.

Adeimantus:: Very true.

Socrates:: Do we then yet hesitate, to rank the covetous and parsimonious man as most of all resembling the city under Oligarchic government?

Adeimantus:: By no means.

Socrates:: Democracy now, as seems, is next to be considered, in what manner it arises, and what kind of man it produces when arisen; that, understanding the nature of such a man, we may bring him to a trial. We shall in this method, proceed consistently with ourselves. Is not, the change from Oligarchy to Democracy produced in some such way as this, through the insatiable desire of the proposed good, viz. the desire of becoming as rich as possible?

Adeimantus:: How?

Socrates:: As those who are its governors govern on account of their possessing great riches, they will be unwilling, I think, to restrain by law such of the youth as are dissolute from having the liberty of squandering and wasting their substance; that so, by purchasing the substance of such persons, and lending them on usury, they may still become both richer, and be held in greater honour.

Adeimantus:: They will be more unwilling than any other.

Socrates:: And is not this already manifest in the city, that it is impossible for the citizens to esteem riches, and at the same time sufficiently possess temperance, but either the one or the other must of necessity be neglected?

Adeimantus:: It is abundantly plain.

Socrates:: But whilst in Oligarchies they neglect education, and suffer the youth to grow licentious, they are sometimes under a necessity of becoming poor, and these such as are of no ungenerous disposition.

Adeimantus:: Very much so.

Socrates:: And these, I imagine, fit in the city, fitted both with slings and with armor, some of them in debt, others in contempt, others in both, hating and conspiring against those who possess their substance, and others likewise, being desirous of a change.

Adeimantus:: These things are so.

Socrates:: But the money-catchers still brooding over it, and not seeming to observe these; wherever they see any of the rest giving way, they wound them by throwing money into their hands, and, drawing to themselves exorbitant usury, fill the city with drones, and the poor.

Adeimantus:: How is it possible they should not?

Socrates:: Nor yet, when so great an evil is burning in the city, are they willing to extinguish it, not even by that method, restraining any one from spending his substance at pleasure; nor yet to take that method, by which, according to the second law, such disorder might be removed.

Adeimantus:: According to which?

Socrates:: According to that, which after the other is secondary, obliging the citizens to pay attention to virtue; for, if one should enjoin them to traffic much in the way of voluntary commerce, and upon their own hazard, they would in a less shameful way make money in the city, and likewise less of those evils we have now mentioned would arise in it.

Adeimantus:: Much less.

Socrates:: But at present, by means of all these things, the governors render the governed of this kind. And do they not render both themselves and all belonging to them, and the youth likewise, luxurious and idle with respect to all the exercises of body and of mind, and effeminate in bearing both pleasures and pains, and likewise indolent?

Adeimantus:: What else?

Socrates:: As to themselves, they neglect every thing but the acquisition of wealth, and pay no more attention to virtue than the poor do.

Adeimantus:: They do not indeed.

Socrates:: After they are trained up in this manner, when these governors and their subjects meet together either on the road in their journeying, or in any other meetings, either at public spectacles, or military marches, either when fellow-sailors or fellow-soldiers, or when they see one another in common dangers, by no means are the poor in these cases contemned by the rich; but very often a robust fellow poor and sun-burnt, when he has his rank in battle beside a rich man bred up in the shade, and swoln with a great deal of adventitious flesh, and sees him panting for breath and in agony, do not you imagine that he thinks it is through their own fault that such fellows grow rich, and that they say to one another, when they meet in private, that our rich men are good for nothing at all?

Adeimantus:: I know very well, that they do so.

Socrates:: For, as a diseased body needs but the smallest shock from without to render it sickly, and sometimes without any impression from without is in sedition with itself, will not in like manner a city resembling it in these things, on the smallest occasion from without, when either the one party forms an alliance with the Oligarchic, or the other with the Democratic, be sickly, and fight with itself, and, sometimes without these things from abroad, be in sedition?

Adeimantus:: And extremely so.

Socrates:: A Democracy then, I think, arises when the poor prevailing over the rich kill some, and banish others, and share the places in the republic, and the magistracies equally among the remainder, and for the most part the magistracies are disposed in it by lot.

Adeimantus:: This truly, is the establishment of a Democracy, whether it arise by force of arms, or from others withdrawing themselves through fear.

Socrates:: In what manner now, do these live, and what sort of a republic is this? for it is plain that a man of this kind will appear some Democratic man.

Adeimantus:: It is plain.

Socrates:: Is not then the city, in the first place, full of all freedom of action, and of speech, and of liberty, to do in it what any one inclines?

Adeimantus:: So truly it is said at least.

Socrates:: And wherever there is liberty, it is plain that every one will regulate his own method of life in whatever way he pleases.

Adeimantus:: It is plain.

Socrates:: And I think that in such a republic most especially there would arise men of all kinds.

Adeimantus:: How can it be otherwise?

Socrates:: This, seems to be the finest of all republics. As a variegated robe diversified with all kinds of flowers, so this republic, variegated with all sorts of manners, appears the finest.

Adeimantus:: What else?

Socrates:: And it is likely, that the multitude judge this republic to be the best, like children and women gazing at variegated things.

Adeimantus:: Very likely.

Socrates:: And it is very proper at least, O blessed man! to search for a republic in such a state as this.

Adeimantus:: How now?

Socrates:: Because it contains all kinds of republics on account of liberty; and it appears necessary for any one who wants to constitute a city, as we do at present, to come to a Democratic city, as to a general fair of republics, and choose that form which he fancies.

Adeimantus:: It is likely indeed, he would not be in want of models.

Socrates:: But what now, is not this a divine and sweet manner of life for the present: To be under no necessity in such a city to govern, not though you were able to govern, nor yet to be subject unless you incline, nor to be engaged in war when others are, nor to live in peace when others do so unless you be desirous of peace; and though there be a law restraining you from governing or administering justice, to govern nevertheless, and administer justice, if you incline?

Adeimantus:: It is likely; it is pleasant for the present at least.

Socrates:: But what now, is not the meekness of some of those who are condemned very curious? Or have you not as yet observed, in such a republic, men condemned to death or banishment, yet nevertheless continuing still, and walking up and down openly; and as if no one attended to or observed him, the condemned man returns like a hero?

Adeimantus:: I have observed very many.

Socrates:: But is not this indulgence of the city very generous, not to mention the small regard, and even contempt, it shows for all those things we celebrated so much when we settled our city, as that unless a man had an extraordinary genius, he never would become a good man, unless when a child he were instantly educated in things handsome, and should diligently apply to all these things? how magnanimously does it despise all these things, and not regard from what kind of pursuits a man comes to act in political affairs, but honors him if he only says he is well affected towards the multitude?

Adeimantus:: This contempt, is very generous indeed.

Socrates:: These now, and such things as are akin to these, are to be found in a Democracy; and it will be, as it appears, a pleasant sort of republic, anarchical, and variegated, distributing a certain equality to all alike without distinction.

Adeimantus:: What you say, is perfectly manifest.

Socrates:: Consider now, what kind of man such an one is in private; or, first, must we not consider, as we did with respect to the republic, in what manner he arises?

Adeimantus:: Yes.

Socrates:: And does he not in this manner arise, viz. from that parsimonious one, who was under the Oligarchy as a son, I think, trained up by his father in his manners?

Adeimantus:: Why not?

Socrates:: Such a one by force governs his own pleasures, those of them which are expensive, and tend not to the acquisition of wealth, and which are called unnecessary.

Adeimantus:: It is plain.

Socrates:: Are you willing then, that we may not reason in the dark, first to determine what desires are necessary, and what are not?

Adeimantus:: I am willing.

Socrates:: May not such be justly called necessary, which we are not able to remove, and such as when gratified are of advantage to us? For both these kinds our nature is under a necessity to pursue; is it not?

Adeimantus:: Very strongly.

Socrates:: This then we shall justly say makes the necessary part in our desires.

Adeimantus:: Justly.

Socrates:: But what now? Such desires as a man may banish, if he study it from his youth, and such as whilst they remain do no good, if we say of these that they are not necessary, shall we not say right?

Adeimantus:: Right indeed.

Socrates:: Let us select a paradigm of each of them, that we may understand by an example what they are.

Adeimantus:: It is proper.

Socrates:: Is not the desire of eating, so far as is conducive to health and a good habit of body; and the desire of food and victuals, of the necessary kind?

Adeimantus:: I think so.

Socrates:: The desire of food at least is indeed necessary on both accounts, as meat is advantageous, and as the want of it must bring life to an end altogether.

Adeimantus:: It is.

Socrates:: And the desire of victuals is likewise necessary, if it anyhow contribute anything towards the good habit of the body.

Adeimantus:: Certainly.

Socrates:: But what? Such desire even of these things as goes beyond these purposes, or such desire as respects other meats than these, and yet is capable of being curbed in youth, and, by being disciplined, to be removed from many things, and which is hurtful both to the body, and hurtful to the soul with reference to her attaining wisdom and temperance, may not such desire be rightly called unnecessary?

Adeimantus:: Most rightly, indeed.

Socrates:: And may we not call these expensive likewise, and the others frugal, as they are conducive towards the actions of life?

Adeimantus:: Why not?

Socrates:: In the same manner, surely, shall we say of venereal desires, and the others.

Adeimantus:: In the same manner.

Socrates:: And did we not, by him whom we just now denominated the drone, mean one who was full of such desires and pleasures, and was governed by such as are unnecessary? but that he who was under the necessary ones was the parsimonious and Oligarchic?

Adeimantus:: Without doubt.

Socrates:: Let us again mention, how the Democratic arises from the Oligarchic; and to me he appears to arise in great measure thus.

Adeimantus:: How?

Socrates:: When a young man nurtured, as we now mentioned, without proper instruction, and in a parsimonious manner, comes to taste the honey of the drones, and associates with those vehement and terrible creatures who are able to procure all sorts of pleasures, and every way diversified, and from every quarter;—thence conceive there is somehow the beginning of a change in him from the Oligarchic to the Democratic.

Adeimantus:: There is great necessity for it.

Socrates:: And as the city was changed by the assistance of an alliance from without with one party of it with which it was akin, will not the youth be changed in the same manner, by the assistance of one species of desires from without, to another within him which resembles it, and is allied to it?

Adeimantus:: By all means.

Socrates:: And I imagine at least, if by any alliance there be given counter-assistance to the Oligarchic party within him, either any how by his father, or by others of the family, both admonishing and upbraiding him, then truly arises sedition, and oppression, and a fight within him with himself.

Adeimantus:: Undoubtedly.

Socrates:: And sometimes indeed, I think, the Democratic party yields to the Oligarchic, and some of the desires are destroyed, but others retire, on a certain modesty being ingenerated in the soul of the youth, and he again becomes cultivated.

Adeimantus:: This sometimes takes place.

Socrates:: And again, I conceive, that when some desires retire, there are others allied to them which grow up, and, through inattention to the father's instruction, become both many and powerful.

Adeimantus:: This is usually the case.

Socrates:: And do they not draw towards intimacies among themselves, and, meeting privately together, generate a multitude?

Adeimantus:: What else?

Socrates:: And at length, I think, they seize the citadel of the soul of the youth, finding it evacuated both of beautiful disciplines and pursuits, and of true reasoning, which are the best guardians and preservers in the dianoëtic part of men beloved of the Gods.

Adeimantus:: Very much so.

Socrates:: And then indeed false and arrogant reasonings and opinions, rushing up in their stead, possess the same place in such a one.

Adeimantus:: Vehemently so.

Socrates:: And does he not now again, on coming among those Lotophagi, dwell with them openly? And if any assistance comes from his friends to the parsimonious part of his soul, those arrogant reasonings, shutting the gates of the royal wall against it, neither give entrance to this alliance, nor to the ambassadorial admonitions of private old men; but, fighting against these, hold the government themselves. And denominating modesty stupidity, they thrust it out disgracefully as a fugitive, and temperance they call unmanliness, and, abusing it most shamefully, expel it. Persuading themselves likewise that moderation, and decent expense, are no other than rusticity and illiberality, they banish them from their territories, with many other and unprofitable desires.

Adeimantus:: Vehemently so.

Socrates:: Having emptied and purified from all these desires the soul that is detained by them, and is initiated in the great mysteries, they next lead in, with encomiums and applauses, insolence and anarchy, luxury and impudence, shining with a great retinue, and crowned. And insolence, indeed, they denominate education; anarchy they call liberty; luxury, magnificence; and impudence, manhood. Is it not, somehow in this manner, that a youth changes from one bred up with the necessary desires into the licentiousness and remissness of the unnecessary and unprofitable pleasures?

Adeimantus:: And very plainly so.

Socrates:: And such a one, I think, after this leads his life, expending his substance, his labor, and his time, no more on the necessary than the unnecessary pleasures: and if he be fortunate, and not excessively debauched, when he is somewhat more advanced in years, and when the great crowd of desires is over, he admits a part of those which were expelled, and does not deliver himself wholly up to such as had entrusted, but regulates his pleasures by a sort of equality, and so lives delivering up the government of himself to every incidental desire as it may happen, till it be satisfied, and then to another, undervaluing none of them, but indulging them all alike.

Adeimantus:: Entirely so.

Socrates:: And such a one, does not listen to true reasoning, nor admit it into the citadel, if any should tell him that there are some pleasures of the worthy and the good desires, and others of the depraved, and that he ought to pursue and honour those, but to chastise and enslave these. But, in all these cases, he dissents, and says that they are all alike, and ought to be held in equal honour.

Adeimantus:: Whoever is thus affected, vehemently acts in this manner.

Socrates:: And does he not live, from day to day, gratifying after this manner every incidental desire, sometimes indulging himself in intoxication, and in music, sometimes drinking water, and extenuating himself by abstinence; and then again attending to the gymnic exercises? Sometimes too he is quite indolent and careless about every thing; then again he applies as it were to philosophy; many times he acts the part of a politician, and in a desultory manner says and does whatever happens. If at any time he affects to imitate any of the military tribe, thither he is carried; or of the mercantile, then again hither; nor is his life regulated by any order, or any necessity, but, deeming this kind of life pleasant, and free, and blessed, he follows it throughout.

Adeimantus:: You have entirely, discussed the life of one who places all laws whatever on a level.

Socrates:: I imagine at least, that he is multiform, and full of very different manners; and that, like the city, he is fine, and variegated, and that very many men and women would desire to imitate his life, as he contains in himself a great many patterns of republics and of manners.

Adeimantus:: He does.

Socrates:: What now? Shall such a man as this be arranged as resembling a Democracy, as he may truly be called Democratic?

Adeimantus:: Let him be so arranged.

Socrates:: But it yet remains that we discuss, the most excellent republic, and the most excellent man, viz. Tyranny, and the Tyrant.

Adeimantus:: It does.

Socrates:: Come then, my dear companion! in what manner does Tyranny arise? For it is almost plain that the change is from Democracy. It is plain. Does not Tyranny arise in the same manner from Democracy, as Democracy does from Oligarchy?

Adeimantus:: How?

Socrates:: What did Oligarchy, propose as its good, and according to what was it constituted? It was with a view to become extremely rich, was it not?

Adeimantus:: Yes.

Socrates:: An insatiable desire then of riches, and a neglect of other things, through attention to the acquisition of wealth, destroys it.

Adeimantus:: True.

Socrates:: And with reference to that which Democracy denominates good, an insatiable thirst of it destroys it likewise?

Adeimantus:: But what is it you say it denominates good?

Socrates:: Liberty. For this you are told is most beautiful in a city which is under a Democracy, and that for the sake of liberty any one who is naturally free chooses to live in it alone.

Adeimantus:: This word Liberty, is indeed often mentioned.

Socrates:: Does not then, as I was going to say, the insatiable desire of this, and the neglect of other things, change even this republic, and prepare it to stand in need of a tyrant?

Adeimantus:: How?

Socrates:: When a city, is under a Democracy, and is thirsting after liberty, and happens to have bad cupbearers appointed it, and becomes intoxicated with an unmixed draught of it beyond what is necessary, it punishes even the governors if they will not be entirely tame, and afford abundant liberty, accusing them as corrupted, and Oligarchic.

Adeimantus:: They do this.

Socrates:: But such as are obedient to magistrates they abuse, as willing slaves, and good for nothing, and, both in private and in public, commend and honour magistrates who resemble subjects, and subjects who resemble magistrates; must they not therefore necessarily in such a city arrive at the summit of liberty?

Adeimantus:: How is it possible they should not?

Socrates:: And must not this inbred anarchy, my friend, descend into private families, and in the end reach even the brutes?

Adeimantus:: How, do we assert such a thing as this?

Socrates:: Just as if, a father should accustom himself to resemble a child, and to be afraid of his sons, and the son accustom himself to resemble his father, and neither to revere nor to stand in awe of his parents, that so indeed he may be free, as if a stranger were to be equaled with a citizen, and a citizen with a stranger, and, in like manner, a foreigner.

Adeimantus:: It is just so.

Socrates:: These things, and other little things of a like nature happen. The teacher in such a city fears and flatters the scholars, and the scholars despise their teachers and their tutors in like manner: and in general the youth resemble the more advanced in years, and contend with them both in words and deeds: and the old men, sitting down with the young, are full of merriment and pleasantry, mimicking the youth, that they may not appear to be morose and despotic.

Adeimantus:: It is entirely so.

Socrates:: But that extreme liberty of the multitude, how great it is in such a city as this, when the men and women slaves are no less free than those who purchase them, and how great an equality and liberty the wives have with their husbands, and husbands with their wives, we have almost forgotten to mention.

Adeimantus:: Shall we not then, according to Æschylus, say whatever now comes into our mouth?

Socrates:: By all means; and accordingly I do speak thus: With reference even to brutes, such of them as are under the care of men, how much more free they are in such a city, he who has not experienced it will not easily believe: for indeed even the puppies, according to the proverb, resemble their mistresses; and the horses and asses are accustomed to go freely and gracefully, marching up against any one they meet on the road, unless he give way; and many other such things thus happen full of liberty.

Adeimantus:: You tell me, my dream; for I have often met with this when going into the country.

Socrates:: But do you observe, what is the sum of all these things collected together, how delicate it makes the soul of the citizens, so that, if any one bring near to them any thing pertaining to slavery, they are filled with indignation, and cannot endure it. And do you know, that at length they regard not even the laws, written or unwritten, that no one by any means whatever may become their masters?

Adeimantus:: I know it well.

Socrates:: This now, friend, is that government so beautiful and youthful, whence Tyranny springs, as it appears to me.

Adeimantus:: Youthful truly; but what follows this?

Socrates:: The same thing, which, springing up as a disease in an Oligarchy, destroyed it; the same arising here in a greater and more powerful manner, through its licentiousness, enslaves the Democracy: and in reality, the doing any thing to excess usually occasions a mighty change to the reverse: for thus it is in seasons, in vegetable and in animal bodies, and in republics as much as in any thing.

Adeimantus:: It is probable.

Socrates:: And excessive liberty seems to change into nothing else but excessive slavery, both with a private person and a city.

Adeimantus:: It is probable, indeed.

Socrates:: It is probable then, that out of no other republic is Tyranny constituted than a Democracy; out of the most excessive liberty I conceive the greatest and most savage slavery.

Adeimantus:: It is reasonable, to think so.

Socrates:: But this I think, was not what you was asking; but what that disease is which enslaves Democracy, resembling that which destroys Oligarchy?

Adeimantus:: You say true.

Socrates:: That then, I called the race of idle and profuse men, one part of which was more brave, and were leaders, the other more cowardly, and followed. And we compared them to drones; some to such as have stings, others to such as have none.

Adeimantus:: And rightly.

Socrates:: These two now, springing up in any republic, raise disturbance, as phlegm and bile in a natural body. And it behooves a wise physician and lawgiver of a city, no less than a wise bee-master, to be afraid of these, at a great distance principally, that they never get in; but, if they have entered, that they be in the speediest manner possible cut off, together with their very cells.

Adeimantus:: Yes, by Jupiter, by all means.

Socrates:: Let us take it then, in this manner, that we may see more distinctly what we want. In what manner? Let us divide in our reasoning a Democratic city into three parts, as it really is; for one such species as the above grows through licentiousness in it no less than in the Oligarchic.

Adeimantus:: It does so.

Socrates:: But it is much more fierce at least in this than in that.

Adeimantus:: How?

Socrates:: In an Oligarchy, because it is not in places of honour, but is debarred from the magistracies, it is unexercised, and does not become strong. But in a Democracy this, excepting a few, is somehow the presiding party, and now it says and does the most outrageous things, and then again approaching courts of justice, it makes a humming noise, and cannot endure any other to speak different from it; so that all things, some few excepted, in such a republic, are administered by such a party.

Adeimantus:: Extremely so.

Socrates:: Some other party now, such as this, is always separated from the multitude.

Adeimantus:: Which?

Socrates:: Whilst the whole are somehow engaged in the pursuit of gain, such as are naturally the most temperate become for the most part the wealthiest.

Adeimantus:: It is likely.

Socrates:: And hence, I think, the greatest quantity of honey, and what comes with the greatest ease, is pressed out of these by the drones.

Adeimantus:: For how, can any one press out of those who have but little?

Socrates:: Such wealthy people, I think, are called the pasture of the drones.

Adeimantus:: Nearly so.

Socrates:: And the people will be a sort of third species, such of them as mind their own affairs, and meddle not with any others, who have not much substance, but yet are the most numerous, and the most prevalent in a Democracy, whenever it is fully assembled.

Adeimantus:: It is so; but this it will not wish to do often, if it does not obtain some share of the honey.

Socrates:: Does it not always obtain a share, as far as their leaders are able, robbing those that have property, and giving to the people that they may have the most themselves?

Adeimantus:: They are indeed, sharers in this manner.

Socrates:: These then who are thus despoiled are obliged to defend themselves, saying and doing all they can among the people.

Adeimantus:: Why not?

Socrates:: Others then give them occasion to form designs against the people, though they should have no inclination to introduce a change of government, and so they are Oligarchic.

Adeimantus:: Why not?

Socrates:: But at length, after they see that the people, not of their own accord, but being ignorant and imposed on by those slanderers, attempt to injure them,—do they not then indeed, whether they will or not, become truly Oligarchic? yet not spontaneously, but this mischief likewise is generated by that drone stinging them.

Adeimantus:: Extremely so, indeed.

Socrates:: And so they have accusations, lawsuits, and contests one with another.

Adeimantus:: Very much so.

Socrates:: And are not the people accustomed always to place some one, in a conspicuous manner, over themselves, and to cherish him, and greatly increase his power?

Adeimantus:: They are.

Socrates:: And this, is plain, that whenever a tyrant arises it is from this presiding root, and from nothing else, that he blossoms.

Adeimantus:: This is extremely manifest.

Socrates:: What is the beginning then of the change from a president into a tyrant? Or is it plain, that it is after the president begins to do the same thing with that in the fable, which is told in relation to the temple of Lycæan Jupiter, to whom was dedicated the wolf in Arcadia?

Adeimantus:: What is that?

Socrates:: That whoever tasted human entrails which were mixed with those of other sacrifices, necessarily became a wolf. Have you not heard the story?

Adeimantus:: I have.

Socrates:: And must not he in the same manner, who being president of the people, and receiving an extremely submissive multitude, abstains not from kindred blood, but unjustly accusing them, (of such things as they are wont) and bringing them into courts of justice, stains himself with bloodshed, taking away the life of a man, and, with unhallowed tongue and mouth, tasting kindred blood, and besides this, banishes and (says, and proposes the abolition of debts, and division of lands,—must not such an one, of necessity, and as it is destined, be either destroyed by his enemies, or exercise tyranny, and, from being a man, become a wolf?

Adeimantus:: Of great necessity.

Socrates:: This is he now, who becomes seditious towards those who have property, and, when he fails, he goes against his enemies with open force, and becomes an accomplished tyrant.

Adeimantus:: It is plain.

Socrates:: And if they be unable to expel him, or to put him to death, on an accusation before the city, they truly conspire to cut him off privately by a violent death.

Adeimantus:: It is wont indeed, to happen so.

Socrates:: And, on this account, all those who mount up to tyranny invent this celebrated tyrannical demand, to demand of the people certain guards for their person, that the assistance of the people may be secured to them. Of this, they take special care. And they grant them, I imagine, being afraid of his safety, but secure as to their own.

Adeimantus:: Extremely so.

Socrates:: And when a man who has property, and who along with his property has the crime of hating the people, observes this,—he then, my friend, according to the answer of the oracle to Crœsus;

> … To craggy Hermus flies,
> Nor stays, nor fears to be a coward deemed.…

Adeimantus:: Because he would not, be in fear again a second time.

Socrates:: But he at least, I imagine, who is caught, is put to death.

Of necessity. It is plain, then, that this president of the city does not himself behave like a truly great man, in a manner truly great, but, hurling down many others, sits in his chair a consummate tyrant of the city, instead of a president.

Adeimantus:: Why is he not?

Socrates:: Shall we consider now, the happiness of the man, and of the city in which such a mortal arises?

Adeimantus:: By all means, let us consider it.

Socrates:: Does he not then, in the first days, and for the first season, smile, and salute every one he meets; says he is no tyrant, and promises many things, both in private and in public; and frees from debts, and distributes land both to the people in general, and to those about him, and affects to be mild and patriotic towards all?

Adeimantus:: Of necessity.

Socrates:: But when, I think, he has reconciled to himself some of his foreign enemies, and destroyed others, and there is tranquility with reference to these, he in the first place always raises some wars, in order that the people may be in need of a leader.

Adeimantus:: It is likely.

Socrates:: And is it not likewise with this view, that, being rendered poor by payment of taxes, they may be under a necessity of becoming intent on daily sustenance, and may be less ready to conspire against him?

Adeimantus:: It is plain.

Socrates:: And, I think, if he suspects that any of those who are of a free spirit will not allow him to govern,—in order to have some pretext for destroying them, he exposes them to the enemy; on all these accounts a tyrant is always under a necessity of raising war.

Adeimantus:: Of necessity.

Socrates:: And, whilst he is doing these things, he must readily become more hateful to his citizens.

Adeimantus:: Why not?

Socrates:: And must not some of those who have been promoted along with him, and who are in power, speak out freely both towards him, and among themselves, finding fault with the transactions, such of them as are of a more manly spirit?

Adeimantus:: It is likely.

Socrates:: It behooves the tyrant, then, to cut off all these, if he means to govern, till he leave no one, either of friends or foes, worth any thing.

Adeimantus:: It is plain.

Socrates:: He must then carefully observe who is courageous, who is magnanimous, who wise, who rich; and in this manner is he happy, that willing, or not willing, he is under a necessity of being an enemy to all such as these; and to lay snares till he purify the city.

Adeimantus:: A beautiful purification.

Socrates:: Yes, the reverse of what physicians do with respect to animal bodies; for they, taking away what is worst, leave the best; but he does the contrary.

Adeimantus:: Because it seems, he must of necessity do so, if he is to govern.

Socrates:: In a blessed necessity, then, truly, is he bound, which obliges him either to live with many depraved people, and to be hated too by them, or not to live at all.

Adeimantus:: In such necessity he is.

Socrates:: And the more he is hated by his citizens whilst he does these things, shall he not so much the more want a greater number of guards, and more faithful ones?

Adeimantus:: How is it possible he should not?

Socrates:: Who then are the faithful, and from whence shall he send for them?

Adeimantus:: Many, of their own accord, will come flying, if he give them hire.

Socrates:: You seem, by the dog, again to mention certain drones foreign and multiform.

Adeimantus:: You imagine right.

Socrates:: But those at home, would he not incline to have them also as guards?

Adeimantus:: How?

Socrates:: After he has taken away the citizens, to give the slaves their liberty, and make of them guards about his person.

Adeimantus:: By all means; for these are the most faithful to him.

Socrates:: What a blessed possession, is this which you mention belonging to the tyrant, if he employ such friends and faithful men, after having destroyed those former ones!

Adeimantus:: But surely such at least, he does employ.

Socrates:: And such companions, admire him, and the new citizens accompany him: but the worthy men both hate and fly from him.

Adeimantus:: Why should they not?

Socrates:: It is not without reason, that tragedy in the general is thought a wise thing, and that Euripides is thought to excel in it.

Adeimantus:: For what?

Socrates:: Because he uttered this, which is the mark of a condensed conception, "That tyrants are wise, by the conversation of the wise," and he plainly said those were wise with whom they hold converse.

Adeimantus:: And he commends too, Tyranny as a divine thing, and says a great many other things of it, as do likewise the other poets.

Socrates:: Those composers then of tragedy, as they are wise, will forgive us, and such as establish the government of cities in a manner nearly resembling ours, in not admitting them into our republic as being panegyrists of Tyranny.

Adeimantus:: I think, such of them at least as are more polite will forgive us.

Socrates:: But going about among other cities, I think, and drawing together the crowds, and putting to sale their fine, magnificent and persuasive words, they will draw over the republics to Tyrannies and Democracies.

Adeimantus:: Extremely so.

Socrates:: And do they not further receive rewards, and are they not honored chiefly by Tyrants, as is natural, and in the next place by Democracy? But the further on they advance towards the republics, the reverse of these, their honour forsakes them the more, as if it were disabled by an asthma to advance.

Adeimantus:: Entirely so.

Socrates:: Thus far, we have digressed: but now again let us mention in what manner that army of the Tyrant, which is so beautiful, so numerous and multiform, and no way the same, shall be maintained.

Adeimantus:: It is plain, that if at any time there be any sacred things in the city, these they will spend, that so what they sell for may still answer their demands, and the people be obliged to pay in the lighter taxes.

Socrates:: But what will they do when these fail them?

Adeimantus:: It is plain, that he and his intoxicated companions, and his associates, male and female, will be maintained out of the paternal inheritance.

Socrates:: I understand, that the people who have made the Tyrant will nourish him and his companions.

Adeimantus:: They are under great necessity.

Socrates:: How do you say? What if the people be enraged, and say that it is not just, that the son who is arrived at maturity be maintained by the father, but contrariwise that the father be maintained by the son; and that they did not make and establish him for this purpose, to be a slave to his slaves when he should be grown up, and to maintain him and his slaves with their other turbulent attendants; but in order that they might be set at liberty from the rich in the city, who are also called the good and worthy, by having placed him over them? And now they order him and his companions to leave the city, as a father drives out of the house his son with his turbulent drunken companions.

Adeimantus:: Then, by Jupiter, shall the people, know what a beast they are themselves, and what a beast they have generated, and embraced, and nurtured, and that whilst they are the weaker they attempt to drive out the stronger.

Socrates:: How do you say? Will the Tyrant dare to offer violence to his father, and, if he cannot persuade him, will he strike him?

Adeimantus:: Yes, even stripping him of his armor.

Socrates:: You call, the Tyrant a parricide and a miserable nourisher of old-age: and yet, as it is probable, Tyranny would really seem to be of this kind; and according to the saying, the people defending themselves against the smoke of slavery amid free men, have fallen into the slavish fire of despotism; instead of that excessive and unseasonable liberty, embracing the most rigorous and the most wretched slavery of bondmen.

Adeimantus:: These things, happen very much so.

Socrates:: What then, shall we not speak modestly, if we say that we have sufficiently shown how Tyranny arises out of Democracy, and what it is when it does arise?

Adeimantus:: Very sufficiently.

THE END OF THE EIGHTH BOOK.

# BOOK IX.

Socrates:: The tyrannical man himself, remains yet to be considered, in what manner he arises out of the Democratic, and, when he does arise, what kind of man he is, and what kind of life he leads, whether miserable or blessed.

Adeimantus:: He indeed yet remains.

Socrates:: Do you know, what I still want?

Adeimantus:: What is it?

Socrates:: We do not appear to me to have sufficiently distinguished with respect to the desires; of what kind they are, and how many; and whilst this is defective, the inquiry we make will be less evident.

Adeimantus:: May it not be done opportunely yet?

Socrates:: Certainly. And consider what it is I wish to know about them; for it is this: Of those pleasures and desires which are not necessary, some appear to me to be repugnant to law: these indeed seem to be ingenerated in every one; but being punished by the laws, and the better desires, in conjunction with reason, they either forsake some men altogether, or are less numerous and feeble; in others they are more powerful, and more numerous.

Adeimantus:: Will you inform me what these are?

Socrates:: Such, as are excited in sleep; when the other part of the soul, such as is rational and mild, and which governs in it, is asleep, and the part which is savage and rustic, being filled with meats or intoxication, frisks about, and, driving away sleep, seeks to go and accomplish its practices. In such a one you know it dares to do every thing, as being loosed, and disengaged from all modesty and prudence: For it scruples not the embraces, as it imagines, of a mother, or of any one else, whether of Gods, of men, or of hearts; nor to kill any one, nor to abstain from any sort of meat,—and, in one word, is wanting in no folly nor impudence.

Adeimantus:: You say most true.

Socrates:: But I imagine, when a man is in health, and lives temperately, and goes to sleep, having excited the rational part, and feasted it with worthy reasonings and inquiries, coming to an unanimity with himself; and allowing that part of the soul which is desiderative neither to be starved nor glutted, that it may lie quiet, and give no disturbance to the part which is best, either by its joy or grief, but suffer it by itself alone and pure to inquire, and desire to apprehend what it knows not, either something of what has existed, or of what now exists, or what will exist hereafter; and having likewise soothed the irascible part, not suffering it to be hurried by any thing, to transports of anger, and to fall asleep with agitated passion: but having quieted these two parts of the soul, and excited the third part, in which wisdom resides, shall in this manner take rest;—by such an one you know the truth is chiefly apprehended, and the visions of his dreams are then least of all repugnant to law. I am altogether, of this opinion. We have, indeed, been carried a little too far in mentioning these things. But what we want to be known is this, that there is in every one a certain species of desires which is terrible, savage, and irregular, even in some who entirely seem to us to be moderate. And this species becomes indeed manifest in sleep. But consider if there appear to be any thing in what I say, and if you agree with me.

Adeimantus:: But I agree.

Socrates:: Recollect now what kind of man we said the Democratic one was: for he was somehow educated from his infancy under a parsimonious father, who valued the avaricious desires alone; but such as were not necessary, but rose only through a love of amusement and finery, he despised.

Adeimantus:: Was he not?

Socrates:: Yes. But, being conversant with those who are more refined, and such as are full of those desires we now mentioned, running into their manner, and all sort of insolence, from a detestation of his father’s parsimony;—however, having a better natural temper than those who corrupt him, and being drawn opposite ways, he settles into a manner which is situated in the middle of both; and participating moderately, as he imagines, of each of them, he leads a life neither illiberal nor licentious, becoming a Democratic from an Oligarchic man. This was, and is our opinion of such an one. Suppose now again, that when such a one is become old, his young son is educated in his manners. I suppose it. And suppose, too, the same things happening to him as to his father; that he is drawn into all kinds of licentiousness, which is termed however by such as draw him off the most complete liberty; and that his father and all the domestics are aiding to those desires which are in the middle, and others also lend their assistance. But when those dire magicians and tyrant-makers have no hopes of retaining the youth in their power any other way, they contrive to excite in him a certain love which presides over the indolent desires, and such as minister readily to their pleasures, which love is a certain winged and large drone; or do you think that the love of these things is any thing else?

Adeimantus:: I think, it is no other than this.

Socrates:: And when other desires make a humming noise about him, full of their odors and perfumes, and crowns, and wines, and those pleasures of the most dissolute kind which belong to such co-partnerships; and, being increased and cherished, add a sting of desire to the drone, then truly he is surrounded with madness as a life-guard, and that president of the soul rages with frenzy; and if he find in himself any opinions or desires which seem to be good, and which yet retain modesty, he kills them, and pushes them from him, till he be cleansed of temperance, and is filled with additional madness.

Adeimantus:: You describe perfectly, the formation of a tyrannical man.

Socrates:: Is it not, on such an account as this, that, of old, Love is said to be a tyrant?

Adeimantus:: It appears so.

Socrates:: And, my friend, has not a drunken man likewise somewhat of a tyrannical spirit?

Adeimantus:: He has indeed.

Socrates:: And surely at least he who is mad, and is disturbed in his mind, undertakes and hopes to be able to govern not only men, but likewise the Gods.

Adeimantus:: Entirely so.

Socrates:: The tyrannical character then, O divine man! becomes so in perfection, when either by temper, or by his pursuits, or by both, he becomes intoxicated, and in love, and melancholy.

Adeimantus:: Perfectly so, indeed.

Socrates:: Such a one, it seems, then, arises in this manner. But in what manner does he live?

Adeimantus:: As they say in their plays, that you will tell me likewise.

Socrates:: I tell then. For I think that after this there are feastings among them, and retellings, and banquetings, and mistresses, and all such things as may be expected among those where Love the tyrant dwelling within governs all in the soul.

Adeimantus:: Of necessity.

Socrates:: Every day and night, therefore, do there not blossom forth many and dreadful desires, indigent of many things?

Adeimantus:: Many indeed.

Socrates:: And if they have any supplies, they are soon spent.

Adeimantus:: What else?

Socrates:: And after this there is borrowing and pillaging of substance.

Adeimantus:: What else?

Socrates:: And when every thing fails them, is there not a necessity that the desires, on the one hand, nestling in the mind, shall give frequent and powerful cries; and the men, on the other hand, being driven as by slings, both by the other desires, and more especially by love itself, commanding all the others as its life-guards, shall rage with frenzy, and search what any one possesses which they are able, by deceit or violence, to carry away?

Adeimantus:: Extremely so.

Socrates:: They must of necessity therefore be plundering from every quarter, or be tormented with great agonies and pains.

Adeimantus:: Of necessity.

Socrates:: And as with such a man his new pleasures possess more than his ancient ones, and take away what belonged to them, shall not he deem it proper in the same manner, that himself, being young, should have more than his father and mother, and take away from them, and, if he has spent his own portion, encroach on that of his parents?

Adeimantus:: Why will he not?

Socrates:: And if they do not allow him, will he not first endeavor to pilfer from and beguile his parents?

Adeimantus:: By all means.

Socrates:: And where he is not able to do this, will he not in the next place use rapine and violence?

Adeimantus:: I think so.

Socrates:: But, O wonderful man! when the old man and the old woman oppose and fight, will he not revere them, and beware of doing any thing tyrannical?

Adeimantus:: I, for my part, am not quite secure, with reference to the safety of the parents of such an one.

Socrates:: But by Jupiter, Adimantus, do you think that, for the sake of a newly beloved and unnecessary mistress, such a one would give up his anciently beloved and necessary mother; or, for the sake of a blooming youth newly beloved, and not necessary, give up his decayed, his necessary and aged father, the most ancient of all his friends, to stripes, and suffer these to be enslaved by those others, if he should bring them into the same house?

Adeimantus:: Yes, by Jupiter, I do.

Socrates:: It seems, to be an extremely blessed thing to beget a tyrannical son.

Adeimantus:: Not altogether so.

Socrates:: But what, when the substance of his father and mother fails such an one, and when now there is the greatest swarm of pleasures assembled in him, shall he not first break into some house, or late at night strip some one of his coat, and after this shall he not rifle some temple; and in all these actions, those desires newly loosed from slavery, and become as the guards of love, shall along with him rule over those ancient opinions he had from his infancy, the established decisions concerning good and evil; these desires which heretofore were only loose from their slavery in sleep, when he was as yet under the laws, and his father when under Democratic government, now when he is tyrannized over by love, such as he rarely was when asleep, such shall he be always when awake; and from no horrid slaughter, or food, or deed of any kind, shall he abstain. But that tyrannical love within him, living without any restraint of law or government, as being sole monarch itself, will lead on the man it possesses, as a city, to every mad attempt, whence he may support himself, and the crowd about him; which partly enters from without, from ill company, and, partly through their manners and his own, is become unrestrained and licentious. Or is not this the life of such a one?

Adeimantus:: It is this truly.

Socrates:: And if there be, but a few such in the city, and the rest of the multitude be sober, they go out and serve as guards to some other tyrant, or assist him for hire, if there be any war; but if they remain in peace and quiet, they commit at home in the city a great many small mischiefs.

Adeimantus:: Which do you mean?

Socrates:: Such as these: they steal, break open houses, cut purses, strip people of their clothes, rifle temples, make people slaves; and where they can speak they sometimes turn false informers, and give false testimony, and take gifts.

Adeimantus:: You call these, small mischiefs, if there be but a few such persons.

Socrates:: What is small, is small in comparison of great. And all those things, with regard to the tyrant, when compared with the wickedness and misery of the city, do not, as the saying is, come near the mark; for when there are many such in the city, and others accompanying them, and when they perceive their own number, then these are they who, through the foolishness of the people, establish as tyrant the man who among them has himself most of the tyrant, and in the greatest strength, within his soul.

Adeimantus:: It is probable indeed; for he will be most tyrannical.

Socrates:: Will he not be so, if they voluntarily submit to him? But if the city will not allow him, in the same manner as he formerly used violence to his father and mother, so now again will he chastise his country if he be able; and bringing in other young people, he will keep and nourish under subjection to these, his formerly beloved mother- and father-country, as the Cretans say? And this will be the issue of such a man's desire.

Adeimantus:: It will be entirely this.

Socrates:: But do not these, become such as this, first in private, and before they govern? In the first place, by the company they keep, either converting with their own flatterers, and such as are ready to minister to them in every thing; or, if they need any thing themselves, falling down to those they converse with, they dare to assume every appearance as friends; but, after they have gained their purpose, they act as enemies.

Adeimantus:: Extremely so.

Socrates:: Thus they pass the whole of their life, never friends to anyone, but always either domineering, or enslaved to another. But liberty and true friendship the tyrannic disposition never tastes.

Adeimantus:: Entirely so.

Socrates:: May we not then rightly call these men faithless?

Adeimantus:: Why not? and surely we may call them most of all unjust, if we have rightly agreed about justice, in our former reasonings, what it is.

Socrates:: But we did rightly agree. Let us finish then, our worst man. He would then seem such a one awake, as we described as asleep.

Adeimantus:: Entirely so.

Socrates:: And does not that man become such a one, who being most tyrannical by natural temper, is in possession of supreme power, and the longer time he lives in tyranny, the more he becomes such a one?

Glaucon, taking up the discourse, interjected;

Glaucon:: Of necessity.

Socrates:: And will not the man, who appears the most wicked, appear likewise the most wretched; and he who shall tyrannize for the longest time, and in the greatest measure, shall he not in reality, in the greatest measure, and for the longest time, be such a one? But as many men as many minds.

Glaucon:: Of necessity, these things at least must be so.

Socrates:: And would this Tyrannic man differ any thing, as to similitude, when compared with the city under tyranny, and the Democratic man when compared with the city under democracy, and after the same manner with respect to others?

Glaucon:: How should they?

Socrates:: As city then is to city, as to virtue and happiness, will not man be to man in the same way?

Glaucon:: Why not?

Socrates:: What then? How is the city which is tyrannized over, in respect of that under kingly government, such as we at the first described?

Glaucon:: Quite the reverse; for the one is the best, and the other is the worst.

Socrates:: I will not ask, which you mean, For it is plain; but do you judge in the same way, or otherwise, as to their happiness and misery? And let us not be struck with admiration, whilst we regard the tyrant alone, or some few about him; but let us, as we ought to do, enter into the whole of the city, and consider it; and going through every part, and viewing it, let us declare our opinion.

Glaucon:: You propose rightly. And it is evident to every one that there is no city more wretched than that which is under Tyranny, nor any more happy than that under regal power.

Socrates:: If now, I should propose the same things with respect to the men, should I rightly propose, whilst I account him worthy to judge about them, who is able, by his dianoëtic power, to enter within, and see through the temper of the man, and who may not, as a child beholding the outside, be struck with admiration of tyrannical pomp, which he makes a show of to those without, but may sufficiently see through him? If then I should be of opinion, that all of us ought to hear such a one, who, having dwelt with the man in the same house, and having been along with him in his actions in his family, is able to judge in what manner he behaves to each of his domestics, (in which most especially a man appears stripped of theatrical shows,) and likewise in public dangers; after he has observed all these things, we shall bid him declare, how the Tyrant is as to happiness and misery, in comparison of others.

Glaucon:: You would advise to these things, most properly.

Socrates:: Are you willing then, that we pretend to be ourselves of the number of those who are thus able to judge, and that we have already met with such men, that we may have one who shall answer our questions?

Glaucon:: By all means.

Socrates:: Come then, consider in this manner. Recollect the resemblance of the city, and the man, to one another, and, thus considering each of them apart, relate the passions of each.

Glaucon:: Which passions?

Socrates:: To begin first, with the city. Do you call the one under Tyranny, either free or enslaved?

Glaucon:: Slavish, in the greatest degree possible.

Socrates:: And yet, surely, at least, you see in it masters and freemen.

Glaucon:: I see, some small part so. But the whole in it, in the general, and the most excellent part, is disgracefully and miserably slavish.

Socrates:: If then the man, resembles the city, is it not necessary that there be the same regulation in him likewise; and that his soul be full of the greatest slavery and illiberality; and that these parts of his soul, which are the noblest, be enslaved, and that some small part, which is most wicked and frantic, is master?

Glaucon:: Of necessity.

Socrates:: What now? will you say that such a soul is slavish, or free?

Glaucon:: Slavish somehow, I say.

Socrates:: But does not then the city which is slavish, and tyrannized over, least of all do what it inclines?

Glaucon:: Very much so.

Socrates:: And will not the soul too, which is tyrannized over, least of all do what it shall incline, to speak of the whole soul; but, hurried violently by some stinging passion, be full of tumult and inconstancy?

Glaucon:: How should not it be so?

Socrates:: But whether will the city which is tyrannized over be necessarily rich or poor?

Glaucon:: Poor.

Socrates:: And the soul under Tyranny be of necessity likewise indigent and insatiable?

Glaucon:: Just so.

Socrates:: But what? Must not such a city, and such a man, of necessity be full of fear?

Glaucon:: Very much so.

Socrates:: Do you think you will find more lamentations, and groans, and weepings, and torments, in any other city?

Glaucon:: By no means.

Socrates:: But with reference to a man, do you think that these things are greater in any other than in this tyrannical one, who madly rages by his desires and lusts?

Glaucon:: How can they?

Socrates:: It is then on consideration of all these things, and other such as these, I think, that you have deemed this city the most wretched of cities?

Glaucon:: And have I not deemed right?

Socrates:: Extremely so. But what say you again with reference to the tyrannical man, when you consider these things?

Glaucon:: That he is by far, the most wretched of all others.

Socrates:: You do not as yet say this rightly.

Glaucon:: How?

Socrates:: I do not as yet think, that he is such in the greatest degree.

Glaucon:: But who then is so?

Socrates:: The following will probably appear to you to be yet more miserable than the other.

Glaucon:: Which?

Socrates:: He, who, being naturally tyrannical, leads not a private life, but is unfortunate, and through some misfortune is led to become a Tyrant.

Glaucon:: I conjecture, from what was formerly mentioned, that you say true.

Socrates:: It is so. But we ought not merely to conjecture about matters of such importance as these, but most thoroughly to inquire into them by reasoning of this kind: for the inquiry is concerning a thing of the greatest consequence, a good life and a bad.

Glaucon:: Most right.

Socrates:: Consider then whether there be any thing in what I say; for, in considering this question, I am of opinion that we ought to perceive it from these things.

Glaucon:: From what?

Socrates:: From every individual of private men, viz. such of them as are rich, and possess many slaves; for those have this resemblance at least of Tyrants, that they rule over many, with this difference, that the Tyrant has a great multitude.

Glaucon:: There is this difference.

Socrates:: You know then that these live securely, and are not afraid of their domestics.

Glaucon:: What should they be afraid of?

Socrates:: Nothing; but do you consider the reason?

Glaucon:: Yes. It is because the whole city gives assistance to each particular private man.

Socrates:: You say right. But what now? If some God should list a man who had fifty slaves or upwards out of the city, both him, and his wife and children, and set him down in a desert, with his other substance, and his domestics, where no free-man was to give him assistance,—in what kind of fear, and in how great, do you imagine he would be about himself, his children and wife, lest they should be destroyed by the domestics?

Glaucon:: In the greatest possible, I imagine.

Socrates:: Would he not be obliged even to flatter some of the very slaves, and promise them many things, to set them at liberty when there was no occasion for it; and appear to be himself a flatterer of servants?

Glaucon:: He is under great necessity, to do so, or be destroyed.

Socrates:: But what, if the God should settle round him many other neighbors, who could not endure if any one should pretend to lord it over another; but, if they any where found such a one, should punish him with the extremist rigor?

Glaucon:: I imagine, that he would be still more distressed, thus beset by every kind of enemies.

Socrates:: And in such a prison-house is not the Tyrant bound, being such, by disposition, as we have mentioned, full of many and most various fears and loves of all kinds? And whilst he has in his soul the greatest desire, he alone of all in the city is neither allowed to go any where abroad, nor to see such things as other men are desirous of; but, creeping into his house, lives mostly as a woman, envying the other citizens if any of them go abroad, and see any good.

Glaucon:: It is entirely so.

Socrates:: And besides such evils as these, does not the man reap still more of them, who, being under ill policy within himself, (which you just now deemed to be the most wretched Tyranny,) lives not as a private person, but through some fortune is obliged to act the tyrant, and, without holding the government of himself, attempts to govern others, as if one with a body diseased, and unable to support itself, were obliged to live not in a private way, but in wrestling and fighting against other bodies?

Glaucon:: You say, Socrates, what is altogether most likely and true.

Socrates:: Is not then, friend Glauco, this condition altogether miserable? and does not the Tyrant live more miserably still, than the man deemed by you to live most miserably?

Glaucon:: Very much so.

Socrates:: True it is then, though one may fancy otherwise, that the truly tyrannical man is truly slavish with respect to the greatest flatteries and slaveries, and is a flatterer of the most abandoned men; nor does he ever in the smallest degree obtain the gratification of his desires, but is of all the most indigent of most things, and appears poor indeed, if a man knows how to contemplate his whole soul; and full of seat through the whole of life, being filled with anxieties and griefs, if indeed he resembles the constitution of that city which he governs. But he does resemble it. Does he not?

Glaucon:: Extremely.

Socrates:: And shall we not, besides these things, likewise ascribe to this man what we formerly mentioned, that he must necessarily be, and, by governing still, become more than formerly envious, faithless, unjust, unfriendly, unholy, and a general recipient and nourisher of all wickedness; and from all these things be most especially unhappy himself, and then render all about him unhappy likewise?

Glaucon:: No one, who hath understanding will contradict you.

Socrates:: Come now, as a judge who pronounces, after considering all, so do you tell me, who, according to your opinion, is the first as to happiness, and who second, and the rest in order, they being? five in all? The Regal, the Timocratic, the Oligarchic, the Democratic, and the Tyrannic.

Glaucon:: But the judgment, is easy; for, as if I had entered among them, I judge of them as of public performers, by their virtue and vice, and by their happiness, and its contrary.

Socrates:: Shall we then hire a Herald? Or shall I myself declare that the son of Ariston hath judged the best and justest man to be the happiest; (and that this is the man who hath most of the regal spirit, and rules himself with a kingly power;) and that the worst and the most unjust is the most wretched; and that he again happens to be the man who is most tyrannical, who in the greatest degree tyrannizes over himself, and the city?

Glaucon:: Let it be published by you.

Socrates:: Shall I add, whether they be unknown to be such or not both to all men and Gods?

Glaucon:: Add it.

Socrates:: Be it so: this would seem to be one proof of ours. And this, if you are of the same opinion, must be the second.

Glaucon:: Which is it?

Socrates:: Since the soul, of every individual is divided into three parts, in the same manner as the city was divided, it will, in my opinion, afford a second proof.

Glaucon:: What is that?

Socrates:: It is this. Of the three parts of the soul, there appear to me to be three pleasures, one peculiar to each. And the desires and governments are in the same manner.

Glaucon:: How do you say?

Socrates:: There is one part, we said, by which a man learns, and another by which he is irascible; the third is so multiform, we are unable to express it by one word peculiar to itself, but we denominated it from that which is greatest and most impetuous in it; for we called it the desiderative, on account of the impetuosity of the desires relative to meat, drink, and venereal pleasures, and whatever others belong to these; and we called it avaricious likewise, because it is by means of wealth most especially that such desires are accomplished.

Glaucon:: And we said rightly.

Socrates:: If then we say that its pleasure and delight are in gain, shall we not best of all reduce it under one head in our discourse, so as to express something to ourselves, when we make mention of this part of the soul? and, calling it the covetous, and the desirous of gain, shall we not term it properly?

Glaucon:: So it appears to me.

Socrates:: But what? Do not we say that the irascible ought to be; wholly impelled to superiority, victory, and applause?

Glaucon:: Extremely so.

Socrates:: If then we term it the contentious and ambitious, will it not be accurately expressed?

Glaucon:: Most accurately.

Socrates:: But it is evident to every one, that the part of the soul, by which we learn, is wholly intent always to know the truth; and as to wealth and glory, it cares for these least of all.

Glaucon:: Extremely so.

Socrates:: When we call it then the desirous of learning, and the philosophic, we shall call it according to propriety.

Glaucon:: How should we not?

Socrates:: And do not these, govern in souls, one of them in some, and in others another, as it happens?

Glaucon:: Just so.

Socrates:: On this account then, we said there were three original species of men; the philosophic, the ambitious, and the avaricious.

Glaucon:: Entirely so.

Socrates:: And that there were likewise three species of pleasures, one subject to each of these.

Glaucon:: Certainly.

Socrates:: You know then, that if you were to ask these three men, each of them apart, which of these lives is the most pleasant, each would most of all commend his own. And the avaricious will say, that in comparison with the pleasure of acquiring wealth, that arising from honour, or from learning, is of no value, unless one make money by them.

Glaucon:: True.

Socrates:: And what says the ambitious? Does not he deem the pleasure arising from making money a sort of burthen? And likewise that arising from learning, unless learning bring him honour, does he not deem it smoke and trifling?

Glaucon:: It is so.

Socrates:: And we shall suppose the philosopher, to deem the other pleasures as nothing in comparison of that of knowing the truth, how it is, and that whilst he is always employed in learning something of this kind, he is not very remote from pleasure; but that he calls the other pleasures truly necessary, as wanting nothing of the others, but where there is a necessity for it.

Glaucon:: This, we must well understand.

Socrates:: When therefore, these several lives, and the respective pleasure of each, dispute among themselves, not with reference to living more worthily or more basely, or worse or better; but merely with reference to this of living more pleasantly, or on the contrary more painfully,—how can we know which of them speaks most conformably to truth?

Glaucon:: I am not quite able, to tell.

Socrates:: But consider it thus. By what ought we to judge of whatever is to be rightly judged of? Is it not by experience, by prudence, and by reason? Or has any one a better criterion than these?

Glaucon:: How can he?

Socrates:: Consider now; of the three men, who is the most experienced in all the pleasures? Whether does it appear to you that the avaricious man, in learning truth itself, what it is, is more experienced in the pleasure arising from knowledge, than the philosopher is in that arising from the acquisition of wealth?

Glaucon:: There is, a great difference: for the philosopher, beginning from his childhood, must, of necessity, taste the other pleasures; but what it is to know real beings, and how sweet this pleasure is, the lucrative man has no necessity of tasting, or of becoming experienced in; but rather, when he earnestly endeavors to effect this, it is no easy matter.

Socrates:: The philosopher then, far surpasses the lucrative man, at least in experience of both the pleasures.

Glaucon:: Far indeed.

Socrates:: But what with reference to the ambitious man? Is he more experienced in the pleasure arising from honour, than the philosopher is in that arising from intellectual energy?

Glaucon:: Honour, attends all of them, if they obtain each of them what they aim at: for the rich man is honored by many, and so is the brave, and the wise; so, as to that of honour, what sort of pleasure it is, all of them have the experience. But in the contemplation of being itself, what pleasure there is, it is impossible for any other than the philosopher to have tasted.

Socrates:: On account of experience then, he of all men judges the best.

Glaucon:: By far.

Socrates:: And surely, along with prudence at least, he alone becomes experienced.

Glaucon:: Why should he not?

Socrates:: But even the organ by which these pleasures must be judged is not the organ of the lucrative, nor of the ambitious, but of the philosopher.

Glaucon:: Which is it?

Socrates:: We said some where, that they must be judged of by reason, did we not?

Glaucon:: Yes.

Socrates:: But reasoning is chiefly the organ of the philosopher.

Glaucon:: How should it not?

Socrates:: If then the things to be determined were best determined by riches and gain, what the lucrative man commended, or despised, would of necessity be most agreeable to truth.

Glaucon:: Entirely.

Socrates:: And if by honour, and victory and bravery, must it not be as the ambitious and contentious man determined?

Glaucon:: It is evident.

Socrates:: But since it is, by experience, and prudence, and reason,—of necessity, what the philosopher and the lover of reason commends must be the most true. Of the three pleasures, then, that is the most pleasant which belongs to that part of the soul by which we learn most, and he among us in whom this part governs lives the most pleasant life.

Glaucon:: How can it, be otherwise? For the wise man, being the sovereign commender, commends his own life.

Socrates:: But which life, does our judge pronounce the second, and which the second pleasure?

Glaucon:: It is plain, that of the war-like and ambitious man; for this is nearer to his own than that of the lucrative.

Socrates:: And that of the covetous, as it appears, is last of all.

Glaucon:: Why not?

Socrates:: These things now have thus succeeded one another in order. And the just man has twice now overcome the unjust. The third victory now, as at the Olympic games, is sacred to Olympic Jupiter, the savior;

for consider, that the pleasure of the others is not every way genuine, but that of the wise man is: nor are they pure, but somehow shadowed over, as I appear to, myself to have heard from one of the wise men. And this truly would be the greatest and most complete downfall of the unjust.

Glaucon:: Extremely so. But how do you mean?

Socrates:: I shall thus trace it out, whilst in searching you answer my questions.

Glaucon:: Ask then.

Socrates:: Tell me then, do we not say that pain is opposite to pleasure?

Glaucon:: Entirely so.

Socrates:: And do we not say likewise, that to feel neither pleasure nor pain is somewhat?

Glaucon:: We say it is.

Socrates:: That being in the middle of both; these, it is a certain tranquility of the soul with reference to them. Do you not thus understand it?

Glaucon:: Thus.

Socrates:: Do you not remember, the speeches of the diseased, which they utter in their sickness?

Glaucon:: Which?

Socrates:: How that nothing is more pleasant than health, but that it escaped their notice before they became sick, that it was the most pleasant.

Glaucon:: I remember it.

Socrates:: And are you not wont to hear those who are under any acute pain say, that there is nothing more pleasant than a cessation from pain?

Glaucon:: I am wont to hear them.

Socrates:: And you may perceive in men, I imagine, the same thing, when they are in many other such like circumstances, where, when in pain, they extol a freedom from pain, and the tranquility of such a state, as being the most pleasant, and do not extol that of feeling joy.

Glaucon:: Because this, it is likely, becomes at that time pleasant and desirable tranquility.

Socrates:: And when anyone ceases, to feel joy, this tranquility from pleasure will be painful.

Glaucon:: It is likely.

Socrates:: This tranquility, then, which we just now said was between the two, will at times become each of these, pain and pleasure.

Glaucon:: It appears so.

Socrates:: But is it truly possible, that what is neither of the two should become both?

Glaucon:: It does not appear to me that it is.

Socrates:: And surely at least, when any thing pleasant or any thing painful is in the soul, both sensations are a certain motion; are they not?

Glaucon:: Yes.

Socrates:: But did not that which is neither painful nor pleasant appear just now to be tranquility, and in the middle of these two?

Glaucon:: It appears so, indeed.

Socrates:: How is it right, then, to deem it pleasant not to be in pain, or painful not to enjoy pleasure?

Glaucon:: It is by no means right.

Socrates:: In these cases, then, tranquility is not really so, but it appears pleasant in respect of the painful, and painful in respect of the pleasant. And there is nothing, genuine in these appearances as to the truth of pleasure, but a certain magical delusion.

Glaucon:: As our reasoning shows.

Socrates:: Consider then, the pleasures which do not arise from the cessation of pains, that you may not frequently in the present discourse suppose that these two naturally thus subsist, viz. that pleasure is the cessation of pain, and pain the cessation of pleasure.

Glaucon:: How, and which pleasures do you mean?

Socrates:: There are many others, but chiefly if you wish to consider the pleasures from; smells; for these, without any preceding pain, are on a sudden immensely great, and, when they cease, they leave no pain behind them.

Glaucon:: Most true.

Socrates:: Let us not then be persuaded that pure pleasure is the removal of pain, or pain the removal of pleasure.

Glaucon:: Let us not.

Socrates:: But yet, those which extend through the body to the soul, and which are called pleasures, the greatest part of them almost, and the most considerable, are of this species, certain cessations of pain.

Glaucon:: They are so.

Socrates:: And are not the preconceptions of pleasure and pain, which arise in the mind from the expectation of these things, of the same kind?

Glaucon:: Of the same.

Socrates:: Do you know then, what kind they are of, and what they chiefly resemble?

Glaucon:: What?

Socrates:: Do you reckon, there is any such thing in nature as this, the above, the below, and the middle?

Glaucon:: I do.

Socrates:: Do you think then that any one, when he is brought from the below to the middle, imagines any thing else than that he is brought to the above? and when he stands in the middle, and looks down whence he was brought, will he imagine he is any where else than above, whilst yet he has not seen the true above?

Glaucon:: By Jupiter, I do not think that such an one will imagine otherwise.

Socrates:: But if he should again, be carried to the below, he would conjecture he was carried to the below, and would conjecture according to truth.

Glaucon:: How should he not?

Socrates:: Would he not be affected in all these respects, from his not having experience in what is really above, and in the middle, and below?

Glaucon:: It is plain.

Socrates:: Would you wonder then, that whilst men are inexperienced in the truth, they have unsound opinions about many other things,—and that as to pleasure and pain, and what is between these, they are likewise affected in this same manner? So that, even when they are brought to what is painful, they imagine truly, and are truly pained; but when from pain they are brought to the middle, they strongly imagine that they are arrived at fullness of pleasure. In the same manner as those who along with the black color look at the gray, through inexperience of the white, are deceived; so those who consider pain along with a freedom from pain, are deceived through inexperience of pleasure.

Glaucon:: By Jupiter, I should not wonder, but much rather if it were not so.

Socrates:: But consider it, in this manner. Are not hunger and thirst, and such like, certain emptinesses in the bodily habit?

Glaucon:: What else?

Socrates:: And are not ignorance and folly an emptiness in the habit of the soul?

Glaucon:: Extremely so.

Socrates:: And is not the one filled when it receives food, and the other when it possesses intellect?

Glaucon:: Why not?

Socrates:: But which is the more real repletion, that of the less, or that of the more real being?

Glaucon:: It is plain, that of the more real.

Socrates:: Which species, then, do you think, participates most of a more pure essence; whether these which participate of bread and drink, and meat, and all such sort of nourishment; or that species which participates of true opinion and science, and intellect, and, in short, of all virtue? But judge of it in this manner. That which adheres to what is always similar, and immortal, and true, and is so itself, and arises in what is such, does it appear to you to have more of the reality of being, than that which adheres to what is never similar, and is mortal, which is so itself, and is generated in a thing of this kind?

Glaucon:: This, differs much from that which is always similar.

Socrates:: Does then the essence of that which is always similar participate more of essence than of science?

Glaucon:: By no means.

Socrates:: But what with relation to truth? Nor of this neither. If it participate less of truth, does it not likewise do so of essence?

Glaucon:: Of necessity.

Socrates:: In short, then, do not the genera relating to the care of the body participate less of truth and essence, than those relating to the care of the soul?

Glaucon:: By far.

Socrates:: And the body less than the soul; do you not think so?

Glaucon:: I do.

Socrates:: Is not that which is filled with more real beings, and is itself a more real being, in reality more truly filled than that which is filled with less real beings, and is itself a less real being?

Glaucon:: How should it not?

Socrates:: If then it be pleasant to be filled with what is suitable to nature, that which is in reality filled, and with more real being, must be made both more really and more truly to enjoy true pleasure; but that which participates of less real being, must be less truly and firmly filled, and participates of a more uncertain and less genuine pleasure.

Glaucon:: Most necessarily.

Socrates:: Such then as are unacquainted with wisdom and virtue, and are always conversant in feastings and such like, are carried as it appears to the below, and back again to the middle, and there they wander for life. But never, passing beyond this, do they look towards the true above, nor are carried to it; nor are they ever really filled with real being; nor have they ever tasted solid and pure pleasure; but, after the manner of brutes looking always downwards, and bowed towards earth and their tables, they live feeding and coupling; and from a lust of these things, kicking and pushing at one another with iron horns and hoofs, they perish through their insatiableness, as those who are filling with unreal being that which is no real being, nor friendly to themselves.

Glaucon:: You pronounce most perfectly, Socrates, as from an oracle, the life of the multitude.

Socrates:: Must they not then, of necessity, be conversant with pleasures mixed with pains, images of the true pleasure, shadowed over, and colored by their position beside each other? so that both their pleasures and pains will appear vehement, and engender their mad passions in the foolish. Hence also they must fight about these things, as Stesichorus says those at Troy fought about the image of Helen, through ignorance of the true one.

Glaucon:: Of necessity, something of this kind must take place. And what as to the irascible part of the soul?

Socrates:: Must not other such like things happen, wherever any one gratifies it, either in the way of envy, through ambition, or in the way of violence, through contentiousness, or in the way of anger, through moroseness, pursuing a glut of honour, of conquest, and of anger, both without reason, and without intelligence?

Glaucon:: Such things as these, must necessarily happen with reference to this part of the soul.

Socrates:: What then, shall we boldly say concerning all the pleasures, both respecting the avaricious and the ambitious part, that such of them as are obedient to science and reason, and, in conjunction with these, pursue and obtain the pleasures of which the prudent part of the soul is the leader, shall obtain the truest pleasures, as far as it is possible for them to attain true pleasure, and in as much as they follow truth, pleasures which are properly their own; if indeed what is best for every one be most properly his own?

Glaucon:: But surely it is most properly, his own.

Socrates:: When then the whole soul is obedient to the philosophic part, and there is no sedition in it, then every part in other respects performs its proper business, and is just, and also reaps its own pleasures, and such as are the best, and as far as is possible the most true.

Glaucon:: Certainly, indeed.

Socrates:: But when any of the others governs, it happens that it neither attains its own pleasures, and it compels the other parts to pursue a pleasure foreign to them, and not at all true.

Glaucon:: It does so.

Socrates:: Do not then the parts which are the most remote from philosophy and reason most especially effectuate such things?

Glaucon:: Very much so.

Socrates:: And is not that which is most remote from law and order, likewise most remote from reason?

Glaucon:: It plainly is.

Socrates:: And have not the amorous and the tyrannical desires appeared to be most remote from law and order?

Glaucon:: Extremely so.

Socrates:: And the royal and the moderate ones, the least remote?

Glaucon:: Yes.

Socrates:: The tyrant then, I think, shall be the most remote from true pleasure, and such as is most properly his own, and the other shall be the least.

Glaucon:: Of necessity.

Socrates:: And the tyrant, shall lead a life the most unpleasant, and the king the most pleasant.

Glaucon:: Of great necessity.

Socrates:: Do you know then, how much more unpleasant a life the tyrant leads than the king?

Glaucon:: If you tell me.

Socrates:: As there are three pleasures, as it appears, One genuine, and two illegitimate; the Tyrant in carrying the illegitimate to extremity, and flying from law and reason, dwells with slavish pleasures as his life-guards, and how far he is inferior is not easily to be told, unless it may be done in this manner.

Glaucon:: How?

Socrates:: The Tyrant is somehow the third remote from the Oligarchic character; for the Democratic was in the middle between them.

Glaucon:: Yes.

Socrates:: Does he not then dwell with the third image of pleasure, distant from him with reference to truth, if our former reasonings be true?

Glaucon:: Just so.

Socrates:: But the Oligarchic is the third again from the Royal, if we suppose the Aristocratic and the Royal the same.

Glaucon:: He is the third.

Socrates:: The Tyrant then, is remote from true pleasure, the third from the third.

Glaucon:: It appears so.

Socrates:: A plain surface then, may be the image of tyrannical pleasure, as to the computation of length.

Glaucon:: Certainly.

Socrates:: But as to power, and the third augment, it is manifest by how great a distance it is remote.

Glaucon:: It is manifest, to the computer at least.

Socrates:: If now, conversely, any one shall say the King is distant from the Tyrant as to truth of pleasure, as much as is the distance of 9, and 20, and 700, shall he not, on completing the multiplication, find him leading the more pleasant life, and the Tyrant the more wretched one, by this same distance?

Glaucon:: You have heaped up, a prodigious account of the difference between these two men, the just and the unjust, with reference to pleasure and pain.

Socrates:: Yet the numbers are true, and corresponding to their lives, if indeed days, and nights, and months, and years, correspond to them.

Glaucon:: But these, do correspond to them.

Socrates:: If then the good and just man surpasses so far the evil and unjust man in pleasure, in what a prodigious degree further shall he surpass him in decorum of life, in beauty and in virtue!

Glaucon:: In a prodigious degree, by Jupiter.

Socrates:: Be it so. Since now we are come to this part of our argument, let us recapitulate what we first said, on account of which we have come hither: and it was somewhere said, that it was advantageous to do injustice, if one were completely unjust, but were reputed just. Was it not so said?

Glaucon:: It was indeed.

Socrates:: Now then, let us settle this point, since we have now settled the other, with reference to acting justly and unjustly, what power each of these possesses in itself.

Glaucon:: How?

Socrates:: Let us in our reasoning fashion an image of the soul, that the man who said those things may know what he said.

Glaucon:: What kind of image?

Socrates:: One of those creatures, which are fabled to have been of old, as that of Chimæra, of Scylla, of Cerberus; and many others are spoken of, where many particular natures existed together in one.

Glaucon:: They are spoken of indeed.

Socrates:: Form now one figure of a creature, various, and many-headed, having all around heads of tame creatures, and of wild, and having power in itself of changing all these heads, and of breeding them out of itself.

Glaucon:: This is the work, of a skilful former: however, as the formation is easier in reasoning, than in wax and such like, let it be formed.

Socrates:: Let there be now one other figure of a lion and one of a man; but let the first be by far the greatest, and the second be the second in bulk.

Glaucon:: These are easy, and they are formed.

Socrates:: Conjoin now these three in one, so as to exist somehow with one another.

Glaucon:: They are conjoined.

Socrates:: Form now around them the external appearance of one of them, that of the man; so that to one who is not able to see what is within, but who perceives only the external covering, the man may appear one creature.

Glaucon:: This is formed around.

Socrates:: Let us now tell him, who asserts that it is profitable to this man to do injustice, but to do justice is unprofitable, that he asserts nothing else, than that it is profitable for him to feast the multiform creature, and to make it strong; and likewise the lion, and what respects the lion, whilst the man he kills with famine, and renders weak, so as to be dragged whichever way either of those drag him; and that he will also find it advantageous never to accustom the one to live in harmony with the other, nor to make them friends, but suffer them to be biting one another, and to fight and devour each other.

Glaucon:: He, who commends the doing injustice, undoubtedly asserts these things.

Socrates:: And does not he again, who says it is profitable to do justice, say that he ought to do and to say such things by which the inner man shall come to have the most entire command of the man, and, as a tiller of the ground, shall take care of the many-headed creature, cherishing the mild ones, and nourishing them, and hindering the wild ones from growing up, taking the nature of the lion as his ally, and, having a common care for all, make them friendly to one another, and to himself, and so nourish them?

Glaucon:: He who commends justice undoubtedly says such things as these.

Socrates:: In all respects, then, he who commends justice would seem to speak the truth, but he who commends injustice, to speak what is false; for, with regard to pleasure, and applause, and profit, he who commends justice speaks the truth, and he who discommends it speaks nothing genuine. Nor does he discommend with understanding what he discommends.

Glaucon:: Not at all, as appears to me at least.

Socrates:: Let us then in a mild manner persuade him (for it is not willingly he errs), asking him, O blessed man! do not we say that the maxims of things beautiful and base become so, upon such accounts as these? Those are good which subject the brutal part of our nature most to the man, or rather perhaps to that which is divine: but those are evil which enslave the mild part of our nature to the brutal. Will he agree with us? or how?

Glaucon:: He will, if he be advised by me.

Socrates:: Is there then any one, whom it avails, from this reasoning, to take gold unjustly, if something of this kind happens, if, whilst he takes the money, he at the same time subjects the best part of himself to the worst? Or, ifs taking gold, he should enslave a son or daughter, and that even to savage and wicked men, shall we not say this would not avail him, not though he should receive for it a prodigious sum? But if he enslaves the most divine part of himself to the most impious and most polluted part, without any pity, is he not wretched? and does he not take a gift of gold to his far more dreadful ruin, than Euriphyle did when she received the necklace for her husband’s life?

Glaucon:: By far; for I will answer you for the man.

Socrates:: And do you not think that to be intemperate, has of old been discommended on such accounts as these, because that in such a one that terrible, great and multiform beast was indulged more than was meet?

Glaucon:: It is plain.

Socrates:: And are not arrogance and moroseness blamed, when the lion and the serpentine disposition increases and stretches beyond measure?

Glaucon:: Entirely so.

Socrates:: And are not luxury and effeminacy blamed because of the remissness and looseness of this disposition, when it engenders in the man cowardice?

Glaucon:: What else?

Socrates:: Are not flattery and illiberality blamed, when any one makes this irascible part itself subject to the brutal crew, and, for the sake of wealth and its insatiable lust, accustoms the irascible to be affronted from its youth, and instead of a lion to become an ape?

Glaucon:: Entirely so.

Socrates:: But why is it, do you think, that mechanical arts and handicrafts are despicable? Shall we say it is on any other account than this, that when a man has the form of that which is best in his soul naturally weak, so as not to be able to govern the creatures within himself, but to minister to them, he is able only to learn what flatters them?

Glaucon:: It is likely.

Socrates:: In order then that such a one may be governed in the same manner as the best man, is, do we not say that he must be the servant of one who is the best, and who has within him the divine governor? not at all conceiving that he should be governed to the hurt of the subject (as Thrasymachus imagined) but, as it is best for every one to be governed, by one divine and wise, most especially possessing it as his own within him, if not subjecting himself to it externally; that as far as possible we may all resemble one another and be friends, governed by one and the same?

Glaucon:: Rightly, indeed.

Socrates:: And law at least, plainly shows it intends such a thing, being an ally to all in the city; as does likewise the government of children, in not allowing them to be free till we establish in them a proper government, as in a city; and having cultivated that in them which is best, by that which is best in ourselves, we establish a similar guardian and governor for youth, and then truly we set it free.

Glaucon:: It shows indeed.

Socrates:: In what way then shall we say, Glauco, and according to what reasoning, that it is profitable to do injustice, to be intemperate, or to do any thing base, by which a man shall indeed become more wicked, but yet shall acquire more wealth, or any kind of power?

Glaucon:: In no way.

Socrates:: But how shall we say it is profitable for the unjust to be concealed, and not to suffer punishment? or does he not indeed, who is concealed, still become more wicked? but he who is not concealed, and is punished, has the brutal part quieted, and made mild, and the mild part set at liberty. And the whole soul being settled in the best temper, in possessing temperance and justice, with wisdom, acquires a more valuable habit than the body does, in acquiring vigor and beauty, with a sound constitution; in as far as the soul is more valuable than the body.

Glaucon:: Entirely so.

Socrates:: Shall not every one then, who possesses intellect, regulate his life in extending the whole of his powers hither, in the first place, honouring those disciplines which will render his soul of this kind, and despising all other things?

Glaucon:: It is plain.

Socrates:: And next, with reference to a good habit of body and its nourishment, he will spend his life in attention to these, not that he may indulge the brutal and irrational pleasure; nor yet with a view to health, nor, principally regarding this, to become strong and healthy, and beautiful, unless by means of these he is to become temperate likewise: but he always appears to adjust the harmony of the body for the sake of the symphony which is in the soul.

Glaucon:: By all means, if indeed he is to be truly musical.

Socrates:: That arrangement then, and symphony arising from the possession of wealth, and that vulgar magnificence, he will not, in consequence of being astonished with the felicity of the multitude, increase to infinity, and bring on himself infinite evils.

Glaucon:: I do not think it.

Socrates:: But looking, to that polity within himself, and taking dare that nothing there be moved out of its place, through the greatness or smallness of his property, governing in this manner as far as he is able, he will add to his substance, and spend out of it.

Glaucon:: Entirely so.

Socrates:: He will regard honors likewise in the same manner; some he will willingly partake of, and taste, which he judges will render him a better man, but those which he thinks would dissolve that habit of soul which subsists within him, he will fly from both in private and in public.

Glaucon:: He will not then, be willing to act in polities, if he takes care of this.

Socrates:: Yes truly, in his own city, and greatly too. But not probably in his country, unless some divine fortune befall him.

Glaucon:: I understand. You mean in the city we have now established, which exists in our reasoning, since it is nowhere on earth, at least, as I imagine.

Socrates:: But in heaven, probably, there is a model of it, for any one who inclines to contemplate it, and on contemplating to regulate himself accordingly; and it is of no consequence to him, whether it does exist any where, or shall ever exist here. He does the duties of this city alone, and of no other.

Glaucon:: It is reasonable.

THE END OF THE NINTH BOOK.

## BOOK X.

Socrates:: I observe, with reference to many other things, that we have established a city in a right manner, beyond what all others have done, and among these establishments, I mean that respecting poetry as none of the least.

Glaucon:: Which?

Socrates:: That no part of it which is imitative be by any means admitted. For it appears, now most of all, and with greatest perspicuity, that it is not to be admitted, since the several forms of the soul have been distinguished apart from one another.

Glaucon:: How do you mean?

Socrates:: That I may tell it as to you, (for you will not accuse me to the composers of tragedy, and the rest of the imitative kind) all such things as these seem to be the ruin of the dianoëtic part of the hearers, viz. of such of them as have not a medicine to enable them to discern their peculiar nature.

Glaucon:: From what consideration, do you say so?

Socrates:: It must be spoken, although a certain friendship, at least, and reverence for Homer, which I have had from my childhood, restrains me from telling it; for he seems truly both to have been the first teacher and leader of all these good composers of tragedy: but the man must not be honored preferably to the truth. But what I mean must, be spoken.

Glaucon:: By all means.

Socrates:: Hear me then, or rather answer me.

Glaucon:: Ask.

Socrates:: Can you tell me perfectly, what at all imitation is? for I do not myself altogether understand what it means.

Glaucon:: And shall I then any how understand it?

Socrates:: That would be no way strange; since those who are dim-sighted perceive many things sooner than those who see more clearly.

Glaucon:: The case is so; but whilst you are present, I should not be able to adventure to tell, even though something did appear to me.

Socrates:: But consider it yourself. Are you willing then, that we hence begin our inquiry in our usual method? for we were wont to suppose a certain species with respect, to many individuals, to which we give the same name; or do you not understand me?

Glaucon:: I understand.

Socrates:: Let us suppose now such among the many, as you please; as, for example, there are many beds and tables, if you please.

Glaucon:: Why are there not?

Socrates:: But the ideas, at least respecting these pieces of furniture, are two; one of bed, and one of table.

Glaucon:: Yes.

Socrates:: And are we not wont to say, that the workmen of each of these species of furniture, looking towards the idea, make in this manner, the one the beds, and the other the tables which we use? and all other things after the same manner. For no one of the artists makes, at least, the idea itself; for how can he?

Glaucon:: By no means.

Socrates:: But see now whether you call such a one as this an artist?

Glaucon:: Which?

Socrates:: One who does all such things, as each manual artificer does.

Glaucon:: You mention some skilful and wonderful man.

Socrates:: Not yet, at least; but you will much more say so presently; for this same mechanic is not only able to make all sorts of utensils, but he makes also every thing which springs from the earth, and he makes all sorts of animals, himself as well as others: and besides these things, he makes the earth, and heaven, and the Gods, and all things in heaven, and in Hades under the earth.

Glaucon:: You mention, a perfectly wonderful sophist.

Socrates:: You do not believe me; but tell me, does it appear to you that there is not any such artist? or that, in one respect, he is the maker of all these things, and in another he is not? or do you not perceive that even you yourself might be able to make all these things, in a certain manner at least?

Glaucon:: And what, is this manner?

Socrates:: It is not difficult, but is performed in many ways, and quickly; but in the quickest manner of all, if you choose to take a mirror, and carry it round everywhere; for then you will quickly make the sun, and the things in the heavens, quickly the earth, quickly yourself, and the other animals, and utensils, and vegetables, and all that was now mentioned.

Glaucon:: Yes, the appearances, but not however the real things.

Socrates:: You come well, and seasonably, with your remark; for I imagine that the painter too is one of these artists.

Glaucon:: Is he not?

Socrates:: How is it possible he should not? But you will say, I think, that he does not make what he makes, true, although the painter too, in a certain manner, at least, makes a bed, does he not?

Glaucon:: Yes, he too makes only the appearance. But what with reference to the bed-maker? Did you not indeed say, just now, that he does not make the form which we say exists, which is bed, but a particular bed?

Socrates:: I said so indeed. If then he does not make that which is, he does not make real being, but some such thing as being, but not being itself: but if any one should say, that the work of a bed-maker, or of any other handicraft, were real being, he would seem not to say true.

Glaucon:: He would, as it must appear to those who are conversant in such kind of reasonings.

Socrates:: Let us not then at all wonder if this likewise happen to be somewhat obscure with reference to the truth.

Glaucon:: Let us not.

Socrates:: Are you willing then, that, with reference to these very things, we inquire concerning the imitator, who he really is?

Glaucon:: If you are willing.

Socrates:: Are there not then these three sorts of beds? One which exists in nature, and which we may say, as I imagine, God made, or who else?

Glaucon:: None, I think.

Socrates:: And one which the joiner makes.

Glaucon:: Yes.

Socrates:: And one which the painter makes. Is it not so?

Glaucon:: Be it so.

Socrates:: Now the painter, the bed-maker, God, these three preside over three species of beds.

Glaucon:: They are three, indeed.

Socrates:: But God, whether it were that he was not willing, or whether there was some necessity for it, that he should not make but one bed in nature, made this one only, which is really bed; but two such, or more, have never been produced by God, nor ever will be produced.

Glaucon:: How so?

Socrates:: Because, if he had made but two, again one would have appeared, the form of which both these two would have possessed, and that form would be, that which is bed, and not those two.

Glaucon:: Right.

Socrates:: God then, I think, knowing these things, and willing to be the maker of bed, really, and really existing, but not of any particular bed, nor to be any particular bed-maker, produced but one in nature.

Glaucon:: It appears so.

Socrates:: Are you willing, then, that we call him the planter of this, or something of this kind?

Glaucon:: It is just, since he has, in their nature, made both this, and all other things.

Socrates:: But what as to the joiner? Is not he the workman of a bed?

Glaucon:: Yes.

Socrates:: And is the painter, too, the workman and maker of such a work?

Glaucon:: By no means.

Socrates:: But what will you say he is with relation to bed?

Glaucon:: This, as it appears to me, we may most reasonably call him, the imitator of what these are the workmen of.

Socrates:: Be it so; you call him then the imitator who makes what is generated the third from nature?

Glaucon:: Entirely so.

Socrates:: And this the composer of tragedy shall be likewise, since he is an imitator, rising as a sort of third from the King and the truth; and in like manner all other imitators.

Glaucon:: It seems so.

Socrates:: We have agreed then as to the imitator; but tell me this concerning the painter, whether do you think he undertakes to imitate each particular thing in nature, or the works of artists?

Glaucon:: The works of artists.

Socrates:: Whether, such as they really are, or such as they appear? Determine this further.

Glaucon:: How do you say?

Socrates:: Thus. Does a bed differ any thing from itself, whether he view it obliquely, or directly opposite, or in any particular position? or, does it differ nothing, but only appears different, and in the same way as to other things?

Glaucon:: Thus, it appears, but differs nothing.

Socrates:: Consider this too, with reference to which of the two does painting work, in each particular work; whether with reference to real being, to imitate it as it really is, or with reference to what is apparent, as it appears; and whether is it the imitation of appearance, or of truth?

Glaucon:: Of appearance.

Socrates:: The imitative art, then, is far from the truth: and on this account, it seems, he is able to make these things, because he is able to attain but to some small part of each particular, and that but an image. Thus we say that a painter will paint us a shoe-maker, a joiner, and other artists, though he be skilled in none of those arts; yet he will be able to deceive children and ignorant people, if he be a good painter, when he paints a joiner, and shows him at a distance, so far as to make them imagine he is a real joiner.

Glaucon:: Why not?

Socrates:: But this, I think, my friend, we must consider with reference to all these things; that when any one tells us of such a painter, that he has met with a man who is skilled in all manner of workmanship, and every thing else which every several artist understands, and that there is nothing which he does not know more accurately than any other person, we ought to reply to such an one, that he is a simple man, and that it seems, having met with some magician, and mimic, he has been deceived; so that he has appeared to him to know every thing, from his own incapacity to distinguish between science, and ignorance, and imitation.

Glaucon:: Most true.

Socrates:: Ought we not then, in the next place, to consider tragedy, and its leader, Homer? since we hear from some, that these poets understand all arts, and all human affairs, respecting virtue and vice, and likewise all divine things; for a good poet must necessarily compose with knowledge, if he means to compose well what he composes, else he is not able to compose. It behooves us then to consider whether these who have met with those imitators have been deceived, and on viewing their works have not perceived that they are the third distant from real being, and that their works are such as can easily be made by one who knows not the truth (for they make phantasms, and not real beings); or whether they do say something to the purpose, and that the good poets in reality have knowledge in those things which they seem to the multitude to express with elegance.

Glaucon:: By all means, this is to be inquired into.

Socrates:: Do you think then, that if any one were able to make both of these, that which is imitated, and likewise the image, he would allow himself seriously to apply to the workmanship of the images, and propose this to himself as the best thing in life?

Glaucon:: I do not.

Socrates:: But if he were in reality intelligent in these things which he imitates, he would far rather, I think, seriously apply himself to the things than to the imitations, and would endeavor to leave behind him many and beautiful actions, as monuments of himself, and would study rather to be himself the person commended than the encomiast.

Glaucon:: I think so; for neither is the honour nor the profit equal.

Socrates:: As to other things, then, let us not call them to account, asking Homer or any other of the poets, whether any of them were any way skilled in medicine, and not an imitator only of medical discourses, for which of the ancient or latter poets is said to have restored any to health, as Æsculapius did? or what students in medicine has any left behind him, as he did his descendants? Nor let us ask them concerning the other arts, but dismiss them: but with reference to those greatest and most beautiful things which Homer attempts to speak of, concerning wars and armies, and constitutions of cities, and the education belonging to men, it is just, somehow, to question him, whilst we demand of him: Friend Homer, if you be not the third from the truth with regard to virtue, being the workman of an image (which we have defined an imitator to be), but the second, and are able to discern what pursuits render men better or worse, both in private and public, tell us which of the cities has been by you better constituted, as Lacedæmon was by Lycurgus, and many other both great and small cities by many others, but what city acknowledges you to have been a good lawgiver, and to have been of advantage to them. Italy and Sicily acknowledge Charondas, and we Solon; but will any one acknowledge you as the benefactor of any city?

Glaucon:: I think not.

Socrates:: It is not then pretended even by the Homerics themselves. But what war in Homer's days is recorded to have been well conducted by him as leader, or counselor?

Glaucon:: Not one.

Socrates:: But what are his discoveries? as among the works of a wise man there are many discoveries and inventions spoken of, respecting the arts, and other affairs; as of Thales the Milesian, and of Anacharsis the Scythian.

Glaucon:: By no means is there any such thing.

Socrates:: But if not in a public manner, is Homer said to have lived as a private tutor to any who delighted in his conversation, and have delivered down to posterity a certain Homeric manner of life? in like manner as Pythagoras was remarkably beloved on this account, and, even to this day, such as denominate themselves from the Pythagorean manner of life appear to be somehow eminent beyond others.

Glaucon:: Neither is there, any thing of this kind related of Homer. For Creophilus, Socrates, the companion of Homer, may probably appear more ridiculous still in his education, than in his name, if what is said of Homer be true. For it is said that he was greatly neglected when he lived under Homer’s tuition.

Socrates:: It is said indeed. But do you think, Glauco, that if Homer had been able to educate men, and to render them better, as being capable not only to imitate with respect to these things, but to understand them, would he not then have procured himself many companions, and have been honored and beloved by them? But Protagoras the Abderite, and Prodicus the Chian, and many others, are able to persuade the men of their times, conversing with them privately, that they will neither be able to govern their family, nor yet their city, unless they themselves preside over their education; and for this wisdom of theirs, they are so exceedingly beloved, that their companions almost carry them about on their heads. Would then the men of Homer’s time have left him or Hesiod to go about ringing their songs, if he had been able to profit men in the way of virtue; and not rather have retained him with gold, and obliged him to stay with them? or, if they could not persuade him, would they not as scholars have followed him every where, till they had obtained sufficient education?

Glaucon:: You seem to me, Socrates, to say what is in every respect true.

Socrates:: Shall we not then establish this point,—That all the poetical men, beginning with Homer, are imitators of the images of virtue, and of other things about which they compose, but that they do not attain to the truth: but as we just now said, a painter who himself knows nothing about the making of shoes, will draw a shoemaker, who shall appear to be real to such as are not intelligent, but who view according to the color and figures?

Glaucon:: Entirely so.

Socrates:: In the same manner, I think, we shall say that the poet colors over with his names and words certain colors of the several arts, whilst he understands nothing himself, but merely imitates, so as to others such as himself who view things in his compositions, he appears to have knowledge: and if he says any thing about shoemaking in measure, rhythm and harmony, he seems to speak perfectly well, and in like manner if of an expedition, or of any thing else: so great an enchantment have these things naturally, since you know, I think, in what manner poetical things appear when stript of musical coloring, and expressed apart by themselves, for you have somewhere beheld it.

Glaucon:: I have.

Socrates:: Do they not, resemble the faces of people who are in their prime, but who are not beautiful, such as they appear when their bloom forsakes them?

Glaucon:: Entirely.

Socrates:: Come now, and consider this. The maker of the image, whom we call the imitator, knows nothing of real being, but only of that which is apparent. Is it not so?

Glaucon:: Yes.

Socrates:: Let us not then leave it expressed by halves, but let us sufficiently perceive it.

Glaucon:: Say on.

Socrates:: A painter, we say, will paint reins, and a bridle.

Glaucon:: Yes.

Socrates:: And the leather-cutter, and the smith, will make them.

Glaucon:: Certainly.

Socrates:: Does then the painter understand what kind of reins and bridle there ought to be? or not even he who makes them, the smith, nor the leather-cutter, but he who knows how to use them, the horseman alone?

Glaucon:: Most true.

Socrates:: Shall we not say it is so in every thing else?

Glaucon:: How?

Socrates:: That with reference to each particular thing, there are these three arts. That which is to use it, that which is to make it, and that which is to imitate it.

Glaucon:: Yes.

Socrates:: Are then the virtue, and the beauty, and the rectitude of every utensil, and animal, and action, for nothing else but for the use for which each particular was made, or generated?

Glaucon:: Just so.

Socrates:: By a great necessity, then, he who uses each particular must be the most skilful, and be able to tell the maker what he makes good or bad, with reference to the use for which he uses it: thus, for example, a player on the pipe tells the pipe-maker concerning pipes, what things are of service towards the playing on the pipe, and he will give orders how he ought to make them, but the workman does not so.

Glaucon:: How should it be otherwise?

Socrates:: Does not the one then, being intelligent, pronounce concerning good and bad pipes, and the other, believing him, make accordingly?

Glaucon:: Yes.

Socrates:: With reference then to one and the same instrument, the maker shall have right opinion concerning its beauty or deformity, whilst he is conversant with one who is intelligent, and is obliged to hear from the intelligent; but he who uses it shall have science.

Glaucon:: Entirely so.

Socrates:: But whether shall the imitator have science from using the things he paints, whether they be handsome and right, or otherwise? or shall he have right opinion from his being necessarily conversant with the intelligent, and from being enjoined in what manner he ought to paint?

Glaucon:: Neither of the two.

Socrates:: The imitator then shall have neither knowledge, nor right opinion about what he imitates with reference to beauty or deformity.

Glaucon:: It appears not.

Socrates:: The imitator then should be very agreeable in his imitation, with regard to wisdom, concerning what he paints.

Glaucon:: Not entirely.

Socrates:: But however he will imitate at least, without knowing concerning each particular in what respect it is ill or good; but it is likely that he will imitate such as appears to be beautiful to the multitude, and those who know nothing.

Glaucon:: What else?

Socrates:: We have now, indeed, sufficiently, as it appears, at least, settled these things: That the imitator knows nothing worth mentioning in those things which he imitates, but that imitation is a sort of amusement, and not a serious affair. And likewise that those who apply to tragic poetry in iambics and heroics, are all imitators in the highest degree.

Glaucon:: Entirely so.

Socrates:: But, by Jupiter, this of imitation is somehow in the third degree from the truth. Is it not?

Glaucon:: Yes.

Socrates:: To what part then of man does it belong, having the power it possesses? What part do you speak of?

Glaucon:: Of such as this.

Socrates:: The same magnitude perceived by sight, does not appear in the same manner, near, and at a distance.

Glaucon:: It does not.

Socrates:: And the same things appear crooked and straight, when we look at them in water, and out of water, and concave and convex, through the error of the sight, as to colors. All this disturbance is manifest in the soul; and this infirmity of our nature painting attacks, and leaves nothing of magical seduction unattempted, together with the wonder-working art, and many other such-like devices.

Glaucon:: True.

Socrates:: And have not the arts of measuring, numbering, and weighing, appeared to be most ingenious helps in these things, that so the apparent greater or less, the apparent more or heavier, may not govern us, but the numbered, the measured, and the weighed?

Glaucon:: How should it be otherwise?

Socrates:: But this again is, at least, the work of the rational part in the soul.

Glaucon:: It is so, indeed.

Socrates:: But whilst reason often measures and declares some things to be greater or less than other things, or equal, the contrary appears at the same time with reference to these things.

Glaucon:: Yes.

Socrates:: But did not we say that it was impossible for the same person to have contrary opinions about the same things at the same time?

Glaucon:: And thus far we said rightly.

Socrates:: That part of the soul, then, which judges contrary to the measure, would seem not to be the same with that which judges according to the measure.

Glaucon:: It would not.

Socrates:: But surely, at least, that which trusts to measure and computation would seem to be the best part of the soul.

Glaucon:: Why not?

Socrates:: That then which opposes itself to this will be some one of the depraved parts of us.

Glaucon:: Of necessity.

Socrates:: It was this then I wished should be agreed upon, when I said that painting, and in short imitation, being far from the truth, delight in their own work, conversing with that part in us which is far from wisdom, and are its companion and friend, to no sound nor genuine purpose.

Glaucon:: Entirely so.

Socrates:: Imitation then, being depraved in itself, and joining with that which is depraved, generates depraved things.

Glaucon:: It seems so.

Socrates:: Whether, is the case thus, with reference to the imitation which is by the sight only, or is it likewise so with reference to that by hearing, which we call poetry?

Glaucon:: Likely as to this also.

Socrates:: We shall not therefore, trust to the appearance in painting, but we shall proceed to the consideration of the dianoëtic part with which the imitation through poetry is conversant, and see whether it is depraved or worthy.

Glaucon:: It must be done.

Socrates:: Let us proceed then thus: Poetic imitation, we say, imitates men acting either voluntarily or involuntarily; and imagining that in their acting they have done either well or ill, and in all these cases receiving either pain or pleasure: Does it any more than this?

Glaucon:: No more.

Socrates:: In all these, now, does the man agree with himself? or, as he disagreed with reference to sight, and had contrary opinions in himself of the same things at one and the same time, does he, in the same manner, disagree likewise in his actions, and fight with himself? But I recollect that there is no occasion for us to settle this at least; for, in our reasonings above, we sufficiently determined all these things, that our soul is full of a thousand such contrarieties existing in it.

Glaucon:: Right.

Socrates:: Right indeed; but it appears to me necessary to discuss now, what was then omitted.

Glaucon:: As what?

Socrates:: We said somewhere formerly, that a good man, when he meets with such a fortune as the loss of a son, or of any thing else which he values the most, will bear it of all men the easiest.

Glaucon:: Certainly.

Socrates:: But let us now consider this further,—whether will he not grieve at all, or is this indeed impossible, but he will, however, moderate his grief?

Glaucon:: The truth, is rather this last.

Socrates:: But tell me this now concerning him, whether do you think that he will struggle more with grief and oppose it, when he is observed by his equals, or when he is in solitude, alone by himself?

Glaucon:: Much more, when he is observed.

Socrates:: But when alone, he will venture, I think, to utter many things, which, if any one heard him, he would be ashamed of, and he will do many things which he would not wish any one saw him doing.

Glaucon:: It is so.

Socrates:: Is it not then reason and law which command him to restrain his grief,—but what drags him to grief is the passion itself?

Glaucon:: True.

Socrates:: As then there is in the man an opposite conduct, with regard to the same thing, at one and the same time, we must necessarily say that he has two conductors.

Glaucon:: What else?

Socrates:: And shall we not say that one of them is ready to obey the law wherever law leads him?

Glaucon:: How?

Socrates:: Law in a manner says that it is best in misfortunes to have the greatest tranquility possible, and not to bear them ill; since the good and evil of such things as these is not manifest, and since no advantage follows the bearing these things ill; and as nothing of human affairs is worthy of great concern; and, besides, their grief proves a hindrance to that in them which we ought to have most at hand.

Glaucon:: What is it, you speak of?

Socrates:: To deliberate, on the event; and, as on a throw of the dice, to regulate his affairs according to what casts up, in whatever way reason shall declare to be best: and not as children when they fall, to lie still, and waste the time in crying; but always to accustom the soul to apply in the speediest manner to heal and rectify what was fallen and sick, dismissing lamentation. One would thus, behave in the best manner in every condition. And did not we say that the best part is willing to follow this which is rational?

Glaucon:: It is plain.

Socrates:: And shall not we say that the part which leads to the remembrance of the affliction, and to wailings, and is insatiably given to these, is irrational, and idle, and a friend to cowardice?

Glaucon:: We shall say so truly.

Socrates:: Is not then the grieving part that which admits of much and of various imitation? But the prudent and tranquil part, which is always uniform with itself, is neither easily imitated, nor, when imitated, easily understood, especially by a popular assembly, where all sorts of men are assembled together in a theatre. For it is the imitation of a disposition which is foreign to them.

Glaucon:: Entirely so.

Socrates:: It is plain, then, that the imitative poet is not made for such a part of the soul as this. Nor is his skill fitted to please it, if he means to gain the applause of the multitude. But he applies to the passionate and the multiform part, as it is easily imitated.

Glaucon:: It is plain.

Socrates:: May we not then, with justice, lay hold of the imitative poet, and place him as correspondent to the painter? for he resembles him, both because, as to truth, he effects but depraved things, and in this too he resembles him, in being conversant with a different part of the soul from that which is best. And thus we may, with justice, not admit him into our city which is to be well regulated, because he excites and nourishes this part of the soul, and, strengthening it, destroys the rational. And as he who in a city makes the wicked powerful, betrays the city, and destroys the best men, in the same manner we shall say that the imitative poet establishes a bad republic in the soul of each individual, gratifying the foolish part of it, which neither discerns what is great, nor what is little, but deems the same things sometimes great, and sometimes small, forming little images in its own imagination, altogether remote from the truth.

Glaucon:: Entirely so.

Socrates:: But we have not however as yet brought the greatest accusation against it: for that is, somehow, a very dreadful one, that it is able to corrupt even the good, if it be not a very few excepted.

Glaucon:: How should it not, since it acts in this manner?

Socrates:: But hear now, and consider; for somehow, the best of us, when we hear Homer, or any of the tragic writers, imitating some of the heroes when in grief, pouring forth long speeches in their sorrow, bewailing and beating their breasts, you know we are delighted; and, yielding ourselves, we follow along, and, sympathizing with them, seriously commend him as an able poet whoever most affects us in this manner.

Glaucon:: I know it.

Socrates:: But when any domestic grief befalls any of us, you perceive, on the other hand, that we value ourselves on the opposite behavior, if we can be quiet, and endure, this being the part of a man, but that of a woman, which in the other case we commended.

Glaucon:: I perceive it.

Socrates:: Is this commendation then, a handsome one, when we see such a man as one would not deign to be oneself, but would be ashamed of, not to abominate but to delight in him, and commend him?

Glaucon:: No, by Jupiter; it appears unreasonable.

Socrates:: Certainly, if you consider it, in this manner.

Glaucon:: How?

Socrates:: If you consider that the part of us, which in our private misfortunes is forcibly restrained, and is kept from weeping and bewailing to the full, being by nature of such a kind as is desirous of these, is the very part which is by the poets filled and gratified: but that part in us, which is naturally the best, being not sufficiently instructed, either by reason or habit, grows remiss in its guardianship over the bewailing part, by attending to the sufferings of others, and deems it no way disgraceful to itself, to commend and pity one who grieves immoderately, whilst he professes to be a good man. But this it thinks it gains, even pleasure, which it would not choose to be deprived of, by despising the whole of the poem. For, I think, it falls to the share of few to be able to consider, that what we feel with respect to the fortunes of others, must necessarily be felt with respect to our own. Since it is not easy for a man to bear up under his own misfortunes, who strongly cherishes the bewailing disposition over those of others.

Glaucon:: Most true.

Socrates:: And is not the reasoning the same with reference to the ridiculous? For when you hear, in imitation by comedy, or in private conversation, what you would be ashamed to do yourself to excite laughter, and are delighted with it, and imitate it, you do the same thing here as in the tragic: for that part, which, when it wanted to excite laughter, was formerly restrained by reason from a fear of incurring the character of scurrility, by now letting loose, and allowing there to grow vigorous, you are often imperceptibly brought to be in your own behavior a buffoon.

Glaucon:: Extremely so.

Socrates:: And the case is the same as to venereal pleasures, and anger, and the whole of the passions, as well the sorrowful as the joyful, which truly, we have said, attend us in every action; that the poetical imitation of these has the same effect upon us; for it nourishes and waters those things which ought to be parched, and constitutes as our governor, those which ought to be governed, in order to our becoming better and happier, instead of being worse and more miserable.

Glaucon:: I can say no otherwise.

Socrates:: When therefore, Glauco, you meet with the encomiasts of Homer, who tell how this poet instructed Greece, and that he deserves to be taken as a matter to teach a man both the management and the knowledge of human affairs, and that a man should regulate the whole of his life according to this poet, we should indeed love and embrace such people, as being the best they are able; and agree with them that Homer is most poetical, and the first of tragic writers: but they must know, that hymns to the Gods, and the praises of worthy actions, are alone to be admitted into the city. But if it should admit the pleasurable muse likewise, in songs, or verses, you would have pleasure and pain reigning in the city, instead of law, and that reason which always appears best to the community.

Glaucon:: Most true.

Socrates:: Let these things now, be our apology, when we recollect what we have said with reference to poetry, that we then very properly dismissed it From our republic, since it is such as is now described: for reason obliged us. And let us tell it further, lest it accuse us of a certain roughness, and rusticity, that there is an ancient variance between philosophy and poetry; for such verses as these;

> That bawling bitch, which at her mistress barks.

And;

> He's great in empty eloquence of fools.

And;

> On trifles still they plod, because they 're poor;

and a thousand such like, are marks of an ancient opposition between them. But nevertheless let it be said, that if any one can assign a reason why the poetry and the imitation which are calculated for pleasure ought to be in a well regulated city, we, for our part, shall gladly admit them, as we are at least conscious to ourselves that we are charmed by them. But to betray what appears to be truth, were an unholy thing. For are not you yourself, my friend, charmed by this imitation, and most especially when you see it performed by Homer?

Glaucon:: Very much so.

Socrates:: Is it not just, then, that we introduce it apologizing for itself, either in song, or in any other measure?

Glaucon:: By all means.

Socrates:: And we may at least grant, somehow, even to its defenders, such as are not poets, but lovers of poetry, to speak in its behalf, without verse, and show that it is not only pleasant, but profitable for republics, and for human life; and we shall hear with pleasure, for we shall gain somewhat if it shall appear not only pleasant but also profitable.

Glaucon:: How is it possible we should not gain?

Socrates:: And if it happen otherwise, my friend, we shall do as those who have been in love when they deem their love unprofitable,—they desist, though with violence: so we in like manner, through this inborn love of such poetry that prevails in our best republics, shall be well pleased to see it appear to be the best and truest: and we shall hear it till it is able to make no further apology. But we shall take along with us this discourse which we have held, as a counter-charm, and incantation, being afraid to fall back again into a childish and vulgar love. We may perceive then that we are not to be much in earnest about such poetry as this, as if it were a serious affair, and approached to the truth; but the hearer is to beware of it, and to be afraid for the republic within himself, and to entertain those opinions of poetry which we mentioned.

Glaucon:: I entirely agree.

Socrates:: For great, friend Glauco, mighty is the contest, and not such as it appears, to become a good or a bad man: so as not to be moved, either through honour, or riches, or any magistracy, or poetic imitation, ever to neglect justice, and the other virtues.

Glaucon:: I agree with you, from what we have discussed, and so I think will any other.

Socrates:: But we have not yet, discussed the greatest prize of virtue, and the rewards laid up for her.

Glaucon:: You speak of some prodigious greatness, if there be other greater than those mentioned.

Socrates:: But what is there, can be great in a little time? for all this period from infancy to old age is but little in respect of the whole.

Glaucon:: Nothing at all indeed.

Socrates:: What then? Do you think an immortal being ought to be much concerned about such a period, and not about the whole of time?

Glaucon:: I think, about the whole. But why do you mention this?

Socrates:: Have you not perceived, that our soul is immortal, and never perishes?

Glaucon, looking at me, and wondering, said:

Glaucon:: By Jupiter, not I indeed. But are you able to show this?

Socrates:: I should otherwise act unjustly. And I think you yourself can show it, for it is in no respect difficult.

Glaucon:: To me at least, it is difficult; but I would willingly hear from you this which is not difficult.

Socrates:: You shall hear then.

Glaucon:: Only speak.

Socrates:: Is there not something, which you call good, and something which you call evil?

Glaucon:: I own it.

Socrates:: Do you then conceive of them in the same manner as I do?

Glaucon:: How?

Socrates:: That which destroys and corrupts every thing is the evil, and what preserves and profits it is the good.

Glaucon:: I do. But what?

Socrates:: Do you not say, there is something which is good, and something which is bad, to each particular? as blindness to the eyes, and disease to every animal body, blasting to corns, rottenness to wood, rust to brass and iron, and, as I am saying, almost every thing has its connate evil, and disease?

Glaucon:: I think so.

Socrates:: And when any thing of this kind befalls any thing, does it not render that which it befalls base, and in the end dissolves and destroys it?

Glaucon:: How should it not?

Socrates:: Its own connate evil then and baseness destroys each particular; or, if this does not destroy it, nothing else can ever destroy it. For that which is good can never destroy any thing, nor yet that which is neither good nor evil.

Glaucon:: How can they?

Socrates:: If then we shall be able to find, among beings, any one which has indeed some evil which renders it base, but is not however able to dissolve and destroy it, shall we not then know that a being thus constituted cannot be destroyed at all?

Glaucon:: So, it appears.

Socrates:: What then? Is there not something which renders the soul evil?

Glaucon:: Certainly; all these things which we have now mentioned, injustice, intemperance, cowardice, ignorance.

Socrates:: But does then any of these dissolve and destroy it? And attend now, that we may not be imposed on, in thinking that an unjust and foolish man, when he is detected acting unjustly, is then destroyed through his injustice, which is the baseness of his soul: but consider it thus. As disease, which is the baseness of animal body, dissolves and destroys body, and reduces it to be no longer that body; so all those things we mentioned, being destroyed by their own proper evil adhering to them and possessing them, are reduced to a nonexistence. Is it not so?

Glaucon:: Yes.

Socrates:: Consider now the soul in the same manner. Does injustice, or other vice, possessing it, by possessing, and adhering to it, corrupt and deface it, till, bringing it to death, it separates it from the body?

Glaucon:: By no means.

Socrates:: But it were absurd, that any thing should be destroyed by the baseness of another, but not by its own.

Glaucon:: Absurd.

Socrates:: For consider, Glauco, that neither by the baseness of victuals, whether it be their moldiness, or rottenness, or whatever else, do we imagine our body can be destroyed; but if this baseness in them create in the body a depravity of the body, we will say that, through their means, the body is destroyed by its own evil, which is disease. But we will never allow that by the baseness of food, which is one thing, the body, which is another thing, can ever by this foreign evil, without creating in it its own peculiar evil, be at any time, destroyed.

Glaucon:: You say most right.

Socrates:: According to the same reasoning, then, unless the baseness of the body create a baseness of the soul, let us never allow that the soul can be destroyed by an evil which is foreign, without its own peculiar evil, one thing by the evil of another.

Glaucon:: There is reason for it.

Socrates:: Let us then either refute these things as not good reasoning; or, so long as they are unrefuted, let us at no time say, that the soul shall be ever in any degree the more destroyed, either by burning fever, or by any other disease, or by slaughter, not even though a man should cut the whole body into the smallest parts possible, till some one show that, through these sufferings of the body, the soul herself becomes more unjust and unholy. But we will never allow it to be said, that when a foreign evil befalls any thing, whilst its own proper evil is not within it, either the soul or any thing else is destroyed.

Glaucon:: But this at least, no one can ever show, that the souls of those who die are by death rendered more unjust.

Socrates:: But if any one, shall dare to contend with us in reasoning; and, in order that he may not be obliged to own that souls are immortal, should say, that when a man dies he becomes more wicked and unjust, we shall somehow justly demand of him to show, if he says true in telling us this, that injustice is deadly to the possessor, as a disease; and that those who embrace it are destroyed by it as by a disease destructive in its own nature—those most speedily who embrace it most, and those more slowly who embrace it less. And not as at present, where the unjust die having this punishment inflicted on them by others.

Glaucon:: By Jupiter, injustice would not appear perfectly dreadful, if it were deadly to him who practices it (for that were a deliverance from evil); but I rather think it will appear to be altogether the reverse, destroying others as far as it can, but rendering the unjust extremely alive, and, in conjunction with being alive, wakeful likewise; so far, as it seems, does it dwell from being deadly.

Socrates:: You say well; for, when a man’s own wickedness and peculiar evil is insufficient to kill and destroy the soul, hardly can that evil, which aims at the destruction of another, destroy a soul, or any thing else but what it is aimed against.

Glaucon:: Hardly indeed, as appears to me at least.

Socrates:: Since therefore it is destroyed by no one evil, neither peculiar nor foreign, is it not plain that, of necessity, it always is? and, if it always is, it is immortal?

Glaucon:: Of necessity.

Socrates:: Let this then, be fixed in this manner. And if it be, you will perceive that the same souls will always remain, for their number will never become less, none being destroyed, nor will it become greater; for if, anyhow, the number of immortals was made greater, you know it would take from the mortal, and in the end all would be immortal.

Glaucon:: You say true.

Socrates:: But let us not, think that this will be the case, (for reason will not allow of it) nor yet that the soul in its truest nature is of such a kind as to be full of much variety, dissimilitude, and difference, considered in itself.

Glaucon:: How do you say?

Socrates:: That cannot easily, be eternal which is compounded of many things, and which has not the most beautiful composition, as hath now appeared to us to be the case with reference to the soul.

Glaucon:: It is not likely.

Socrates:: That the soul then is something immortal, both our present reasonings, and others too, may oblige us to own; but in order to know what kind of being the soul is, in truth, one ought not to contemplate it as it is damaged both by its conjunction with the body, and by other evils, as we now behold it, but such as it is when become pure, such it must by reasoning be fully contemplated; and he (who does this) will find it far more beautiful at least, and will more plainly see through justice, and injustice, and every thing which we have now discussed. We are now telling the truth concerning it, such as it appears at present. We have seen it, indeed, in the same condition in which they see the marine Glaucus, where they cannot easily perceive his ancient nature, because the ancient members of his body are partly broken off, and others are worn away; and he is altogether damaged by the waves: and, besides this, other things are grown to him, such as shell fish, sea weed, and stones: so that he in every respect resembles a beast, rather than what he naturally was. In such a condition do we behold the soul under a thousand evils. But we ought, Glauco, to behold it there.

Glaucon:: Where?

Socrates:: In its philosophy; and to observe to what it applies, and what intimacies it affects, as being allied to that which is divine, immortal, and eternal; and what it would become, if it pursued wholly a thing of this kind, and were by this pursuit brought out of that sea in which it now is, and had the stones and shell fish shaken off from it, which, at present, as it is fed on earth, render its nature, in a great measure, earthy, stony, and savage, through those aliments, which are said to procure felicity. And then might one behold its true nature, whether multiform, or uniform, and every thing concerning it. But we have, I think, sufficiently discussed its passions, and forms in human life.

Glaucon:: Entirely so.

Socrates:: Have we not now, discussed every thing else in our reasonings, though we have not produced those rewards and honors of justice (as you say Hesiod and Homer do)? but we find justice itself to be the best reward to the soul; and that it ought to do what is just, whether it have or have not Gyges' ring, and, together with such a ring, the helmet likewise of Pluto.

Glaucon:: You say most true.

Socrates:: Will it not now then, Glauco, be attended with no envy, if, besides these, we add those rewards to justice and the other virtues, which are bestowed on the soul by men and Gods, both whilst the man is alive, and after he is dead?

Glaucon:: By all means.

Socrates:: Will you then restore me what you borrowed in the reasoning?

Glaucon:: What, chiefly?

Socrates:: I granted you, that the just man should be deemed unjust, and the unjust be deemed to be just. For you were of opinion, that though it were not possible that these things should be concealed from Gods and men, it should however be granted, for the sake of the argument, that justice in itself might be compared with injustice in itself; or do you not remember it?

Glaucon:: I should, indeed, be unjust, if I did not.

Socrates:: Now after the judgment is over, I demand again, in behalf of justice, that as you allow it to be indeed esteemed both by Gods and men, you likewise allow it to have the same good reputation, that it may also receive those prizes of victory, which it acquires from the reputation of justice, and bestows on those who possess it; since it has already appeared to bestow those good things which arise from really being just, and that it does not deceive those who truly embrace it.

Glaucon:: You demand what is just.

Socrates:: Will you not then, in the first place, restore me this? That it is not concealed from the Gods, what kind of man each of the two is.

Glaucon:: We will grant it.

Socrates:: And if they be not concealed, one of them will be beloved of the Gods, and one of them hated, as we agreed in the beginning.

Glaucon:: We did so.

Socrates:: And shall we not agree, that as to the man who is beloved of the Gods, whatever comes to him from the Gods will all be the best possible, unless he has some necessary ill from former miscarriage.

Glaucon:: Entirely so.

Socrates:: We are then to think in this manner of the just man, That if he happen to be in poverty, or in diseases, or in any other of those seeming evils, these things to him issue in something good, either whilst alive, or dead. For never at any time is he neglected by the Gods who inclines earnestly to endeavor to become just, and practices virtue as far as it is possible for man to resemble God.

Glaucon:: It is reasonable, that such an one should not be neglected by him whom he resembles.

Socrates:: And are we not to think the reverse of these things concerning the unjust man?

Glaucon:: Entirely.

Socrates:: Such, then, would seem to be the prizes which the just man receives from the Gods.

Glaucon:: Such they are indeed in my opinion.

Socrates:: But what, do they receive from men? Is not the case thus? (if we are to suppose the truth). Do not cunning and unjust men do the same thing as those racers, who run well at the beginning, but not so at the end? for at the first they briskly leap forward, but in the end they become ridiculous, and, with their ears on their neck, they run off without any reward. But such as are true racers, arriving at the end, both receive the prizes, and are crowned. Does it not happen thus for the most part as to just men? that at the end of every action and intercourse of life they are both held in esteem, and receive rewards from men.

Glaucon:: Entirely so.

Socrates:: You will then suffer me to say of these what you yourself said of the unjust. For I will aver now, that the just, when they are grown up, shall arrive at power if they desire magistracies, they shall marry where they incline, and shall settle their children in marriage agreeably to their wishes; and every thing else you mentioned concerning the others, I now say concerning these. And on the other hand I will say of the unjust, that the most of them, though they may be concealed whilst they are young, yet being caught at the end of the race, are ridiculous, and, when they become old, are wretched and ridiculed, and shall be scourged both by foreigners and citizens, and they shall afterwards be tortured, and burnt; which you said were terrible things, and you spoke the truth. Imagine you hear from me that they suffer all these things. But see if you will admit of what I say.

Glaucon:: Entirely, for you say what is just.

Socrates:: Such as these now, are the prizes, the rewards and gifts, which a just man receives in his lifetime, both from Gods and men; besides those good things which justice contains in itself.

Glaucon:: And they are extremely beautiful, and likewise permanent.

Socrates:: But these now, are nothing in number or magnitude, when compared with those which await each of the two at death. And these things must likewise be heard, that each of them may completely have what is their due in the reasoning.

Glaucon:: You may say on, not as to a hearer who has heard much, but as to one who hears with pleasure.

Socrates:: But, however, I will not, tell you the apologue of Alcinus; but that, indeed, of a brave man, Erus the son of Armenius, by descent a Pamphylian; who happening on a time to die in battle, when the dead were on the tenth day carried off, already corrupted, he was taken up sound; and being carried home, as he was about to be buried on the twelfth day, when said on the funeral pile, he revived; and being revived, he told what he saw in the other state, and said: That after his soul left the body, it went with many others, and that they came to a certain dæmoniacal place, where there were two chasms in the earth, near to each other, and two other openings in the heavens opposite to them, and that the judges sat between these. That when they gave judgment, they commanded the just to go to the right hand, and upwards through the heaven, fixing before them the accounts of the judgment pronounced; but the unjust they commanded to the left, and downwards, and these likewise had behind them the accounts of all they had done. But on his coming before the judges, they said, it behooved him to be a messenger to men concerning things there, and they commanded him to hear, and to contemplate every thing in the place. And that he saw here, through two openings, one of the heaven, and one of the earth, the souls departing, after they were there judged; and through the other two openings he saw, rising through the one out of the earth, souls full of squalidness and dust; and through the other, he saw other souls descending pure from heaven; and that always on their arrival they seemed as if they came from a long journey, and that they gladly went to rest themselves in the meadow, as in a public assembly, and saluted one another, such as were acquainted, and that those who rose out of the earth asked the others concerning the things above, and those from heaven asked them concerning the things below, and that they told one another: those wailing and weeping whilst they called to mind, what and how many things they suffered and saw in their journey under the earth; (For it was a journey of a thousand years) and that these again from heaven explained their enjoyments, and spectacles of immense beauty. To narrate many of them, Glauco, would take much time; but this, was the sum, that, whatever unjust actions any had committed, and how many soever any one had injured, they were punished for all these separately tenfold, and that it was in each, according to the rate of an hundred years, the life of man being considered as so long, that they might suffer tenfold punishment for the injustice they had done. So that if any had been the cause of many deaths, either by betraying cities or armies, or bringing men into slavery, or being confederates in any other wickedness, for each of all these they reaped tenfold sufferings; and if, again, they had benefited any by good deeds, and had been just and holy, they were rewarded according to their deserts. Of those who died very young, and lived but a little time, he told what was not worth relating in respect of other things. But of impiety and piety towards the Gods and parents, and of suicide, he told the more remarkable retributions. For he said he was present when one was asked by another, where the great Aridæus was? This Aridæus had been tyrant in a certain city of Pamphylia a thousand years before that time, and had killed his aged father, and his elder brother, and had done many other unhallowed deeds, as it was reported: and he said, the one who was asked, replied: He neither comes, nor ever will come hither. For we then surely saw this likewise among other dreadful spectacles: When we were near the mouth of the opening, and were about to ascend after having suffered every thing else, we beheld both him on a sudden, and others likewise, most of whom were tyrants, and some private persons who had committed great iniquity, whom, when they imagined they were to ascend, the mouth of the opening did not admit, but bellowed when any of those who were so polluted with wickedness, or who had not been sufficiently punished, attempted to ascend. And then, fierce men, and fiery to the view, standing by, and understanding the bellowing, took them and led them apart, Aridæus and the rest, binding their hands and their feet, and, thrusting down their head, and pulling off their skin, dragged them to an outer road, tearing them on thorns; declaring always to those who passed by, on what accounts they suffered these things, and that they were carrying them to be thrown into Tartarus. And hence, that amidst all their various terrors, this terror surpassed, lest the mouth should bellow, and that when it was silent every one most gladly ascended. And that the punishments and torments were such as these, and their rewards were the reverse of these. He also added, that every one, after they had been seven days in the meadow, arising thence, it was requisite for them to depart on the eighth day, and arrive at another place on the fourth day after, whence they perceived from above through the whole heaven and earth, a light extended as a pillar, mostly resembling the rainbow, but more splendid and pure; at which they arrived in one day's journey; and thence they perceived, through the middle of the light from heaven, the extremities of its ligatures extended; as this light was the best of heaven, like the transverse beams of ships keeping the whole circumference united. That from the extremities the distaff of necessity is extended, by which all the revolutions were turned round, whose spindle and point were both of adamant, but its whirl mixed of this and of other things; and that the nature of the whirl was of such a kind, as to its figure, as is any one we see here. But you must conceive it, from what he said, to be of such a kind as this: as if in some great hollow whirl, carved throughout, there was such another, but lesser, within it, adapted to it, like casks fitted one within another; and in the same manner a third, and a fourth, and four others, for that the whirls were eight in all, as circles one within another, having their lips appearing upwards, and forming round the spindle one united convexity of one whirl; that the spindle was driven through the middle of the eight; and that the first and outmost whirl had the widest circumference in the lip, that the sixth had the second wide, and that of the fourth is the third wide, and the fourth wide that of the eighth, and the fifth wide that of the seventh, the sixth wide that of the fifth, and the seventh wide that of the third, and the eighth wide that of the second. Likewise that the circle of the largest is variegated, that of the seventh is the brightest, and that of the eighth hath its color from the shining of the seventh; that of the second and fifth resemble each other, but are more yellow than the rest. But the third hath the whitest color, the fourth is reddish; the second in whiteness surpasses the sixth; and that the distaff must turn round in a circle with the whole it carries; and whilst the whole is turning round, the seven inner circles are gently turned round in a contrary motion to the whole. Again, that of these, the eighth moves the swiftest; and next to it, and equal to one another, the seventh, the sixth, and the fifth; and that the third went in a motion which as appeared to them completed its circle in the same way as the fourth. The fourth in swiftness was the third, and the fifth was the second, and it was turned round on the knees of necessity. And that on each of its circles there was seated a Syren on the upper side, carried round, and uttering one voice variegated by diverse modulations. But that the whole of them, being eight, composed one harmony. That there were other three sitting round at equal distance one from another, each on a throne, the daughters of Necessity, the Fates, in white vestments, and having crowns on their heads; Lachesis, and Clotho, and Atropos, singing to the harmony of the Sirens; Lachesis singing the past, Clotho the present, and Atropos the future. And that Clotho, at certain intervals, with her right hand said hold of the spindle, and along with her mother turned about the outer circle. And Atropos, in like manner, turned the inner ones with her left hand. And that Lachesis touched both of these, severally, with either hand. After they arrive here, it is necessary for them to go directly to Lachesis. That then a certain prophet first of all ranges them in order, and afterwards taking the lots, and the models of lives, from the knees of Lachesis, and ascending a lofty tribunal, he says:—The speech of the virgin Lachesis, the daughter of Necessity: Souls of a day! The beginning of another period of men of mortal race. The dæmon shall not receive you as his lot, but you shall choose the dæmon: He who draws the first, let him first make choice of a life, to which he must of necessity adhere: Virtue is independent, which every one shall partake of, more or less, according as he honors or dishonors her: the cause is in him who makes the choice, and God is blameless. That when he had said these things, he threw on all of them the lots, and that each took up the one which fell beside him, and that he was allowed to take no other. And that when he had taken it, he knew what number he had drawn. That after this he placed on the ground before them the models of lives, many more than those we see at present. And that they were all-various. For there were lives of all sorts of animals, and human lives of every kind. And that among these there were tyrannies also, some of them perpetual, and others destroyed in the midst of their greatness, and ending in poverty, banishment, and want. That there were also lives of renowned men, some for their appearance as to beauty, strength, and agility; and others for their descent, and the virtues of their ancestors. There were the lives of renowned women in the same manner. But that there was no disposition of soul among these models, because of necessity, on choosing a different life, it becomes different itself. As to other things, riches and poverty, sickness and health, they were mixed with one another, and some were in a middle station between these.

There then, as appears, friend Glauco, is the whole danger of man. And hence this of all things is most to be studied, in what manner every one of us, omitting other disciplines, shall become an inquirer and learner in this study, if, by any means, he be able to learn and find out who will make him expert and intelligent to discern a good life, and a bad; and to choose every where, and at all times, the best of what is possible, considering all the things now mentioned, both compounded and separated from one another, what they are with respect to the virtue of life. And to understand what good or evil beauty operates when mixed with poverty, or riches, and with this or the other habit of soul; and what is effected by noble and ignoble descent, by privacy, and by public station, by strength and weakness, docility and indocility, and every thing else of the kind which naturally pertains to the soul, and likewise of what is acquired, when blended one with another; so as to be able from all these things to compute, and, having an eye to the nature of the soul, to comprehend both the worse and the better life, pronouncing that to be the worse which shall lead the soul to become more unjust, and that to be the better life which shall lead it to become more just, and to dismiss every other consideration. For we have seen, that in life, and in death, this is the best choice. But it is necessary that a man should have this opinion firm as an adamant in him, when he departs to Hades, that there also he may be unmoved by riches, or any such evils, and may not, falling into tyrannies, and other such practices, do many and incurable mischiefs, and himself suffer still greater: but may know how to choose always the middle life, as to these things, and to shun the extremes on either hand, both in this life as far as is possible, and in the whole of hereafter. For thus man becomes most happy.—That then the messenger from the other world further told, how that the prophet spoke thus: Even to him who comes last, choosing with judgment, and living consistently, there is prepared a desirable life; not bad. Let neither him who is first be negligent in his choice, nor let him who is last despair. He said, that when the prophet had spoken these things, the first who drew a lot ran instantly and chose the greatest tyranny, but through folly and insatiableness had not sufficiently examined all things on making his choice, but was ignorant that in this life there was this destiny, the devouring of his own children, and other evils; and that afterwards, when be had considered it at leisure he wailed and lamented his choice, not having observed the admonitions of the prophet above mentioned. For that he did not accuse himself, as the author of his misfortunes, but fortune and the dæmons, and every thing instead of himself. He added, that he was one of those who came from heaven, who had in his former life lived in a regulated republic, and had been virtuous by custom without philosophy. And that, in short, among these there were not a few who came from heaven, as being unexercised in trials. But that the most of those who came from earth, as they had endured hardships themselves, and had seen others in hardships, did not precipitantly make their choice. And hence, and through the fortune of the lot, to most souls there was an exchange of good and evil things. Since, if one should always, whenever he comes into this life, soundly philosophize, and the lot of election should not fall on him the very last, it would seem, from what has been told us from thence, that he shall be happy not only here, but when he goes hence, and his journey hither back again shall not be earthy, and rugged, but smooth and heavenly. This spectacle, was worthy to behold, in what manner the several souls made choice of their lives. For it was pitiful and ridiculous and wonderful to behold, as each for the most part chose according to the habit of their former life. For he told, that he saw the soul which was formerly the soul of Orpheus making choice of the life of a swan, through hatred of woman-kind, being unwilling to be born of woman on account of the death he suffered from them. He saw likewise the soul of Thamyris making choice of the life of a nightingale. And he saw also a swan turning to the choice of human life; and other musical animals in a similar manner, as is likely. And that he saw one soul, in making its choice, choosing the life of a lion; and that it was the soul of Telamonian Ajax, shunning to become a man, remembering the judgment given with reference to the armor. That after this he saw the soul of Agamemnon, which, in hatred also of the human kind, on account of his misfortunes, exchanged it for the life of an eagle. And that he saw the soul of Atalante choosing her lot amidst the rest, and, having attentively observed the great honors paid an athletic man, was unable to pass by this lot, but took it. Next to this, he saw the soul of Epæus the Panopean going into the nature of a skilful workwoman. And that far off, among the last, he saw the soul of the buffoon Thersites assuming the ape. And that by chance he saw the soul of Ulysses, who had drawn its lot last of all, going to make its choice: that in remembrance of its former toils, and tired of ambition, it went about a long time seeking the life of a private man of no business, and with difficulty found it lying somewhere, neglected by the rest. And that on seeing this life, it said, that it would have made the same choice even if it had obtained the first lot,—and joyfully chose it. That in like manner the souls of wild beasts went into men, and men again into beasts: the unjust changing into wild beasts, and the just into tame; and that they were blended by all sorts of mixtures. After therefore all the souls had chosen their lives according as they drew their lots, they all went in order to Lachesis, and that she gave to every one the dæmon he chose, and sent him along with him to be the guardian of his life, and the accomplisher of what he had chosen.—That first of all he conducts the soul to Clotho, to ratify under her hand, and by the whirl of the vortex of her spindle, the destiny it had chosen by lot: and after being with her, he leads it back again to the spinning of Atropos, who makes the destinies irreversible. And that from hence they proceed directly under the throne of Necessity; and that after he had passed by it, as all the others passed, they all of them marched into the plain of

Lethe amidst dreadful heat and scorching, for he said that it is void of trees and every thing that the earth produces. That when night came on, they encamped beside the river Amelete, whose water no vessel contains. Of this water all of them must necessarily drink a certain measure, and such of them as are not preserved by prudence drink more than the measure, and that he who drinks always forgets every thing. But after they were said asleep, and it became midnight, there was thunder, and an earthquake, and they were thence on a sudden carried upwards, some one way, and some another, approaching to generation like stars. But that he himself was forbidden to drink of the water. Where, however, and in what manner, he came into his body, he was entirely ignorant; but suddenly looking up in the morning, he saw himself already said on the funeral pile. And this fable, Glauco, hath been preserved, and is not lost, and it may preserve us, if we are persuaded by it; for thus we shall happily pass over the river Lethe, and shall not contaminate the soul. But if the company will be persuaded by me; considering the soul to be immortal, and able to bear all evil, and all good, we shall always persevere in the road which leads above; and shall by all means pursue justice in conjunction with prudence, in order that we may be friends both to ourselves, and to the Gods, both whilst we remain here, and when we receive its rewards, like victors assembled together; and we shall, both here, and in that journey of a thousand years which we have described, enjoy a happy life.

THE END OF THE TENTH AND LAST BOOK OF THE REPUBLIC.

## Rivals

Can you determine the greatest contrast in this dialog? Can you determine the perceptible topic and the intelligible topic?

This is a much underrated dialog, yet its importance cannot be overstressed.

# The Rivals.

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Socrates, and two anonymous rivals.

Socrates:: I entered the school of Dionysius, the teacher of grammar, and I saw there those of the young men, who were deemed to be the most remarkable for their personal appearance and the good repute of their fathers, and their admirers likewise. Two of the youths happened to be disputing, but about what I did not very well hear. They appeared however to be disputing about Anaxagoras, or Œnopides; as they were describing circles, and imitating by their hands certain inclinations, with great earnestness. And I, for I was sitting near an admirer of one of the young persons, nudged him with my elbow, and asked

On what were the two youths so earnestly engaged? Surely it is a subject important and beautiful, on which they have bestowed so serious an attention.

First Rival:: What call you important and beautiful? They are prating about things above in the sky, and trifling away their time in philosophizing.

Socrates:: And I, in wonder at such an answer, said Do you think it, young man, to be a disgraceful thing to philosophize? or why do you speak so harshly?

But another person, who was a rival admirer of the youths, and happened to be sitting near, on hearing me asking the question, and the answer, said

Second Rival:: It is not for you, Socrates, to ask this man, whether he thinks it disgraceful to philosophize. Know you not that he has spent all his time in being throstled, and cramming himself, and sleeping? so that what other answer think you he would give, but that it is disgraceful to philosophize?

Socrates:: Now this person had employed his whole time in mental cultivation, but the other, whom he abused, in bodily exercises. It seemed then to me that I ought to dismiss the one, who had been interrogated, for he did not pretend even to be skilled in words, but in deeds; and to interrogate thoroughly the other, who pretended to be rather clever, in order that I might, if I could, be benefited by him in knowledge. I said therefore to him, that I had proposed my question in common for all; but if you think you will give a better answer, I put the same question to you as I did to him, Whether you think it honourable to philosophize or not?

Just as we were conversing thus, the two youths, overhearing us, became silent; and ceasing from the dispute, became listeners. Now, what their admirers suffered, I know not; but I was struck with astonishment. For I am always struck so in the case of the young and handsome. One of them, however, seemed to me in no less an agony than myself; and he answered with the air of a person eager for honor.

Second Rival:: Should I ever, Socrates, consider it disgraceful to philosophize, I should no longer deem myself a human being; nor, indeed, any one else, so disposed.

Socrates:: He said pointing to his Rival, and speaking with a loud voice, so that the objects of their admiration might hear.

To you, then, it seems honourable to philosophize.

Second Rival:: Most highly.

Socrates:: What then; does it seem to you possible for a man to know any thing whatever, whether it is disgraceful or honourable, who does not know at all what that thing is?

Second Rival:: No.

Socrates:: Know you then, what it is to philosophize?

Second Rival:: Perfectly.

Socrates:: What is it then?

Second Rival:: What else, than according to the sentiment of Solon? For Solon says somewhere;

> Even as I grow old, still much I learn.

And it appears to me that the man, who would philosophize, ought to be always learning some one thing at least, when he is either young or old, in order that he may during life learn the greatest number of things.

Socrates:: At first it seemed to me that he had said something to the purpose; but afterwards, on thinking thrice, I asked him, whether he considered philosophy to be much learning?

Second Rival:: Completely so.

Socrates:: And do you consider, that philosophy is only honourable? or good likewise?

Second Rival:: It is likewise very good.

Socrates:: Do you perceive this to be something peculiar to philosophy? or does it seem to you to be the case in other things likewise? For instance, do you consider a love of gymnastic exercises to be not only honourable but good likewise, or not?

To this he said very ironically two things.

Second Rival:: To this man let it be said, that it is neither; but to you, Socrates, I acknowledge it to be both honourable and good.

Socrates:: Do you think that in these exercises the undergoing much toil is a love of exercise?

Second Rival:: By all means; just as in philosophizing, I consider that much learning is philosophy.

Socrates:: Do you think then, that the lovers of those exercises desire any thing else than that, which will cause the body to be in a good state?

Second Rival:: That very thing.

Socrates:: Do then,, many labours, cause the body to be in a good state?

Second Rival:: Certainly; for how should a person have, from little labour, his body in a good state?

Socrates:: Here I thought it best to call upon the lover of gymnastics, in order that he might assist me through his knowledge of the gymnastic art. And I asked him, Why are you silent, O best of men, while this person is talking thus? Or to you likewise do persons seem to have their bodies in a good state from much labour or little?

First Rival:: For my part, Socrates, I thought he had known the saying, that moderate labour is best for the body.

Socrates:: How so?

First Rival:: I speak not of a man sleepless, and foodless, and having his neck not worn down and attenuated by care.

Socrates:: On his saying this the youths were delighted, and burst into a laugh; but the other party blushed.-

I then said, What then, do you now concede that neither much nor little labour causes human beings to have their bodies in a good state, but only what is moderate? or will you contest with us two?

Second Rival:: Against him, I would enter the lists with much pleasure, and I know well that I should be competent to support the proposition I have laid down, if I had laid down one weaker than this; for he is nothing. But against you I beg not to contend in favour of a paradox; and I admit, that not many, but moderate exercises procure for men a good habit of body.

Socrates:: And what in the case of food? said I. Is it the moderate, or much?

He admitted it in the case of food. And thus I compelled him to confess that, in the case of all the other things relating to the body, the moderate is the most beneficial, and not the much or little. And he confessed the moderate and all this he granted me.

What then, said I, as regards the soul? Of the things applied to it do the moderate or the immoderate benefit it?

Second Rival:: The moderate.

Socrates:: Is not learning one of the things applied to the soul?

He admitted it.

Of learning then, the moderate quantity benefits, but not the great.

He assented.

Of whom then, making an inquiry, should we justly inquire what kind of exercise and of food are moderate for the body? We all three agreed that it is a physician or a master of exercise. And of whom shall we inquire about the sowing of seeds? About this, we confessed the husbandman. But inquiring of whom, should we justly inquire respecting the planting and sowing of learning in the soul, how many, and of what kinds of it are moderate? We were here all full of difficulty. Upon which I said, byway of a joke, Since we are all at a loss, are you willing for us to ask these youths here? Or perhaps we are ashamed, as Homer says the suitors were, who deemed that no one else was fit to stretch the bow.

Since then they now seemed to be dispirited on the question, I endeavored to view it in another light, and I said

What kinds of learning do we best conjecture those are, which a philosopher ought to learn? since they are not all or many. Whereupon the wiser person, taking up the discourse, observed that the most beautiful kinds of learning, and the most becoming, are those by which a person would obtain the highest reputation for philosophy; and that he would obtain the highest, if he seemed to be skilled in all arts; and, if not all, at least in as many as possible, and especially those of the greatest account, after having learnt such of them as are fitting for freemen to learn, and are connected with intellect, and not with a handicraft merely.

Do you mean in the same way as in carpentry? For there you may purchase a tip-top carpenter for five or six minæ; but you could not buy an architect even for ten thousand drachmas; so few of these are to be found amongst all the Greeks. Are you speaking of some such thing?

And he, on hearing, admitted that he was speaking of such a thing.

I then asked him, if it was not impossible for one person to learn thus only two arts, much less, many and great.

Second Rival:: Do not understand me, Socrates,, as if I were saying that a philosopher ought to know each of the arts accurately, as he does, who makes it his profession; but to be able, as becomes a person of a liberal education, to follow better than the persons present, what is said by the handicraftsman; and to give his opinion so as to appear, in what is said and done relating to the arts, to have a finer taste, and more knowledge, than those who happen to be present.

Socrates:: Then I, for I was still doubtful what he meant by his speech, said to him, Do I conceive rightly what kind of person you call a philosopher? For you seem to me to speak of a person, such as are the competitors in five kinds of contest, compared with the runner, or the wrestlers. For the former fall short of the latter, as regards the contests of the latter, and are second to them; but of all the other competitors, they are the first, and are the victors. Some such thing you mean perhaps that the study of philosophy effects in those, who pursue it, in that they fall short of the first prize, in the intellect relating to the arts, but in attaining the second, they are superior to all the rest; so that he, who has studied philosophy, becomes in every thing a person under the tip-top man. Some such person you seem to me to point out.

Second Rival:: You appear to me, Socrates, to understand correctly what relates to a philosopher, in likening him to a competitor in five contests. For he is really such a man, as not to be a slave to any thing; nor has he laboured upon any one thing with such accuracy, as, through his attention to that one thing, to be deficient in all the rest, as are handicraftsmen, but he has touched moderately upon all.

Socrates:: After this reply, I was anxious to know clearly what he meant, and I inquired of him, whether he considered good persons to be useful or useless.

Second Rival:: Useful, surely, Socrates.

Socrates:: If then the good are useful, are not the bad useless?

He agreed.

Well then,, do you deem philosophers to be useful, or not?

He acknowledged they were useful; and moreover he said, that he deemed them the most useful of all persons.

Come now, let us see whether you say what is true. How can these second-rate men be of any use to us? For it is plain that the philosopher is inferior to each of those who possess their respective arts.

He acknowledged it.

Come then, if either yourself were unwell, or any of your friends, for whom you have a great regard, would you, being desirous to recover health, introduce that second-rate person, the philosopher, to your family; or take a physician.

Second Rival:: Both of them.

Socrates:: Do not say both; but which in preference, and the first?

Second Rival:: No man would hesitate about this, that I would take the physician in preference and first.

Socrates:: What then, in a vessel tost in a storm? To whom would you rather intrust yourself and your property? To a pilot, or to a philosopher?

Second Rival:: To a pilot, for my part.

Socrates:: And so, too, in all other affairs; so long as there is a person of skill in a profession, the philosopher is of no use.

Second Rival:: It appears so.

Socrates:: The philosopher, therefore, is some useless person; for there are surely persons of skill in all professions. But we have agreed that the good are useful, and the wicked useless.

He was forced to own it.

What then, shall I ask you about what comes after this? or is it not rather rude to put a question?

Second Rival:: Ask what you please.

Socrates:: I desire nothing else, than to repeat the concessions already made. Now the matter stands thus. We have conceded that philosophy is an honourable thing, and that we are ourselves philosophers; and that philosophers are good; and that the good are useful, and the wicked useless. Again, on the other hand, we have conceded that philosophers are useless, as long as there are persons of skill in any particular profession; and that such persons are existing at all times. For was not all this conceded?

Second Rival:: Certainly.

Socrates:: We concede, therefore, agreeably to your own reasoning, that if it be philosophy to be skilled in arts in the manner you state, such persons are wicked and useless as long as there are artists. But see, my friend, if the case be so, and that to philosophize is not to attend to arts, nor to busy oneself about many things, nor to be living like a workman, bending over his work, nor to be learning many things, but something else? Since I thought, it was a reproach for persons, much occupied in arts, to be called operatives. But we shall know more clearly by this means, whether I am speaking truly, if you will answer me this. Who know how to punish horses correctly? Whether they, who make them better, or others?

Second Rival:: They who make them better.

Socrates:: Well then, do not they, who know how to make dogs better, know how to chastise dogs properly?

Second Rival:: Yes.

Socrates:: The same art then makes better, and chastises properly.

Second Rival:: I agree.

Socrates:: Well then, is the art, which makes better and chastises properly, the same as that which knows the good and the vicious, or is it a different one?

Second Rival:: It is the same.

Socrates:: Are you then willing to concede this, in the case of human beings likewise, that the art, which makes men better, is that, which chastises properly, and knows the good and the bad?

Second Rival:: By all means.

Socrates:: Does not then the art which applies to one apply to many too, and that which applies to many apply to one likewise? And so too as regards horses and all other things?

Second Rival:: I confess it.

Socrates:: What then is the science, which chastises properly the licentious and the lawless in civil states? Is it not the judicial science?

Second Rival:: Yes.

Socrates:: Do you mean by justice any other science than this?

Second Rival:: No other.

Socrates:: Do not then men know the good and the bad by that science, by which they chastise properly?

Second Rival:: By that.

Socrates:: And he, who knows one, will know many?

Second Rival:: Yes.

Socrates:: And whoever does not know many, will not know one.

Second Rival:: I confess it.

Socrates:: If then a horse, as being but a horse, knows not good and bad horses, he would not know of which kind he is himself?

Second Rival:: I admit it.

Socrates:: And if an ox, being but an ox, knows not good and bad oxen, he would not know of which kind he is himself?

Second Rival:: True.

Socrates:: And so too, in the case of a dog?

He admitted it.

What then, if a man knows not the good men and the bad, would he not be ignorant whether he is good or bad, inasmuch as he too is a man?

He agreed.

Now to be ignorant of oneself, is it to be of sound mind, or not sound?

Not sound.

To know then oneself, is to be of sound mind.

Second Rival:: I admit it.

Socrates:: To this then, as it seems, the Delphic inscription exhorts, namely, to exercise a sound mind, and justice.

Second Rival:: It seems so.

Socrates:: And by the very same science we know too how to chastise properly.

Second Rival:: I admit it.

Socrates:: Is not then justice that, by which we know how to chastise properly? but soundness of mind that, by which we have the skill to know ourselves and others?

Second Rival:: It seems so.

Socrates:: Justice then, and soundness of mind are the same thing.

Second Rival:: It appears so.

Socrates:: In this way states are well governed, when they, who do wrong, suffer punishment.

Second Rival:: You speak the truth.

Socrates:: The same science too is that of the statesman.

He assented.

What then, when a single man administers correctly the affairs of a state, he is not a tyrant, and a king?

Second Rival:: I admit it.

Socrates:: Does he not administer affairs by the art of the king? or the tyrant?

Second Rival:: Just so.

Socrates:: These arts then are the same with those.

Second Rival:: They appear so.

Socrates:: Well then, when one man administers the affairs of a household correctly, what is his name? Is it not steward, or master?

Second Rival:: Yes.

Socrates:: Whether by justice would he administer the affairs of a household correctly? or by any other art?

Second Rival:: By justice.

Socrates:: The same kind of person then, it seems, is a king, a tyrant, a statesman, a steward, a master, a man of sound mind, and a just man; and one is the art of the king, of the tyrant, of the statesman, of the master, of the steward, of the just man, and the man of sound mind.

Second Rival:: So it appears.

Socrates:: Is it not then disgraceful for a philosopher, when the physician is speaking about persons who are ill, not to be able to follow what is said, nor to give an opinion on what is said or done, and similarly, when any one skilled operative is speaking? and when a judge, or a king, or any one else of those whom we have just now enumerated, is speaking of things belonging to his office, is it not disgraceful for a philosopher not to follow what they say or do, nor to be able to give an opinion respecting them?

Second Rival:: How, Socrates, is it not disgraceful for him, to be able to give no opinion on subjects so important?

Socrates:: Shall we assert then, that on these points the philosopher must be a competitor in five contests, and be second-rate, having the second prize after all, and be useless, so long as there exists any of the first-rate? Or must he in the first place not commit his household to another person, nor have the second place in that business; but ought himself to chastise after being the judge, if his household is about to be administered correctly.

In this he agreed with me.

And then, should his friends submit an award to him, or the state order him to decide upon any thing, or to act the judge, would it not, my friend, be disgraceful for him to appear in such cases to be second or third, and not to take the lead?

Second Rival:: So it seems to me.

Socrates:: To philosophize therefore, thou best of men, wants much of being great in learning, or the busying oneself about arts.

On my saying this, the wise man, ashamed of what he had before asserted, was silent; but the illiterate person said, it was in that way, and the rest approved of what had been stated.

# **The Rivals.**

## THE LOVERS

### [OR ON PHILOSOPHY: ETHICAL]

Translated by Lamb.

Socrates:: I entered the grammar school of the teacher Dionysius, and saw there the young men who are accounted the most comely in form and of distinguished family, and their lovers. Now it chanced that two of the young people were disputing, but about what, I did not clearly overhear: it appeared, however, that they were disputing either about Anaxagoras or about Oenopides; at any rate, they appeared to be drawing circles, and they were imitating certain inclinations with their arms, bending to it and taking it most earnestly. Then I—for I was sitting beside the lover of one of the pair—nudged him with my elbow and asked him what on earth the two youngsters were so earnest about, and I said: Is it then something great and fine, in which they are so earnestly immersed?

First Rival:: Great and fine, indeed! Why, these fellows are prating about the heavenly bodies, and babbling philosophy.

Socrates:: Then I, surprised at his answer, said: Young man, do you consider philosophizing to be shameful? Else, why do you speak so sharply?

Then the other youth—for he chanced to be sitting near him, as his rival in love—when he heard my question and his rivals answer, said:

Second Rival:: You do yourself no good, Socrates, by pressing this fellow with a further question, as to whether he considers philosophizing to be shameful. Do you not know that he has spent the whole of his life in practising the neck-hold, and stuffing himself, and sleeping? So why did you suppose he would make any other reply than that philosophy is shameful?

Socrates:: Now this one of the two lovers had spent his time on humane studies, whereas the other, whom he was abusing, had spent his on athletics. So I decided that I had best relinquish the other, whom I had been questioning, since he did not even himself set up to be experienced in words, but only in deeds; and that I should interrogate the one who set up to be wiser, in order that so far as I was able I might get some benefit from him. I said therefore: I addressed my question to both in common; but if you think you could answer more creditably than he, I put the same question to you as I did to him: do you consider philosophizing to be honourable or not?

Then the two striplings, overhearing us speak somewhat like this, were silent, and ceasing from their own contention they became listeners to ours. What their lovers sensations were, I do not know, but I myself, at any rate, was staggered; for every time I am staggered by handsome young people. It seemed to me, however, that my young friend too was in as great a flutter as myself; but nevertheless he answered me in a most ambitious spirit:

Second Rival:: Why, of course, Socrates, if I should ever consider philosophizing to be shameful, I should not account myself so much as a man, nor anyone else either who was disposed to think so.

Socrates:: Here he pointed to his rival lover, and spoke with a loud voice, in order that his favourite might hear every word. Then I remarked: So philosophizing seems to you to be honorable?

Second Rival:: Quite so.

Socrates:: Well now, does it seem to you possible to know whether anything is honourable or shameful without knowing what it is fundamentally?

Second Rival:: No.

Socrates:: Then do you know what philosophizing is?

Second Rival:: Certainly I do.

Socrates:: Then what is it?

Second Rival:: Why, just what Solon called it; you know it was Solon who said:

And ever, as I older grow, I learn yet more and more;—

and I agree with him that a man who intends to philosophize should in this way be ever learning something or other, whether he be younger or older, in order that he may learn as many things as possible in his life.

Socrates:: Now at first I felt there was something in his reply, but then, on second thoughts, I asked him whether he considered philosophy to be much learning, to which he answered:

Second Rival:: Certainly.

Socrates:: And do you consider philosophy to be merely honourable or good as well?

Second Rival:: Good as well: very much so.

Socrates:: Then do you observe this as peculiar to philosophy, or do you find it similarly in everything else? For example, do you consider the love of athletics to be not merely honourable, but good as well, or do you not?

Whereupon he, most slily, gave a double answer:

Second Rival:: To him my statement must be “neither”; but to you, Socrates, I acknowledge it to be both honourable and good: for I consider this the right view.

Socrates:: Well now, in athletics, do you consider that much exercise is love of athletics?

Second Rival:: Certainly, just as in philosophizing I consider much learning to be philosophy.

Socrates:: And do you then consider that the lovers of athletics desire anything else than that which will cause them to be in good bodily condition?

Second Rival:: Only that.

Socrates:: And does much exercise cause them to be in good bodily condition?

Second Rival:: Yes, for how could one be in good bodily condition through little exercise?

Socrates:: Here I felt it was time to stir up the lover of athletics, in order that he might give me the support of his athletic experience; so I proceeded to ask him: And you then, pray, why are you silent, excellent sir, while your friend here is speaking thus? Do you agree that men are in good bodily condition through much exercise, or is it rather through moderate exercise?

First Rival:: For my part, Socrates, I thought even a pig—as the saying is—would have known that moderate exercise causes them to be in good bodily condition, so why should not a fellow who is sleepless and unfed, with unchafed neck and slender, care-worn frame!

Socrates:: And when he had said this the boys were delighted and laughed their approval, while the other lover blushed.

Socrates:: Well, do you now concede that it is neither much, nor little, but moderate exercise that causes men to be in good bodily condition? Or do you bid defiance to the two of us on this point?

Second Rival:: Against him I should be only too glad to fight it out, and I am certain I should prove able to support the theory I have put forward, even had I put forward a weaker one; for he is naught. But with you I do not aim at winning an unscrupulous success; and so I admit that not a great but a moderate amount of athletics causes good condition in men.

Socrates:: And what of food? Moderate or much?

Second Rival:: The same applied to food.

Socrates:: Then I went on and sought to compel him also to admit that everything else connected with the body when most beneficial, was the moderate thing, not the much or the little; and he admitted that it was the moderate thing.

Socrates:: And now, as regards the soul; are moderate or immoderate things beneficial, as adjuncts of it?

Second Rival:: Moderate things.

Socrates:: And are studies among the adjuncts of the soul?

He admitted they were.

So among these also it is the moderate that are beneficial, and not the much?

He agreed.

Then whom should we be justified in asking what sort of exercise or food is moderate for the body?

The three of us agreed that it must be a doctor or a trainer.

And whom should we ask about the moderate measure in the sowing of seed?

In that matter, we agreed, it must be a farmer.

And whom should we be justified in asking as to the moderate degree and kind, in regard to the sowing and planting of studies in the soul?

At this point we all began to be full of perplexity; then I, mocking at them, asked: Do you mind, since we are in perplexity, if we ask these boys here? Or perhaps we are ashamed, as Homer said the suitors were, and do not think it fit there should be someone else who will string the bow?

Then, as it seemed to me that they were losing their zeal for the argument, I tried to pursue the inquiry in another way, and said: But what, as nearly as we can guess, are the kinds of learning which the philosopher should learn, since he is not to learn all things or many things?

At this the wiser one interjected:

Second Rival:: The finest and most suitable kinds of learning are those which will bring him the most reputation for philosophy; and he will get most reputation if he appears well versed in all the arts, or if not in all, in as many of them, and those the most considerable, as he can, by learning so much of them as befits a free man to learn, that is, what belongs to the understanding rather than the handiwork of each.

Socrates:: Well now, do you mean, in the same way as in carpentry? For there, you know, you can buy a carpenter for five or six minae, but a first-rate architect cannot be got for even ten thousand drachmae; few such, indeed, could be found throughout the whole of Greece. Is it something of this sort that you mean? When he heard me say this, he admitted that something like this was what he himself meant.

I next asked him if it was not impossible for the same person to learn in this way merely two of the arts, not to speak of many or the principal ones; to which he replied:

Second Rival:: Do not conceive me, Socrates, to be stating that the philosopher must have accurate knowledge of each of the arts, like the actual adept in any of them; I mean only so far as may be expected of a free and educated man: that is, he should be able to follow the explanations of the craftsman more readily than the rest of the company, and to contribute an opinion of his own which will make him appear the cleverest and most accomplished of the company who may at any time be present at some verbal or practical exposition of the arts.

Socrates:: Then, as I was still unsettled in my mind as to the drift of his words, I asked him: Do I quite grasp the sort of man whom you mean by the philosopher? For you seem to me to mean someone like the all-round athletes in contest with the runners or the wrestlers: the former yield, you know, to the latter in their particular exercises, and are their inferiors in these, but are superior to the usual sort of athletes and beat them. I daresay it may be something of this sort that you would suggest as the effect produced by philosophy on those who make it their pursuit: they yield to those who are first-rate in an understanding of the arts, but in taking the second place they surpass the rest; and in this way the man who has studied philosophy comes just next to the top in everything. That is the kind of person whom you appear to me to indicate.

Second Rival:: You are quite right, it seems to me, Socrates, in your conception of the philosopher's position, with your comparison of him to the all-round athlete. For it is precisely his nature not to be enslaved to any business, or to work out anything exactly, so as to let his application to that one matter make him deficient in the rest, as the craftsmen do, but to have a moderate contact with all of them.

Socrates:: Well, after this answer I was eager to know clearly what he meant, so I inquired of him whether he conceived of good men as useful or useless.

Second Rival:: Useful, I should say, Socrates.

Socrates:: Then if good men are useful, are wicked men useless?

He agreed that they were.

Again, do you consider that philosophers are useful persons or not?

He agreed that they were useful; nay, more, that he considered they were most useful.

Come now, let us make out, if what you say is true, where these second-best men are also useful to us: for clearly the philosopher is inferior to any particular adept in the arts.

He agreed.

Well now, I went on, if you yourself, or one of your friends for whom you feel great concern, should have fallen sick, would you fetch that second-best man into the house with a view to obtaining health, or would you summon the doctor?

Second Rival:: For my part, I should have both.

Socrates:: Please do not say "both," but which of the two you would prefer and also summon first.

Second Rival:: No one would make any question but that the doctor should be preferred and also summoned first.

Socrates:: And again, if you were in a ship that was making rough weather, to which would you rather entrust yourself and yours, the pilot or the philosopher?

Second Rival:: I should choose the pilot.

Socrates:: And so it will be in everything else: so long as there is some craftsman, the philosopher is not useful?

Second Rival:: Apparently.

Socrates:: So now we find that the philosopher is a useless person? For I suppose we always have craftsmen;

and we have agreed that good men are useful, and bad ones useless.

He was obliged to agree to this.

Then what follows? Am I to ask you, or will it be too ill-mannered?

Second Rival:: Ask whatever you please.

Socrates:: Well, my aim is merely to recall our agreements upon what has been stated. The matter stands somewhat like this. We agreed that philosophy is an honourable thing, and that philosophers are good; and that good men are useful, and wicked men useless: but then again we agreed that philosophers, so long as we have craftsmen, are useless, and that we always do have craftsmen. Has not all this been agreed?

Second Rival:: Yes, to be sure.

Socrates:: Then we agreed, it seems, by your account—if philosophizing means having knowledge of the arts in the way you describe—that philosophers are wicked and useless so long as there are arts among mankind. But I expect they are not so really, my friend, and that philosophizing is not just having a concernment in the arts or spending one's life in meddlesome stooping and prying and accumulation of learning, but something else; because I imagined that this life was actually a disgrace, and that people who concerned themselves with the arts were called sordid. But we shall know more definitely whether this statement of mine is true, if you will answer me this: What men know how to punish horses rightly? Is it those who make them into the best horses, or some other men?

Second Rival:: Those who make them into the best horses.

Socrates:: Or again, is it not the men who know how to make dogs into the best dogs that know also how to punish them rightly?

Second Rival:: Yes.

Socrates:: Then it is the same art that makes them into the best dogs and punishes them rightly?

Second Rival:: It appears so to me.

Socrates:: Again, is the art that makes them into the best ones and punishes them rightly the same as that which knows the good and the bad ones, or is it some other?

Second Rival:: The same.

Socrates:: Then in the case of men also will you be prepared to agree that the art which makes them into the best men is that which punishes them rightly and distinguishes the good and the bad ones?

Second Rival:: Certainly.

Socrates:: And that which does this to one, does it also to many, and that which does it to many, does it also to one?

Second Rival:: Yes.

Socrates:: And so it is also with horses and everything else?

Second Rival:: I agree.

Socrates:: Then what is the knowledge which rightly punishes the licentious and law-breaking people in our cities? Is it not judicature?

Second Rival:: Yes.

Socrates:: And is it any other art than this that you call justice?

Second Rival:: No, only this.

Socrates:: And that whereby they punish rightly is that whereby they know the good and bad people?

Second Rival:: It is.

Socrates:: And whoever knows one will know many also?

Second Rival:: Yes.

Socrates:: And whoever does not know many will not know one?

Second Rival:: I agree.

Socrates:: Then if one were a horse, and did not know the good and wicked horses, would one not know which sort one was oneself?

Second Rival:: I think not.

Socrates:: And if one were an ox and did not know the wicked and good oxen, would one not know which sort one was oneself?

Second Rival:: That is so.

Socrates:: And so it would be, if one were a dog?

He agreed.

Well now, when one is a man, and does not know the good and bad men, one surely cannot know whether one is good or wicked oneself, since one is a man also oneself?

He granted this.

And is “not knowing oneself” being temperate, or not being temperate?

Second Rival:: Not being temperate.

Socrates:: So “knowing oneself” is being temperate?

Second Rival:: I agree.

Socrates:: So this is the message, it seems, of the Delphic inscription—that one is to practise temperance and justice.

Second Rival:: It seems so.

Socrates:: And it is by this same art that we know also how to punish rightly?

Second Rival:: Yes.

Socrates:: Then that whereby we know how to punish rightly is justice, and that whereby we know how to distinguish our own and others quality is temperance?

Second Rival:: It seems so.

Socrates:: Then justice and temperance are the same thing?

Second Rival:: Apparently.

Socrates:: And further, it is thus, you know, that cities are well ordered—when the wrongdoers pay the penalty.

Second Rival:: That is true.

Socrates:: Hence this is also statecraft.

He concurred.

Again, when one man governs a city rightly, is he not called a despot and king?

Second Rival:: I agree.

Socrates:: And he governs by a kingly and despotic art?

Second Rival:: That is so.

Socrates:: And these arts are the same as the former?

Second Rival:: Apparently.

Socrates:: Again, when a man singly governs a house aright, what is he called? Is he not a house-manager and master?

Second Rival:: Yes.

Socrates:: Then would he also govern his house well by justice, or by some other art?

Second Rival:: By justice.

Socrates:: Hence they are all the same, it seems,—king, despot, statesman, house-manager, master, and the temperate man and the just man; and it is all one art,—the kingly, the despotic, the statesman's, the master's, the house-manager's, and justice and temperance.

Second Rival:: It is so, apparently.

Socrates:: Then, if it is disgraceful in the philosopher to be unable, when a doctor speaks about the sick, either to follow his remarks or to contribute anything of his own to what is being said or done, and to be in the same case when any other of the craftsmen speaks, is it not disgraceful that he should be unable, when it is a judge or a king or some other of the persons whom we have just instanced, either to follow their words or contribute anything to their business?

Second Rival:: It must indeed be disgraceful, Socrates, to have nothing to contribute to subjects of such great importance!

Socrates:: Are we then to say that in these matters also he is to be an all-round athlete, a second-rate man, taking the second place in all the subjects of this art—he, the philosopher—and is to be useless so long as there is one of these persons; or that, first of all, he is to entrust his own house to nobody else and is not to take the second place in it, but is himself to judge and punish rightly, if his house is to be well managed?

He granted me that it must be so.

Secondly, I presume, whether his friends entrust him with an arbitration, or the state charges him to determine or judge any matter, it is disgraceful for him, my good friend, in such cases, to be found in the second or third place, and not to lead?

Second Rival:: I agree.

Socrates:: Hence we see, my excellent sir, that philosophizing is very far from being much learning and that affair of busying oneself with the arts.

On my saying this the cultivated youth was silent, feeling ashamed for what he had said before, while the unlearned one said it was as I stated; and the rest of the company praised the argument.

## Rival Lovers

Translated by Jeffrey Mitscherling.

PERSONS OF THE DIALOGUE.

Socrates, and two anonymous rivals.

Socrates:: I walked into the school of Dionysus the grammarian and saw there some extremely attractive young men of good family; their lovers were there too. Two of the boys happened to be arguing about something, but I couldn't quite make out what it was. They appeared, however, to be arguing about Anaxagoras or Oenopides; in any event, they appeared to be drawing circles and holding their hands at angles to depict certain astronomical inclinations, and they were very serious about it. And I— I'd sat down next to the lover of one of them—I nudged him with my elbow and asked him what it could be that the boys were arguing about so seriously and said, "It must be something important and admirable for them to be putting such serious effort into it."

First Rival:: "What?! Important and admirable? Those guys are just babbling about things up in the sky and talking philosophical nonsense."

Socrates:: Astonished at his reply, I asked him, "Young man, does the pursuit of philosophy seem to you to be contemptible? Why do you speak of it so harshly?"

And the other one—a rival lover of the boy, you see, happened to be sitting next to him—the other one heard my question and his reply and said;

Second Rival:: "You're wasting your time, Socrates, asking him whether he thinks philosophy is a contemptible pursuit. Don't you realize that he's spent his whole life wrestling, stuffing himself and sleeping? How could you expect him to give any answer other than that philosophy is contemptible?"

Socrates:: Of the two lovers, this one spent all his time pursuing the liberal studies, while the other, the one he'd just insulted, spent all his time on athletics. And it seemed to me that I ought to leave off questioning the one I'd just asked—as he didn't claim to be any good with words, but only with deeds—and instead direct my questions to the one who claimed to be the wiser, on the chance that I might somehow be able to benefit from him.

So then  I said, "My question was addressed to everybody, and if you think you can give a better answer, then I'll ask you the same thing: do you think the pursuit of philosophy is admirable, or not?"

At about this point in our conversation, the two boys overheard us and fell silent, and, putting aside their argument, came over to listen to us. Now, I don't know what their lovers were feeling, but I was struck senseless—as always happens to me when I'm around beautiful young men. It did seem to me, however, that the other lover was struggling no less than I was. And yet he did manage to answer me, and in a very self-important manner.

Second Rival:: "Socrates, if I ever came to regard philosophy as contemptible, I would no longer consider myself a human being, nor anybody else who felt that way!"

Socrates:: As he said this he gestured toward his rival and raised his voice so that his young favorite would be sure to get the message.

"So, you think philosophy is an admirable pursuit."

Second Rival:: "Certainly,"

Socrates:: "Well then, do you think it's possible for someone to know whether a thing is admirable or contemptible unless he first knows what it is?"

Second Rival:: "No."

Socrates:: "So you know what philosophy is."

Second Rival:: “Certainly.”

Socrates:: “What is it, then?

Second Rival:: “What else but what Solon says it is? He says somewhere, ‘I continue to learn many things as I grow old.’ And I agree with him that someone who wants to pursue philosophy, whether young or old, should always be learning one thing or another in order to learn as many things as possible in life.”

Socrates:: Now at first I thought there was something to this, but after I thought it over a bit I asked him if he thought philosophy consisted in learning many things.

Second Rival:: “Precisely that.”

Socrates:: “And do you believe, that philosophy is only admirable, or that it’s also good?”

Second Rival:: “It’s also good, of course it is.”

Socrates:: “Do you regard this property as something peculiar to philosophy, or do you think it belongs to other things as well? For example, do you believe athletics to be not only admirable but also good, or don’t you?”

Very sarcastically, he gave me two answers:

Second Rival:: “To him I would say that it is neither. But with you, Socrates, I agree that it is both admirable and good, for I believe this to be correct.”

Socrates:: Then I asked him, “And do you think athletics consists in doing lots of exercise?”

Second Rival:: “Indeed, just as I think philosophy consists in learning many things.”

Socrates:: “Do you think that athletes desire anything other than what will bring about their good physical condition?”

Second Rival:: “Just that.

Socrates:: “And is it true, that it’s by doing lots of exercise that one gets into good physical condition?”

Second Rival:: “Obviously, for how could anyone get into good physical condition by doing only a little exercise?”

Socrates:: It seemed to me appropriate at this point to get the athlete going, so that he might offer me some assistance drawn from his experience in athletics. So I asked him, “How can you sit there so quietly, my friend, with this man saying these things? Does it seem to you too that people get into good physical condition by exercising a lot, or by exercising moderately?”

First Rival:: “As far as I’m concerned, Socrates, I thought even a pig would know, as they say, that it’s moderate exercise that produces good physical condition, so why shouldn’t a man who doesn’t sleep or eat know this, somebody who’s out of shape and scrawny from sitting around meditating?”

Socrates:: The boys were amused by what he said, and they snickered, while the other lover blushed.

And I said, “Well then, do you now grant that it’s neither lots of exercise nor a little, but a moderate amount, that produces good physical condition? Or do you want to fight out the argument against the two of us?”

Second Rival:: “With him I would very happily fight it out, and I’m sure that I would be able to support the claim I made, even if my position were far weaker than it is—for he’s no competition. But there’s no need to compete with you about my opinion. I agree that it’s not lots of athletics but a moderate amount that produces good physical condition in people.”

Socrates:: “And what about food? A moderate amount or a lot?”

He agreed about food as well.

And then I also made him agree that with everything else concerning the body the moderate is the most beneficial, neither a large nor a small amount; and he agreed with me about that.

“And what about the soul? Does it benefit most from having moderate or immoderate amounts of things administered to it?”

Second Rival:: “Moderate amounts.”

Socrates:: “And isn’t learning something that’s administered to the soul?”

He agreed.

“And so a moderate amount of learning is beneficial, but not a great deal of learning?”

He agreed.

“Now suppose we wanted to ask which exercises and which foods are moderate for the body; who would be the right man to ask?”

All three of us agreed that it would be either a doctor or an athletic trainer.

“And who would we ask about the moderate amount of seed to sow?”

The farmer, is what we agreed this time.

“And what about sowing and planting the seeds of learning in the soul? Suppose we wanted to ask which ones and how many were moderate; who would be the right man to ask?”

At this point we all found ourselves completely at a loss. So I asked them, in fun, “Since we’re all at a loss, would you like it if we asked these boys here? Or perhaps we’re ashamed to do that, like the suitors in Homer, who didn’t expect anybody else to be able to string the bow?”

At this point they seemed to me to be losing enthusiasm for the argument, so I tried a different approach, and I said, “What would you guess are the main sorts of subjects that a philosopher needs to learn, since he doesn’t need to learn them all, or even a lot of them?”

The wiser one now took up the question and said;

Second Rival:: “The most admirable and proper sorts of learning are those from which one derives the most fame as a philosopher, and one acquires the most fame by appearing to be an expert in all the skills, or if not in all of them, in most of the really important ones, learning as much of them as is proper for a free man— that is, their theory, not their actual practice.”

Socrates:: “Do you mean, something like in the building trade? You can buy a workman for five or six minas, but a master architect will cost you thousands of drachmas, and indeed there are few of them in all of Greece. Do you perhaps mean something like that?” He agreed that what I said was something like what he meant.

Then I asked him if it wasn’t impossible to learn even two of the skills so thoroughly, let alone several important ones.

Second Rival:: “You mustn’t think I’m saying, Socrates, that the philosopher needs to understand each skill as thoroughly as the man who makes it his profession. He needs to understand it only as far as is reasonable for a free and educated man, so that he can follow the explanations offered by the tradesman better than everyone else present, and can add his own opinion; that way, he always appears to be the most accomplished and the wisest of those present whenever the skills are discussed or practiced.”

Socrates:: But since I still wasn’t sure what he meant, I asked him, “Am I understanding what sort of man you suppose the philosopher to be? It seems to me that you mean someone like the pentathlon athletes who compete against runners or wrestlers. They lose to the latter in their respective sports and are runners-up behind them, but they place first among the other athletes and defeat them. Perhaps you're suggesting something along those lines, that philosophy produces this result in those who devote themselves to it. In knowledge of the skills, they rank behind those who place first, but as runners-up they remain superior to the rest; and so a man who has studied philosophy becomes a strong competitor in all subjects. You seem to be describing someone like that."

Second Rival:: "You appear to me, Socrates, to have just the right conception of the philosopher, when you compare him with the pentathlete. He is just the sort of man not to be enslaved to any one thing, nor to have worked anything out in such detail that, by concentrating on only that one thing, as do the tradesmen, he is left behind in all the others, but has touched on everything to a moderate extent."

Socrates:: After he'd offered this answer, I was eager to know exactly what he meant, so I asked him whether he supposed that good people were useful or useless.

Second Rival:: "Useful, surely, Socrates."

Socrates:: "So, if good people are useful, then bad people are useless?"

He agreed.

"Well then, do you think that philosophers are useful men, or not?"

He agreed that they were useful, and he added that he held them to be extremely useful.

"Let's see, then. Supposing what you're saying is true, when are these people, these runners-up, of any use to us? For it's obvious that the philosopher is inferior to each of the skilled professionals."

He agreed.

“And what about you?” I went on. “If it happened that you, or one of your friends about whom you cared a great deal, were to become sick, and you were looking for a cure, would you call that runner-up, the philosopher, to your house, or would you call the doctor?”

Second Rival:: “I’d call both.”

Socrates:: “No, don’t tell me you'd call both of them; tell me which you'd rather call first.”

Second Rival:: “No one would have any doubt, about calling the doctor first.”

Socrates:: “Well then, on a ship in stormy weather, to whom would you rather entrust you and your possessions, the pilot or the philosopher?”

Second Rival:: “I would prefer the pilot.”

Socrates:: “And isn’t it the same in every other case, that as long as there’s a tradesman, the philosopher is of no use?”

Second Rival:: “So it appears.”

Socrates:: “Then isn’t the philosopher actually useless to us? For surely we always have tradesmen. We agreed, however, that good men are useful, and bad men useless.”

He was forced to agree.

“So what follows? Should I question you further, or would that be rude?”

Second Rival:: “Ask whatever you like.”

Socrates:: “All I’m trying to do, is sum up what’s been said. It was something like this: we agreed that philosophy is admirable, that philosophers are good, that good men are useful, and that bad men are useless; on the other hand, we agreed that philosophers are of no use whenever there are tradesmen, and that tradesmen are always to be found. Isn't that what we agreed?"

Second Rival:: "It is indeed."

Socrates:: "We agreed then, it seems, at least according to your argument, that if philosophy consists, as you suggest, in knowledge of skills, then philosophers are bad and useless, as long as there are men with skills.

"But no, my friend, philosophers are not like that, and philosophy does not consist in stooping to a concern with skills nor in learning many things, but in something quite different—in fact, I thought that was actually dishonorable, and that people who pursued the skills were called vulgar. But we'll be able to see more clearly whether what I say is true if you will answer this: who understands how to discipline horses properly, those who make them better horses, or someone else?"

Second Rival:: "Those who make them better."

Socrates:: "And as it is with horses, so it is with every other animal?"

Second Rival:: "That's correct."

Socrates:: "Well then, aren't those who know how to make dogs better also those who know how to discipline them properly?"

Second Rival:: "Yes."

Socrates:: "Then it's the same skill which both makes better and properly disciplines?"

Second Rival:: "That's how it seems to me."

Socrates:: "Well then, is the skill that makes them better and properly disciplines them the same as that which distinguishes between the good ones and the bad ones, or is it a different skill?"

Second Rival:: "It's the same."

Socrates:: “And are you prepared to agree to this point concerning people, that the skill which makes them better is the same as that which disciplines them and that which distinguishes between the good ones and the bad?”

Second Rival:: “Certainly.”

Socrates:: “And a skill that can do this with one can also do it with many, and vice versa?”

Second Rival:: “Yes.”

Socrates:: “Now what kind of knowledge is it that properly disciplines the undisciplined and lawless people in cities? Is it not knowledge of the law?”

Second Rival:: “Yes.”

Socrates:: “Now is what you call justice the same as this or is it different?”

Second Rival:: “No, it’s the same.”

Socrates:: “Isn’t the knowledge used in disciplining people properly the same as that used in knowing the good ones from the bad?”

Second Rival:: “It’s the same.”

Socrates:: “And whoever has such knowledge with regard to one person will also have it with regard to many?”

Second Rival:: “Yes.”

Socrates:: “And whoever is ignorant with regard to many is also ignorant with regard to one?”

Second Rival:: “That’s correct.”

Socrates:: “So if one were a horse and didn’t know good horses from bad horses, then one also wouldn’t know what sort of horse one was oneself?”

Second Rival:: “That’s right.”

Socrates:: “And if one were an ox and didn’t know bad oxen from good ones, then one also wouldn’t know what sort of ox one was?”

Second Rival:: “Yes.”

Socrates:: “Likewise if one were a dog?”

He agreed.

“Well then, if a human being didn’t know good human beings from bad ones, wouldn’t he fail to know whether he himself was good or bad, since he is in fact a human being?”

He conceded that.

“And not knowing yourself, is that being sensible, or is it not being sensible?”

Second Rival:: “Not being sensible.”

Socrates:: “Then knowing yourself is being sensible?”

Second Rival:: “It is.”

Socrates:: “So it is this, it seems, which is prescribed in the Delphic inscription, to exercise good sense and justice.”

Second Rival:: “It would seem so.”

Socrates:: “And this is how we understand how to discipline properly?”

Second Rival:: “Yes.”

Socrates:: “So the way we understand how to discipline properly is justice, and the way we evaluate ourselves and others is good sense.”

Second Rival:: “It would seem so.”

Socrates:: “So justice and good sense are one and the same.”

Second Rival:: “Apparently.”

Socrates:: “And isn’t it also the case that cities are well governed when the unjust are punished?”

Second Rival:: “That’s true.”

Socrates:: “And this is political skill.”

He agreed.

“Well then, when one man properly governs a city, isn’t he called a tyrant or a king?”

Second Rival:: “He is.”

Socrates:: “And isn’t it by means of kingly or tyrannical skill that he governs?”

Second Rival:: “That’s right.”

Socrates:: “These skills, then, are the same as the previous ones?”

Second Rival:: “So they seem.”

Socrates:: “Well then, when one man governs a household properly, what’s the name for him? Isn’t it ‘head of the household’, and ‘master of slaves’?”

Second Rival:: “Yes.”

Socrates:: “And isn’t it also by means of justice that he governs his household well, or is it through some other skill?”

Second Rival:: “It’s through justice.”

Socrates:: “So they are all the same, it seems: king, tyrant, politician, head of the household, master of slaves, sensible man, and just man. And they are all one skill: kingly, tyrannical, political, managerial and household skills, and justice and good sense.”

Second Rival:: “So it seems.”

Socrates:: “Now if it is contemptible for the philosopher to be unable to follow what the doctor says when he talks about sick people or to add any opinion of his own regarding what’s being said or done, and to be in the same situation whenever any other tradesman does or says something—when it’s a judge speaking or a king or any of those others we’ve just been talking about—wouldn’t it be contemptible for him to be able neither to follow what is said nor to add his own opinion?”

Second Rival:: “How could it not be contemptible, Socrates, for him to be incapable of contributing an opinion concerning such matters?”

Socrates:: “So, are we to say that he needs to be a pentathlete and a runner-up in these areas as well? To begin with, surely he shouldn’t hand over control of his own household to anybody else or take second place in it, but should himself administer justice and discipline, if his household is to be well governed?”

He conceded this point to me.

“And furthermore, if his friends entrust him with the settling of some dispute, or if the city commissions him to investigate or pass judgment on something, wouldn’t it surely be contemptible in these cases, my friend, for him to appear second or third and not to take the lead?”

Second Rival:: “I think it would.”

Socrates:: “So for us to say, my friend, that philosophy consists in learning many things and busying oneself with skills, would be very far from the truth.”

When I said this, the wise fellow was ashamed at what he'd said before and fell silent, while the unlearned one said that I was right; and the others approved of what I’d said.

## **The Rivals.**

Translated by Mr. Sydenham.

*THE PERSONS OF THE DIALOGUE.*

SOCRATES, MAN OF LEARNING, MAN OF EXERCISE.

SCENE the SCHOOL of DIONYSIUS.

Socrates:: I went into the School of Dionysius the grammarian; and I there saw the comeliest and finest of our young gentry, accompanied by such as courted their esteem and friendship. Two of these youths happened at that time to be disputing: but what was the subject of their dispute I did not perfectly apprehend. There was reason however to suppose it related either to Anaxagoras or to Oenopides: for they appeared to be describing circles; and by holding their hands in an inclining and oblique portion, seemed to be representing, not in play, but with much seriousness, certain inclinations of the pole. Upon which, as I had seated myself next to an admirer of one of the young disputants, I moved him with my elbow to turn his face to me, and then asked him what point it was which engaged those two youths so earnestly in debate; adding, It must certainly be something of great importance, and a matter of fine speculation, that, on which they bellowed so serious an attention.

First Rival:: What call you great and fine? They are prating about things up in the sky, and trifle away their time in philosophizing.

Socrates:: This answer of his seemed to me a strange one; and I said, Young man, do you then think it mean and dishonourable for a man to philosophize? or for what other reason do you speak so hardily of what they are employed about?

On my putting this question to him, another person, who happened to be a rival of his for the esteem of the youths I mentioned, and was therefore seated near us, having heard my question, with his answers to them, interposed, and said to me;

Second Rival:: It is unworthy of you, Socrates, to ask the opinion of this man, whether he thinks it mean and dishonourable to philosophize. Know you not him, that he has spent all his time in wrestling, cramming himself, and sleeping? What other answer then can you expect from him than this, that the study of philosophy is dishonourable and base.

Socrates:: Now the person, who thus spake to me, ye are to understand, employed his whole time in the improvement of his mind, and in the study of the arts and sciences: the other, whom he had vilified, spent his in the care and improvement of his body by the gymnic exercises. I therefore thought it proper to desist from putting my questions to him, this robust body of a man; seeing that he professed not to be well-practised in the arts of reasoning and discoursing, but in feats only of activity and strength: and I chose rather to interrogate and sift the other, who pretended to be the wiser man; in hopes that, if it were possible for me, I might receive from him some improvement in knowledge. Addressing myself therefore to him, I told him that I had proposed my question before all who heard me; and if you think yourself, said I, capable of giving me a better answer than that man, I repeat the same question to you, Whether you think it honourable, or not, to philosophize?

About the time we had proceeded thus far in our conversation, the two youths, overhearing what we said, became silent; and breaking off the dispute between themselves, gave their attention to us. Now, what were the sentiments of their professed friends and admirers on this occasion I know not; but, for my own part, I was struck with admiration at the scene; as I always am, when I see such a disposition in the young and handsome. One of them, however, the person to whom I had proposed my question last, seemed to me no less charmed with it than myself: not but that he answered with a free and open air, as if ambitious only of having the preference and the praise given to his own studies.

Hinting at his Rival, and raising his voice, that he might be heard by the youths, of whose esteem both of them were emulous, replied.

Second Rival:: Should I ever, Socrates, come to think meanly of philosophy, I should no longer deem myself a human being; as I deem not any person, who entertains such a sentiment worthy of that character.

Socrates:: You then, think highly of philosophy.

Second Rival:: Most highly.

Socrates:: But what? Do you suppose it possible for a man to know the true dignity of any thing, to know whether it be base or honourable, unless he first knows what the nature of that thing is?

Second Rival:: I do not.

Socrates:: Know you then, what it is to philosophize?

Second Rival:: Perfectly well.

Socrates:: What is it then?

Second Rival:: What other thing than that described by Solon in these verses.

> To various knowledge, I had gain'd before.
> I add each year variety of more;
> And thus old-age increases still my store.

Agreeably to this is my opinion that the man, who would philosophize, ought to be always, in his old-age as well as in his youth, still adding to his stock of knowledge by some new acquisition; making use of life to learn as many things as possible.

Socrates:: Now this account of his seemed to me, at first appearance, to have some weight in it: but after reviewing it a little within myself, I asked him, whether philosophy in his judgment consisted in multiplicity of knowledge.

Second Rival:: That is entirely my opinion.

Socrates:: And is it your opinion too, that philosophy is only a becoming and an honourable study? or do you deem it also good and beneficial?

Second Rival:: Good and beneficial in the highest degree.

Socrates:: Does this appear to you the peculiar property of philosophy? or think you that other studies partake of the same advantage? For instance, love of the gymnic exercises, do you deem it not only honourable and becoming a man, but good for him also? or think you otherwise?

To this question, he facetiously replied;

Second Rival:: I have two answers to give. To this man here I would say, It is neither: but to you, Socrates, I acknowledge it to be both, to be good for a man, as well as becoming him.

Socrates:: Then I asked him, whether in these exercises he thought the undergoing much toil to be the same thing with love of exercise.

Second Rival:: By all means; just as in philosophizing, I take the acquisition of much knowledge to be the same thing with philosophy.

Socrates:: Do you think then, that the lovers of those exercises have any other view than to acquire a good habit of body?

Second Rival:: No other.

Socrates:: Is a good habit of body then, acquired by using much exercise, and undergoing much toil and labour in it?

Second Rival:: Certainly: for how should a man, who labours little, or uses little exercise, acquire a good habit of body.

Socrates:: Here I thought it most advisable to call in to my assistance our champion for the gymnastic art, on account of his experience. I therefore said to him, How can you sit silent, my friend, and hear this man talk so strangely? Are you of opinion too, that a good habit of body is acquired through great toil, labour, and exercise, and not rather by means of such as are moderate?

First Rival:: For my part, Socrates, I was thinking that I had an evident proof before my eyes, at this very time, to confirm the truth of that well-known saying, that moderate labour is best for the body.

Socrates:: How so?

First Rival:: Do I not see him there, in want of sleep and good nourishment, scarce able to turn his head, and worn away to a shadow with much study and hard labour of the brain?

Socrates:: At this sarcasm, the youths, who heard him, were pleased, and could not refrain from laughing; a circumstance which put our great student a little out of countenance.

Socrates:: Well; do you now agree with us, that a good habit of body is procured neither by much nor by little labour, but by that only which is moderate? or will you dispute the point with us, one against two?

Second Rival:: Against him, I would enter the lists with much pleasure, well assured that I should be able to support my side of the argument, even though it were worse and weaker than it is: for in such combats, he is a mere nothing. But against you, Socrates, I would not choose to contend for any kind of paradox: and therefore I admit, that not violent but moderate exercise procures men a good habit of body.

Socrates:: And how is it with respect to food? Is it much or moderate, which contributes to the same end?

Second Rival:: With respect to food also I acknowledge moderation to be best.

Socrates:: And thus I led him on through all other things which had relation to the body; urging him to own, that it was best to be moderate in the use of them all, and neither to exceed, nor to be deficient: and all this he granted me.

Well; and how is it with respect to the soul? Is this benefited most by a moderate or by an immoderate quantity of those things which it receives?

Second Rival:: By a moderate quantity.

Socrates:: Is not learning one of the things administered to the soul?

It was admitted.

Most beneficial therefore to the soul is moderate learning, and not an immense heap.

He granted it.

Who now is the proper person for us to advise with concerning the body; would we know, what kinds and degrees of exercise are moderate, and what is a moderate quantity of food? We must all three of us agree, that it is either a physician or a master of exercise. And concerning corn, what is a moderate and due quantity for sowing, we must agree, that the husbandman is the fittest person to be consulted. But concerning the soul, and the discipline or learning to be there sown and planted, of whom ought we to inquire, what measure and what share is to be accounted moderate?

We were here all of us at a stand. Upon which, in a jocular way, I said since we are at a loss, ourselves, what to answer, will you con sent to ask the opinion of these youths here on the point in question? But perhaps we are above that; like the wooers of Penelope, of whom Homer says, that they disdained to suffer any to draw the bow beside themselves.

When they now seemed to be giving up the argument, in despair of coming to a conclusion; I bethought myself how to put the inquiry on another footing. And accordingly I proposed this question, What sorts of learning, to the best of our conjecture, does it become a philosopher to acquire principally? since we have already found, that it is not all sorts, nor even many.

To this my learned companion answered;

Second Rival:: That the finest sorts of learning, and the most becoming to the philosophic character, were those which give a man the highest reputation as a philosopher: and this reputation that man would gain, who should appear conversant in all the arts and sciences. at least in as many as possible, especially in those which are held in esteem the most, and are the most deserving of it; the man, who having studied these arts, as far as is requisite to a liberal education, hath acquired so much knowledge in them, as depends on taste and judgment, not on the mechanical exercise of any, or on the labour of the hands.

Socrates:: Do you mean in the same way, as it is in building? For in that affair, if you have occasion for artificers and artists, a bricklayer or a carpenter you may hire for five or six minæ, but an architect will cost you above ten thousand drachmas, so few of these are to be found in all Greece. Do you mean to distinguish in some such way as this?

He admitted such to be his meaning.

On this, I asked him, if it was not impossible for one man to be a perfect master of any two arts, much more to attain a mastership in any considerable number, especially of such as are great and excellent.

Second Rival:: Do not imagine, Socrates, that I mean, it is requisite for a philosopher to have so thorough a knowledge of any art, as the man who makes it his profession; but to be able, as becomes a gentleman of a liberal education, to understand what the artist says, when he is speaking of his work, better than any of the bystanders; and to interpose judiciously his own advice about the workmanship: so as always to appear, in every conversation relating to the arts, and in criticising on every performance of the artists, to have a finer taste, and more knowledge, than any other person present.

Socrates:: Then I, for I was not yet quite certain what he meant, said to him thus; Do I conceive rightly, what kind of man you call a philosopher? You seem to me to have described such a man, as the general combatants are in the Olympic games, compared with the racers or the wrestlers. For in each kind of competition, those universalists fall short of the respective excellencies of the particular professors, and are but the next best men to them in their own way, but at the same time are superior to the professors of the other kind, and easily get the better of these, whose excellence lies only in the other way. Such a degree of skill as this, you may perhaps mean, that the study of philosophy begets in those who are addicted to it; a degree, by which they fail of supreme excellence in knowledge of the arts, but attaining an excellence which is next to the supreme, they excel all men except the artists: so that he, who has studied philosophy, is, in every employment or business of life, a second-rate man, and below the pitch of perfection. Some such man, I think, as this you point out to us for a philosopher.

Second Rival:: You seem, Socrates, to have a just conception of what belongs to a philosopher, in likening him to a general combatant in the public games. For he is absolutely such a man, as not to be a slave to any thing; nor has he studied any branch of knowledge so accurately and minutely, as, through entire attention to that one, to be deficient in all the rest, like vulgar artists, and the professors of one only science; but he has bestowed a competent measure of application on them all.

Socrates:: After he had made me this answer, I, desirous he should explain himself more fully and clearly, asked him, whether he thought the good, in any way of life, to be useful men, or useless.

Second Rival:: Useful, without doubt, Socrates.

Socrates:: If then the good are useful, are not the bad useless?

He agreed.

Well then, do you take philosophers to be useful men, or not?

He acknowledged they were useful: and not only so, said he;

Second Rival:: But I account them the most useful of all men.

Socrates:: Come now, let us examine whether this be true. How can they be even of any use at all, these second-rate men? For it is plain, that your philosopher is inferior in every art or science to the man who is a perfect master of it.

This he acknowledged.

Well; suppose now, that you yourself, or any friend of yours, for whom you have a great regard, should happen to fall sick, I ask you, whether, with a view to the recovery of health, you would send for that second-rate man, the philosopher; or whether you would send for a physician.

Second Rival:: For both of them.

Socrates:: I ask you not that; but which of the two you would send for in the first place, or in preference to the other.

Second Rival:: No man would doubt, in such a case, to give the preference to the physician.

Socrates:: And how in the case of a storm at sea? to whom rather would you choose to intrust yourself and your concerns; to a pilot, or to a philosopher?

Second Rival:: To a pilot, I for my part.

Socrates:: And thus it is in every other affair; so long as a man, professing skill in it, is to be found, a philosopher is of no use.

Second Rival:: Thus it appears.

Socrates:: A philosopher therefore, we have discovered to be a man entirely useless; since it is clear, that in every affair of life, men, who profess skill therein, are to be found. And we agreed before, that the good in any way were the useful men, and the bad were the useless.

He was forced to own it.

But now, that we have carried our reasoning to this length, may I go on with my questions? or would it not be rather unpolite and rude to push the point further?

Second Rival:: Ask any questions that you please.

Socrates:: Nay; I desire nothing else, than to recapitulate what has been already said. The present state of the argument then is this: We acknowledged, that philosophy was an honourable study, and professed to be philosophers ourselves: we acknowledged that philosophers were, in their way, good as well as honourable; that the good, in any way, were useful men, and the bad useless. On the other hand, we acknowledged that philosophers were useless, whenever we could find good workmen and men of skill of every kind; and that good workmen of every kind, professors of the several sciences, and practisers of the several arts, were always to be found. For was not all this granted?

Second Rival:: It was.

Socrates:: We grant therefore, agreeably to those our own concessions, that, if philosophy be, what you say it is, knowledge in the arts and sciences, the spending our time in philosophizing is then a bad and useless way of life, and philosophers are useless men, and good for nothing. But what, my friend, if their case be otherwise? what, if the philosophic life consist not in studying the arts; nor in busying a man's self about a multitude of experiments, and continually poring over them; nor in acquiring a multiplicity of knowledge; but in something else? For I thought, that such employments were accounted dishonourable and base, and that those who followed them were called, by way of reproach, dirty mechanics and bellows-blowers. Whether my suspicions are just or not, will, evidently appear, if you but answer to the following questions.

What men are those who understand how to give proper chastisement to vicious horses? are they those very men who can give a horse all the improvement he is capable of; or are they a different sort of men?

Second Rival:: The very same men.

Socrates:: And those who are able to improve the useful qualities of a dog, do not the same men know how properly to chastise dogs which are vicious?

Second Rival:: They do.

Socrates:: By one and the same art then, are those animals improved and properly chastised.

Second Rival:: I agree.

Socrates:: Well; but is it also the same art, through which a man distinguishes amongst those animals the good from the vicious? or is this an art different from that, through which they receive improvement and due correction?

Second Rival:: It is still the same art.

Socrates:: Will you admit then, that this holds true with regard to the human species in like manner; that the art, whatever it be, by which men are made to excel in virtue, is the same art with that through which bad men are properly chastised, and the same also with that though which the good and the bad are known and distinguished one sort from the other?

Second Rival:: By all means.

Socrates:: Now the art, which gives this power and this knowledge with respect to one man, has it the same efficacy with respect to many men? And the art of thus managing and judging of many, has it the same abilities with respect to one?

Second Rival:: Certainly.

Socrates:: Is it so in the case of horses too and in all other cases after the same manner?

Second Rival:: Beyond a doubt.

Socrates:: Now what science is that, through which proper chastisement is given to the licentious and the lawless in civil states? Is it not the judicial science, that of judges and other magistrates?

Second Rival:: It is.

Socrates:: Is the science of justice any other than this science?

Second Rival:: No other.

Socrates:: And is it not through the same science that the good and the bad are both known?

Second Rival:: It was through the same science.

Socrates:: And the science through which one man is known, will give equal skill to know many men.

Second Rival:: True.

Socrates:: And whoever through want of this science, hath not the skill to know many, will be equally deficient in the knowledge of one.

Second Rival:: Right.

Socrates:: If a horse therefore, as being but a horse, be incapable of knowing and distinguishing between good and bad horses, must he not be ignorant of which sort he himself is?

Second Rival:: Certainly.

Socrates:: And if an ox being but an ox, knows not how to distinguish and judge of good and bad oxen, is it possible that he can know of which sort he is himself?

Second Rival:: Certainly not.

Socrates:: And is not the same thing certain with respect to the ignorance of dogs?

Second Rival:: It is.

Socrates:: And how is it in the case of men? When a man knows not who are the good men and who the bad, is he not at the same time ignorant of himself, and unable to tell whether he is good or bad, in as much as he also is a man?

He allowed it to be true.

Now to be ignorant of oneself is it to be sound of mind, or to be insane?

Second Rival:: To be insane.

Socrates:: To know oneself therefore is to be sound of mind.

Second Rival:: I agree.

Socrates:: This then should seem to be the precept contained in the Delphic inscription; it is to exercise wisdom and justice.

Second Rival:: It should seem so.

Socrates:: And through the same science we know how to correct others duly and rightly.

Second Rival:: True.

Socrates:: Now that, through which we have this knowledge, is the science of justice; and that, through which a man has the knowledge of himself, and of other men, is soundness of mind, or wisdom.

Second Rival:: It appears so to be.

Socrates:: The science therefore of justice and the science belonging to every sound mind, wisdom, are one and the same science.

Second Rival:: It appears to be so proved.

Socrates:: Again, by the same means are civil states well governed; that is, when the doers of injustice are duly punished.

Second Rival:: Right.

Socrates:: The same science therefore, is the science of politics.

He assented.

And when a civil state is thus well governed by one man, is not that man called either a tyrant, or a king?

Second Rival:: He is.

Socrates:: Does he not thus govern through the kingly art, or the tyrannic?

Second Rival:: He does.

Socrates:: These arts therefore, the kingly and the tyrannic, are the same with that art and science just before mentioned.

Second Rival:: So they appear.

Socrates:: Well, and when a family is in like manner well governed by one man, what is this man called? Either the steward, of the household, or else the master of the family; is he not?

Second Rival:: He is.

Socrates:: Whether is it the science of justice now which enables this man also to govern well his family? or is it any other art or science?

Second Rival:: The science of justice only.

Socrates:: The same kind of person, it seems then, is a king, a tyrant, a politician a steward of a household, a lord and master of a family, a man of wisdom, and a just and good man. And one and the same art is the kingly, the tyrannic, the political, the despotic, and the œconomical, the same with the science of justice, and the same with wisdom.

Second Rival:: So it appears.

Socrates:: Well then: is it a shame for a philosopher not to understand what the physician says, when speaking of his patient's malady; nor to be able to give a judicious opinion, himself, upon the case? and so with regard to other artists and their arts, is it a shame for him to be ignorant? and yet, when a magistrate, or a king, or any of the others, just now enumerated, is speaking of the affairs or functions of his office, is it not shameful in a philosopher not to understand perfectly what any of these persons say, nor to be able to give good counsel himself in such cases?

Second Rival:: How, Socrates, can it be otherwise than shameful to him, to have nothing pertinent to say on subjects so important?

Socrates:: Are we of opinion then, that in these cases it becomes a philosopher to be like a general combatant, a second-rate man, to come next behind all who have these offices, and to be useless, so long as any such are to be found? or do we hold quite the contrary, that he ought, in the first place, not to commit the management of his domestic affairs to another man, nor to come next behind some other in his own house; but that he ought himself to be the ruler, corrector, and impartial judge, if he would have right order and good government at home?

This he granted me.

And besides this, if his friends should submit their differences to his arbitration, or if the state should refer to his judgment the decision of any controverted point, is it not a shame that he should appear in such cases to be but a second or a third rate man, and not to have the lead?

Second Rival:: I must own myself of that opinion.

Socrates:: Philosophizing, therefore, my friend, is a thing quite different, we find, from the acquiring a multiplicity of various knowledge, or the being busied in the circle of arts and sciences.

When I had said this, the Man of Learning, ashamed of what he had before asserted, was silent: the man without learning said, I had made it a clear case: and the rest of our audience gave their assent and approbation.

THE END OF THE RIVALS.

# Symposium

When you read, do you parse what you read in accordance with the perceptible and the intelligible? What is Love? Is Love just one thing? If it is just one thing, what are its two parts? Is it defined by what we want, or does it have a factual biological definition? How does Plato define his topic through the individual speakers? Does he divide the intelligible from the perceptible through different speakers? Why did Plato introduce two people called masters of Love, Agathon and Socrates? Why were they put into the order of last, Agathon preceding Socrates? Etc.

How can you place both Socrates' discourse as the intelligible and Alcibiades testimony as a perceptible? What does the ending about comedy and tragedy have to do with this discourse?

In this dialog Plato demonstrates, once again, that he was truly a master of metaphor. The Bible states that Eve, a woman, was the mother of all living, does this have anything at all with Plato's recourse to Diotima? Does Diotima explain that love is no more than the desire to have life and have it more abundantly? What metaphor would you use to denote a life support system of the body?

# Plato’s Symposium

Translated by Benardete.

Apollodorus, Friend Of Apollodorus—Glauco, Aristodemus,
Socrates, Servant, Agatho, Pausanias, Aristophanes,
Eryximachus, Phaedrus, Diotima, Alcibiades.

Apollodorus:: In my own opinion, I am not unprepared for what you ask about; for just the other day, when I was on my way up to town from my home in Phaleron, one of my acquaintances spotted me a long way off from behind and called, playing with his call:

Glaucon:: Phalerian! You there, Apollodorus, aren't you going to wait?

Apollodorus:: And I stopped and let him catch up.

Glaucon:: Apollodorus, why, it was just recently that I was looking for you; I had wanted to question you closely about Agathon's party, the one at which Socrates, Alcibiades, and the others were then present at dinner together, to question you about the erotic speeches. What were they? Someone else who had heard about the party from Phoenix the son of Philippus was telling me about it, and he said that you too knew. As a matter of fact, there wasn't anything he could say with certainty. So you tell me, for it is most just that you report the speeches of your comrade. But first tell me, were you yourself present at this party or not?

Apollodorus:: It really does seem as if there were nothing certain in what your informant told you, if you believe that this party which you are asking about occurred so recently that I too was present.

Glaucon:: That is indeed what I believed.

Apollodorus:: But how could that be, Glaucon? Don't you know that it has been many years since Agathon resided here, but that it is scarcely three years now that I have been spending my time with Socrates and have made it my concern on each and every day to know whatever he says or does? Before that, I used to run round and round aimlessly, and though I believed I was doing something of importance, I was more miserable than anyone in the world (no less than you are at this moment), for I believed that everything was preferable to philosophy.

Glaucon:: Don't mock me now, but tell me when this party did occur.

Apollodorus:: When we were still boys, at the time of Agathon's victory with his first tragedy, on the day after he and his choral dancers celebrated the victory sacrifice.

Glaucon:: Oh, a very long time ago, it seems. But who told you? Was it Socrates himself?

Apollodorus:: No, by Zeus, but the same one who told Phoenix. It was a certain Aristodemus, a Kydathenean, little and always unshod. He had been present at the party and, in my opinion, was the one most in love with Socrates at that time. Not, however, that I have not asked Socrates too about some points that I had heard from Aristodemus; and Socrates agreed to just what Aristodemus narrated.

Glaucon:: Why, then, don't you tell me? The way to town, in any case, is as suitable for speaking, while we walk, as for listening.

Apollodorus:: So as we walked, we talked together about these things; and so, just as I said at the start, I am not unprepared. If it must be told to you as well, that is what I must do. As for me, whenever I make any speeches on my own about philosophy or listen to others, apart from my belief that I am benefited, how I enjoy it! But whenever the speeches are of another sort, particularly the speeches of the rich and of moneymakers, your kind of talk, then just as I am distressed, so do I pity your comrades, because you believe you are doing something of importance, but in fact it's all pointless. And perhaps you, in turn, believe that I am a wretch; and I believe you truly believe it. I, on the other hand, do not believe it about you, I know it.

Friend:: You are always of a piece, Apollodorus, for you are always slandering yourself and others; and in my opinion you simply believe that, starting with yourself, everyone is miserable except Socrates. And how you ever got the nickname Softy, I do not know, for you are always like this in your speeches, savage against yourself and others except Socrates.

Apollodorus:: My dearest friend, so it is plain as it can be, is it, that in thinking this about myself as well as you I am a raving lunatic?

Friend:: It is not worthwhile, Apollodorus, to argue about this now; just do what we were begging you to do; tell what the speeches were.

Apollodorus:: Well, they were somewhat as follows, but I shall just try to tell it to you from the beginning as Aristodemus told it.

He said that Socrates met him freshly bathed and wearing fancy slippers, which was not Socrates usual way, and he asked Socrates where he was going now that he had become so beautiful.

Socrates:: To dinner at Agathon's, for yesterday I stayed away from his victory celebration, in fear of the crowd, but I did agree to come today. It is just for this that I have got myself up so beautifully, that beautiful I may go to a beauty. But you, how do you feel about going uninvited to dinner? Would you be willing to do so?

Aristodemus:: I shall do whatever you say.

Socrates:: Then follow so that we may change and ruin the proverb, the good go to Agathon's feasts on their own. Homer, after all, not only ruined it, it seems, but even committed an outrage [hybris] on this proverb; for though he made Agamemnon an exceptionally good man in martial matters, and Menelaus a soft spearman, yet when Agamemnon was making a sacrifice and a feast, he made Menelaus come to the dinner uninvited, an inferior to his better's.

Apollodorus:: He said that when he heard this he said;

Aristodemus:: Perhaps I too shall run a risk, Socrates, perhaps it is not as you say, but as Homer says, a good-for-nothing going uninvited to a wise man's dinner. Consider the risk in bringing me. What will you say in your defense? For I shall not agree that I have come uninvited but shall say that it was at your invitation.

Socrates:: With the two of us going on the way together we shall deliberate on what we shall say. Well, let us go.

Apollodorus:: He said that once they had finished their conversation along these lines, they went on. And as they were making their way Socrates somehow turned his attention to himself and was left behind, and when Aristodemus waited for him, he asked him to go on ahead. When Aristodemus got to Agathon's house, he found the door open, and he said something ridiculous happened to him there. Straight off, a domestic servant met him and brought him to where the others were reclining, and he found them on the point of starting dinner. So Agathon, of course, saw him at once, and said;

Agathon:: Aristodemus, you have come at a fine time to share a dinner. If you have come for something else, put it off for another time, as I was looking for you yesterday to invite you but could not find you. But how is it that you are not bringing our Socrates?

Aristodemus:: And I turn around and do not see Socrates following anywhere. So I said that I myself came with Socrates, on his invitation to dinner here.

Agathon:: It is a fine thing for you to do, but where is he?

Aristodemus:: He was just coming in behind me. I am wondering myself where he might be.

Agathon:: Go look, boy, and bring Socrates in. And you, Aristodemus, lie down beside Eryximachus.

Apollodorus:: And he said the boy washed him so he could lie down; and another of the boys came back to report;

Boy:: Your Socrates has retreated into a neighbor's porch and stands there, and when I called him, he was unwilling to come in.

Agathon:: That is strange. Call him and don't let him go.

Aristodemus:: No, no, leave him alone. That is something of a habit with him. Sometimes he moves off and stands stock still wherever he happens to be. He will come at once, I suspect. So do not try to budge him, but leave him alone.

Agathon:: Well, that is what we must do, if it is your opinion. Well now, boys, feast the rest of us. Though you always serve in any case whatever you want to whenever someone is not standing right over you, still now, in the belief that I, your master, as much as the others, has been invited to dinner by you, serve in such a way that we may praise you.

Apollodorus:: After this, they dined; but Socrates did not come in, and though Agathon often ordered that Socrates be sent for, Aristodemus did not permit it. Then Socrates did come in, he had lingered as long as was usual for him, when they were just about in the middle of dinner. Then he said that Agathon, who happened to be lying down at the far end alone, said;

Agathon:: Here, Socrates, lie down alongside me, so that by my touching you, I too may enjoy the piece of wisdom that just occurred to you while you were in the porch. It is plain that you found it and have it, for otherwise you would not have come away beforehand.

Apollodorus:: And Socrates sat down and said;

Socrates:: It would be a good thing, Agathon, if wisdom were the sort of thing that flows from the fuller of us into the emptier, just by our touching one another, as the water in wine cups flows through a wool thread from the fuller to the emptier. For if wisdom too is like that, then I set a high price on my being placed alongside you, for I believe I shall be filled from you with much fair wisdom. My own may turn out to be a sorry sort of wisdom, or disputable like a dream; but your own is brilliant and capable of much development, since it has flashed out so intensely from you while you are young; and yesterday it became conspicuous among more than thirty thousand Greek witnesses.

Agathon:: You are outrageous, Socrates. A little later you and I will go to court about our wisdom, with Dionysus as judge, but now first attend to dinner.

Apollodorus:: After this, he said, when Socrates had reclined and dined with the rest, they made libations, sang a song to the god and did all the rest of the customary rites, and then turned to drinking. Then Pausanias, he said, began to speak somewhat as follows.

Pausanias:: All right, men. What will be the easiest way for us to drink? Now I tell you that I am really in a very bad way from yesterday's drinking, and I need a rest. I suspect many of you do too, for you were also here yesterday. So consider what would be the easiest way for us to drink.

Aristophanes:: That is a good suggestion, Pausanias, to arrange our drinking in some easier way, for I too am one of yesterday's soaks.

Apollodorus:: Eryximachus, he said, the son of Akoumenos, heard them out and then said;

Eryximachus:: What a fine thing you say. But I still have need to hear from one of you, from Agathon, how set he is on heavy drinking.

Agathon:: Not at all, nor do I have the strength.

Eryximachus:: We seem to be in luck, myself, Aristodemus, Phaedrus, and those here, if you who have the greatest capacity for drink have now given up, for we are always incapable. And I leave Socrates out of account, as he can go either way, he will be content with whatever we do. Now, since in my opinion none of those present is eager to drink a lot of wine, perhaps I should be less disagreeable were I to speak the truth about what drunkenness is. For I believe this has become quite plain to me from the art of medicine. Drunkenness is a hard thing for human beings; and as far as it is in my power, I should neither be willing to go on drinking nor to advise another to do so, particularly if he still has a headache from yesterday's debauch.

Phaedrus:: Well, as for myself, I am used to obeying you, particularly in whatever you say about medicine; and now the rest will do so too, if they take good counsel.

Apollodorus:: When they heard this, all agreed not to make the present party a drinking bout, but for each to drink as he pleased.

Eryximachus:: Since, then, it has been decreed that each is to drink as much as he wants to, and there is to be no compulsion about it, I next propose to dismiss the flute girl who just came in and to let her flute for herself, or, if she wants, for the women within, while we consort with each other today through speeches. And as to what sort of speeches, I am willing, if you want, to make a proposal.

Apollodorus:: All then agreed that this was what they wanted and asked him to make his proposal.

Eryximachus:: The beginning of my speech is in the manner of Euripides Melanippe, for the tale that I am about to tell is not my own, but Phaedrus here. On several occasions Phaedrus has said to me in annoyance, Isn't it awful, Eryximachus, that hymns and paeans have been made by the poets for other gods, but for Eros, who is so great and important a god, not one of the many poets there have been has ever made even a eulogy? And if you want, consider, in their turn, the good Sophists, they write up in prose praises of Heracles and others, as the excellent Prodicus does. Though you need not wonder at this, for I have even come across a volume of a wise man in which salt got a marvelous puff for its usefulness, and you might find many other things of the kind with eulogies. So they employ much zeal in things like that, yet to this day not one human being has dared to hymn Eros in a worthy manner; but so great a god lies in neglect. Now, Phaedrus, in my opinion, speaks well in this regard. So, as I desire to make a comradely loan to please him, it is, in my opinion, appropriate for those of us who are now here to adorn the god. And if you share in my opinion, we should find enough of a pastime in speeches. For it is my opinion that each of us, starting on the left, should recite the fairest praise of Eros that he can, and Phaedrus should be the first to begin, inasmuch as he is lying on the head couch and is also the father of the argument.

Socrates:: No one, will cast a vote against you, Eryximachus. For I would surely not beg off, as I claim to have expert knowledge of nothing but erotics; nor would Agathon and Pausanias beg off, to say nothing of Aristophanes, whose whole activity is devoted to Dionysus and Aphrodite. And none of the others I see here would refuse either. And yet it is not quite fair for those of us who lie on the last couches; but if those who come first speak in a fine and adequate way, we shall be content. Well, good luck to Phaedrus then. Let him make a start and eulogize Eros.

Apollodorus:: All the others then approved and urged it as Socrates had done. Now, Aristodemus scarcely remembered all that each and every one of them said, and I in turn do not remember all that he said; but I shall tell you the noteworthy points of those speeches that, in my opinion, most particularly deserved remembering.

First of all, as I say, he said that Phaedrus began his speech at somewhat the following point: that Eros was a great and wondrous god among human beings as well as gods, and that this was so in many respects and not least in the matter of birth.

Phaedrus:: For the god to be ranked among the oldest is a mark of honor, and here is the proof: the parents of Eros neither exist nor are they spoken of by anyone, whether prose author or poet; but Hesiod says that Chaos came first;

Then thereafter
Broad-breasted Earth, always the safe seat of all.
And Eros.

After Chaos, there came to be these two. Earth and Eros. And Parmenides says that Genesis;

> First of all gods, devised Eros.

Akousilaus agrees with Hesiod as well. So there is an agreement in many sources that Eros is among the oldest. And as he is the oldest, we have him as the cause of the greatest goods, for I can hardly point to a greater good for someone to have from youth onward than a good lover, and for a lover, a beloved. For that which should guide human beings who are going to live fairly throughout their lives can be implanted by neither blood ties, nor honors, nor wealth, nor anything else as beautifully as by love. Now what do I say this is? It is shame in the face of shameful things and honorable ambition in the face of beautiful things; for without them neither city nor private person can accomplish great and beautiful deeds. So I assert that in the case of any real man who loves, were it to come to light that he was either doing something shameful or putting up with it from another out of cowardice and without defending himself, he would not be as pained on being observed by either his father, his comrades, or anyone else as by his beloved. We observe that this same thing holds in the case of the beloved; he is exceptionally shamed before his lovers whenever he is seen to be involved in something shameful. So if there were any possibility that a city or an army could be composed of lovers and beloveds, then there could be no better way for them to manage their own city; for they would abstain from all that is shameful and be filled with love of honor before one another. And besides, were they to do battle alongside one another, then even a few of this sort would win over just about all human beings; for a real man in love would of course far less prefer to be seen by his beloved than by all the rest when it comes to deserting his post or throwing away his weapons; he would choose to be dead many times over before that happened. And, to say nothing of leaving behind one's beloved or not coming to his aid when he is in danger, there is no one so bad that, once the god Eros had entered him, he would not be directed toward virtue, to the point where he is like one who is best by nature: And simply, as Homer said, the strength that the god breathed into some of the heroes, Eros supplies from himself to lovers.

And what is more, lovers are the only ones who are willing to die for the sake of another; and that is not only true of real men but of women as well. Alcestis, the daughter of Pelias, offers a sufficient testimony for Greeks on behalf of this argument. She alone was willing to die on behalf of her husband, though his father and mother were alive; but through her love she so much surpassed his parents in friendship that she showed them up as alien to their own son and only related to him in name. Her performance of this deed was thought to be so noble in the opinion not only of human beings but of the gods as well that, although there have been many who have accomplished many noble deeds, the gods have given to only a select number of them the guerdon of sending up their souls again from Hades, and hers they did send up in admiring delight at her deed. So gods, too, hold in particular esteem the zeal and virtue that pertain to love. Orpheus, the son of Oeagrus, they sent back from Hades unfulfilled; and though they showed him a phantom of his wife, for whom he had come, they did not give her very self to him, because it was thought he was soft, like the lyre player he was, and had not dared to die for love like Alcestis, but contrived to go into Hades alive. Consequently, they imposed a punishment on him, and made him die at the hands of women, and did not honor him as they had Achilles, the son of Thetis. For Achilles they sent away to the Isles of the Blest, because, though he had learned from his mother that he would be killed if he killed Hector, and that if he did not, he would return home and die in old age, still he dared to choose to come to the aid of his lover Patroclus; and with his vengeance accomplished, he dared not only to die on his behalf but to die after him who had died. On this account, the gods were particularly impressed and gave him outstanding honors, because he had made so much of his lover. Aeschylus talks nonsense in claiming that Achilles was in love with Patroclus (rather than the other way around), for Achilles was more beautiful than not only Patroclus but all the other heroes as well; and besides, he was unbearded, and thirdly, far younger than Patroclus, as Homer says. Well, anyhow, though the gods really hold in very high esteem that virtue which concerns love, they wonder, admire, and confer benefits even more when the beloved has affection for the lover than when the lover has it for the beloved. A lover is a more divine thing than a beloved, for he has the god within him. This is the reason why they honored Achilles more than Alcestis and sent him to the Isles of the Blest.

So this is how I assert that Eros is the oldest, most honorable, and most competent of the gods with regard to the acquisition of virtue and happiness by human beings both when living and dead.

Apollodorus:: He said that Phaedrus made some such speech, and after Phaedrus there were some others that he scarcely could recall; he passed them over and told of Pausanias speech. He said that Pausanias said;

Pausanias:: Phaedrus, in my opinion it is not noble the way the argument has been proposed to us, commanding us to eulogize Eros in so unqualified a fashion. For were Eros one, it would be noble, but as it is, it is not noble, for he is not one; and as he is not one, it is more correct that it be declared beforehand which Eros is to be praised. So first I shall try to set the record straight, to point out the Eros who is to be praised, and then to praise him in a manner worthy of the god. We all know that there is no Aphrodite without Eros; and were she one, Eros would be one; but since there are two Aphrodites, it is necessary that there be two Erotes as well. Who would deny that there are two goddesses? One surely is the elder and has no mother, the daughter of Uranos, the one to whom we apply the name Uranian; the other is younger and the daughter of Zeus and Dione, the one we call Pandemus. So it is necessary that the Eros who is a fellow worker with one correctly be called Pandemus, and the other one, Uranian. Now all gods must be praised, but one must still try to say what has been allotted to each god. Every action is of the following sort: When being done in terms of itself, it is neither noble nor base. For example, what we are now doing, either drinking, singing, or conversing, none of these things is in itself a noble thing, only in terms of how it is done in the doing of it does it turn out to be the sort of thing that it is. For if it is done nobly and correctly, it proves to be noble, and if incorrectly, base. So, too, in the case of loving and Eros, for Eros as a whole is not noble nor deserving of a eulogy, but only that Eros who provokes one to love in a noble way.

Now the Eros who belongs to Aphrodite Pandemus is truly pandemian and acts in any sort of way. And here you have the one whom good-for-nothing human beings have as their love. Those who are of the same sort as this Eros are, first of all, no less in love with women than with boys; secondly, they are in love with their bodies rather than their souls; and thirdly, they are in love with the stupidest there can be, for they have an eye only to the act and are unconcerned with whether it is noble or not. That is how it happens that it turns out for them, however it turns out, with the same likelihood of its being good as the opposite. For Eros Pandemus depends on the Aphrodite who is far younger than the other goddess, and who partakes in her birth of female as well as of male. But the other Eros is of Uranian Aphrodite, who, first of all, does not partake of female but only of male (and this is the love of boys); and secondly, is the elder and has no part in outrage. That is how it comes about that those inspired by this kind of love turn to the male, with an affection for that which is naturally more vigorous and has more sense. And one might recognize in pederasty itself those who have been prompted purely by this kind of love; for they do not love boys except when boys start having sense, and that is close to the time when the beard first appears. For those who start loving a boy at this point in time are in a position I believe to be with him and live with him for their whole life and not, once they have deceived and seized a young and foolish boy, to laugh at him and then run away to another. There should have been a law as well to prohibit the loving of boys, in order that a lot of zeal would not have been wasted for an uncertain result; for it is not clear where the perfection of boys has its end with regard to the vice and virtue of both soul and body. Now, the good willingly lay down this law upon themselves, but there should have been applied the same sort of compulsory prohibition to those pandemian lovers, just as we compel them as far as we can not to love freeborn matrons. For here you have those who have made pederasty a disgrace, so that some have the nerve to say that it is shameful to gratify lovers. They say it is shameful with an eye to those pandemian lovers, observing their impropriety and injustice, since surely any action whatsoever that is done in an orderly and lawful way would not justly bring reproach.

Now in general the law about love in other cities is easy to understand, for it has been simply determined; but the law here and in Sparta is complicated. In Elis and among the Boeotians, and where they are not wise in speaking, the gratification of lovers has been unqualifiedly legalized as noble, and no one, whether young or old, would say that it is shameful. This is so, I suspect, in order that they might have no trouble in trying to persuade the young by speech, because they are incapable of speaking. In Ionia, on the other hand, and in many other places (wherever they live under barbarians), it has been customarily held to be shameful. In the eyes of barbarians, on account of their tyrannies, pederasty as well as philosophy and the love of gymnastics is shameful; for I suspect that it is not to the advantage of the rulers that great and proud thoughts be engendered among their subjects, any more than strong friendships and associations. It is precisely this that love, as well as all these other things, especially tends to implant. And the tyrants here [in Athens] actually learned this by deed; for the love of Aristogeiton and the friendship of Harmodius, once it became firm, dissolved the tyrants rule. So wherever it has been laid down as shameful to gratify lovers, it has been through the vice of those who have done so, the hankering after more on the part of the rulers, and the lack of manliness on the part of their subjects; and wherever the gratifying of lovers has been held to be a fine thing without qualification, it has been through the slothfulness of soul of those who have so ordained. But here [in Athens] there are much finer customs than elsewhere; yet just as I said, they are not easy to understand. Let one just reflect that it is said to be a finer thing, to love openly than in secret; and particularly to love the noblest and best, even if they are uglier than others; and again, that everyone enthusiastically encourages the lover, and not as if he were doing anything shameful; and if a lover makes a successful capture, it is thought to be fine, and if he fails, shameful; and that, for making an attempt at seizure, the law grants the lover the opportunity to be praised for doing amazing deeds. If one dared to do any of these deeds in pursuing and wishing to accomplish anything else whatsoever except this, one would reap the greatest reproaches leveled against philosophy. For if, in wanting to take money from someone, or to take a governmental office, or any other position of power, one were willing to act just as lovers do toward their beloved, making all sorts of supplications and beseechings in their requests, swearing oaths, sleeping at the doors of their beloveds, and being willing to perform acts of slavishness that not one slave would, he would be checked from acting so by his enemies as much as by his friends, the former reproaching him for his flatteries and servilities, the latter admonishing him and feeling ashamed on his behalf. But if the lover does all of this, there is a grace upon him; and the law allows him to act without reproaching him, on the ground that he is attempting to carry through some exceedingly fine thing; and what is most dreadful, as the many say, is that, if he swears and then departs from his oath, for him alone there is pardon from the gods, for they deny that an oath in sex is an oath. Thus the gods and human beings have made every opportunity available to the lover, as the law here states. Now on these grounds one might suppose that it is customarily held to be a very fine thing in this city both to love and for lovers to have friends. But on the other hand, when fathers set attendants in charge of the beloveds and prohibit them from conversing with their lovers, and the attendant has this as a standing order, and the beloved's contemporaries and comrades blame him if they see anything like this going on; and the elders, in turn, do not stand in the way of those who cast reproaches or abuse them on the grounds that they are speaking incorrectly, then, if one glances in this direction, one would believe that such a thing is customarily held to be most shameful. This is to be explained, I believe, as follows. The matter is not simple; and, as was said at the start, it is neither noble nor base in itself, but if nobly done, noble, and if basely done, base. Now, it is base to gratify one who is no good and to do so in a bad way; while it is noble to gratify the good and to do so in a noble way. It is the pandemian lover who is no good, the one in love with the body rather than with the soul. He is not even, for example, a lasting lover, because he is in love with a thing that is not lasting either. As soon as the bloom of the body fades, which is what he was in love with, he is off and takes wing, having made a foul shame of many speeches and promises. But he who is in love with a good character remains throughout life, for he is welded to what is lasting. So our law, in good and noble fashion, really wants to test these and to have the beloved gratify one group of lovers and escape from the others. On account of this it exhorts lovers to pursue and beloveds to flee, setting up a contest so that there may be a test as to which group the lover belongs and to which the beloved. And because of this, first, to let oneself be caught too quickly is customarily held shameful, since it is precisely the passing of time that is thought to test many things nobly; and secondly, to be caught by money and political power is shameful, regardless of whether a hurt humbles the beloved and prevents him from resisting, or a benefit consisting of money or political favors prevents him from feeling contempt; for neither money nor political favors are thought to be stable or lasting, to say nothing of the fact that in the natural course of things no noble and generous friendship comes out of them. So there is only one way left according to our law, if a beloved is to gratify a lover in a fine way. For just as we have a law that in the case of lovers to be enslaved willingly in any slavery to the beloved is agreed not to be flattery nor a matter of reproach, so too there is only one other willing enslavement that is not a matter of reproach. This is the enslavement regarding virtue; for it is customarily held by us that if anyone is willing to devote his care to someone in the belief that he will be better because of him, either in regard to some kind of wisdom or any other part of virtue whatsoever, this willing enslavement is not disgraceful nor is it flattery. So these two laws (the law about pederasty and the law about philosophy and the rest of virtue) must contribute to the same end if it is going to turn out that a beloved's gratification of a lover is noble. For whenever lover and beloved come to the same point, each with a law, the one, in serving a beloved who has granted his favors, would justly serve in anything; and the other, in assisting him who is making him wise and good, would justly assist. And the one is able to contribute to prudence and the rest of virtue, while the other stands in need of them for the acquisition of education and the rest of wisdom. Then and only then, when these laws converge, does it result that a beloved's gratification of his lover is noble; but in any other circumstance it is not. Even to be deceived in this regard is no disgrace; but in all other cases, whether one is deceived or not, it does involve disgrace. If someone granted his favors to a lover for the sake of wealth because he thought him rich, and then were deceived and got no money when the lover was found to be poor, it is no less a disgrace; for a beloved of that sort is thought to display his very self as one who for the sake of money would serve anyone in anything, and this is not noble. So along the same line of argument, were someone to grant his favors because he thought that his lover was good and that he himself would be better through his friendship with this lover, then even if his lover is found to be bad and without virtue, the deception is noble all the same. For he too is thought to have made plain what holds in his own case, that strictly for the sake of virtue and of becoming better he would show his total zeal in everything, and this is the noblest thing of all. Thus, for the sake of virtue alone is it wholly noble to grant one's favors. This is the love of the Uranian goddess, and it is Uranian and very worthwhile for both city and private men, for it compels both the lover himself and the beloved, each in his own case, to exercise much concern for virtue. All the other loves are of the other goddess, the pandemian.

Here, Phaedrus, you have my extemporary contribution to Eros.

Apollodorus:: With Pausanias pausation, the wise teach me to talk in such balanced phrases, Aristodemus said that it was Aristophanes turn to speak; however, he had just got the hiccups (from satiety or something else) and was unable to speak, but he did say, the doctor Eryximachus was lying on the couch next to him;

Aristodemus:: Eryximachus, it is only just that you either stop my hiccups or speak on my behalf until I do stop.

Eryximachus:: Well, I shall do both. I shall talk in your turn, and you, when you stop hiccupping, in mine. And while I am speaking, see if by holding your breath for a long time, you make the hiccups stop; but if they do not, gargle with water. And if they prove very severe, take something with which you might irritate your nose, and sneeze; and if you do this once or twice, even if the hiccups are severe, they will stop.

Aristodemus:: Go ahead and speak. I shall do the rest.

Eryximachus:: Well, in my opinion, since Pausanias made a fine start to his speech but did not adequately complete it, it is necessary for me to try to put a complete end to the argument. Inasmuch as Eros is double, it is, in my opinion, a fine thing to divide him; but that he presides not only over the souls of human beings in regard to the beautiful but also in regard to many other things and in other cases, the bodies of all the animals as well as those things that grow in the earth, and just about all the things that are, that, in my opinion, I have come to see from medicine, our art. For how great and wondrous the god is in his comprehensive aims, both in terms of human things and in terms of divine things! I shall begin my speech with medicine, so that we may venerate that art as well. The nature of bodies has this double Eros, for the health and the sickness of the body are by agreement different and dissimilar; and the dissimilar desires and loves dissimilar things. Now, there is one love that presides over the healthy state, and another over the sickly. Just as Pausanias was saying, it is a fine thing to gratify those who are good among human beings and disgraceful to gratify the intemperate, so too, in the case of men's bodies taken by themselves is it a fine and needful thing to gratify the good and healthy things of each body (this is what has the name the medical'); but it is shameful to gratify the bad and sickly things, and one has to abstain from favoring them, if one is to be skilled. For the art of medicine is, to sum it up, the expert knowledge of the erotics of the body in regard to repletion and evacuation; and he who diagnostically discriminates in these things between the noble and base love is the one most skilled in medicine; while he who induces changes, so as to bring about the acquisition of one kind of love in place of the other, and who, in whatever things where there is no love but there needs must be, has the expert knowledge to instill it, or to remove it from those things in which it is [but should not be], would be a good craftsman. For he must, in point of fact, be able to make the things that are most at enmity in the body into friends and to make them love one another. The most opposite things are the most at enmity: cold and hot, bitter and sweet, dry and moist, and anything of the sort. Our ancestor Asklepios, who had the expert knowledge to instill love and unanimity into these doings, as the poets here assert and as I am convinced is so, put together our art. Not only medicine, as I say, is entirely captained by this god, but likewise gymnastics and farming. And it is plain to anyone who pays the slightest attention that music is also on the same level as these, as perhaps Heracleitus too wants to say, though as far as his actual words go, what he says is not fine. For he says that the one alone in differing with itself agrees with itself, as is the harmony of lyre and bow."° It is a lot of nonsense to affirm that a harmony differs with itself or is composed of still differing things. But perhaps he wanted to say that, from the prior differences between the high and the low, there arises from their later agreement a harmony by means of the art of music; for there surely would no longer be a harmony from high and low notes while they were differing with each other; for harmony is consonance, and consonance is a kind of agreement. But it is impossible to derive agreement from differing things as long as they are differing; and it is impossible, in turn, to fit together the differing or non-agreeing, just as rhythm arises from the fast and the slow, from their prior state of difference and their subsequent agreement. Here, music inserts agreement in all these things (just as, there, medicine does) as it instills mutual love and unanimity; and music, in turn, is expert knowledge of the erotics of harmony and rhythm. And in the simple constitution of harmony and rhythm it is not at all hard to diagnose the erotics, for the double eros is not yet present there; but whenever rhythm and harmony have to be employed in regard to human beings, either by making rhythm and harmony (what they call lyric poetry) or by using correctly the songs and meters that have been made (what has been called education), it is difficult and a good craftsman is needed. For the same argument returns here, namely, that decent human beings must be gratified, as well as those who are not as yet decent, so that they might become more decent; and the love of the decent must be preserved. And this love is the beautiful one, the Uranian, the Eros of the Uranian Muse. But the pandemian one is Polyhymnia's, which must, whenever it is applied, be applied cautiously, in order that it might harvest its own pleasure but not instill any intemperance, just as in our art it is a large order to employ in a fair way the desires that cluster around the art of making delicacies so as to harvest their pleasure without illness. And in general, in music, in medicine, and in all other things, the human and the divine, each Eros must be watched as far as practicable; for both of the Erotes are present in these things. The composition of the seasons of the year, for example, is also full of both these Erotes; and whenever the hot and the cold, and the dry and the moist, which I mentioned before, obtain decent love for each other and accept a moderate harmony and mixture, they come bearing good seasonableness and health to human beings and to the rest of the animals and plants and commit no injustice. But whenever Eros with his hubris proves to be too strong with regard to the seasons of the year, he corrupts and commits injustice against many things. For plagues as well as many other diseases are wont to arise for wild beasts and plants from things like that. Frosts, for example, and hailstorms and blights arise from the greediness and disorderliness of such erotic things in relation to one another; and the science of these erotic things in regard to the revolutions of stars and seasons of the years is called astronomy. Furthermore, all the sacrifices and things over which divination presides, these are concerned with the communing of gods and human beings with one another, involve almost nothing else but the protection and healing of Eros. For impiety as a whole is wont to arise if one does not gratify the decent Eros and honor and venerate him in every deed, but instead gratifies and honors the other one, in matters that concern parents, both living and dead, and gods. And so it is, accordingly, that divination is charged with the overseeing and healing of lovers; and divination, in turn, is the craftsman of friendship between gods and human beings, since it has expert knowledge of human erotics, as far as erotics has to do with sacred law and piety.

This is the great and overwhelming power that Eros as a whole has (and indeed it is rather close to total power); but the Eros concerned with good things, consummately perfected with moderation and justice, among us and among gods, this has the greatest power and provides us with every kind of happiness, making us able to associate with one another and to be friends even with the gods who are stronger than we are. Now, perhaps in praising Eros I too am omitting many things; but I have done that unwillingly. For if I did omit anything, it is your job, Aristophanes, to fill it in; or if you intend to make a different eulogy of the god, proceed to do so, since you have stopped hiccupping.

Apollodorus:: He then said that Aristophanes accepted and said;

Aristophanes:: It has stopped, to be sure; not, however, before sneezing had been applied to it. So I wonder at the orderly decency of the body desiring such noises and garglings as a sneeze is; for my hiccupping stopped right away as soon as I applied the sneeze to it.

Eryximachus:: My good Aristophanes, look at what you are doing. You have made [us] laugh just as you were about to speak; and you compel me to be a guardian of your own speech, lest you ever say anything laughable, though you did have the chance to speak in peace.

Apollodorus:: And Aristophanes laughed and said;

Aristophanes:: You have made a good point, Eryximachus, and please let what has been said be as if it were never spoken. But do not be my guardian, for in what is about to be said I am not afraid to say laughable things, for that would be a gain and native to our Muse, but only things that are laughed at.

Eryximachus:: You believe you can hit and run, Aristophanes,, but pay attention and speak as though you are to render an account; perhaps, however, if I so resolve, I shall let you go.

Aristophanes:: Well, Eryximachus, I do intend to speak in a somewhat different vein from that in which you and Pausanias spoke. Human beings, in my opinion, have been entirely unaware of the power of Eros, since if they were aware of it, they would have provided the greatest sanctuaries and altars for him, and would be making him the greatest sacrifices, and not act as they do now when none of this happens to him, though it most certainly should. For Eros is the most philanthropic of gods, a helper of human beings as well as a physician dealing with an illness the healing of which would result in the greatest happiness for the human race. So I shall try to initiate you into his power; and you will be the teachers of everyone else. But you must first understand human nature and its afflictions. Our nature in the past was not the same as now but of a different sort. First of all, the races of human beings were three, not two as now, male and female; for there was also a third race that shared in both, a race whose name still remains, though it itself has vanished. For at that time one race was androgynous, and in looks and name it combined both, the male as well as the female; but now it does not exist except for the name that is reserved for reproach. Secondly, the looks of each human being were as a whole round, with back and sides in a circle. And each had four arms, and legs equal in number to his arms, and two faces alike in all respects on a cylindrical neck, but there was one head for both faces, they were set in opposite directions, and four ears, and two sets of genitals, and all the rest that one might conjecture from this. Each used to walk upright too, just as one does now, in whatever direction he wanted; and whenever he had the impulse to run fast, then just as tumblers with their legs straight out actually move around as they tumble in a circle, so did they, with their eight limbs as supports, quickly move in a circle. It is for this reason that the races were three and of this sort: because the male was in origin the offspring of the sun; the female, of the earth; and the race that shared in both, of the moon, since the moon also shares in both. And they themselves were globular, as was their manner of walking, because they were like their parents. Now, they were awesome in their strength and robustness, and they had great and proud thoughts, so they made an attempt on the gods. And what Homer says about Ephialtes and Otus, is said about them, that they attempted to make an ascent into the sky with a view to assaulting the gods. Then Zeus and the other gods deliberated as to what they should do with them. And they were long perplexed, for the gods knew neither how they could kill them and (just as they had struck the giants with lightning) obliterate the race, for, in that case, their own honors and sacrifices from human beings would vanish, nor how they could allow them to continue to behave licentiously. Then Zeus thought hard and says, In my own opinion, he said, I have a device whereby human beings would continue to exist and at the same time, having become weaker, would stop their licentiousness. I shall now cut each of them in two, he said; and they will be both weaker and more useful to us through the increase in their numbers. And they will walk upright on two legs. But if they are thought to behave licentiously still, and are unwilling to keep quiet, then I shall cut them again in two, he said, so that they will go hopping on one leg. As soon as he said this he began to cut human beings in two, just like those who cut sorb-apples in preparation for pickling, or those who cut eggs with hairs. And whenever he cut someone, he had Apollo turn the face and half the neck around to face the cut, so that in beholding his own cutting the human being might be more orderly; and he had him heal all the rest. Apollo turned the face around; and by drawing together the skin from everywhere toward what is now called the belly (just like drawstring bags) he made one opening, which he tied off in the middle of the belly, and that is what they call the navel. He shaped up the chest and smoothed out many of the other wrinkles, with somewhat the same kind of tool as shoemakers use in smoothing the wrinkles in leather on the last; but he left a few wrinkles, those on the belly itself and the navel, to be a reminder of our ancient affliction. When its nature was cut in two, each, desiring its own half, came together; and throwing their arms around one another and entangling themselves with one another in their desire to grow together, they began to die off due to hunger and the rest of their inactivity, because they were unwilling to do anything apart from one another; and whenever one of the halves did die and the other was left, the one that was left tried to seek out another and entangle itself with that, whether it met the half of the whole woman, and that is what we now call a woman, or of a man; and so they continued to perish. But Zeus took pity on them and supplies another device: He rearranges their genitals toward the front, for up till then they had them on the outside, and they generated and gave birth not in one another but in the earth, like cicadas, and for this purpose, he changed this part of them toward the front, and by this means made generation possible in one another, by means of the male in the female; so that in embracing, if a man meets with a woman, they might generate and the race continue; and if male meets with male, there might at least be satiety in their being together; and they might pause and turn to work and attend to the rest of their livelihood. So it is really from such early times that human beings have had, inborn in themselves, Eros for one another, Eros, the bringer-together of their ancient nature, who tries to make one out of two and to heal their human nature. Each of us, then, is a token of a human being, because we are sliced like fillets of sole, two out of one; and so each is always in search of his own token. Now all who are the men's slice from the common genus, which was then called androgynous, are lovers of women; and many adulterers have been of this genus; and, in turn, all who are women of this genus prove to be lovers of men and adulteresses. And all women who are sliced off from woman hardly pay attention to men but are rather turned toward women, and lesbians arise from this genus. But all who are male slices pursue the males; and while they are boys, because they are cutlets of the male, they are friendly to men and enjoy lying down together with and embracing men; and these are the best of boys and lads, because they are naturally the manliest. Some, to be sure, assert that such boys are shameless, but they lie. For it is not out of shamelessness that they do this but out of boldness, manliness, and masculinity, feeling affection for what is like to themselves. And there is a great proof of this, for once they have reached maturity, only men of this kind go off to political affairs. When they are fully grown men, they are pederasts and naturally pay no attention to marriage and procreation, but are compelled to do so by the law; whereas they would be content to live unmarried with one another. Now it is one of this sort who wholly becomes a pederast and passionate lover, always feeling affection for what is akin to himself. And when the pederast or anyone else meets with that very one who is his own half, then they are wondrously struck with friendship, attachment, and love, and are just about unwilling to be apart from one another even for a short time. And here you have those who continue through life with one another, though they could not even say what they want to get for themselves from one another. For no one would be of the opinion that it was sexual intercourse that was wanted, as though it were for this reason, of all things, that each so enjoys being with the other in great earnestness; but the soul of each plainly wants something else. What it is, it is incapable of saying, but it divines what it wants and speaks in riddles. If Hephaestus with his tools were to stand over them as they lay in the same place and were to ask, What is it that you want, human beings, to get for yourselves from one another?, and if in their perplexity he were to ask them again, Is it this you desire, to be with one another in the very same place, as much as is possible, and not to leave one another night and day? For if you desire that, I am willing to fuse you and make you grow together into the same thing, so that, though two, you would be one; and as long as you lived, you would both live together just as though you were one; and when you died, there again in Hades you would be dead together as one instead of as two. So see if you love this and would be content if you got it. We know that there would not be even one who, if he heard this, would refuse, and it would be self-evident that he wants nothing else than this; and he would quite simply believe he had heard what he had been desiring all along: in conjunction and fusion with the beloved, to become one from two. The cause of this is that this was our ancient nature and we were wholes. So love is the name for the desire and pursuit of the whole. And previously, as I say, we were one; but now through our injustice we have been dispersed by the god, just as the Arcadians were dispersed by the Spartans. There is the fear, then, that if we are not orderly in our behavior to the gods, we shall be split again and go around like those who are modeled in relief on stelae, sawed through our nostrils, like dice. For this reason every real man must be exhorted to be pious toward the gods in all his acts, so that we may avoid the one result and get the other, as Eros is our guide and general. Let no one act contrary to Eros, and he acts contrary whoever incurs the enmity of the gods, for if we become friends and reconciled to the gods, we shall find out and meet with our own favorites, which few at the moment do. And please don't let Eryximachus suppose, in making a comedy of my speech, that I mean Pausanias and Agathon, perhaps they have found their own and are both naturally born males. For whatever the case may be with them, I am referring to all men and women: our race would be happy if we were to bring our love to a consummate end, and each of us were to get his own favorite on his return to his ancient nature. And if this is the best, it must necessarily be the case that, in present circumstances, that which is closest to it is the best; and that is to get a favorite whose nature is to one's taste. And were we to hymn the god who is the cause of this we should justly hymn Eros, who at the present time benefits us the most by leading us to what is our own; and in the future he offers the greatest hopes, while we offer piety to the gods, to restore us to our ancient nature and by his healing make us blessed and happy.

Here, Eryximachus, is my speech about Eros, different from yours. So, just as I begged you, don't make a comedy of it, in order that we may listen to what each of the others, or rather, what each of the two, will say; for Agathon and Socrates are left.

Eryximachus:: Well, I shall obey you. Your speech was indeed a pleasure for me. And if I did not know that both Socrates and Agathon were skilled in erotics, I should be very much afraid of their being at a loss for words on account of the fullness and variety of what has been said; but as it is, I am confident.

Socrates:: That is because you yourself put up a fine show in the contest, Eryximachus; but if you were where I am now, or rather where I shall be when Agathon has spoken well, then you would really be afraid and as wholly baffled as I am now.

Agathon:: You want to bewitch me, Socrates. You would have me believe that the audience is full of expectation that I shall speak well, and in that way, I shall be in a turmoil.

Socrates:: I should surely be forgetful, Agathon, if I did that. I saw your courage and greatness of mind in mounting the platform with the actors and in facing so large an audience when you were about to display your own speeches, and I saw that you were in no way disturbed, should I now believe that you will be in a turmoil on account of us few human beings?

Agathon:: What's this, Socrates? You really do not believe that I am so wrapped up in the theater as not to know that to a man of sense a few who are sensible are more terrifying than many fools?

Socrates:: Well, I should surely be in disgrace, Agathon, were I to presume any lack of urbanity in you; for I know very well that were you to meet any you believed wise, you would think more of them than of the many. But I suspect that we shall not prove to be of the wise, for we too were present there and were part of the many; but if you were to meet others who were indeed wise, then you might be ashamed before them, if you were perhaps to believe that you were doing something that is disgraceful. Is this what you mean?

Agathon:: What you say is true.

Socrates:: But you would not be ashamed before the many if you believed you were doing something disgraceful?

Apollodorus:: Phaedrus then interrupted and said;

Phaedrus:: Dear Agathon, if you answer Socrates, it will not make any difference to him what effect this might have on our present arrangements, provided only that he has someone to converse with, especially if he is beautiful. And I myself listen to Socrates conversation with pleasure; but I am compelled to attend to the eulogy to Eros and to receive from each one of you your speech; so let each of you repay the god and then go on conversing as you were.

Agathon:: Well, what you say is fine, Phaedrus, and nothing keeps me from speaking; for it will be possible for me to converse with Socrates on many other occasions.

I want first to say how I must speak, and then to speak. For in my own opinion all the previous speakers did not eulogize the god but blessed human beings for the goods of which the god is the cause; yet no one has said what sort is he who makes these gifts. There is one proper manner in every praise of anything: to tell in speech, whomever the speech is about, what sort he is and what sort of things he causes. This is the just way for us too to praise Eros, first what sort he is, and then his gifts. I declare that though all gods are happy, Eros (if sacred law allow it and it be without nemesis to say so) is the happiest of them, as he is the most beautiful and the best. As the most beautiful he is of the following sort: First, he is the youngest of gods, Phaedrus; and he by himself supplies a great proof for this assertion, for with headlong flight he avoids old age, swift though it plainly is, coming on us, at any rate, swifter than he should. It is precisely old age that Eros naturally detests; he does not even come within hailing distance of it. He is always with and of the young. For the old saying holds good, that like to like always draws near. Though I agree with Phaedrus in many other respects, I do not agree that Eros is more ancient than Kronos and lapetos; but I affirm his being the youngest of gods and ever young. And the events of old about gods of which Hesiod and Parmenides speak belong to Necessity and not Eros, if what they say is true. Otherwise there would not have been castrations and bindings of each other, and many other acts of violence among the gods, had Eros been among them; but there would have been friendship and peace, just as there is now since Eros became king of the gods. So he is young, and besides being young, he is tender. But there is need of a poet as good as Homer was to show a god's tenderness. Homer says that Ate is a goddess and tender, her feet at any rate are tender, saying:

Tender are her feet, for she does not on the threshold
Draw near, but lo! she walks on the heads of men.

So in my opinion it is with a fine piece of evidence that he shows her softness, because she walks not on the hard but on the soft. And we too shall use the same piece of evidence about Eros to prove that he is soft; for not upon earth does he walk nor even on skulls, which are hardly soft, but on the softest of beings he walks and dwells. For he has set up his dwelling place in the characters and souls of gods and human beings, and not in each and every soul, for whichever soul he finds to have a hard character, he goes away from, and whichever he finds to have a soft one he dwells in. So, as he is always touching with his feet and every other part the softest of the softest, it is necessary that he be most tender. Now besides being youngest and tenderest, he is supple in his looks. Otherwise he would not be able to fold himself around everywhere, nor to be unobserved on first entering or on departing from every soul, if he were hard. The harmony of his figure is a great piece of evidence for his proportioned and supple appearance, and on all sides it is agreed that Eros is exceptionally harmonious; for lack of harmony and Eros are always at war with one another. The god's way of living among blooming flowers means that his complexion is beautiful; for Eros does not settle on what is fading and has passed its bloom, whether it be body or soul or anything else, but wherever a place is blooming and scented, there he settles and remains.

Now this is enough about beauty as attributable to the god, though many points are still omitted; but Eros virtue must next be spoken of. The greatest thing is that Eros neither commits injustice nor has injustice done to him, neither against a god nor by a god, neither against a human being nor by a human being. For it is not by violence that Eros is affected, if he is affected at all, for violence does not touch him; nor does he act with violence, for everyone of his own accord serves Eros in everything. And whatever anyone of his own accord agrees upon with another of his own accord, the royal laws of the city declare to be just. And besides the share he has in justice he has his fullest share in moderation. For it is agreed that to be moderate means to dominate over pleasures and desires; but no pleasure is stronger than Eros; and if other pleasures are weaker, they will be dominated by Eros; and since it is he who is dominant, then in dominating pleasures and desires Eros must be exceptionally moderate. And besides, in point of courage, not even Ares resists Eros; for Ares does not possess Eros (for Aphrodite, as the story goes), but Eros Ares. And he who possesses is stronger than he who is possessed; and in dominating the bravest of all the rest, he must be the bravest. Now that the god's justice, moderation, and courage have been mentioned, all that remains is wisdom; so, as far as I can, I must try to supply the omission. And first, that I too might honor our art as Eryximachus did his, the god is a poet of such wisdom that he can make poets of others too; at any rate, everyone whom Eros touches proves to be a poet, though he be without the Muses before. We can, accordingly, properly make use of this fact to infer that in every kind of musical making [i.e., poetry] Eros is a good poet [maker]; for what one does not have and does not know, one could neither give to another nor teach another.

And who will oppose the fact that the making of all animals is nothing but Eros wisdom, by which all the animals come to be and grow? And don't we know that, in the case of the arts, whomever this god teaches turns out to be renowned and conspicuous in craftsmanship, and that he whom Eros does not touch remains obscure? Archery, for example, medicine, and divination were invented by Apollo when desire and love were his guides; and thus he too must be a pupil of Eros, as are the Muses in music, Hephaestus in blacksmithing, Athena in weaving, and Zeus the captain of gods and human beings. So it is plain that, when Eros came to be among them, the affairs of the gods were arranged out of love of beauty, for there is no eros present in ugliness. But before that, as I said at the start, many awesome events took place among the gods, as is said, through the monarchy of Necessity; whereas since the birth of this god, all good things have resulted for gods as well as for human beings from loving the beautiful things.

Thus Eros, in my opinion, Phaedrus, stands first, because he is the fairest and the best, and, after this, he is the cause for everyone else of the same sort of fair and good things. It occurs to me to say something in meter too, that he is the one who makes

> Peace among human beings, on the open sea calm
> And cloudlessness, the resting of winds and sleeping of care.

He empties us of estrangement, he fills us with attachment; he arranges in all such gatherings as this our coming together with one another; in festivals, in dances, in sacrifices he proves himself a guide; furnishing gentleness, banishing wildness; loving giver of amity, no giver of enmity; gracious, good; spectacular to the wise, wonderful to the gods; enviable to the have-nots, desirable to the haves; father of luxury, splendor, glory, graces, yearning, and longing, caring for good ones, careless of bad ones; in toiling, in fearing, in longing, in speaking, the best governor, mariner, fellow warrior, and savior; the ornament of all gods and human beings, the fairest and best guide, whom every real man must follow hymning beautifully, and sharing the song Eros sings in charming the thought of all gods and human beings.

Here, Phaedrus, you have the speech from me. Let it be dedicated to the god, sharing, as far as I am able, partly in playfulness, partly in measured earnestness.

Apollodorus:: Aristodemus said that when Agathon had finished speaking, all those present applauded vigorously, as the youth had spoken in a way as suited to himself as to the god. Socrates then said, with a glance at Eryximachus;

Socrates:: Son of Akoumenos, is it your opinion that my long-standing fear was groundless, and that I was not prophetic, when I said before that Agathon would speak in a marvelous way, and that I should be at a loss?

Eryximachus:: In my opinion, your first point was indeed prophetic, that Agathon would speak well; but as to the other, that you would be at a loss, that I do not believe.

Socrates:: You blessed innocent! How can you say that? Am I and anyone else whatsoever not to be at a loss after so fair and varied a speech has been made? Though the rest was not quite so marvelous, that bit at the end, who would not be thunderstruck on hearing the beauty of its words and phrases? I for my part, on reflecting that I myself should be unable to say anything nearly as beautiful, almost ran off and was gone in shame, if I had any place to go. For the speech reminded me of Gorgias; so I was simply affected as in the saying of Homer's. I was afraid that Agathon in his speech would at last send the head of the dread speaker Gorgias against my speeches and turn me to very stone in speechlessness. And then I realized that, after all, I am to be laughed at for having agreed to eulogize Eros in turn with you, and for claiming that I was skilled in erotics; for as it has turned out, I know nothing of the matter, nor how one is to eulogize anything. For in my stupidity I believed the truth had to be told about anything that was given a eulogy, and that this was the underpinning, and that by selecting the most beautiful parts of the truth one was to arrange them in the seemliest manner possible. And I was quite filled with the proud thought that I should speak well, since I knew the truth about praising anything. But it was not this after all, it seems, that was meant by the fair praising of anything, but the attribution to the matter at hand of the greatest and fairest things possible regardless of whether this was so or not. And if the praise were false, it was of no importance anyway; for the injunction was, it seems, that each of us should be thought to eulogize Eros, and not just eulogize him. It is for this reason, I suspect, that you leave no argument unturned and dedicate each and every argument to Eros. And you assert that he is of this sort and that sort and the cause of so many things, so that he may seem to be as beautiful and good as possible, plainly to those who do not know, for this surely is not the case for those who do know, and so the praise turns out to be beautiful and awesome. But after all I did not know that this was to be the manner of praise, and in ignorance I came to an agreement with you that I would take my turn in praising. So the tongue promised but the mind did not; let me then call it quits. I am not a eulogist in this fashion: I am simply incapable of it. Not that I am unwilling, on the contrary I am willing, if you want, to tell the truth on my own terms, so long as my words are not to be compared with your speeches, lest I be laughed at. Decide, then, Phaedrus, if you have any need for such a speech too, for hearing the truth being said about Eros, even though the phrasing and arrangement of the sentences just fall as they come.

Apollodorus:: He said that Phaedrus and the others urged Socrates to speak in whatever way he himself believed he had to speak.

Socrates:: Allow me further, Phaedrus, to ask Agathon about a few small points, in order that when I have got him to agree with me I can go ahead and speak.

Phaedrus:: Well, I allow it. Ask.

Apollodorus:: After this he said that Socrates began from somewhat the following point.

Socrates:: Well, dear Agathon, in my opinion you made a fine start to your speech, in saying that one had to show first what sort of being Eros himself is, and then his deeds. I very much admire this beginning. So come now, since you have explained fairly and magnificently all the rest about what sort he is, then tell me this as well about Eros: is Eros the sort that is love of something or of nothing? I am not asking whether he is of a mother or of a father (for the question whether Eros is love of mother or father would be laughable), but just as if I asked about this very word, father, is the father, father of someone or not? You should doubtless tell me, if you wanted to give a fair reply, that the father is father of a son or daughter. Isn't that so?

Agathon:: Of course.

Socrates:: And the same is true of the mother?

Apollodorus:: This too was agreed upon.

Socrates:: Answer me just a little more, so that you might come to understand better what I want. Suppose I asked, What about this point? Is a brother, just in terms of what he is, a brother of someone, or isn't he?

Apollodorus:: He answered that he is.

Socrates:: And of a brother or a sister, right?

Apollodorus:: He agreed.

Socrates:: Do try, then, to tell about love as well. Is Eros love of nothing or something?

Agathon:: Of course he is of something.

Socrates:: Keep this fast in your memory, this something of which you claim he is, but now say only this much: That Eros that is the love of something, does he desire this something or not?

Agathon:: Of course he does.

Socrates:: And is it when he has, or does not have, that which he desires and loves, that he desires and loves it?

Agathon:: It is at least likely that he does not have it.

Socrates:: Think, is it not a necessity rather than a likelihood that the desirous thing desires what it is in need of, and does not desire unless it is in need? For in my opinion, Agathon, it is a marvelous necessity. What is your opinion?

Agathon:: It's my opinion too.

Socrates:: What you say is fair. Would anyone want to be tall if he were tall, or strong if he were strong?

Agathon:: From what has been agreed upon, that would be impossible.

Socrates:: For he surely would not be in need of those things that he already is.

Agathon:: What you say is true.

Socrates:: So that if he wanted to be strong being strong and swift being swift, and healthy being healthy, I say this so that we may not deceive ourselves, for one might perhaps suppose with regard to these and all cases of this sort that those who are of this sort and have these things desire those things that they have, but if you have these cases in mind, Agathon, then who would desire each of those things that of necessity he has at the moment when, whether he wants to or not, he has it? For whenever anyone says, I am healthy and want to be healthy or I am wealthy and want to be wealthy, and I desire those very things that I have, we should tell him, You, human being, possessing wealth, health, and strength, want to possess them also in the future, since at the present moment at least, whether you want to or not, you have them. Consider then, whenever you say, I want the present things, if you mean anything else than, I want the things of the present moment to be present also in future time. Would he agree to that?

Apollodorus:: Aristodemus said that Agathon consented.

Socrates:: To want that those things be safe and present for him in future time, is to love that which is not yet at hand for him and which he does not have.

Agathon:: Of course.

Socrates:: So he and everyone else who desires what is not at hand desires what is not present; and what he does not have and what he himself is not and what he is in need of, it is things like that of which desire and love are, right?

Agathon:: Of course.

Socrates:: Come then. Let us draw up an agreement about what has been said. Eros is love, first of all, of some things, and secondly, of whatever things the need for which is present to him.

Agathon:: Yes.

Socrates:: Would you now think back then to what you asserted Eros to be of in your speech; but if you want, I shall remind you. I believe you spoke somewhat along these lines, that matters were arranged by the gods through love of beautiful things, for there would not be love of ugly things. Weren't you speaking somewhat along these lines?

Agathon:: I said so.

Socrates:: And what you say is reasonable, comrade. And if this is so, Eros would be nothing else than love of beauty, but not of ugliness?

Apollodorus:: He agreed.

Socrates:: Hasn't it been agreed that that of which one is in need and does not have one loves?

Agathon:: Yes.

Socrates:: So Eros is in need of and does not have beauty.

Agathon:: Of necessity.

Socrates:: What about this? That which is in need of beauty and in no way possesses beauty, do you say that it is beautiful?

Agathon:: Certainly not.

Socrates:: Do you still agree then that Eros is beautiful, if this is so?

Agathon:: It's probable, Socrates, that I knew nothing of what I had said.

Socrates:: And yet spoke you beautifully, Agathon. But, Still, tell me about a small point. Are the good things beautiful as well in your opinion?

Agathon:: Yes, in mine.

Socrates:: So if Eros is in need of beautiful things, and the good things are fair, he would be in need of the good things as well.

Agathon:: I, Socrates, would not be able to contradict you; so let it be as you say.

Socrates:: Not at all, my dear Agathon. It is rather that you are unable to contradict the truth, since it is not at all hard to contradict Socrates.

Socrates:: And I shall let you go for now, and turn to the speech about Eros that I once heard from a woman, Diotima of Mantineia. She was wise in these and many other things; when the Athenians once made a sacrifice before the plague, she caused the onset of the disease to be delayed ten years; and she is the very one who taught me erotics. The speech that she was wont to make, I shall now try to tell you all on the basis of what has been agreed on between Agathon and myself; and I shall try to do it on my own, as best I can. For just as you explained, Agathon, one must first tell who Eros himself is and what sort he is, and then tell his deeds. In my opinion, it is easiest to do this in just the same way that the stranger once did in quizzing me. For I came pretty near, in speaking to her, to saying the same sort of things that Agathon said to me now, that Eros was a great god, and was the love of beautiful things. She then went on to refute me with those same arguments with which I refuted him, that he is neither beautiful, according to my argument, nor good.

Socrates:: How do you mean it, Diotima? Is Eros after all ugly and bad?

Diotima:: Hush! Or do you believe that whatever is not beautiful must necessarily be ugly?

Socrates:: Absolutely.

Diotima:: And whatever is not wise, without understanding? Or were you unaware that there is something in between wisdom and lack of understanding?

Socrates:: What is this?

Diotima:: Don't you know, that to opine correctly without being able to give an account [logos] is neither to know expertly (for how could expert knowledge be an unaccounted for [alogon] matter?) nor lack of understanding? (For how could lack of understanding be that which has hit upon what is.) But surely correct opinion is like that, somewhere between intelligence and lack of understanding.

Socrates:: What you say is true.

Diotima:: Then do not compel what is not beautiful to be ugly, or what is not good, to be bad. So too since you yourself agree that Eros is not good or beautiful, do not at all believe that he must be ugly and bad, but something between the two of them.

Socrates:: And yet, it is agreed on by all that he is a great god.

Diotima:: Do you mean by all who do not know, or by those who know?

Socrates:: No, by all together.

And she said with a laugh;

Diotima:: And how, Socrates, could he be agreed to be a great god by those who deny even that he is a god?

Socrates:: Who are these?

Diotima:: You are one and I am one.

Socrates:: How can you say this?

Diotima:: It's easy. Tell me, don't you assert that all gods are happy and beautiful? Or would you dare to deny that any one of the gods is beautiful and happy?

Socrates:: By Zeus, I would not.

Diotima:: But don't you mean by the happy precisely those who possess the good things and the beautiful things?

Socrates:: Of course.

Diotima:: And do you hold to the agreement that Eros, out of need for the good and beautiful things, desires those very things of which he is in need?

Socrates:: Yes, I hold to it.

Diotima:: How then could he who is without a share in the beautiful and good things be a god?

Socrates:: In no way, it seems.

Diotima:: Do you see then, that you too hold that Eros is not a god?

Socrates:: What would Eros then be? A mortal?

Diotima:: Hardly that.

Socrates:: Well, what then?

Diotima:: Just as before, between mortal and immortal.

Socrates:: What is that, Diotima?

Diotima:: A great daemon, Socrates, for everything daemonic is between god and mortal.

Socrates:: With what kind of power?

Diotima:: Interpreting and ferrying to gods things from human beings and to human beings things from gods: the requests and sacrifices of human beings, the orders and exchanges-for-sacrifices of gods; for it is in the middle of both and fills up the interval so that the whole itself has been bound together by it. Through this proceeds all divination and the art of the priests who deal with sacrifices, initiatory rituals, incantations, and every kind of soothsaying and magic. A god does not mingle with a human being; but through this occurs the whole intercourse and conversation of gods with human beings while they are awake and asleep. And he who is wise in things like this is a daemonic man; but he who is wise in anything else concerning either arts or handicrafts is vulgar and low. These daemons are many and of all kinds; and one of them is Eros.

Socrates:: Who is his father? And who is his mother?

Diotima:: It is rather long to explain; but I shall tell you all the same. When Aphrodite was born, all the other gods as well as Poros [Resource] the son of Metis [Intelligence] were at a feast; and when they had dined, Penia [Poverty] arrived to beg for something, as might be expected at a festivity, and she hung about near the door. Then Poros got drunk on nectar, for there was not yet wine, and, heavy of head, went into the garden of Zeus and slept. Then Penia, who because of her own lack of resources was plotting to have a child made out of Poros, reclined beside him and conceived Eros. It is for this reason that Eros has been the attendant and servant of Aphrodite, as he was conceived on her birthday; for he is by nature a lover in regard to the beautiful, and Aphrodite is beautiful. So because Eros is the son of Poros and Penia, his situation is in some such case as this. First of all, he is always poor; and he is far from being tender and beautiful, as the many believe, but is tough, squalid, shoeless, and homeless, always lying on the ground without a blanket or a bed, sleeping in doorways and along waysides in the open air; he has the nature of his mother, always dwelling with neediness. But in accordance with his father he plots to trap the beautiful and the good, and is courageous, stout, and keen, a skilled hunter, always weaving devices, desirous of practical wisdom and inventive, philosophizing through all his life, a skilled magician, druggist, sophist. And his nature is neither immortal nor mortal; but sometimes on the same day he flourishes and lives, whenever he has resources; and sometimes he dies, but gets to live again through the nature of his father. And as that which is supplied to him is always gradually flowing out, Eros is never either without resources nor wealthy, but is in between wisdom and lack of understanding. For here is the way it is: No one of the gods philosophizes and desires to become wise, for he is so, nor if there is anyone else who is wise, does he philosophize. Nor, in turn, do those who lack understanding philosophize and desire to become wise; for it is precisely this that makes the lack of understanding so difficult, that if a man is not beautiful and good, nor intelligent, he has the opinion that that is sufficient for him. Consequently, he who does not believe that he is in need does not desire that which he does not believe he needs.

Socrates:: Then who, Diotima, are the philosophizers, if they are neither the wise nor those who lack understanding?

Diotima:: By now it is perfectly plain even to a child, that they are those between them both, of whom Eros would be one. For wisdom is one of the most beautiful things, and Eros is love in regard to the beautiful; and so Eros is, necessarily, a philosopher; and as a philosopher he is between being wise and being without understanding. His manner of birth is responsible for this, for he is of a wise and resourceful father, and an unwise and resourceless mother. Now the nature of the daemon, dear Socrates, is this; but as for the one whom you believed to be Eros, it is not at all surprising that you had this impression. You believed, in my opinion, as I conjecture from what you say, that the beloved is Eros, and is not that which loves. It is for this reason, I believe, that Eros seemed to you to be wholly beautiful. For the beloved thing is truly beautiful, delicate, perfect, and most blessed; but that which loves has another kind of look, the sort that I just explained.

Socrates:: All right, stranger, what you say is fine. If Eros is of this sort, of what use is he for human beings?

Diotima:: It is this, Socrates, that I shall next try to teach you. Now, Eros is of that sort and was born in that way; and he is of the beautiful things, as you assert. But what if someone were to ask us, What about those beautiful things of which Eros is, Socrates and Diotima? It is more clearly expressed as follows: He who loves the beautiful things loves, what does he love?

Socrates:: That they be his.

Diotima:: But the answer still longs for the following sort of question: What will he have who gets the beautiful things?

Socrates:: I said that I was hardly capable of giving a ready answer to this question.

Diotima:: Well. What if someone changed his query and used the good instead of the beautiful? Come, Socrates, the lover of the good things loves: what does he love?

Socrates:: That they be his.

Diotima:: And what will he who gets the good things have?

Socrates:: This, I can answer more adequately: he will be happy.

Diotima:: That is because the happy are happy by the acquisition of good things; and there is no further need to ask, For what consequence does he who wants to be happy want to be so? But the answer is thought to be a complete one.

Socrates:: What you say is true.

Diotima:: This wanting and this eros, do you suppose they are common to all human beings, and all want the good things to be theirs always, or how do you mean it?

Socrates:: That way. They are common to all.

Diotima:: Why is it, then, Socrates, that we deny that everyone loves, given, that is, that everyone loves the same things and always, but we say that some love and some do not?

Socrates:: I too, am amazed.

Diotima:: Well, don't persist in your amazement; for we detach from eros a certain kind of eros and give it the name eros, imposing upon it the name of the whole; while in the other cases we employ several different names.

Socrates:: What are those?

Diotima:: Like the following: You know that making has a wide range; for, you see, every kind of making is responsible for anything whatsoever that is on the way from what is not to what is. And thus all the productions that are dependent on the arts are makings, and all the craftsmen engaged in them are makers.

Socrates:: What you say is true.

Diotima:: But nevertheless, you know that not all craftsmen are called makers but have other names; and one part is separated off from all of making, that which is concerned with music and meters, and is addressed by the name of the whole. For this alone is called poetry; and those who have this part of making are poets.

Socrates:: What you say is true.

Diotima:: So too in the case of eros. In brief, eros is the whole desire of good things and of being happy, the greatest and all-beguiling eros. But those who turn toward it in many other ways, in terms of either money-making, love of gymnastics, or philosophy, are neither said to love nor called lovers; whereas those who earnestly apply themselves to a certain single kind, get the name of the whole, love, and are said to love and called lovers.

Socrates:: What you say is probably true.

Diotima:: And there is a certain account according to which those who seek their own halves are lovers. But my speech denies that eros is of a half or of a whole, unless, comrade, that half or whole can be presumed to be really good; for human beings are willing to have their own feet and hands cut off, if their opinion is that their own are no good. For I suspect that each does not cleave to his own (unless one calls the good one's own and belonging to oneself, and the bad alien to oneself) since there is nothing that human beings love other than the good. Or is it your opinion that they do?

Socrates:: No, by Zeus, that is not my opinion.

Diotima:: Then is it to be said unqualifiedly that human beings love the good?

Socrates:: Yes.

Diotima:: What about this? Mustn't it be added, that they love the good to be theirs?

Socrates:: It must be added.

Diotima:: And not only that it be theirs, but always as well?

Socrates:: This too must be added.

Diotima:: So, in sum, eros is of the good's being one's own always.

Socrates:: What you say is most true.

Diotima:: Since eros is always this, then in what manner and in what activity would the earnestness and intensity of those who pursue the good be called eros. What in fact are they doing when they act so? Can you tell?

Socrates:: If I could, Diotima, then I should not, you know, in admiration of your wisdom resort to you to learn this very thing.

Diotima:: Well, I shall tell you. Their deed is bringing to birth in beauty both in terms of the body and in terms of the soul.

Socrates:: Whatever it is that you mean, is in need of divination, and I do not begin to understand.

Diotima:: Well, I shall speak more clearly. All human beings, Socrates, conceive both in terms of the body and in terms of the soul, and whenever they are at a certain age, their nature desires to give birth; but it is incapable of giving birth in ugliness, but only in beauty, for the being together of man and woman is a bringing to birth. This thing, pregnancy and bringing to birth, is divine, and it is immortal in the animal that is mortal. It is impossible for this to happen in the unfitting; and the ugly is unfitting with everything divine, but the beautiful is fitting. So Kallone [Beauty] is the Moira [Fate] and Eileithyia for birth. It is for these reasons that whenever the pregnant draws near to beauty, it becomes glad and in its rejoicing dissolves and then gives birth and produces offspring; but whenever it draws near to ugliness, then, downcast and in pain, it contracts inwardly, turns away, shrinks up, and does not produce offspring, but checking the course of the pregnancy, has a hard time of it. So this is why someone who is pregnant, with breasts already swelling, flutters so much around the beautiful, because the one who has the beautiful releases him from great labor pains. For eros is not, Socrates, of the beautiful, as you believe.

Socrates:: Well, what then?

Diotima:: It is of engendering and bringing to birth in the beautiful.

Socrates:: All right!

Diotima:: It is more than all right. And why is eros of engendering? Because engendering is born forever and is immortal as far as that can happen to a mortal being. From what has been agreed to, it is necessary to desire immortality with good, provided eros is of the good's always being one's own. So it is necessary from this argument that eros be of immortality too.

Socrates:: All of these things she used to teach me whenever she made her speeches about erotics. And once she also asked;

Diotima:: What do you believe, Socrates, is the cause of this eros and desire? Or aren't you aware how uncanny is the disposition of all the beasts (the footed as well as the winged) whenever they desire to produce offspring? They are all ill and of an erotic disposition, first concerning actual intercourse with one another, then later concerning the nurture of what is generated. And they are ready to fight to the finish, the weakest against the strongest, for the sake of those they have generated, and to die on their behalf; and they are willingly racked by starvation and stop at nothing to nourish their offspring. One might suppose, that human beings do this from calculation; but as for the beasts, what is the cause of their erode disposition's being of this sort? Can you say?

Socrates:: And I again said that I did not know; and she said;

Diotima:: Do you really think you will ever become skilled in erotics, if you do not understand this?

Socrates:: But you see, Diotima, that is the reason, as I said just now, why I have come to you: I know I am in need of teachers. But do tell me the cause of these things as well as of the rest that concern erotics.

Diotima:: If you put your trust, in the statement that by nature eros is of that which we have often agreed to, don't persist in your amazement. For in the eros of the beasts, in terms of the same argument as that concerning men, the mortal nature seeks as far as possible to be forever and immortal. Mortal nature is capable of immortality only in this way, the way of generation, because it is always leaving behind another that is young to replace the old. For while each one of the animals is said to live and be the same (for example, one is spoken of as the same from the time one is a child until one is an old man; and though he never has the same things in himself, nevertheless, he is called the same), he is forever becoming young in some respects as he suffers losses in other respects: his hair, flesh, bones, blood, and his whole body. And this is so not only in terms of the body but also in terms of the soul; his ways, character, opinions, desires, pleasures, pains, fears, each of these things is never present as the same for each, but they are partly coming to be and partly perishing. And what is far stranger still is that in the case of our sciences too not only are some coming to be while others are perishing (and we are never the same in terms of the sciences either); but also each single one of the sciences is affected in the same way. For studying, as it is called, is done on the grounds that the science is passing out from us; for forgetfulness is the exiting of science; and studying, by instilling a fresh memory again to replace the departing one, preserves the science, so that it may be thought to be the same. For in this way every mortal thing is preserved; not by being absolutely the same forever, as the divine is, but by the fact that that which is departing and growing old leaves behind another young thing that is as it was. By this device, Socrates, the mortal shares in immortality, both body and all the rest; but the immortal has a different way. So do not be amazed if everything honors by nature its own offshoot; for it is for the sake of immortality that this zeal and eros attend everything.

Socrates:: And when I had heard her speech I was amazed and said, Really! Wisest Diotima, is it truly like this?

And she, like the perfect Sophists, said;

Diotima:: Know it well, Socrates, inasmuch as in the case of human beings, if you were willing to glance at their love of honor, you would be amazed at their irrationality unless you understand what I have said and reflect how uncanny their disposition is made by their love of renown, and their setting up immortal fame for eternity; and for the sake of fame even more than for their children, they are ready to run all risks, to exhaust their money, to toil at every sort of toil, and to die. For do you suppose, that Alcestis would have died for Admetus sake, or Achilles would have died after Patroclus, or your own Codrus would have died before his sons for the sake of their kingship, if they had not believed that there would be an immortal remembering of their virtue, which we now retain? Far from it, but I believe that all do all things for the sake of immortal virtue and a famous reputation of that sort; and the better they are, so much the more is it thus; for they love the immortal. Now there are those who are pregnant in terms of their bodies, and they turn rather to women and are erotic in this way, furnishing for themselves through the procreation of children immortality, remembrance, and happiness (as they believe) for all future time. But there are others who are pregnant in terms of the soul, for these, in fact, are those who in their souls even more than in their bodies conceive those things that it is appropriate for soul to conceive and bear. And what is appropriate for soul? Prudence and the rest of virtue; it is of these things that all the poets and all the craftsmen who are said to be inventive are procreators; and by far the greatest and most beautiful part of prudence, is the arranging and ordering of the affairs of cities and households. Its name is moderation and justice. So whenever someone from youth onward is pregnant in his soul with these virtues, if he is divine and of suitable age, then he desires to give birth and produce offspring. And he goes round in search, I believe, of the beautiful in which he might generate; for he will never generate in the ugly. So it is beautiful bodies rather than ugly ones to which he cleaves because he is pregnant; and if he meets a beautiful, generous, and naturally gifted soul, he cleaves strongly to the two (body and soul) together. And to this human being he is at once fluent in speeches about virtue, of what sort the good man must be and what he must practice, and he tries to educate him. So in touching the one who is beautiful, I suspect, and in association with him, he engenders and gives birth to offspring with which he was long pregnant; and whether the [lover] is present or absent he holds the beautiful one in memory, and nurtures with him that which has been generated in common. Therefore, those of this sort maintain a greater association and firmer friendship with one another than do those who have children in common, because the children they share in common are more beautiful and more immortal. And everyone would choose to have for himself children like these rather than the human kind; and if one looks at Homer, Hesiod, and the other good poets, one envies them: what offspring of themselves they have left behind! For as these offspring are in their own right immortal, they supply the poets with immortal fame and memory. And if you want. think of the children that Lycurgus left behind in Sparta, the preservers of Sparta and, to exaggerate a little, of Greece. Solon too is honored among you through his engendering of the laws; and other men as well in many other regions, among Greeks and among barbarians, by their showing forth of many beautiful deeds, have engendered every kind of virtue. It is to these that many sanctuaries are now dedicated through children of this kind; while through the human sort there are no sanctuaries for anyone yet.

Now perhaps, Socrates, you too might be initiated into these erotics; but as for the perfect revelations, for which the others are means, if one were to proceed correctly on the way, I do not know if you would be able to be initiated into them. Now I shall speak. I shall not falter in my zeal; do try to follow, if you are able. He who is to move correctly in this matter must begin while young to go to beautiful bodies. And first of all, if the guide is guiding correctly, he must love one body and there generate beautiful speeches. Then he must realize that the beauty that is in any body whatsoever is related to that in another body; and if he must pursue the beauty of looks, it is great folly not to believe that the beauty of all bodies is one and the same. And with this realization he must be the lover of all beautiful bodies and in contempt slacken this [erotic] intensity for only one body, in the belief that it is petty. After this he must believe that the beauty in souls is more honorable than that in the body. So that even if someone who is decent in his soul has only a slight youthful charm, the lover must be content with it, and love and cherish him, and engender and seek such speeches as will make the young better; in order that [the lover], on his part, may be compelled to behold the beautiful in pursuits and laws, and to see that all this is akin to itself, so that he may come to believe that the beauty of the body is something trivial. And after these pursuits, he must lead [the beloved] on to the sciences, so that he [himself, the lover] may see the beauty of sciences, and in looking at the beautiful, which is now so vast, no longer be content like a lackey with the beauty in one, of a boy, of some human being, or of one practice, nor be a sorry sort of slave and petty calculator; but with a permanent turn to the vast open sea of the beautiful, behold it and give birth, in ungrudging philosophy, to many beautiful and magnificent speeches and thoughts; until, there strengthened and increased, he may discern a certain single philosophical science, which has as its object the following sort of beauty. Try to pay as close attention as you can. Whoever has been educated up to this point in erotics, beholding successively and correctly the beautiful things, in now going to the perfect end of erotics shall suddenly glimpse something wonderfully beautiful in its nature, that very thing, Socrates, for whose sake alone all the prior labors were undertaken, something that is, first of all, always being and neither coming to be nor perishing, nor increasing nor passing away; and secondly, not beautiful in one respect and ugly in another, nor at one time so, and at another time not, either with respect to the beautiful or the ugly, nor here beautiful and there ugly, as being beautiful to some and ugly to others; nor in turn will the beautiful be imagined by him as a kind of face or hands or anything else in which body shares, nor as any speech nor any science, and not as being somewhere in something else (for example, in an animal, or in earth, or in heaven, or in anything else), but as it is alone by itself and with itself, always being of a single form; while all other beautiful things that share in it do so in such a way that while it neither becomes anything more or less, nor is affected at all, the rest do come to be and perish. So whenever anyone begins to glimpse that beauty as he goes on up from these things through the correct practice of pederasty, he must come close to touching the perfect end. For this is what it is to proceed correctly, or to be led by another, to erotics, beginning from these beautiful things here, always to proceed on up for the sake of that beauty, using these beautiful things here as steps: from one to two, and from two to all beautiful bodies; and from beautiful bodies to beautiful pursuits; and from pursuits to beautiful lessons; and from lessons to end at that lesson, which is the lesson of nothing else than the beautiful itself; and at last to know what is beauty itself. It is at this place in life, in beholding the beautiful itself, my dear Socrates, that it is worth living, if, for a human being, it is [worth living] at any place. Should you ever see the beautiful itself, it will be your opinion that it is not to be compared to gold and garments and the beautiful boys and youths at whose sight you are now thunderstruck. And you and many others are prepared, in seeing the beloved and in always being with him, neither to eat nor drink, if it were somehow possible, but only to behold him and be with him. What then, do we believe happens to one, if he gets to see the beautiful itself, pure, clean, unmixed, and not infected with human flesh, colors, or a lot of other mortal foolishness, and can glimpse the divine beautiful itself as being of a single shape? Do you believe, that life would prove to be a sorry sort of thing, when a human being gazes in the direction of the beautiful and beholds it with the instrument with which he must and is together with it? Or don't you realize, that only here, in seeing in the way the beautiful is seeable, will he get to engender not phantom images of virtue, because he does not lay hold of a phantom, but true, because he lays hold of the true; and that once he has given birth to and cherished true virtue, it lies within him to become dear to god and, if it is possible for any human being, to become immortal as well?

Socrates:: Here, Phaedrus and you others, is what Diotima declared and what I am convinced of. And in this state of conviction, I try to persuade others that for this possession one could not easily get a better co-worker with human nature than Eros. Accordingly, I assert that every real man must honor Eros, as I myself honor erotics and train myself exceptionally in them; and I urge it on the rest, and now and always I eulogize the power and courage of Eros as far as I am able. Regard this speech, then, Phaedrus, if you want to, as spoken in eulogy of Eros; but if not, and your pleasure is to give it some other kind of name, so name it.

Apollodorus:: When Socrates had said this, some praised it; and Aristophanes tried to say something, because Socrates in speaking had mentioned him and referred to his speech. But suddenly a hammering on the courtyard door made a lot of noise, revelers they thought, and they heard the sound of a flute girl. Then Agathon said;

Agathon:: Boys, go look. And if it is any one of our close friends, invite him in; but if not, say that we are not drinking but have already stopped.

Apollodorus:: Not much later they heard the voice of Alcibiades in the courtyard, very drunk and shouting loudly, asking where Agathon was and commanding them to lead him to Agathon. Then the flute girl who, together with some other of his attendants, supported him and led him before them; and he stood at the door, thickly crowned with ivy and violets, with many fillets on his head. And he said;

Alcibiades:: Men, hail! Will you welcome a man who's terribly drunk as a fellow drinker? Or shall we go away just as soon as we have wreathed Agathon, for which single purpose we have come? For I, you see, could not come yesterday, but now I have come with fillets on my head, so that from my own head I might wreathe the head of the wisest and most beautiful, well! And if I shall say that, what then? Will you laugh at me because I am drunk? But all the same, even if you do laugh, I know well that I am telling the truth. Well, tell me on the spot, shall I enter on the said conditions or not? Will you join me in drink or not?

Apollodorus:: Then they all applauded loudly and asked him to enter and lie down; and Agathon summoned him. And he came led by his creatures; and as he was taking off the fillets to do the crowning, he had had them before his eyes and so did not observe Socrates, he sat down alongside Agathon, between him and Socrates; for Socrates had made room for Alcibiades when he saw him. On sitting down he embraced Agathon and bound on the fillets.

Then Agathon said;

Agathon:: Take off Alcibiades shoes, boys, so that he may lie down in the third place.

Alcibiades:: Certainly, but who is here as our third fellow drinker?

Apollodorus:: And at once he turned around and saw Socrates; and as soon as he saw him he leapt up and said;

Alcibiades:: Heracles! What is the meaning of this? Socrates is here? Once again you lie in ambush; and just as is your habit, you appear suddenly wherever I believed you were least likely to be. And now, why have you come? And why did you lie down here? For it is not with Aristophanes, or with anyone else who is, or wants to be, laughable that you lie; but you managed it so that you might lie down beside the most beautiful of those in this room.

Socrates:: Agathon, consider! Are you going to defend me? The love I have of this human being has proved quite bothersome. For since the time that I first loved him, it is no longer possible for me to look at or converse with even one beauty; or else in jealousy and envy of me he does amazing things, and abuses me and hardly keeps his hands off me. Take care lest he do something now, and do reconcile us; or if he tries to use force, defend me, since I really quake with fear at his madness and love of lovers.

Alcibiades:: But, reconciliation between you and me is impossible. Well, I shall take my vengeance on you for this at another time; but now, Agathon, spare us some of the fillets, so that I may wreathe this amazing head of his; and he need not reproach me because I wreathed you, and not him; for he conquers all human beings in speeches, and not just the day before yesterday as you did, but at all times.

Apollodorus:: And at once he took some of the fillets, wreathed Socrates, and lay down.

And when he lay down, he said;

Alcibiades:: All right, men. In my opinion you're sober. This cannot be allowed; you must drink, for we have agreed to it. And I choose as leader of the drinking, until you have drunk enough, myself. But let someone do the fetching, Agathon, if there is any large beaker. But there is no need really; just bring that wine cooler there, boy;

Apollodorus:: He saw that it had a capacity of more than eight pints. Once he saw that it got filled he was the first to drink it off; and then, as he asked that it be poured for Socrates.

Alcibiades:: It is no sophistic stratagem of mine against Socrates, men; for as much as one asks him to, so much he drinks off without any risk of getting more drunk.

Apollodorus:: Then the boy poured and Socrates drank.

Eryximachus:: What are we to do, Alcibiades? Is this to be our way, to say nothing at all over our cups, nor sing anything, but simply to drink like the thirsty?

Alcibiades:: Eryximachus, best son of the best and most moderate father, hail!

Eryximachus:: You too. But what shall we do?

Alcibiades:: Whatever you order. For we must obey you, For a physician is worth the equivalent of many others. Prescribe what you want.

Eryximachus:: Listen then. It was our resolution before you entered that each of us in turn, beginning on the left, should make as fair a speech as he could about Eros, and eulogize him. Now all the rest of us have spoken; and since you have not spoken but have drunk up, it is just that you speak. And after your speech prescribe for Socrates whatever you want; and then let him prescribe for him on his right, and so on for the rest.

Alcibiades:: Well, Eryximachus, what you say is fine, but I am afraid it is not quite fair for a drunkard to be matched against the speeches of the sober. And at the same time, you blessed innocent, has Socrates really convinced you of anything he just said? Don't you know that things are exactly the opposite of what he was saying? For if I praise anyone other than himself, whether god or human being, while he is present, he will not keep his hands off me.

Socrates:: Hush.

Alcibiades:: No, by Poseidon. Say nothing against this, since there is no one else I should praise while you were present.

Eryximachus:: Well, do so, if you want. Praise Socrates.

Alcibiades:: What are you saying? Is it thought that I should, Eryximachus? Shall I assault the man and take vengeance on him in your presence?

Socrates:: You there. What do you have in mind? To praise me for the sake of raising a laugh? Or what will you do?

Alcibiades:: I shall tell the truth. See if you allow it.

Socrates:: Well, if it is the truth, I both allow and order you to tell it.

Alcibiades:: Your word is my command. Now you do as follows. If I say anything that is untrue, check me in the middle if you want to and say in what respect I am telling a lie; for as far as my will goes, I shall not lie. Now if in reminiscing I speak of one thing and then another, don't be surprised; for it is not at all easy for me in the condition I am in to enumerate fluently and consecutively your strangeness.

I shall try in this way, men, to praise Socrates, through likenesses. Now he perhaps will suppose it is for raising a laugh; but the likeness will be for the sake of the truth, not for the sake of the laughable. I declare that he is most strictly like those silenuses that sit in the shops of herm sculptors, the ones that craftsmen make holding reed pipes or flutes; and if they are split in two and opened up, they show that they have images of gods within. And I declare, in turn, that he bears a likeness to the satyr Marsyas. Now, that you are like them at least in looks, Socrates, surely not even you would dispute; and as for your likeness to them in other respects, just listen to what I have to say. You are hubristic, are you not? For if you do not agree, I shall get witnesses. Well, aren't you a flute player? You are far more marvelous, to be sure, than Marsyas. He used to charm human beings by means of instruments, with the power from his mouth, as anyone still does today who plays his flute songs. For I ascribe to Marsyas as what Olympus fluted since Marsyas had taught him; so that the songs of Olympus, whether a good flutist or a sorry sort of flute girl should play them, are the only ones, because they are divine, that cause possession and reveal those who are in need of the gods and initiatory rituals. And you differ from him only in that you do the same thing with bare words without instruments. We, at any rate, whenever we hear the speeches of anyone else, no matter how good a speaker he is, just about no one gets concerned. But whenever any one of us hears you or another speaking your speeches, even if the speaker is very poor, regardless of whether a woman, man, or lad hears them, we are thunderstruck and possessed. I, at any rate, men, were I not going to be thought utterly drunk, should tell you on oath exactly how his speeches have affected me, and still do to this very day. For whenever I listen, my heart jumps far more than the Corybantes, and tears pour out under the power of his speeches; and I see that they affect many, many others in the same way. When I heard Pericles and other good speakers, I thought they spoke well, but they could not affect me in any way like that, nor did my soul grow troubled and become distressed at my slavish condition. But I had so often been put in this state by this Marsyas you see before you that I came to the opinion that it was not worth living in the way I am. Now, Socrates, you will not say that this is not true. And even now I know within myself that were I willing to lend my ears, I should not be capable of holding out but should be affected in the same way. For he compels me to agree that, though I am still in need of much myself, I neglect myself and handle instead the affairs of the Athenians. So it was by main force that I stopped my ears and took off in flight, as if from the Sirens, in order that I might not sit here in idleness and grow old beside him. In regard to this human being alone have I been affected in a way that no one would suspect was in me, to feel shame before anyone at all. Only before him do I feel shame. For I know within myself that I am incapable of contradicting him or of saying that what he commands must not be done; and whenever I go away, I know within myself that I am doing so because I have succumbed to the honor I get from the many. So I have become a runaway and avoid him; and whenever I see him, I am ashamed of what has been agreed upon. And many is the time when I should see with pleasure that he is not among human beings; but again, if this should happen, I know well that I should be much more greatly distressed. I do not know what to do with this human being.

And I and many others have been affected in such ways by the flute songs of this satyr here before us. But as to the rest, hear me tell how he is like those to whom I have likened him, and how amazing is the power he has. For know well that not one of you is acquainted with him; but I shall make it plain, inasmuch as I have started on it. You see that Socrates is erotically inclined to the beauties and is always around them, and that he is thunderstruck; and again that he is ignorant of everything and knows nothing. Now isn't this guise of his silenic? It certainly is. For he has wrapped this around himself on the outside, just as the carved silenus; but once he is opened up, do you suspect, fellow drinking men, how full he is of moderation? Know that he's not at all concerned if someone is beautiful, and he holds this in such great contempt that no one would believe it, any more than if someone is rich or has any other honor of those deemed blessed by the multitude. But he believes that all these possessions are worth nothing and that we are nothing, I tell you, and all his life he keeps on being ironical and playful to human beings. And when he is in earnest and opened up, I do not know if anyone has seen the images within; but I once saw them, and it was my opinion that they were so divine, golden, altogether beautiful, and amazing that one had to do just about whatever Socrates commanded. Believing him to be in earnest about my youthful beauty, I believed I had had a lucky find and an amazing piece of good luck: I had the chance, if I gratified Socrates, to hear everything that he knew; for I used to take an amazing amount of pride in my youthful beauty. So with this in mind, though I previously was not in the habit of being alone with him without an attendant, I then sent the attendant away and was alone with him. (For the whole truth must be told you, but pay attention, and if I lie, Socrates, try and refute me.) So I was alone with him alone, men; and I believed he would converse with me at once in just the way a lover would converse with his beloved in isolation, and I rejoiced. But exactly nothing of the sort happened; but just as he used to do, he would converse with me; and having spent the day with me he would take his leave. After this I challenged him to join me in stripping; and I stripped along with him. Here, I thought, I shall get my way. So he joined me in stripping and often wrestled with me when no one else was present. And what need is there to say more? I got no advantage from it at all. And when I made no headway in this manner, I resolved that the man must be set upon by force and not be released, since I was already committed to the attempt, and now I had to find out what was really the matter. I invited him then to join me at supper, simply as a lover plots against a beloved. And he did not quickly yield to me in this, but in time, at any rate, he was persuaded. And when he came for the first time, he wanted, once he had dined, to go away. And then out of shame I let him go; but I renewed my plotting once more. And tills time when we had dined I kept on conversing far into the night; and when he wanted to go away, I pretended that it was too late and compelled him to remain. So he took his rest in the bed next to me on which he had dined; and no one else slept in the room but ourselves. Now, what I have said up to this point in my speech could properly be told to anyone at all. And you would not hear any more from me than this were it not that, first of all, as the saying goes, wine, with boys and without boys, is truthful, and in the second place, that it is patently unjust for me, once I have come to the point of praising Socrates, to keep hidden his magnificently overweening deed. Furthermore, the affliction of a victim of the viper's bite is also mine. For they say, as you know, that anyone who has been so afflicted is unwilling to speak of what sort of thing it is except to those who themselves have been bitten, since they alone will recognize it and pardon him if his pain brought him to the point of doing and saying anything. Take me, for instance. I was bitten by a more painful viper in the place that is most liable to pain, the heart or soul or whatever name it must have, bitten and struck by philosophical speeches, which grip in a more savage way than the viper, whenever they get a hold on a young soul that is not ill-favored by nature, and make it do and say anything whatsoever, and seeing in turn Phaedruses, Agathons, Eryximachuses, Pausaniases, Aristodemuses, as well as Aristophaneses…and what need is there to speak of Socrates and all the others? You all have shared in the philosophic madness and Bacchic frenzy, so accordingly you all will hear; for you will pardon the things then done and now said. But you house servants, and if there is anyone else who is profane and rustic, put large gates over your ears.

So, men, when the lamp was extinguished and the boys were outside, I resolved that I should in no way complicate the issue before him, but freely speak what were my opinions. And I nudged him and said, Socrates, are you asleep?

Socrates:: Certainly not.

Alcibiades:: Do you know then what I have resolved?

Socrates:: What in particular?

Alcibiades:: You, in my opinion have proved to be the only deserving lover of mine; and it seems to me that you hesitate to mention it to me. Now I am in this state: I believe it is very foolish not to gratify you in this or anything else of mine, my wealth or my friends, that you need; for nothing is more important to me than that I become the best possible; and I believe that, as far as I am concerned, there is no one more competent than you to be a fellow helper to me in this. So I should be far more ashamed before men of good sense for not gratifying a man like you than I should be before the many and senseless for gratifying you.

And when he heard this, he said very ironically, and exactly as he is, and in his usual fashion;

Socrates:: Really, my dear Alcibiades, you're no sucker if what you say about me is really true and there is some power in me through which you could become better. You must see, you know, an impossible beauty in me, a beauty very different from the fairness of form in yourself. So if, in observing my beauty, you are trying to get a share in it and to exchange beauty for beauty, you are intending to get far the better deal. For you are trying to acquire the truth of beautiful things in exchange for the seeming and opinion of beautiful things; and you really have in mind to exchange gold for bronze. But, blessed one, do consider better: without your being aware of it, I may be nothing. Thought, you know, begins to have keen eyesight when the sight of the eyes starts to decline from its peak; and you are still far from that.

Alcibiades:: And I heard this, and said, This is the way matters stand on my side, not one of my words has been said in a way different from what I think; but you yourself take whatever counsel you believe to be best for yourself and me.

Socrates:: Well, what you say is good; for in the future, after deliberating, we shall do whatever looks best to us two concerning these things and the rest.

Alcibiades:: So I, when I had heard and said these things, and had shot my darts as it were, thought he had been wounded. And I got up, and did not allow him to speak any more, but wrapped my mantle around him, for it was winter, and lay down under his blanket; and I threw my arms around this truly daemonic and amazing being, and lay down beside him the whole night. And not even in this, Socrates, will you say that I lie. But when I had done this, he so far prevailed over me and despised and laughed at my youthful beauty and committed an outrage against it (and in that regard I believed I was something special, men of the jury, for you are the judges of Socrates arrogance)... for know well, by the gods, by the goddesses, that though I slept the night through with Socrates I got up without anything more untoward having happened than would have been the case if I had slept with my father or elder brother.

So after this, what notion do you suppose I had? I believed I had been dishonored, and yet I still admired his nature, moderation, and courage; I had met a human being whose prudence and endurance were such as I believed I should never encounter. Consequently, I did not know how I could be angry at him and be deprived of his association; nor did I have any resources whereby I could attract him. I knew well that, on all sides, he was far more invulnerable to money than Ajax was to iron; and even at that one point where I believed he could be taken, he had escaped me. So I was in a quandary; and enslaved by this human being as no one has been by anyone else, I wandered about in distraction. Now, all this had happened to me earlier; and after this we went together on the expedition to Potidaea, and we shared our mess there. Now first of all he faced trials not only better than I did but better than all others. Whenever we were cut off somewhere and compelled to go without food, as happens in campaigns, the others were nothing compared to him in self-control. And again at festivities he alone was able to take pleasure in other things, and in drinking as well; for even though he wasn't willing to drink, whenever he was compelled to do so, he outdid everybody; and what is the most amazing thing of all, no human being has ever seen Socrates drunk. Now it is my opinion that there will soon be a test of this. And again, in regard to resistance against the winter, for winters are terrible there, all the rest that he did was amazing. And once when the frost was the most terrible imaginable, and no one went outdoors (or if any did go out, they wrapped themselves in an amazing number of garments and put on shoes and tied up their feet in felt and sheepskins), he went out among them with the same sort of mantle as he wore at any time, and without shoes he marched through the ice more easily than the others did shod; and the soldiers looked askance at him as if he were despising them. And that is the way things were.

What sort of thing the strong man did and dared there on campaign once, is worth hearing. Once, he had gotten a thought, and he stood on the same spot from dawn on, considering it; and when he made no progress, he did not let up but stood searching. And it was already noon, and the men became aware of it; and in amazement one said to another that Socrates had stood there in reflection since dawn. And finally some Ionians, when it was evening and they had dined, for it was then summer, brought out their pallets and slept in the cold and watched to see if he would also stand during the night. And he stood until it was dawn and the sun came up; and then having made a prayer to the sun he went away. And in combat, if you want to hear about it, for it is just to credit him with this, once when there was a battle for which the generals gave me the prize of excellence, no other human being saved me but he; for he was not willing to leave me wounded, but saved both myself and my weapons. And I even then, Socrates, asked the generals to offer you the prize of excellence. And in this too you will not blame me and say that I lie; but as a matter of fact, when the generals looked to my rank and wanted to offer me the prize of excellence, you proved more eager than the generals that I take it rather than yourself. Furthermore, men, it was worthwhile to behold Socrates when the army retreated in flight from Delium; for I happened to be there on horseback and he was a hoplite. The soldiers were then in rout, and while he and Laches were retreating together, I came upon them by chance. And as soon as I saw them, I at once urged the two of them to take heart, and I said I would not leave them behind. I had an even finer opportunity to observe Socrates there than I had had at Potidaea, for I was less in fear because I was on horseback. First of all, how much more sensible he was than Laches; and secondly, it was my opinion, Aristophanes (and this point is yours); that walking there just as he does here in Athens, stalking like a pelican, his eyes darting from side to side, quietly on the lookout for friends and foes, he made it plain to everyone even at a great distance that if one touches this real man, he will defend himself vigorously. Consequently, he went away safely, both he and his comrade; for when you behave in war as he did, then they just about do not even touch you; instead they pursue those who turn in headlong flight.

Now, one could praise Socrates for many other amazing things; but whereas for the rest of his pursuits, one might perhaps say the like about someone else as well, what deserves all wonder is that respect in which he is like no human being, neither the ancients nor those of the present day. For one might liken Brasidas and others to such a one as Achilles was; and, in turn, liken the sort that Pericles was to both Nestor and Antenor (and there are others as well); and of the rest one might make likenesses in the same way. But the sort that this human being in his strangeness proved to be, both in himself and in his speeches, one could not even come close to finding, whether one looked among the men of today or among the ancients; unless, after all, one were to liken him in himself and in his speeches to those I say, to no human being but to silenuses and satyrs.

And what is more, I omitted to say at the beginning that his speeches too are most like the silenuses when opened up. For were one willing to hear Socrates speeches, they would at first look altogether laughable. The words and phrases that they wrap around themselves on the outside are like that, the very hide of a hubristic satyr. For he talks of pack-asses, blacksmiths, shoemakers, and tanners, and it looks as if he is always saying the same things through the same things; and hence every inexperienced and foolish human being would laugh at his speeches. But if one sees them opened up and gets oneself inside them, one will find, first, that they alone of speeches have sense inside; and, second, that they are most divine and have the largest number of images of virtue in them; and that they apply to the largest area, indeed to the whole area that it is proper to examine for one who is going to be beautiful and good.

Here, men, is what I praise Socrates for; and I mixed in with it what, in turn, I blame him for, when I told you how he committed an outrage against me. And what is more, he not only did this to me, but to Charmides the son of Glaucon, Euthydemus the son of Diodes, and many, many others, for while deceiving them into thinking of him as the lover, he brings it about that he is the beloved rather than the lover. It is this that I am telling you, Agathon. Do not be deceived by him; but with the knowledge of our afflictions be on your guard, and do not, as in the proverb, like a fool realize it after you have suffered.

Apollodorus:: When Alcibiades said this, there was laughter at his outspokenness because it was thought that he was still erotically inclined toward Socrates. Then Socrates said;

Socrates:: You are sober, in my opinion, Alcibiades, for otherwise you would never have so elegantly cast a screen about yourself and tried to conceal why you said all this; for you spoke of it as if it were a side-issue by inserting it at the end, as though you had not said everything for its sake, to set Agathon and me at odds, believing that I must love you and no one else, and that Agathon must be loved by you and by no one else. But you did not get away with it; this satyr and silenic drama of yours was quite obvious. Well, my dear Agathon, see that he does not get the advantage, and prepare yourself against anyone setting you and me at odds.

Agathon:: Why, Socrates, I am afraid that what you say is true. My evidence is the fact that he lay down between you and me so that he may hold us apart. Well, he will not get the advantage, but I shall come and lie down beside you.

Socrates:: Yes, do come lie down in the place beside me.

Alcibiades:: Zeus! What the fellow does to me! He believes he must surpass me everywhere. Well, if nothing else, you wondrous being, let Agathon lie down between us.

Socrates:: But that is impossible. For you praised me, and I in turn must praise the one on the right; surely if Agathon lies down next to you, he will not praise me again, will he, before he has been praised by me? But leave it as it is, daemonic being, and do not begrudge the lad's being eulogized by me, for I want very much to sing his praises.

Agathon:: Now I get it, Alcibiades. It is impossible for me to remain here; and I shall not fail to change my place so that I may be praised by Socrates.

Alcibiades:: This is the usual thing. When Socrates is present it is impossible for someone else to get hold of the beauties, just as now you see how resourcefully he has found a persuasive argument to get Agathon to lie down beside him.

Apollodorus:: Now Agathon got up to lie down beside Socrates; but suddenly a large crowd of revelers came to the door; and finding it open, someone had gone out, they walked straight in among the guests and lay down. And everything was full of commotion, and everybody was compelled, but no longer with any order, to drink a great deal of wine. Now Aristodemus said that Eryximachus, Phaedrus, and some others went away, but he himself was overtaken by sleep. And he slept very deeply, because the night was far gone and the cocks were already singing when he woke toward daybreak. And on awakening he saw that the rest were sleeping or had gone away; but Agathon, Aristophanes, and Socrates were the only ones who were still awake, and they were drinking from a large cup, passing it from left to right. Socrates was conversing with them. And Aristodemus said, he did not remember the other points of the speeches, for he was not only absent at the start, but was dozing, however, the chief point, he said, was that Socrates was compelling them to agree that the same man should know how to make comedy and tragedy; and that he who is by art a tragic poet is also a comic poet. They were compelled to admit this, though they were not following too well and were nodding. Aristophanes went to sleep first, and then, when it was already day, Agathon. Then Socrates, having put them to bed, got up and went away, and he (Aristodemus) followed, just as he was accustomed to; and Socrates went to the Lyceum, washed up, and spent the rest of his day just as he did at any other time. And once he had passed the time in this way, toward evening he took his rest at home.

# The Banquet.

or

on Love.

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Apollodorus, Friend Of Apollodorus, Glauco, Aristodemus, Socrates, Agatho, Pausanias, Aristophanes, Eryximachus, Phædrus, Diotima, Alcibiades.

Apollodorus:: Respecting the matters, about which you are inquiring, I think myself to be not unprepared. For I happened yesterday to be coming up to the city from my house at Phalerus; when one of my acquaintances, who was behind, seeing me at distance, called out to me; and playing upon my name, said, at the same time;

Glaucon:: Hollo! Apollodorus, you Phalerean, will you not stop?

Apollodorus:: Upon which I stopped, and waited for him.

Glaucon:: Apollodorus, I was just now looking after you, being desirous of hearing fully about the meeting between Agatho, and Socrates, and Alcibiades, and the rest who were present at the supper, which took place then, when there were some speeches on the subject of love. For another person narrated a part, having heard it from Phœnix, the son of Philip; and he said that you knew all: but that he had it not in his power to state any thing clearly. Do you then tell me; for you have the best right to narrate the conversation of your friend. But first, tell me, were you present yourself at the meeting or not?—

Apollodorus:: It appears, that your informant has by no means given you a clear account, if you suppose that the meeting, about which you are asking, took place recently, so that I could be present at it.—

Glaucon:: I thought so.—

Apollodorus:: How, Glauco, could it be?—Know you not, that Agatho has not sojourned here for many years? whereas, since I first passed my time with Socrates, and made it my care each day to know what he said and did, it is not yet three years. Before that time, running about wherever chance led me, and fancying I was doing something, I was more wretched than any being whatever, and not less so than you are now in thinking that you must do every thing rather than philosophize.—

Glaucon:: Do not scoff, but tell me when the meeting took place.—

Apollodorus:: When we were still children, it was that Agatho won the prize with the first tragedy, and the day after that in which he and his performers in the Chorus had made the sacrifice for his victory.—

Glaucon:: It is then a long time since, it seems; but who was the relater? Was it Socrates himself?—

Apollodorus:: Not Socrates, by Zeus; but he who told it to Phoenix. It was one Aristodemus, a Cydathencean, a man of small size, and who always went without sandals. He was present at the meeting, being, it seems to me, an admirer, the greatest amongst those then living, of Socrates. Nevertheless, I inquired of Socrates himself about some of the things I had heard from him Aristodemus; and he Socrates confessed to all he had reported.—

Glaucon:: Why then, do not you tell me? The road to the city is very convenient for persons, as they walk along, to speak and hear.

Apollodorus:: Proceeding in this way we entered into conversation together, so that I am now, as I said at the commencement, not quite unprepared. If then I must relate these matters over again to you, I must do so. Besides, for in other respects, when I am either making myself, or hearing from others, any discourse on philosophy, I feel, independent of considering myself benefited, a delight beyond all bounds. But when I hear some other conversation, and especially yours, who are wealthy, and engaged in money-making, I feel a weariness myself, and pity for you my friends, who fancy you are doing something, while you are in fact doing nothing. But perhaps, on the other hand, you consider me possessed with an evil genius; and I think that you think correctly. I do not however think so of you; but I know it full well.

Friend:: You are always the same man, Apollodorus, ever railing at yourself and others, and you seem to me as if you really thought all men, commencing from yourself, to be, with the exception of Socrates, miserable. Now, from whence you acquired the surname of a madman, I know not; for in your discourses, you are ever in such a mood, and are savage against yourself and all others, Socrates excepted.

Apollodorus:: And is it, my dearest friend, evident then that by so thinking of myself, and you, I am mad and talk at random?

Friend:: It is not worth while, Apollodorus, to dispute about this now. But as to what we have requested, do not do otherwise, but tell us what the speeches were.

Apollodorus:: The speeches then were of some such kind as this. But I will rather endeavor to relate, as he Aristodemus related to me all from the beginning.

For he told me that Socrates, having washed himself and put on his slippers, which he was wont to do very seldom, met him; and that he asked him, whither he was going, after he had made himself so smart; when Socrates told him, he was going to Agatho's to supper; for yesterday said he at the sacrifice for the victory, I avoided him, for fear of the crowd; but agreed to be with him to-day.

Socrates:: I have therefore made myself smart to go to a handsome man in a handsome manner. But how, Aristodemus, have you the disposition to be willing to go with me, uninvited, to a supper?—

Aristodemus:: I will do as you may command.—

Socrates:: Follow me then, that we may by a change pervert the proverb, that

> To the feasts of the good will go
> The good of their own accord.

Homer, however, nearly seems to have not merely perverted the proverb, but to have done violence to it. For after describing Agamemnon as pre-eminently good in the affairs of war, and Menelaus as "a soft-hearted spearman," yet, when Agamemnon had made a sacrifice and was feasting, he has introduced Menelaus as coming to the feast uninvited, an inferior man to the banquet of his betters.

Aristodemus:: Perhaps I too shall run a risk, not Socrates, as you say, but as in Homer, if I, a person of no parts, go to the banquet of a clever man uninvited. Will you then make an apology for bringing me? for, as to myself, I will not confess that I came uninvited, but invited by you.

Socrates::

> "We two together going will consult,
> The one for the other," what we have to say.

But come, let us be going.

Apollodorus:: After conversing a little in this way on they went. But on the way, Socrates, attending to something in his own mind, was left behind in the walk; and that he, Socrates, bade him, Aristodemus, who was waiting, to go on; but that when he arrived at Agatho's dwelling he found the door open, and there, he said, happened a ludicrous incident. For a servant from within, straightway meeting him, led him to where the rest were reclining at the table; and that Agatho, on seeing him, said immediately;

Agathon:: Aristodemus, you are come very opportunely to sup with us; but if you are come for any other purpose, defer it to another time; for know that I was looking about for you yesterday, that I might invite you, but I could not see you. But how are you not bringing Socrates to us?—

Aristodemus:: And I, turning round, saw no where Socrates following me. I stated however that I had come with Socrates, having been invited hither by him to supper.—

Agathon:: You did well; but where is he himself?—

Aristodemus:: He was coming behind me just now; and I too wonder where he can be.—

Apollodorus:: Agatho said to one of his servants;

Agathon:: Boy, will you not make inquiry for Socrates, and bring him in? but do you, Aristodemus, recline near Eryximachus.

Apollodorus:: And he said that a servant washed him, that he might take his place upon the couch; but that some other of the servants came and brought word, that

Boy:: this Socrates had withdrawn himself, and was standing in the porch of a neighboring house; and when I called to him, he refused to come in.—

Agathon:: Absurd! Will you not call him? and do not leave him there.—

Aristodemus:: By no means; but let him alone; for he has such a habit of withdrawing himself. He sometimes stands still, wherever he may happen to be. He will be here presently, as I guess. Do not then disturb him, but let him alone.

Agathon:: Nay then, if you think it best, so we must do. But, slaves, prepare the feast for us the rest. By all means put before us what you like; since there is nobody to superintend—an act which I never do myself. Conceiving then myself and the rest here to be invited by you to supper, entertain us so that we may commend you.—

Apollodorus:: After this, they went to supper; but Socrates had not come in. Agatho, therefore, gave frequent orders to send for Socrates; but Aristodemus would not permit it. That Socrates therefore came, having waited as usual, a not long time, but at furthest, when they were in the middle of supper. Agatho then, who happened to be lying on the couch at the lower end of the table alone, said;

Agathon:: Come hither, Socrates, and lay yourself down by me; in order that, by touching you, I may enjoy that wise thought, which has occurred to you in the porch. For it is plain that you have found out and possess it; for you would not have previously stood aloof.—

Apollodorus:: Socrates then, sitting down, observed;

Socrates:: It would be well, Agatho, if wisdom were a thing of such a kind, as to flow from the party filled with it, to the one who is less so, when they touch each other; like water in vessels running by means of a thread of wool from the fuller vessel into the emptier. For if wisdom were in this state, I should value highly a reclining near you. For I think I should be filled by you with wisdom abundant and beautiful. For mine would be mean and questionable, being as it were a dream. But yours is brilliant, and has a great hope for an increase, since already it has shone out from you so vehemently, and became conspicuous the day before yesterday, in the presence of more than thirty thousand Greeks, its witnesses.

Agathon:: You are saucy, Socrates. But I and you will shortly afterwards try the question touching our wisdom, and Bacchus shall decide the cause, but for the present turn yourself to the supper.

Apollodorus:: Upon this he told me that Socrates reclined himself, and took his supper, and so did the rest, and that they made libations, and sung the praises of the god, and after performing the other rites, they turned themselves to drinking; when Pausanias, he said, opened the conversation thus:—

Pausanias:: Well then, gentlemen, after what fashion shall we drink the easiest and best? For my part, I confess to you that I really feel myself not very well from yesterday's debauch, and I have need of some respite, and so I think the most of you have; for you were here yesterday. Consider then in what way we may drink the easiest.—

Aristophanes:: You speak however well, Pausanias, on this point, that we should by all means procure for ourselves an easy method in our drinking. For I am one of those, who were thoroughly drenched yesterday.—

Eryximachus:: Both of you say well: but I want to hear from one of you, how does Agatho bear up with strength in drinking.—

Agathon:: I am by no means very strong.—

Eryximachus:: It would be a god-send, for us, both myself, and Aristodemus, and Phædrus, and these here, if you, the stouter men at the bottle, have on the present occasion flinched. For we are at all times weak. Socrates indeed I put out of the account; for he is all-sufficient on both points, so that it matters not to him, whichsoever we may do. Since then none of the persons present seem inclined to drink much wine, I may be perhaps the less disagreeable, if I tell the truth about getting drunk. For from the physician’s art, I conceive that this has become a matter quite evident to myself, that drunkenness is for men a very bad thing; and I would neither willingly myself be willing to drink far on, nor advise any other person to do so, especially when still suffering with a head-ache from the night before.—

Phaedrus:: As for me, I am accustomed to attend to you in other respects, and in whatever you say about the physician’s art, and so would the rest here, if they are well-advised.—

Apollodorus:: On hearing this, they all agreed not to make the present meeting a debauch; but to drink thus as they pleased.—

Eryximachus:: Since then this has been decreed, that we are to drink as each one pleases, and that there is to be no compulsion, the next thing I have to propose is, to let the flute-playing damsel, who has just come in, go away and play to herself, or, if she pleases, to the women within; but for us to mix with each other to-day in conversation: and on what kind of conversation I am willing, if you wish it, to explain.—

Apollodorus:: This, they all said, they wished, and bade him explain accordingly.

Eryximachus:: The commencement then of my speech is in the style of the Melanippe of Euripides.

> The tale I have to tell is not my own.

but from Phædrus here. For Phædrus is on every occasion saying to me, with an air of indignation, Is it not a shocking thing, says he, Eryximachus, for hymns and pæans to be made by poets in honor of some other deities; and yet not one amongst so many poets who have been born, has ever composed a panegyric upon Love, who is a deity of such an age, and of such a power? But if, on the other hand, you are willing to look carefully into the utilitarian sophists, you will find that some have composed encomiums in prose on Hercules, and other persons, as the best of them, Prodicus, has done. This, however, is the less wonderful. But I have lately met with a little book, by a wise man, in which salt has a wondrous praise for its utility; and upon many, other things of such a kind you may see encomiums. Strange that about such subjects many should have bestowed great care, but that not a single person should ever to this day have dared to hymn Love worthily; and thus has a deity so great been neglected. Now, in all this, Phædrus seems to me to speak correctly. I am desirous, therefore to bring at the same time my contribution to this subject, and to gratify him; and at the same time it seems to me becoming for the persons here on the present occasion to give glory to the god. If then this seems good to you likewise, there will be a sufficient subject of discussion before us. For I vote that each of us shall speak in praise of Love, an oration, the most beautiful he can, proceeding on the right-hand side; and that Phædrus shall begin, as he is reclining at the top, and is, moreover, the father of the discussion.—

Socrates:: Not a single person, Eryximachus, will give a contrary vote. For neither would I say no, who say that I know nothing else than the matters relating to love; nor would Agatho, nor Pausanias, nor would, I ween, Aristophanes, whose whole occupation is relating to Dionysus and Aphrodite; nor would any one else of these whom I see here. And yet it is not fair and equal for us who are reclining the lowest down. However, if those who are before us shall speak sufficiently and well, it will be enough for us. Let Phædrus then, with fortune favoring, begin and make a panegyric upon Love.

Apollodorus:: To this all the rest assented, and bade him do, as Socrates had said. Of all then which each person said, neither had Aristodemus a perfect recollection, nor have I of all that he told me: but what was said, and by whom, that seemed to be worth remembering on these points, I will detail the speech of each individual.

He told me then, as I say, that Phædrus first began somewhat after this way, and said—

Phaedrus:: Love is a deity mighty and wonderful amongst men and gods, on many other accounts, and not the least as regards his origin. For to be one of the oldest of the gods, is a thing said he of honor. And there is a proof of this. For the parents of Love neither exist, nor are said by any individual or poet to exist. Now Hesiod says;

> Chaos was first produced; Earth rose the next,
> ‘Wide-bosomed, a firm seat for all; then Love—

the poet says that next after Chaos were born these two, Earth and Love. And Parmenides says of Generation, that it

> Plann’d that of all the gods Love should be first.

Acusilaus too agrees with Hesiod. Thus on many sides it is confessed that Love is among the most ancient of things. And being the most ancient, he is the cause to us of the greatest good. For to a person being now young, I cannot mention what is a greater good than a useful lover, or to a lover than an object of affection. For that, which should lead persons who are to live correctly through the whole of life, neither consanguinity is able to produce in us, nor honors, nor wealth, nor any thing else, so well as love; I mean some such thing as the shame for base acts, and the love of glory for honorable deeds. For without these two it is not possible for a state or individual to accomplish any thing great or honorable. I assert therefore that he, who loves, if he is found committing any base act, or suffering one from any body, and failing through cowardice to revenge himself, would not be in so much pain, when seen by his father and friends or any one else, as by the object of his affection. In the very same manner, we see that the party loved is vehemently ashamed before the parties loving, if discovered doing any dishonorable act. If then there could be any contrivance to form a city or an army of persons loving and loved, it is not possible for them to regulate their own country better than by abstaining from every thing base, and having a desire to be honored by one another for what is noble; and fighting side by side, such persons, although few in number, would conquer, so to say, the whole world. For a lover would less endure to be seen by his beloved, when deserting his post, or throwing away his arms, than by all the others; and in preference to this, either to leave behind his beloved when he has fallen, or not to assist him when in danger, he would rather die many deaths. There is not a man so much of a coward as that Love would not divinely inspire him to deeds of velour, and make him equal to the very best by birth. And in good truth, what Homer says, that a god did into some heroes breathe a spirit, this, from himself produced, does Love to all lovers furnish. Moreover, to die for another lovers alone are ready, not only men, but women too. Of this Alcestis, the daughter of Pelias, affords a sufficient proof amongst the Hellenes in behalf of this reasoning, in being alone willing to die for her husband, although his father and mother were then living; whom she so much excelled in affection through love as to prove them to be aliens in blood to their own son, and relations only in name. And having done this deed so noble, she was thought by not only men, but the gods likewise, to have effected that, although many had achieved many and noble acts, to only some, to be easily counted, did the gods grant this as a gift, for the soul to return from Hades; but they sent her back, struck with admiration of the deed. Thus do even the gods especially honor the zeal bestowed on Love and velour. But Orpheus, the son of Oeagrus, did the gods send back from Hades with his object unaccomplished, by showing him the phantom merely of his wife, for whom he went, and not restoring her real self; because he appeared to act the coward, as being a harper, and not daring, like Alcestis, to die for Love, but contriving to go alive to Hades. Hence on this very account did the gods impose on him a punishment, and caused his death to take place at the hands of women. Not so did they honor him, as they did Achilles, the son of Thetis, whom they sent even to the islands of the blest, because, having heard from his mother, that he would die himself, after he had slain Hector, but that if he slew not Hector, he would return home and die an old man, he dared to prefer, after aiding his lover Patroclus and avenging his fate, not only to die for him, but over him when dead. From whence the gods, being amazingly struck with admiration, honored him exceedingly, because he had valued so highly the person who had loved him. For Æschylus talks idly, in saying that Achilles was in love with Patroclus; for Achilles was more handsome not only than Patroclus, but all the other heroes, and still beardless, and moreover, as Homer says, much younger. But in reality the gods honor most the velour, which is shown in behalf of love: they still feel a greater wonder and admiration, and act more kindly, when the person loved has an affection for the lover, than when the lover has for the loved. For the lover is more of a godlike thing than the loved, as being inspired by a god. On this account did the gods honor Achilles even more than Alcestis, by sending him to the islands of the blest. Thus then do I assert that Love is the most ancient, and most honored, and most powerful of the gods, for the attainment of velour and happiness by man both during life and in the grave.

Apollodorus:: Some such speech as this, Aristodemus told me, did Phædrus pronounce. But after Phædrus, there were some others, which he did not well remember; and omitting these, he repeated that of Pausanias, who said:—

Pausanias:: The subject, Phædrus, does not seem to me to have been fairly set before us, when it was simply proposed to make an encomium upon Love. This would have been well had there been but one Love; but now it is not, for one there is not. Since then one there is not, the better way is for it to be stated beforehand which kind of love we ought to praise. I will endeavor then to put the question on a right footing, and to state first what Love we ought to praise; and then to praise in a manner worthy of the god. We all know that without Love Venus is not. If then there were only one Venus, there would have been only one Love. But since there are two, there must be likewise two Loves. And how are there not two, one the elder, and who had no mother, a daughter of Uranus, Heaven, whom we name the celestial; the other, younger, a daughter of Jupiter and Dione, whom we call the vulgar. It is necessary then for the Love who works with the latter Venus to be called the vulgar, but the other, the celestial. All the gods, indeed, we ought to praise; but we must endeavor to state what each has obtained by lot. For every action is in this state; it is itself by itself neither honorable nor base; as for instance, what we are now doing, either drinking, or singing, or discoursing, there is not one of these acts which is good, itself by itself, but it turns out such in the doing. Rightly performed according as it may be done it is right and honorably; not rightly performed, it is dishonorable. So in the case of loving, not every Love is honorable, and worthy to be highly praised, but that which impels to loving honorably. The one then belonging to the vulgar Venus is a Love truly vulgar, and works out whatever may happen; and this it is which inspires the worthless love; and such persons in the first place love women not less than boys; and next, of such as they love, they love the bodies rather than the minds; and then of persons the most silly that can be, through their looking only to the act of enjoyment, and disregarding the doing so honorably or not. And hence it results that they do whatever they may have in their power, whether good or the reverse. For there is even from the younger deity much than from the other, and partaking of the female and male in its generation. But that from the celestial Venus, in the first place, not partaking of the female, but only of the male, and this is the love of boys: next of the elder, and a not sharing in lust; and hence they who are inspired by this love, turn themselves to the male, feeling an affection for that which is naturally of greater strength and possesses more of mind. And any one would in the boy-love itself discover those sincerely impelled by this passion. For they do not love boys, but youths, when they are beginning to possess mind. Now this is near the time of their obtaining a beard. But they who begin from this date to love, are, I think, prepared, as if about to associate through the whole of life together, and to live in common, and not, after having obtained an object in an hour of imprudence, through cheating him as a youth, to go away, laughing at him, and to run to another one. There ought then to be a law not to love a boy, in order that much care may not be wasted upon an uncertainty; for it is uncertain to what end may come that relating to boys, whether of vice or virtue, as regards the body or soul. Such a law do men of virtue indeed lay down, themselves for themselves, of their own accord; but we ought to compel in some such way as this those vulgar lovers; just as we compel them, as far as we can, not to fall in love with free-born women. For it is such lovers as these who give rise to the reproach, that, as some dare to say, it is shameful to gratify a lover. Now they say so with a view to lovers of this kind, from witnessing their conduct at once unseasonable and unjust. For certainly no act done decently and lawfully can bring with it justly blame. And indeed the law relating to love in other states is easy to be understood, for it has been defined with simplicity; but that one here, and that at Sparta, are complex. For in Elis, and amongst the Bœotians, and wherever there are not persons clever in speaking, the law is laid down simply, that it is honorable to gratify a lover; nor would any one there, either young or old, say that it is disgraceful, in order, I presume, that they who endeavor to persuade over the youths, may not be put to trouble, as being unskilled in speaking. But by those in Ionia, and many other places, where persons live under the barbarians, it is held to be dishonorable. For through their tyrannical governments this, and the love of wisdom and of gymnastic exercises, are considered disgraceful. For it is not, I conceive, to the interest of the rulers that high thoughts should be engendered in their subjects, nor strong friendships formed, nor societies in common; all which those other things and love especially is wont to introduce. And thus by experience learnt the tyrants here. For the love of Aristogeiton and the firm friendship of Harmodius dissolved their power. And thus, wherever it has been held disgraceful to gratify a lover, it has been so laid down through the depravity of the legislators, and the desire of possession in the rulers, and the want of manliness in the ruled; but wherever it is simply enjoined, it is through the listlessness of soul in the legislators. But here the law is placed upon a better footing; although, as I said before, it is not easy to understand it. For to a person considering that it is reputed more honorable to love openly than secretly, and especially the most nobly born and the best, even though they be uglier than others; and on the other hand, that the exhortation to a lover from all parties is wonderful, as if he were not doing something disgraceful, and that it appears to be honorable to the party obtaining, but not obtaining disgraceful; and that towards making the attempt to obtain, the law grants a permission to the lover, while doing wonderful acts, to be commended, such acts as, should a person dare to do when pursuing any thing else whatever, and desirous to accomplish it, except this, he would obtain as the fruit of his doings, the greatest reproaches of philosophy. For if with a desire either to obtain money from any one, or an office in the government, or a power of any other kind, a person would be willing to do what lovers do towards their boy-loves, by making supplications, and urgent requests in their begging, and swearing oaths, lying down at their doors, and willingly enduring a servitude such as not even a slave would endure, he would be stopped from acting in this way both by friends and enemies the latter reproaching him for his fawning and want of spirit, and the former giving him advice, and feeling ashamed on his behalf. But even a grace follows the lover when doing all this; and he is allowed by the law to do so without reproach, as performing some very honorable act. But the most terrible thing is what the multitude say, that there is to him alone, after swearing an oath, a pardon from the gods for transgressing it. “For an oath, they say, of Venus is no oath." Thus both gods and men give all kinds of license to the lover, as says the law here. In this way then a person would imagine that in this state it is held a very honorable thing both to love and to be the friend to a lover. But when we see that parents, after appointing instructors over the loved, do not permit them to have any intercourse with their lovers, and that orders are given to this effect to the instructor, and when their equals in age and companions censure them, if they see any such thing taking place, and when the old folks do not stop the censurers, nor abuse them for speaking not correctly, a person, looking to such acts, would imagine, on the contrary, that love of this kind is here held to be disgraceful. But the case I conceive stands thus. As it was stated at the beginning, to love is not a simple thing. Taken itself by itself I conceive it to be neither honorable nor disgraceful; but if carried on honorably, it is honorable; if disgracefully, disgraceful. Now to gratify a vicious person in a vicious manner is to carry it on disgracefully; but to gratify a virtuous person in a virtuous manner is to carry it on honorably. The vicious lover is he of the vulgar kind, who is in love with the body rather than the mind. For he is not a lasting lover, being in love with a thing which is not lasting; since, with the decaying flower of the body, of which he is enamored, he goes away on wing, putting to shame all his speeches and promises. But he who is enamored of a virtuous character, abides a lover through life, as being closely united with what is itself abiding. Now these our law is desirous to test well and truly, and to permit persons to gratify some, and to fly from others. On this account therefore it exhorts some to pursue, but others to fly; by appointing itself the judge in a contest, and testing of what kind is the lover, and of what the loved. And thus by this very reason it is held by law to be disgraceful, in the first place, for a person to be captivated quickly; in order that time may intervene, which seems to be of many things the fairest test; in the next place, it is held disgraceful for a person to be caught by considerations of money or political power; whether he crouch on being ill used and do not bear up manfully, or whether, being kindly treated as regards pecuniary and political transactions, he does not feel a contempt. For none of these things appear to be firm and abiding, without a generous friendship being produced from them. There is left then one only way for our law, if the object in view is to gratify honorably the lover. For our law is, as it was in the case of lovers, that for a person willing to endure any servitude whatever for his beloved youth, it is not an act of fawning nor worthy of reproach. Thus then there is left only one other willing servitude not worthy of reproach; and this is that which relates to virtue. For it is a settled law with us, that whoever wishes to pay court to any one, conceiving that through that person he shall become better as regards wisdom, or any other part of virtue, such voluntary servitude again is neither disgraceful nor an act of fawning. Now these two laws ought to come to the same point, and both the one relating to the love of youths, and the other relating to philosophy and the other parts of virtue, if indeed it is about to be agreed that it is honorable to gratify a lover. For, when the lover and the beloved youth come together, each having their respective laws, the one in ministering to the beloved youth, who is complying, would justly minister any thing whatever, and the other being subservient to the person making him both wise and good, would on the other hand be justly subservient in any thing whatever. For the one being able to make a collision for the attainment of prudence and the other parts of virtue, and the other being desirous to acquire instruction and the other parts of wisdom, then only indeed while these two parties come to the same spot, do the matters relating to the two laws fall to the same point, so that it is honorable for the boy to gratify a lover? And in this case it is no disgrace to be deceived; but in the others it brings on shame equally to the party deceived or not. For if any one for the sake of money gratifies a lover as being wealthy, and is disappointed, and obtains no money, through the lover being found to be poor, the act is not at all the less disgraceful; for such a person seems to lay open his character, and that for the sake of money he would minister in any thing to any person. Now this is not honorable. By parity of reasoning, should any one gratify a person, as if he were virtuous, and with the view of becoming himself better through the friendship of the lover, and be disappointed through his being found to be a bad man, and not possessed of virtue, the disappointment nevertheless is still honorable: for on the other hand, this person too seems to have laid open his character, and that for the sake of virtue, and to be made better, he would be ready to minister in every thing to every one. Now this, on the other hand, is of all acts the most honorable. So entirely honorable is it to gratify for the sake of virtue. This is that love, the co-worker of the celestial Venus, himself celestial, and of great value to both the state and individuals, through compelling, both the lover himself and the party beloved by him, to pay considerable attention to virtue; but all the others belong to the other Venus, the vulgar. Thus much, Phædrus, have I to contribute, said he, on the instant, upon the subject of love.

Apollodorus:: On Pausanias pausing,—for the wise teach me to talk thus in parities,—Aristodemus told me, that Aristophanes should have spoken: but either from repletion, or some other cause, a fit of the hiccups happened to come upon him, and he became unable to speak; and he said to the physician, Eryximachus, who was reclining lower;

Aristophanes:: You are the proper person, Eryximachus, either to stop my hiccups, or to speak in my turn, until I cease from them myself.—

Apollodorus:: To which Eryximachus replied;

Eryximachus:: I will do both. I will speak in your turn, and when your hiccups are gone you shall speak in mine: and while I am speaking, should the hiccups cease, through your keeping yourself without breathing for some time, it is well, but if not, gargle your throat with water; and if they are very violent, take some such thing as this, with which you can tickle your nose and then sneeze; and when you have done so once or twice the hiccups will cease, be they ever so violent.—

Aristophanes:: You will not say a word, before I do so.

Apollodorus:: —Eryximachus then said—

Eryximachus:: Since then Pausanias, after setting out so well on the subject has ended imperfectly, it seems that I must of necessity endeavor to put the finish to the speech. In distinguishing Love into two kinds, he appears to me to have correctly divided. And that the Love exists not only in the soul of man for beautiful persons, but for many other objects in other beings likewise, in the bodies of all animals as well as in the productions of the earth, and, so to speak, in all existing things I seem to myself to see clearly from my own healing art; and how great and wonderful a god is Love, who extends his sway over all, as regards things human and divine. And I will commence with the healing art in order that I may give the highest honors to my own profession. Now the very nature of our bodies partakes of this twofold love. For health and disease in the body are confessedly different and unlike. Now the unlike longs for and loves the unlike. The love in a healthy body is of one kind; the love in a diseased body is of another. Now it is, as Pausanias just stated, honorable to gratify the good amongst men, but dishonorable the vicious; so in the case of bodies themselves, to gratify the good and healthy parts of each is well and necessary, and this it is from which there is the name of the healing art. But to gratify the bad and diseased is disgraceful; and he who would act according to art, must deny the gratification. For medical science, to speak summarily, is the knowledge of the feelings of love in the body relating to repletion and evacuation; and he, who in these appetites can distinguish the right love and wrong, is the best physician; while he who causes a change, so as to obtain one in the place of the other, and knows how to infuse a love into those bodies in which it is not, but ought to be, and how to expel a love which is there, but ought not to be, would be a skilful practitioner. For he should be able to cause things in the body, that are most hostile, to be friendly and to love each other. Now the things most hostile are such as are the most contrary, as cold is to hot, bitter to sweet, dry to moist, and all things of that sort. Into these things our ancestor Æsculapius, knowing how to introduce love and concord, as say the poets here, and as I believe, put together our art. And the present art of healing is, as I state, entirely regulated by this very deity. And in like manner is the gymnastic art, and agriculture. And it is evident to every one, who gives even a little attention to the subject, that music is in the same state as the others, as Heracleitus perhaps meant to say; for he expresses himself not clearly in his language. For he says that the one disagreeing with itself, is carried on like the harmony of the bow and lyre. Now it is very irrational to say that harmony differs from itself; or that it exists from things that differ: but perhaps he meant to say this; that from a sharp and flat, different originally, a harmony is produced from their subsequent agreement through the art of musicians. For harmony cannot assuredly consist of sharp and flat sounds, while still disagreeing; because harmony is consonance, and consonance is a kind of agreement; and it is impossible for any agreement to exist between things disagreeing, so long as they disagree; and on the other hand, it is impossible to fit a thing disagreeing and not agreeing. So too rhythm is produced from notes quick and slow previously disagreeing, but subsequently agreeing. As there the medical art, so here the musical art, introduces in all these an agreement, by affecting a love of and a concord with each other; and thus music is the knowledge of amorous unions relating to harmony and rhythm. Now in this combination itself of harmony and rhythm, it is not at all difficult to know thoroughly the amorous unions; for the twofold love exists there not at all. But when it shall be necessary to misuse rhythm and harmony, applied to mankind, by a person composing, what is called setting to music, or in making a right use of melodies and measure composed already, which is called instruction, there indeed the thing is very difficult, and requires a skilful practitioner. For here recurs the same reasoning as before, that we must gratify the well-ordered, and those who would be, but are not as yet, better ordered, and we must guard their love. For this is the honorable, the heavenly, the co-worker with the heavenly muse. But the co-worker with Polyhymnia is the vulgar love, whom a person ought with caution to bring to whom he may bring it, in order that men may enjoy the pleasure from it, and that he may not introduce any intemperance; just as in our own art it is a matter of moment to use correctly the appetites relating to the confectioner’s art, so that a person may enjoy the pleasure without detriment to health. Thus, in music, and in medicine, and in all other things, both human and divine, we must, as far as is permissible, watch each of those Loves: for both exist. Since even the constitution of the seasons of the year is full of both these; and when the hot and the cold, the dry and the moist, which I mentioned before, meet in opposition to each other, with a well-regulated love, and receive a temperate fitting-together and combination, they come bringing in their train a year of good seasons and health to men, and the rest of animals, and plants, and do no injury. But when the love which is mixed up with ungovernable passion becomes rather violent as regards the seasons of the year, it destroys or injures many things. For from such seasons are wont to be produced plagues and many other unequal disorders on wild beasts and plants. For hoar-frosts, and hail-storms, and mildews are generated from the excessive and disorderly state of such feelings of love with respect to each other; the knowledge of which, as regards the movements of the stars and the seasons of the year, is called astronomy. Further still, all kinds of sacrifice, and the things over which the diviner’s art presides—now these are the reciprocal intercourse between gods and men—are conversant about nothing else than the guardianship and the healing of Love. For every kind of impiety is wont to be generated, if one does not gratify the well-ordered Love, and honor him, and hold him as the chief,—but serve rather the other,—in every act relating to parents living and dead, and to the gods, according as it has been ordained for the divining art to superintend the Loves and to heal them. And again, the divining art is the artificer, skilled in promoting friendship between gods and men, through knowing what things relating to Love amongst mortals tend to justice and impiety respectively. So various and vast, or rather universal, a power does every kind, to speak in one word, of Love possess. But that which is conversant about the good, and is effected in union with temperance and justice, both towards us and the gods, this is the one that has the greatest power, and procures for us every kind of happiness, so as to enable us to associate with each other, and to be dear to beings superior to ourselves, the gods. It is possible, indeed, that I too, in praising Love, have omitted many things; not, however, intentionally. But if I have left out aught, it is your business, Aristophanes, to fill it up; or, if you have it in your mind to praise the god in any other way, praise him, now that your hiccups have ceased.

Apollodorus:: He said then that Aristophanes, taking up the discourse, observed that—

Aristophanes:: the hiccups had very much ceased, not however before the sneezing was applied to them, so that I wonder how a well-ordered part of the body should be in love with such noises and ticklings, such as sneezing is: for when I brought to it a sneezing it immediately ceased entirely.—

Eryximachus:: My good friend Aristophanes, consider what you are doing. For being about to speak, you are acting the buffoon, and compel me to keep a watch over your speech, lest you say aught to excite a laugh, when you might speak in peace.—

Aristophanes:: You have spoken correctly, Eryximachus; and let what I said just now be considered as unsaid. But do not watch me. Since I have a fear of what is about to be said, lest I should say not what will be laughable—for that would be an advantage and indigenous to my muse—but to be laughed down.—

Eryximachus:: Having shot your bolt, Aristophanes, think you to escape? But have a care, and so speak, as if about to give an account for it. Perhaps, however, if it seem good to me, I shall dismiss you unhurt.

Aristophanes:: In good truth, Eryximachus, I have it in my mind to speak in some other way than you and Pausanias have spoken. For to me men appear to be utterly insensible of the power of Love. Since, being sensible of it, they would have instituted most important sacred rites, and built altars, and made to him the greatest sacrifices; nor, as now, would any thing of this kind have occurred, at a time when it ought to have occurred the least. For he is, of all the gods, the most friendly to man, the aider of man, and the healer of those wounds which, being healed, there would be the greatest happiness to the human race. I will, therefore, endeavor to explain to you his power, and you shall be the teacher of it to others. But you must first learn the nature of man, and what sufferings it has undergone. For our nature of old was not the same as it is now. In the first place, there were three kinds of human beings, not as at present, only two, male and female; but there was also a third common to both of those; the name only of which now remains, it has itself disappeared. It was then one man-woman, whose form and name partook of and was common to both the male and the female. But it is now nothing but a name, given by way of reproach. In the next place, the entire form of every individual of the human race was rounded, having the back and sides as in a circle. It had four hands, and legs equal in number to the hands; and two faces upon the circular neck, alike in every way, and one head on both the faces placed opposite, and four ears, and two kinds of sexual organs, and from these it is easy to conjecture how all the other parts were doubled. They walked, as now, upright, whithersoever they pleased. And when it made haste to run, it did, in the manner of tumblers, who after turning their legs upward in a circle, place them accurately in an upright position, support itself on its eight limbs, and afterwards turn itself over quickly in a circle. Now these three and such kinds of beings existed on this account, because the male kind was the produce originally of the sun, the female of the earth, and that which partook of the other two, of the moon; for the moon partakes of both the others the sun and the earth. The bodies thus were round, and the manner of their running was circular, through their being like their parents. They were terrible in force and strength and had high aspirations, and they made an attempt against the gods; and what Homer says of Ephialtus and Otus, was told of them likewise; that they attempted to ascend to heaven with the view of attacking the gods. Upon which Jupiter and the other gods consulted together what they should do to them; but they were in a difficulty. They had not the mind to destroy them by making the race to disappear with the thunderbolt, as they did the giants; for then the honors and the holy rites paid them by that race would have been extinct, nor yet could they suffer them to act wantonly. At length Jupiter, on reflection, said, I seem to myself to have a plan, so that men may exist, and still be stopt by becoming weaker from their unbridled licentiousness. For now, said he, I will divide each of them into two; and they will at the same time become weaker, and at the same time more useful to us, through their becoming more in number; and they shall walk upright upon two legs; but if they shall think fit to behave licentiously, and are not willing to keep quiet, I will again, said he, divide them, each into two, so that they shall go upon one leg, hopping. So saying, he cut men into two parts, as people cut meddlers when about to pickle them, or as they cut eggs with hairs. But whomsoever he cut, he ordered Apollo to turn the face and the half of the neck to that part where the section had taken place, in order that the man might, on seeing the cutting off, be better behaved than before, and he ordered him to heal the other parts. And he Apollo turned the face; and pulling the skin together on every side like a contracted purse, over that which is now called the belly, he did, after making a single orifice, tie up the skin at the middle of the belly, now called the navel. He then smoothed the greater part of the remainder of the wrinkles of the skin, and jointed the breast, having an instrument such as shoemakers use when they smooth wrinkles of the leather on the last. But he left a few wrinkles on the belly and navel as a memorial of their original suffering. Now when their nature had been bisected, each half perceived with a longing its other self; and throwing their arms around each other and becoming entwined, they had a great desire to grow together, but they died through famine and idleness. And when one of these halves died, and the other was left, the surviving half sought another, and was entwined with it, whether it met with the half of a whole woman, which half we now call a woman, or with the half of a whole man. And thus they were in the act of perishing. But Jupiter in pity devised another plan, and placed the organs of generation in front, for hitherto they had been on the outside, and they begot and bred, not with one another, but with the earth, like grasshoppers. And therefore he changed them to the front; and by them he caused the generation to be with each other, from the female through the male, on this account, that should a male meet with a female, they might in the embrace at one time generate, and the race be thus propagated; but if at another time a male met with a male, a surfeit might take place from the connection, and that they might cease and turn themselves to their business, and attend to the other affairs of life. From this period has been implanted by nature in mankind a mutual love, which is the bringer together of their ancient nature, and which endeavors to make one out of two, and to heal the nature of man. Each of us then is but the counterpart of a human creature, as having been cut like the Psettæ from one into two. Hence each one is in search of his counterpart. As many men then as are sections of the form common to men, which was then called Man-Woman, are lovers of women; and from this race are sprung the majority of adulterers: and on the other hand, as many women as are addicted to the love of men, and are adulteresses, are sprung from the same race. But such women as are sections of the female, do not pay much attention to men, but turn themselves rather to women; and from this race are the Lesbian courtesans. Such as are sections of the male form, follow the males: and whilst they are young, being fragments of men, they love men and are delighted in being with them; and these are the best of boys and youths, as being the most manly in their disposition. Yet some say, indeed, they are shameless. But in this they say false; for it is not through shamelessness, but through assurance, and a manly temper and manly look, that they embrace what resembles themselves. And of this there is a great proof. For when they are full grown, such alone turn out men as regards political affairs: but when they have become men, they feel a love for young persons, and do not turn their thoughts to marriage and child-getting naturally, but are led by the force of custom and law, although it would be sufficient for them to continue to live unmarried. Altogether then such a person is both a lover of youths and a lover of those who love him, and ever embraces what is from the same race as himself. Now, whenever the lover of youths, and every one else, meet with that very thing, the half of himself, they are both smitten with a friendship in a wondrous manner, and attracted by an intimacy and love, and are unwilling to be separated from each other for even, so to say, a brief period. And these are they, who continue to live together through life; and yet they could not tell what they wish to take place to themselves from each other; for it does not seem to be sexual intercourse, that the one should, for the sake of that, be delighted with the company of the other, and seek it with so much trouble; but the soul of each being evidently desirous of something else, which it is unable to tell, it divines what it wishes, and hints at it. And if while they are lying down in the same place, Vulcan were to stand over them with his tools in his hand, and ask them “What is it do ye, mortals, desire to take place, the one by the other?” and if, finding them in a difficulty, were he to demand them again, “Do ye desire this, to be as much as possible in the same place with each other, so as never, by night or day, to be apart from each other? for if ye long for this, I am willing to melt you down together, and to mould you into the same mass, so that ye two may become one, and as long as ye live, may live both of you in common, as one person; and when ye die, may, having died in common, remain for ever in Hades, one soul instead of two. See then whether ye desire this, and it is sufficient for you, should ye obtain it.” On hearing this not a single person, I know that, would refuse, nor would he appear to wish for anything else; but everyone would in reality conceive he had heard that which he had long ago wished for, and that having come into the company of, and being melted with, his beloved, he would out of two become one. And of this the cause is, that this was our original nature. We were once whole. To the desire then and pursuit of this whole, the name of Love is given. And we were, as I said, formerly one. But now, for our iniquity, we have been cut in twain by the deity, and have been made, like the Arcadians by the Lacedæmonians, to dwell asunder. There is therefore a fear, that, unless we are well-behaved towards the gods, we shall be again cleft in twain, and go about with our noses split down, as those have, who are modeled on pillars in profile, and become, as it were, pebbles cut through and rubbed smooth. On this account then, it is meet to exhort every man to behave in all things piously towards the gods, that we may on the one hand escape from the ills, and on the other obtain the good, to which Love is our guide and general; to whom let no one act in opposition. For he who acts in opposition, is an enemy to the gods. But by becoming friends and being reconciled to the god, we shall, what few of those now living do, find and meet with our beloved, the halves of ourselves. And let not Eryximachus take me up, and ridicule my speech, as if I meant Pausanias and Agatho. For perhaps they are amongst such, the fortunate few, and are both of them males in nature. I say then of all in general, both men and women, that the whole of our race would be happy, if we worked out Love perfectly; and if each were to meet with his beloved, having returned to his original nature. If this then be the best, it necessarily follows, that of the things now present, that which is nearest to this is the best; and that is, to meet with youthful objects of love that are naturally suited to one's ideas. In celebrating then the deity who is the cause of this fitness, we should justly celebrate Love; who both at the present time benefits us the most, by leading us to our own; and for hereafter gives us the greatest hopes, that, if we pay the debt of piety to the gods, he will restore us to our original nature, and, by healing us, render us happy.

Such, Eryximachus, is my speech, in behalf of Love, of a different kind from yours. As then I requested, do not ridicule it, in order that we may hear what each of the rest will say; or rather what both will; for the rest are only Agatho and Socrates.

Eryximachus:: I will be obedient; for the speech has been spoken in a delightful manner; and if I were not conscious that Socrates and Agatho were deeply versed in affairs of Love, I should have greatly feared they would be at a loss for reasons through there having been said so much, and of all kinds. But now I have every confidence.—

Socrates:: This is all very well for you, Eryximachus; since you have already gone through the ordeal yourself with honor. But if you were, where I am now, or rather perhaps where I shall be, when Agatho shall have spoken his speech cleverly, you would be in a very great fright, and in every kind of heart-sinking, as I am now.—

Agathon:: You wish, Socrates, to drug me, in order that I may be confused through thinking that the spectators have a great expectation of my being about to make a clever speech.—

Socrates:: I should have been, Agatho, forgetful indeed, if, after witnessing your courage and high spirit, when you came upon the stage with the performers and looking so numerous an audience in the face, you were about to exhibit your compositions without being in the least daunted, I thought you could be now disturbed on account of us, so few in number.—

Agathon:: Surely, Socrates, you do not think me so inflated by a theatrical audience, as not to know that to a man, who has any mind, a few persons of sense are more awful than a multitude of fools.—

Socrates:: I should be acting not at all correctly if I thought there was any thing about you, Agatho, of a boorish nature. But I know very well, that if you met with any whom you considered wise, you would think more of them than of the multitude. But I fear we are not such; for we were there likewise, and made a part of that multitude. But if you had met with other wise men, you would perhaps have felt a shame before them, had you thought you were doing an act really disgraceful. Is it not so? or how say you?—

Agathon:: It is true.—

Socrates:: But before the multitude would you not feel a shame, if you thought you were doing any thing base?—

Phaedrus:: If, dear Agatho, you will give Socrates an answer, it will be no manner of concern to him what becomes of any thing whatever here, or if he can only have somebody to converse with, and especially one who is handsome. I confess I do with much pleasure hear Socrates conversing: but it is necessary for me to take care of the panegyric upon Love, and to receive a speech from every one of you. But do both of you pay thus your tribute to the god, and then converse.

Agathon:: You say well, Phædrus; and there is nothing to prevent me from beginning my speech. For I shall have frequently the means of conversing again with Socrates.

I wish in the first place to state how I ought to speak; and I will then so speak. For all of those who have spoken before me, appear to me to have celebrated not the god, but to felicitate mankind upon the good, of which the god is the cause. But what he is himself, who has bestowed these gifts, not one of them has explained. Now upon each subject of every panegyric, there is only one correct method; and that is, to detail in a rational way of how great things how great a cause is he, respecting whom the discourse may be. In this way then it is meet for us to make the encomium upon Love, by showing, first, how great he is, and afterwards his gifts. I assert then, that of all the gods in reality blessed, Love is, if it is lawful to say so, and without calling down vengeance, the most blessed of all the gods, and at once the most beautiful and the best. But such he is, being the most beautiful. In the first place, he is, Phædrus, the youngest of the gods. Of this assertion he affords himself a powerful proof, by running away in haste from Old Age, who is quick-footed, it is plain, at least it approaches quicker than is necessary; and which, indeed, Love naturally hates, nor does he come near to it within a great distance; but he is ever with the young, and is. For, as the old proverb rightly has it, “Like always doth approach to like.” Now, though I agree with Phædrus in many other points, I do not agree in this, that Love is older than Saturn and Japetus; but of gods, I affirm, he is the youngest, and is ever young, and that the doings of the olden time, which Hesiod and Parmenides detail, were produced, if indeed they say true, by the power of Necessity, and not Love. For, had Love been with them, there had been no castrations, nor bindings, nor those many other acts of violence, but friendship and peace, as now, from the time when Love came to be the ruler of the gods. Thus then he is young, and in addition to being young is a tender being. But he wants a poet, such as Homer was, to express the tenderness of the god. Now Homer describes Ate as a goddess, and of a tender frame. At least he speaks of her feet as being tender:

> Her feet are tender; not on ground she stalks,
> But on the top of human heads she walks.

The poet then seems to me to show by such a proof her tenderness; because she walks not upon a hard place, but a soft one. And the same proof we shall use respecting Love, that he too is tender. For he neither walks on the ground, nor upon human skulls, which in truth are places not very soft; but on the softest of all existing things, he walks and dwells there. For he has fixed his abode in the dispositions and souls of gods and men: and yet not in all souls indiscriminately: but whenever he meets with a soul possessing a harsh disposition, away he goes, and takes up his abode with a tender one. Since, then, he is ever touching with his feet, and in every way the softest parts in the softest persons, he must needs be extremely tender. Thus then he is very young and very tender; and in addition to these qualities he is of a flexible form. For he would not be able to entwine himself around every thing, nor to pass through every soul, at first unperceived, and to go out again, if he were of a hard substance. And a great proof of his form being in proportion and flexible, is in its gracefulness, which Love confessedly possesses in a manner superior to all. For between Ungracefulness and Love there is always a war. His diet too on flowers points out the beauty of his color. For Love does not settle upon a body, or any other spot where flowers are not, or where they have fallen off; but wherever is a spot flowery and fragrant, there he settles and fixes his abode., As regards then the beauty of the god thus much is sufficient; although much still remains. I must speak after this on virtue of Love. Now is the highest praise; that he does no injury to a god or man, nor by a god or man is he injured. Nor, if he suffers aught, does he suffer by violence; for violence touches not Love; nor if he does aught, does he it with violence; for every one willingly ministers in every thing to Love. But whatever one party agrees to do of his own accord for another party of his own accord, such acts the laws, that are the rulers in a state, say are justly done.

In addition to justice, Love has the greatest share of temperance. For to be superior to pleasures and to passions, is every where confessed to be temperance. But no pleasure is superior to Love. If then they are inferior, they will be Love's subjects; and he will be their master; and being thus superior to pleasures and passions, he will be pre-eminently temperate. Moreover, as regards velour, not Ares Mars himself can stand up against Love. For it is not Ares that holds Love, but Love Ares, the son, as the saying is, of Aphrodite Venus. Now he who holds is superior to the party held; and he who is the master of the party more valiant than all the rest, will be the most valiant. Thus then have we spoken of the justice, and temperance, and velour of the god; and it is left to speak of his wisdom. As far then as we can, we must endeavor to be in no way wanting. And in the first place, that I too may do honor to my own art, as Eryximachus did to his, the god is so clever a poet, that he is able to make even another person one.

> For each becomes a poet, though before
> He was not musical, when Love touches him.

This testimony it is fitting for us to use, to prove that the poet Love is excellent for all the creative power connected with the Muse. For that, which one has not, or does not know, he can not either give to another or teach. Moreover who will gainsay the assertion that the making of all animals is through the wisdom of Love, by which all living things are generated and produced? Then as regards handicraft-skill in arts, know we not that he, whose teacher is the deity, turns out a person of repute and illustrious; but he on whom Love does not lay his hands, remains in obscurity? The art of the archer, and of the physician, and of the prophet, did Apollo invent, under the guidance of Love; so that he would be disciple of Love; and through desire the Muses became the inventors of music, and Hephaestus Vulcan, of brass-working, and Athena Minerva, of weaving, and Zeus Jupiter, of governing gods and men. From whence then were the affairs of the gods put into order? Through the birth, it is plain, of the love of beauty; for Love does not follow ugliness. For previously, as I stated at the commencement, many and terrible things befell, as they say, the gods, through the rule of necessity. But when this god was born, through his loving all things of beauty, “to gods and men did all good things arise.”—Thus, Phædrus, Love appears to me to be, in the first place, himself the most beautiful and best; in the next, to be the cause of such like beautiful things in other beings. And it comes into my mind to speak something in verse, because he it is, who produces

> Peace amongst men, upon the sea a calm;
> Stillness on winds, on joyless bed sweet sleep.

It is he who divests us of all feelings of alienation; and fills us with those of intimacy; who establishes all meetings such as these, and in festivals, in dances, and in sacrifices, he becomes the leader; introducing mildness, and banishing a harshness of manners; the friendly giver of good-will, the non-giver of enmity; gracious to the good; looked up to by the wise, admired by the gods; envied by those who have no lot in life, possessed by those who have; the parent of luxury, of tenderness, of elegance, of grace, of desire, and regret; careful of the good, regardless of the bad; in labor, in fear, in wishes’, and in speech, the pilot, the encourager, the bystander, and best savior: of gods and men, taken all together, the ornament; a leader the most beautiful and best; in whose train it is the duty of every one to follow, hymning well his praise, and bearing a part in that sweet song which he sings himself when soothing the mind of every god and man.—

Let this my speech be offered up, Phædrus, to Love, partaking, as best I could, in some parts of what is gay, in others of what is grave.

Apollodorus:: When Agatho had done speaking, all present, said Aristodemus, roared out applause, for he had spoken in a manner worthy of himself and the god.—

Upon which Socrates, looking at Eryximachus, said;

Socrates:: Do I appear to you, son of Acūmĕnus, to have felt just now a fear that was no fear, when I spoke prophetically, what I asserted lately, that Agatho would speak marvelously well, and that I should be placed in a difficulty?—

Eryximachus:: One portion you appear to have foretold truly, that Agatho would speak excellently, but the other, that you would be in a difficulty, I do not consider true.

Socrates:: And how, O happy man, am I not likely to be in a difficulty, and any one else too, who is to speak after a speech so full of beauty and variety? In other respects it was not equally admirable, but who, that heard the conclusion, would not have been struck with the beauty of the nouns and verbs? For when I consider how unable I shall be to say any thing beautiful approaching to this, I should run away for very shame, had I in any way the power. For the speech put me in mind of Gorgias: so that I suffered what is told in Homer. For I feared that Agatho would at last send in his speech the head of that formidable speaker Gorgias against my speech; and, through my inability to say a word, turn me into stone! And I perceived how ridiculous I was then, when I agreed that I would in my turn after you make an encomium upon Love, and asserted that I had some skill in the matter of Love, yet knowing nothing of it, nor how it was necessary to praise any thing whatever. For in my stupidity I thought one ought to speak truths respecting each subject praised, and that these were to be the substratum, and that selecting out of these very matters the most beautiful, to put them together in the most becoming manner. And I had a great notion that I should speak well, as knowing well the truths relating to the praising of any thing whatever. But this it seems is not the way to praise correctly, but we must attribute to the subject qualities the greatest and the best possible, whether they are such or not; and if the encomiums are untrue, that is an affair quite immaterial. For it was stated before, as it seems, that each of us should appear to praise Love, and not merely to praise. On this account, I suppose, you turn over every topic and attribute to Love, and assert that he is of such a kind, and the cause of things so great, as to appear the most beautiful and best—to those it is clear who know him not—for he certainly would not appear so to those who did know him. And thus the praise becomes fine and pompous. But for my part, I know nothing of this kind of praise; and through not knowing, I agreed to compose myself in my turn a panegyric. "But my tongue only promised, not my mind." And so farewell to it. For I should not be able to say any thing, not I indeed. But I am ready to speak the truth according to my own notions, if you are willing to hear, but not by way of comparison with yours, in order that I may not pay the debt of laughter. Do you then, Phædrus, consider, if indeed you are in want at all of such a speech, whether you wish to hear the truth spoken about Love with such an arrangement of nouns and verbs as may happen to come into my mind.

Apollodorus:: Phædrus then and the rest requested him to speak in the manner which he thought he ought to speak.

Socrates:: Permit me, Phædrus, however, to ask Agatho still some trifling questions; that, after having obtained a confession from him, I may then speak in this way.

Phaedrus:: I permit you. Question him.

Apollodorus:: Hereupon he said, that Socrates began somewhat after this fashion:

Socrates:: In good truth, friend Agatho, you seem to me to have begun your speech well, in saying that we ought in the first place to set forth what is the nature of Love, and afterwards his doings. With this introduction I am quite delighted. Come, then, touching this Love; since you have gone through the other points in a beautiful and splendid manner, tell me this also. Is Love a being of such a kind as to be the love of something or nothing? I do not ask, whether it is of some father or mother;—for the question, whether love is the love of a father or mother, would be ridiculous—but as if I had asked this respecting a father, Is a father a father; and the father of something, or not? In this case you would surely have said, if you wished to answer correctly, that a father is the father of a son or daughter, would you not?—

Agathon:: Certainly.—

Socrates:: And is not a mother in the same predicament?—

Apollodorus:: To this too Agatho assented.—

Socrates:: Answer me still further to a question a little larger, that you may the better apprehend my meaning. If I had asked, What, then, of a brother—whatever that very thing may be—is he a brother of some person, or not?—

Agathon:: He is.—

Socrates:: Is he not of a brother or a sister?—

Apollodorus:: Agatho assented.—

Socrates:: Try then to tell me about love. Is it the love of nothing, or of something?—

Agathon:: Of something, by all means.—

Socrates:: This, therefore, keep to yourself, remembering what it is; but tell me so much as this. Does love desire that very thing, of which it is the love, or does it not?—

Agathon:: Desires it, certainly.—

Socrates:: Whether, when possessing what it desires and loves, does it then desire and love it? or only when not possessing it?—

Agathon:: It would seem only when not possessing it.—

Socrates:: Instead of seeming consider if it be not of necessity thus, that desire desires only that, of which it is in want; and that it does not desire, if it be from want. For to me, Agatho, this seems to be marvelously necessary. But how does it to you?—

Agathon:: To me too it seems.—

Socrates:: You say well. Would then a big man, being big already, wish to be big? or a man being strong, wish to be strong?—

Agathon:: This is, from what has been just now stated, impossible. For, being so, he would not be wanting on those points.—

Socrates:: You say true; for, if a person, being already strong, should wish to be strong, and being swift, wish to be swift, and being healthy, wish to be healthy, one might perhaps imagine that those who are such, as regards these and such-like points, and possess these, would desire those things which they already possess. That we may not therefore be deceived, it is for this that I speak. For if you consider the matter, Agatho, you will see that they, who possess at present any of those things, must possess them, whether they will or not; and of such a thing, how can any one ever have a desire? But when a person says thus—“I, who am now in health, desire to be in health; and I, who am now wealthy, desire to be wealthy; and I long for those very things, which I possess;” we should say to him thus: “You mean, my man, that you, who now possess wealth, and health, and strength, are desirous to possess those things for the time to come; since at the present time you possess them, whether you will or not.” When you say, therefore, thus—“I desire what is present,” consider whether you are saying any thing else than this—“I wish that what are now present may be present for the time to come.” Would aught else but this be acknowledged?—

Apollodorus:: Agatho agreed that it would not.—

Socrates:: Is not this then, to love to desire that which is not at hand to him, and which he does not possess; and that what are now present should be preserved for him for the time to come.—

Agathon:: Certainly so.—

Socrates:: Both this man, therefore, and every one else who feels a desire, desires that which lies not at hand, and which is not present, and which he has not, and which he himself is not, and of which he is in want of; such things only are those of which there is the desire and the love.—

Agathon:: Certainly.—

Socrates:: Come then, let us agree upon what has been said. Is Love any thing else than, in the first place, the love of something? next, of those things of which there is a want?—

Agathon:: Clearly not.—

Socrates:: In addition to these, recollect, of what things you asserted in your speech there was a Love. But, if you wish it, I will remind you. For, I think, you said something like this—“that their affairs were put into order by the gods, through a love of things beautiful: for that of things ugly there could be no love.” Did you not say some such thing?

Agathon:: I did say so.—

Socrates:: And you spoke reasonably, friend. Now, if such be the case, would Love be any thing else than the love of beauty, and not of ugliness?—

Apollodorus:: He confessed it.—

Socrates:: And has it not been confessed that a person loves that thing of which he is in want, and which he does not possess?—

Agathon:: Yes.—

Socrates:: Love then, is in want of, and does not possess, beauty.—

Agathon:: It is so of necessity.—

Socrates:: What then, do you call that beautiful, to which beauty is wanting, and does not possess it at all?—

Agathon:: Certainly not.—

Socrates:: Do you then, still confess that Love is beautiful, if such be the case?—

Agathon:: I seem nearly, Socrates, to know nothing of what I then asserted.—

Socrates:: And you have, Agatho, spoken fairly. But tell me still one little thing. Do not things good seem to you to be also beautiful?—

Agathon:: They do.—

Socrates:: If then, Love is in want of things beautiful, and if good things are beautiful, Love will be in want of good things likewise.—

Agathon:: I am not able to argue against you, Socrates; let then the case be as you say.—

Socrates:: You are not able, my beloved Agatho to argue against the truth: for to argue against Socrates is by no means difficult. And now here I will leave you. But as regards the discourse about Love, which I heard formerly from Diotima of Mantinea, who was a clever person on these and many other points—for when the Athenians were making sacrifices on account of the plague, she effected its being put off for ten years—she it was who instructed even me in Love affairs. The speech then which she spoke I will endeavor to go through before you on the principles agreed upon by myself and Agatho, relying as well as I can, myself upon myself. It is then, Agatho, very meet to declare, first, as you have stated, who Love is, and of what kind, and then his doings. Now it seems to me a thing the most easy to go through the subject, as the stranger went through it, while sifting myself. For I spoke to her in other words, but on nearly such points as Agatho just now did to me, by saying that Love was a god of goodness, and was also one of things beautiful. But she refuted me with the same arguments as I did this person Agatho; by showing that, according to my own reasoning, Love was neither beautiful nor good.

How say you, Diotima? Is Love an ugly and an evil being?—

Diotima:: Will you not speak words of good omen? Or do you imagine that every thing which is not beautiful, must of necessity be ugly?—

Socrates:: Most certainly.—

Diotima:: And is every thing that is not wise, ignorant? Or do you not perceive, there is something between wisdom and ignorance?—

Socrates:: What is that?—

Diotima:: To think correctly, and without being able to give a reason, know you not, is neither to know—for how can knowledge exist without a reason?—nor yet is it ignorance; for how can that which hits the truth be ignorance? There is then some such thing as correct opinion between intelligence and ignorance.—

Socrates:: You say truly.—

Diotima:: Do not then compel what is not beautiful to be ugly; or what is not good to be evil. And thus, since you have confessed that Love is neither good nor beautiful, do not fancy a whit the more that he is ugly and evil; but something, between those two.—

Socrates:: However, he is acknowledged by all to be a god of might.—

Diotima:: By all who do not know him, or by those who do likewise?—

Socrates:: By all universally.

Diotima:: How, Socrates, can he be acknowledged a god of might by those, who say he is no god at all?—

Socrates:: Who are they?.—

Diotima:: You yourself, are one and I am one.—

Socrates:: How say you this?—

Diotima:: Easily. For tell me. Say you not that all the gods are blest and beautiful? or would you dare assert that any one of the gods is not beautiful and blest?—

Socrates:: Not I, indeed, by Zeus.—

Diotima:: Say you not that those who possess things good and beautiful are happy?—

Socrates:: Certainly.—

Diotima:: But you have confessed that, through the want of things good and beautiful, Love has a desire for those very things of which he is in want.—

Socrates:: I have confessed.—

Diotima:: But how can he be a god, who has no share in things beautiful and good?—

Socrates:: It seems, by no means.—

Diotima:: You see then, that even you do not consider Love as a god.—

Socrates:: What then, is Love a mortal?—

Diotima:: Least of all.—

Socrates:: What then?—

Diotima:: As in the case before mentioned, between a mortal and immortal.—

Socrates:: What is this, Diotima?—

Diotima:: A great dæmon, Socrates. For the whole dæmon-kind is between a god and mortal.—

Socrates:: What power has it?—

Diotima:: It interprets for, and transmits to, the gods what is sent from men; and for and to men what is sent from the gods; from men, their petitions and sacrifices; from the gods, their commands and returns for sacrifices; and being in the middle space between both gods and men it fills up the whole. So that by it all have been bound together into one. Through them proceeds every kind of prophecy, and the priestly art relating to sacrifices, and initiations and incantations, and the whole of magic and sorcery. For a god is not mixed up with man; but through that middle nature is carried on all intercourse and converse between gods and men, whether awake or asleep. Now he who is wise in things of this kind is a dæmon-like man; but he who is wise in any other matter, whether arts or handicrafts, is an operative merely. But these dæmons are many and various, and one of them is Love.—

Socrates:: But, from what father or mother is he?—

Diotima:: It is a rather long story, to tell. However, I will relate it. When Venus was born the gods had a feast, all the rest, and likewise Plenty, the son of Planning. And when they had supped, Poverty came to beg, as there was good cheer there, and she staid about the door. Just then Plenty, intoxicated with nectar,—for as yet wine was not,—went into the garden of Zeus, and being drowsy with liquor, fell asleep. Poverty therefore laid a plot against him, so as to have a child by Plenty, and placed herself down by him, and became pregnant with Love. Hence Love has become the follower of and attendant upon Venus, as having been begotten on the birth-day of that deity, and being also naturally fond of the beautiful and of Aphrodite, as being beautiful. As Love then is the son of Plenty and of Poverty, he is in this state of fortune. In the first place, he is always poor and so far from being either tender or fair, as the multitude fancy, he is rough and dirty, and shoeless, and houseless, ever stretched on the bare ground, and bedless, and lying at doors, and in the road under the sky alone; and as partaking of his mother's nature, dwelling ever with indigence. On the other hand, taking after his father, he is a plotter against the beautiful and good; courageous and bold, and on the stretch to act; a skilful hunter, for ever weaving some contrivance; eagerly desirous of intellect, and finding away for himself; acting the philosopher through the whole of life; a clever sorcerer and a drug-employer, and sophist; and naturally neither an immortal nor a mortal; but at one time in the same day he blooms and lives, when he is faring well; and at another time he dies; but revives again through his father's nature. Whatever is furnished to him, is ever secretly flowing out; so that Love is never either in want or in wealth. He is likewise in a middle place between wisdom and ignorance. For the case is this:—

No god philosophizes, or desires to become wise; for they are so; and if there is any other being who is wise, neither does he philosophize. Nor yet are the ignorant philosophers, nor do they desire to become wise. For on this very account, Ignorance is in a hard case, in that a person, being neither beautiful, nor good, nor wise, still appears to himself to be all-sufficient. Hence he who fancies himself to be not wanting, does not desire that, of which he fancies he is not in want.—

Socrates:: Who then, Diotima, are they who philosophize? if they are neither the wise nor the ignorant?—

Diotima:: This, is surely clear even to a child, that they are those between both of these; of whom Love too is one. For of the things most beautiful is wisdom. Now Love is conversant with the beautiful. So that it is of necessity for Love to be a lover of wisdom, and for a lover of wisdom to be between the wise and the ignorant. And of this too the cause is in his birth; for he is from a father wise and in abundance, but from a mother unwise and in want. Such, my dear Socrates, is the nature of this dæmon. But as to whom you fancied to be Love, you have suffered nothing to be wondered at. For you fancied, as it seems to me, making a guess from what you are saying, that Love is the thing loved, and not the loving; and hence, I think, Love appeared to you to be all-beautiful. For the thing loved is in reality beautiful and delicate and perfect and blest. But the thing loving possesses another nature, and such as I have described.—

Socrates:: Be it so, stranger lady; for you have spoken well. But if Love be of such a nature, of what advantage is he to mankind?—

Diotima:: This, Socrates, I will subsequently endeavor to teach you. Love then is of such a nature, and has been so begotten; and he is, as you assert, the love of things beautiful. Now should any one ask us, What is, O Socrates and Diotima, the Love of things beautiful?—but I will speak more clearly in this way—What does the lover of things beautiful long for?—

Socrates:: For them to be his.—

Diotima:: This answer, seeks still such a question as this. What will there be to that man, who shall possess things beautiful?—

Socrates:: To this question, I had it not in my power to give an answer very ready at hand.—

Diotima:: But, should a person making a change, and putting good in the place of beautiful, inquire of you by saying, Come tell me, Socrates, what does the lover of good things long for?—

Socrates:: For them to be his.—

Diotima:: And what will there be to a man, who shall possess good things?—

Socrates:: This is more easy to answer: that he will be happy.—

Diotima:: Right; for by the possession of good things the happy are happy, nor is there any need to ask, Why does he, who wishes to be happy, wish so; but the answer appears to be conclusive.—

Socrates:: You say true.—

Diotima:: Now do you conceive, that this wishing and this longing is common to all men, and that all wish for good things to be in their possession always; or how say you?—

Socrates:: I think in this way; that it is common to all.—

Diotima:: Why then, Socrates, do we not say that all men are in love, if all love the same things, and always? but say rather, that some are in love, and some are not?—

Socrates:: I too am in a wonderment.—

Diotima:: Do not wonder; for after we have taken away a certain species of love, we call it love, adding the name of the whole; but as regards the rest, we make an improper use of other names.—

Socrates:: As how, for example?—

Diotima:: As this. You know that creation is a thing of extensive meaning. For that which is the cause of any thing coming out of non-existence into existence, is altogether a creation. So that all the operations effected by all the arts, are creations; and all the workers of them are creators.—

Socrates:: You say true.—

Diotima:: And yet you know, they are not called creators, but have other names; but from all kinds of creation one portion has been separated, relating to the musical art and to meters; and is called by the name belonging to the whole. For it alone is called poesy i.e. making; and they, who possess this portion of the creative power, are poets i.e. makers:—

Socrates:: You say true.—

Diotima:: Just so it is with Love. Universally all long after good things; and a state of good fortune is to every one a Love the greatest and deceitful. But some persons, turning themselves towards him in many and various ways, either through money-making, or a love of gymnastic exercises, or of wisdom, are neither said to be in love nor are called lovers; while others who go, and are seriously occupied, according to one kind of love, have the name of the whole, and love, and are said to be in love, and are called lovers.—

Socrates:: You are very near the truth.—

Diotima:: There is a story told, that they who are in love are in search of their other half. But my doctrine is, that a person loves neither the half nor the whole of any thing, unless it happens, my friend, to be somehow a good. Since men are willing to have their feet and hands cut off, if their own limbs are deemed to be an evil. For each person does not hug his own, I fancy, unless he calls good his own property, but evil the property of another: since there is nothing else of which men are in love, but good alone. How do they seem to you?—

Socrates:: By Zeus, to me at least not otherwise.—

Diotima:: May we not then say simply, that men love the good?—

Socrates:: Yes.—

Diotima:: What, must we not add that they desire the good to be present to them?—

Socrates:: This must be added.—

Diotima:: And not only, to be present, but to be present always?—

Socrates:: This too must be added.—

Diotima:: There is then, to speak comprehensively, the desire that the good should be present to a person for ever.—

Socrates:: You speak most truly.—

Diotima:: Since then, there is the love of this, the good, of those who pursue it in any manner, and by any act, the eagerness and the stretch for it would be called love. But can you state what this act would happen to be?—

Socrates:: I should not however have wondered, Diotima, at your wisdom, nor have frequented your school to learn these very things, had I been able to tell. —

Diotima:: Well then, I will tell you. The act is of breeding upon a beautiful thing, as regards both the body and soul.—

Socrates:: What you are saying, has need of divination. For I do not understand.—

Diotima:: I will speak then, more clearly. All human beings, Socrates, yearn, as regards the body and soul; and when they arrive at maturity our nature longs to beget. But it is unable to beget upon an ugly thing, but only upon a beautiful one. For the begetting is through the connection of a man and woman. But this is a god-like act, and this the yearning and generation is in a mortal animal an immortal act. But these it is impossible to take place in a thing unsuitable. Now what is ugly is ill-suited to every thing that is divine? But what is beautiful is suited. For Beauty is Fate and Eileithuia, who presides over child-birth. Hence when what is yearning comes close to what is beautiful, it becomes joyous, and being delighted it pours itself out and breeds and begets. But when it comes close to what is ugly, it assumes a sour look, and is vexed and coils itself up, and turns away, and unrolls itself, and does not beget, but restraining the swelling, it takes the matter grievously to heart. Hence to the party yearning and swelling with desire, there is an excessive fluttering of mind respecting the beautiful; on account of its being able to deliver him who has it from his great agony. But, Socrates, this is not, as you fancied, the love of the beautiful.—

Socrates:: Of what then is it?—

Diotima:: It is the love of generation and of begetting in a beautiful thing.—

Socrates:: Be it so.—

Diotima:: By all means.—

Socrates:: But why of generation?—

Diotima:: Because generation is a thing ever producing, and immortal, as far as it can be for a mortal. Now from what has been agreed upon it is necessary to desire immortality with a good, if there is to Love the desire of the good being ever present to himself. It is necessary then from this reasoning, that there is a love likewise of immortality.

Socrates:: All this did Diotima teach me, when she was discoursing upon love matters. And once upon a time she asked me;

Diotima:: What do you imagine, Socrates, to be the cause of that love and desire? Do you not perceive how vehemently all brute animals are affected, when they feel such a desire to breed, both beasts and birds? how they are all sick and lovingly disposed, in the first place, to have a connection with each other; and afterwards to rear their offspring; and how ready in their behalf the weakest are to fight against the strongest, and to die for them, and though they are themselves pining away with hunger, they do not faint in doing every thing, so as to bring them up. Human beings indeed, one might fancy, acted thus from reflection, but what reason is there for wild animals to be so lovingly disposed. Can you state?—

Socrates:: And I said again that I did not know.—

Diotima:: And do you think, ever to become a person of power in questions of love, if you do not understand this?—

Socrates:: It is for this very reason, Diotima, as I just now stated, that I come to you, being well aware that I have need of teachers. Do you then tell me the cause both of this and of all the rest relating to questions of love.—

Diotima:: If you believe then, that there is naturally the love of that, which we have often confessed, do not wonder. For here, on the same ground as that, the mortal nature seeks as far as possible to be ever and immortal. Now this it effects only by generation; when it leaves another new thing in the place of the old; since at the time when each individual animal is said to live, and to be the same; as for instance, a person is called the same from childhood, until he becomes an old man; and though he never possesses the same things in himself, he is nevertheless called the same person, being perpetually altered, by obtaining some new things, and losing the old, as regards the hair and flesh, and bones and blood, and the whole body. And not only as regards the body, but the soul likewise; his manners, morals, opinions, desires, pleasures, pains, fears, all these never remain the same to any man; but some are produced, and some destroyed. And there is something still more strange than this; since not only are some sciences produced, and some lost by us, but we are never the same, not even as regards sciences in general; but each single science suffers in a similar way. For what we call to practice oneself is to act, as if a science were about to depart; and indeed oblivion is the departure of science; but practice, introducing again a fresh remembrance in the place of the departing one, preserves the science, so that it seems to be the same. In this manner every thing mortal is preserved, not by its being in every respect the same for ever, as the deity is; but by the thing that is departing and growing old, leaving another new thing, such as it was itself. By this contrivance, Socrates, that which is mortal partakes of immortality, both body and all other things. But that which is immortal in another way. Do not then wonder that every thing honors its own offspring. For this earnest attention and love follows every thing for the sake of immortality.—

Socrates:: And I on hearing the discourse was amazed and said;

Be this so thou most wise Diotima; since such is truly the case. And she, like the perfect sophists, replied;

Diotima:: Rest assured, Socrates. Since, if you are willing to turn your eyes to the love of glory in mankind, you would wonder at your want of reason touching the points on which I have spoken, unless you bear in mind and consider how terribly they are affected with the desire to become renowned;

And fame undying to lay up for ever.

And for this they are ready to run the risk of all kinds of danger, even still more than for their children, and to expend their substance, and undergo labors of whatsoever kind, and for it to die. Since do you fancy, that Alcestis would have died for Admetus, or Achilles have died over the body of Patroclus, or your countryman Codrus to preserve the kingdom for his children, had they not thought that of their virtuous deeds the remembrance would never-dying live, as it actually does for ever, which we cherish to this day?—

Socrates:: Far from it.

Diotima:: But I think, that in behalf of undying virtue, and of a reputation glorious as this, all men perform all deeds, and so much the more, as they are the more excellent. For they have a yearning for immortality.—

They then, who have a yearning according to the body, turn themselves rather to women, and are in this way given to love affairs; and by child-getting procure for themselves, as they fancy, immortality and a remembrance and happiness for the time to come. But they who have a yearning according to the soul—

Socrates:: Are there then, they who yearn in their souls?—

Diotima:: Still more than in their bodies; for which it is fitting for the soul to yearn and to bring forth. What fitting offspring is this? Intellect and every other excellence. Of which all poets are the generators, and such handy-craftsmen as are said to be inventive. But the greatest and most beautiful part of intellect is that, which is conversant in the well-ordering of cities and private dwellings, to which is given the name of temperance and justice. With these when any one is teeming from his youth, as being divine in his soul, and when he has arrived at a mature age, he longs already to beget and breed; and he seeks, I think, even he, going about, for the beautiful thing, upon which he may generate: for he never will generate on what is ugly; and thus yearning, he takes to his arms handsome bodies rather than the ugly; but if he meets with a soul beautiful and noble, and finely molded, he ardently embraces both united; and to such a person he immediately discourses copiously on virtue, and what a virtuous man ought to be, and what pursuits he should follow; and he endeavors himself to act the teacher; for laying hold, I think, of a beautiful thing, and associating with it, he breeds and begets that, with which he has been yearning of old, and has both present and absent borne in recollection; and in common with the other party, he brings up what has been produced; so that such persons have a communion of feeling towards each other much greater than what arises from other children, and a friendship more firm; inasmuch as they have a joint interest in children more lovely and more immortal. Now every one would choose that such children should be born to him rather than those of a human kind. And turning his thoughts to Homer, Hesiod, and the rest of the excellent poets, he would envy them for having left such an issue of their own, as to obtain for them an undying glory and remembrance. Or, if you prefer it, see what children Lycurgus left behind him at Lacedæmon, the saviors of their country, and, so to say, of the whole of Greece. Amongst yourselves, too, how honored is Solon, for his begetting the laws! and there are many other men elsewhere and in many places amongst both the Greeks and Barbarians, who have shown forth many and noble deeds, and begotten every kind of virtue. And to them many holy rites have been paid on account of such their progeny; but never to any man on account of his human offspring. In such mysteries relating to Love even you, Socrates, would perhaps be initiated. But the consummation, on account of which the looking-on itself exists, if a person follows the rites correctly, I know well you would not complete. However, I will tell you, and not be wanting in a readiness to instruct you. But do you endeavor to follow me, as long as you are able. He then, who would rightly arrive at this consummation, must begin when young to direct his steps to forms that are beautiful. And if, in the first place, his leader conducts him rightly, he must feel a love for one of them, and there beget conversations full of beauty. In the next place, he must have a due perception that the beauty, which exists in any form whatever, is the brother to that which is in a different form. And if he must pursue the beauty, which is in a species, there would be a great want of understanding not to consider the beauty found in all bodies as one and the same. And he, who thus considers, must become a lover of all beautiful forms, and relax the violence of his love for a single form, and despise it, and hold it of no moment; and afterwards consider of greater value the beauty existing in the soul, than that existing in the body; so that, if there be a person only reasonably beautiful in soul, and if he bears only a small flower, he should be satisfied to feel a love, and to tend with care, and to give birth to conversations of this kind, full of beauty, and to seek such as will make the young better, in order that he may, on the other hand, be compelled to behold the beauty existing in the employments of life, and the regulations of laws, and to see this, that all this has an affinity with itself, in order that he may consider as of little value the beauty that is around the body; and after these liberal employments to lead him to sciences in order that he may see again the loveliness of science; and looking upon beauty as being now manifold, he may no longer be the slave of that which exists in one form—as a domestic is contentedly in love with the beauty of a little child, or of a man, or one employment—and become a person of no mark, and of contracted notions; but turning himself to the wide sea of beauty, and contemplating the many and beautiful and magnificent discourses, he may there give birth to conceptions in unstinting philosophy, until being there in philosophy strengthened and increased, he shall behold some single science of such a kind that it is conversant with so great and beautiful a thing. But now try, to give me all the attention you can. Whoever then has been instructed thus far in the mysteries of Love, and has beheld in due order and correctly the things of beauty, he will, when he arrives at the consummation of the things of Love, see on a sudden some wondrous sight of natural beauty, for the sake of which all his previous labors have been undertaken. For in the first place, it exists for ever, being neither produced nor destroyed, and neither suffering increase nor decay. In the next place, it is not beautiful only on this side, but ugly on that; nor only at one time, but not so at another; nor as regards one point beautiful, but as regards another ugly; nor as being beautiful in the eyes of some, but ugly in the eyes of others; nor will its beauty be a mere outward appearance, as if it were a face, or hands, or any thing else in which the body participates; nor is it any discourse or science; nor does it exist in any other being, such as an animal; nor in the earth, nor in the heavens, nor in any other part of the universe; but it subsists by and with itself, and possesses a form eternally one; while all the other things are beautiful through their participating in this, in some such manner, that whereas the rest are produced and destroyed, it becomes neither greater in aught, nor less, nor is exposed to any state of suffering. And when ascending from these, through rightly loving the young, he begins to have a view of the beautiful, he will have nearly arrived at the consummation. Now this is to march by oneself correctly to the affairs of Love, or to be led by another; beginning from the things of beauty, to keep ascending, for the sake of the beautiful itself, by making use as it were of steps, from one beautiful object to two, and from two to all; and from the beauty of bodies to the beauty of soul; and from the beauty of soul to that of pursuits; from the beauty of pursuits to that of doctrines; until he arrives at length from the beauty of doctrines generally, to that single one relating to nothing else than beauty in the abstract, and he knows at last what is the beautiful itself. In this state of life, if any where, dear Socrates.

Socrates:: Said the stranger-prophetess;

Diotima:: should a person live, contemplating beauty in the abstract; which should he behold, it will appear to be not in a bit of gold, nor in dress, nor in beautiful boys or youths; with the sight of which you are struck, and are ready both yourself and many others, if it were possible, to look upon your beloved and live with them for ever, and to neither eat nor drink, but to feast yourselves with the view, and to be together. What think you then, would take place, if it were in the power of any person to behold beauty itself, clear as the light, pure and unmixed, but not polluted with human flesh and color, and much of other kinds of mortal trash; but be able to view the godlike beautiful in its singleness of form? Think you, that the life of a man would be of little account who looks thither, and beholds it with what he ought, and is in its company? Perceive you not, that there alone will it be in the power of him, who looks upon the beautiful with the eye by which it can be seen, to beget not the shadowy show of virtue—as not coming in contact with shadowy shows—but virtue in reality, as coming in contact with a reality; and that to a person, begetting virtue in reality and bringing her up, it will happen for him to become god-beloved, and, if ever man was, immortal.—

Socrates:: Thus, friend Phædrus and ye the rest here, spoke Diotima, and I am myself convinced, and being convinced, I am endeavoring to convince the rest, that no one would readily find a better assistant to human nature for the attainment of such a possession than Love. And hence I assert, that every man ought to hold Love in honor; and I do myself pay all honors to the things of Love, and cultivate them particularly, and I exhort others likewise; and both now and ever I celebrate, as far as I can, the power and the excellence of Love.—Consider then, Phædrus, this speech as having been spoken in praise of Love, if you are so inclined; but if not, giving it

> “What thou, with thy genius, thy youth, and thy name,
> Thou born of the Russells, whose instinct to run
> The accustomed career of their sire is the same,
> As the eaglet’s to soar with its eyes to the sun.”

any other name, and taking it in any other sense, so call it.

Apollodorus:: When Socrates had thus spoken, the rest praised the speech; but Aristophanes endeavored to say something, because Socrates had, when speaking, alluded to his speech. On a sudden, however, the door of the porch was knocked at and it sent within a loud noise, so that there was heard the voice of revelers, and of a pipe-playing damsel. Upon this Agatho said to the servants;

Agathon:: Will you not see to the matter? and if there is any acquaintance, invite him in; but if not, say that we are no longer drinking, and have already left off.

Apollodorus:: Not long afterwards, the voice of Alcibiades, who was very drunk, was heard in the court, bawling very loud, and asking—Where is Agatho? and ordering a slave to lead him to Agatho. The flute-player, therefore, and some others of his followers, supported him towards Agatho, and he stood at the door crowned with a garland of ivy and violets, and having very many fillets on his head, and exclaiming;

Alcibiades:: All hail, my friends! Either receive as a fellow-tippler a man very drunk, or let us depart, after crowning Agatho alone, for which purpose we have come. For I was not able to come yesterday; but I am here now with fillets on my head, that, from my own, I may bind them on the head of the wisest and the most beautiful person. If I should say so, will you laugh at me, as being drunk? However, although you may laugh, I well know that I am speaking the truth. But tell me immediately, shall I come in or not on these conditions? Will you drink with me or not?

Apollodorus:: Thereupon all the company was in an uproar, and ordered him to enter and recline on a couch, and Agatho too invited him. And Alcibiades came, led by his attendants; and at the same time taking off the fillets, as if about to bind them on Agatho, he did not see Socrates, who was before his eyes, but sat down by Agatho, and between him and Socrates: for Socrates had made way for him that he might sit down; and sitting down he embraced Agatho, and bound the fillet on him. Thereupon said Agatho;

Agathon:: Slaves, unloose the sandals of Alcibiades, that he may recline as the third among us.

Alcibiades:: By all means; but, who is this third person our fellow-drinker?

Apollodorus:: and at the same time turning round, he beheld Socrates; and on seeing him, he started up, and exclaimed;

Alcibiades:: O Hercules! what is this? What ho Socrates? are you again sitting here in ambush against me, just as you are wont to do, and to appear suddenly, where I least expected you would be. And why are you reclining here? and not with Aristophanes, or any other person who is, and wishes to be a source of merriment? But you have contrived to sit near the most beautiful of those within.

Socrates:: See, Agatho, if you can assist me; for the love of this man here is to me no trifling matter; since from the time when I fell in love with him, I am no longer permitted either to look at, or speak to, any beautiful person; or he is, through jealousy and envy, practicing strange devices, and abuses me, and scarcely keeps off his hands? See therefore that he does not do something now, but do you reconcile us; or, should he attempt to do any violence, do you assist me: for I greatly fear the madness of this man, and his strong feeling of love.—

Alcibiades:: But, there shall be no reconciliation between you and me. For I will by and by revenge myself upon you for this. But for the present, Agatho, give me some of the fillets, that I may bind them on the wonderful head of this man, and he may not find fault with me, because I have bound the fillets on you, but not on him, who vanquishes all men in discourse, not only lately as you have done, but at all times, upon all subjects.

Apollodorus:: And at the same time, taking some of the fillets, he bound them upon Socrates, and laid himself down. When he had laid himself down, he said;

Alcibiades:: Let things be; for you appear to me to be sober; this you must not be allowed, but you must drink; for so it has been agreed. I therefore elect myself the chairman until you have drunk enough. But, Agatho, let some one bring a beaker, if there is a large one; or rather, there is no need; but bring hither, boy, that wine cooler, which seems to hold more than eight kotylæ.

Apollodorus:: Having filled it, he first drank it off himself; and afterwards ordered them to pour out of it for Socrates, and stated at the same time;

Alcibiades:: This stratagem of mine, gentlemen, is of no avail against Socrates; for, let him drink as much as any one may command, he will not be a bit the more intoxicated.

Apollodorus:: Socrates then, when the boy had poured out the wine, drank it off.

Eryximachus:: What shall we do, Alcibiades? Shall we neither say nor sing over the cup, but drink really like those who are thirsty?

Alcibiades:: Hail, Eryximachus! thou best of men, sprung from the best and most temperate of fathers.

Eryximachus:: And hail thou too. But what shall we do?

Alcibiades:: Whatever you may order; for you we must obey. For

> A man of physic has ’gainst many others
> A worth.

Order then what you will.

Eryximachus:: Hear then. Before you came in, it was determined that every one, beginning at the right hand, should in turn make a speech in praise of Love, to the best of his ability. All the rest of us, therefore, have spoken; and it is just, since you have not spoken, but have been drinking, that you too should make a speech; and, when you have spoken, order Socrates to do whatever you please, and he too order the person on his right hand, and so with respect to the rest.

Alcibiades:: You say well, Eryximachus; but it is not fair to compare a drunken man against a sober one in their speeches. But, O happy man, does Socrates persuade you with respect to what he has just now said? Or do you know that every thing is the contrary to what he has said? For he it is, who, when I in his presence praise any one, except himself, whether god or man, will not keep his hands from me.

Socrates:: Will you not speak fair words?

Alcibiades:: By Neptune, say nothing against this; for I wall praise no other person, while you are present.

Eryximachus:: Do so then; if you will, praise Socrates.

Alcibiades:: How say you? Does it seem good to you, Eryximachus, that I should do so? Must I fall upon this man, and revenge myself before you?

Socrates:: Ho, sir, what have you in mind? Will you praise me so as to make me ridiculous? or what will you do?

Alcibiades:: I will speak the truth. But see whether you will permit me.

Socrates:: Nay, I both permit, and command you to speak the truth.

Alcibiades:: I will do it instantly. But however do you act thus; if I assert any thing not true, lay hold of me while speaking if you will, and say that I am telling a falsehood; for I shall not willingly tell a lie. And do not wonder if I speak as if recollecting one thing after another; for it is not easy for a man in my state to enumerate readily, and in succession, your strange behavior. I will then endeavor, gentlemen, to praise Socrates in this way by means of images. He indeed will perhaps imagine that I am turning him into ridicule; but the image will be for the sake of what is true, and not ridiculous.

I say, then, that Socrates is most like the figures of Silenus that are seated in the workshops of statuaries, which the artists have made, holding reeds or flutes; but which, when they are opened down the middle, appear to contain within them statues of the gods. And I again say, that he resembles the satyr Marsyas. Now that in your outward form, Socrates, you resemble these things, even you yourself will not deny; but that you resemble them likewise in other points, hear in the next place. You are saucy in deeds; or are you not? For, if you do not acknowledge it, I will bring witnesses to the fact. Are you not also a piper much more wonderful than Marsyas? For he charmed men through instruments, by a power proceeding from the mouth; and he charms even now, when any one plays his melodies. For what Olympus played, I call the melodies of Marsyas, who taught him. Now his melodies, whether a good male flute-player plays them, or a bad female one, alone cause a person to be spell-bound, and point out, through their being divine, those that stand in need of the gods and the mysteries; but you in this respect alone differ from him, that you effect the very same thing by naked words without instruments. We therefore, when we hear another person, although a good speaker himself, pronouncing the speeches of others, not a single hearer, so to say, pays any regard to them; but when any one hears you, or your discourses spoken by another, although he is a wretched speaker, yet, whether a woman or a man or a lad is the auditor, we are astonished and spell-bound. I therefore, gentlemen, unless I seemed to be very much in liquor, would tell you upon oath what I have suffered by the discourses of this man, and am suffering even now. For when I hear him, my heart leaps much more than that of the Corybantes; and my tears flow forth through his discourses. I see too many others suffering in the very same way. But when I hear Pericles, and other excellent orators, I think indeed that they speak well, but I suffer nothing of this kind; nor is my soul agitated with tumult, nor is it indignant, as if I were in a servile state. But by this Marsyas here I am often so affected, that it appears to me I ought not to live, while I am in such a state. You will not, Socrates, say that this is not true. And even now I feel conscious that, were I willing to lend him my ears, I could not bear it, but should suffer in the very same way. For he would compel me to confess, that, being yet very deficient, I neglect my own affairs, but attend to those of the Athenians. By violence therefore restraining myself as to my ears, I depart from him, flying, as it were, from the Syrens, lest I should sit there by him until I grew old. And towards him alone of all men, I suffer that, which no one would think to be in me, to be ashamed of any one. But I am abashed before him alone. For I feel conscious of my inability to deny that what he exhorts me to do ought not to be done; but when I depart from him, I am conscious of being overcome by the honor I receive from the multitude. I therefore run away from and avoid him; and when I see him, I am ashamed for what I had consented to do. And often, indeed, I would gladly see him no longer amongst men: and yet again, if this should happen, I well know I should be afflicted still more; so that I know not what to do with this man. And from the melodies indeed of this Satyr in such a manner both I and many others have suffered.

Hear too from me on other points, how like he is to what I have compared him, and what a wonderful power he possesses. For be well assured, that not one of you knows him; but I will lay him open, since I have begun to speak. You see then that he is disposed in a very amatory manner towards beautiful persons; and that he is always about them and struck with them; but on the other hand, he is ignorant of every thing and knows nothing how his figure is. Is not this Silenus-like? For he is invested with this externally like a carved Silenus; but when he is opened inwardly, with temperance how great, think you, fellow-tipplers, is he filled? Know too, that if any person is beautiful, he regards him not, but despises him to such an extent as no one would suppose; nor if he is wealthy, or possesses any other honor amongst those who are considered by the multitude as blessed; but he holds all these possessions to be nothing worth, and that we too are of no account. He passes likewise the whole of life indulging in irony and jests against mankind; but when he is serious and is opened, I know not whether any one of you has seen the images within; but I once saw them, and they appeared to me to be so divine and golden, and all-beautiful and wonderful, that I thought I must in a short time do whatever Socrates ordained. Conceiving too that he paid great attention to my beauty, I considered this as a god-send, and a piece of wondrous good fortune for myself, since by gratifying Socrates it would be in my power to hear from him all that he knew. For I prided myself on my beauty marvelously. With these thoughts in my head, although I had previously been never accustomed to be in his company without an attendant, on that occasion I sent the page away and remained with him alone; for I must state the whole truth, and do you give me your attention; and if I am telling a falsehood, do you, Socrates, confute me. I was, gentlemen, alone with him alone; and I thought he would immediately converse with me in the way that lovers are wont to speak to their beloved in private; and I was highly delighted with the expectation. Nothing however of this kind very much took place; but after conversing somewhat and passing the day with me as usual, he went away. Then I challenged him to contend with me in the naked exercises, and I did contend as if about to effect something by this means. He engaged therefore naked, and had a tussle frequently against me, no one being present. But why need I mention this? Nothing more took place. But when I accomplished nothing at all by this means, I determined to attack the man with all my might, nor to let him off; since I had put my hand to the task. But you must now know what is the affair. Accordingly I invited him to supper, artlessly laying a plot as a lover does against his beloved. Even to this he did not quickly give ear. In time, however, he was over-persuaded. But when he came for the first time, he wished, as soon as he had supped, to go away; and I, feeling ashamed, let him go. Having laid however again a plot, after supper I had a conversation with him far into the night; and when he wished to go away, I pretended it was late, and I compelled him to stay. He reposed, therefore, in a couch close to mine, and on which he had supped; and no other person besides us slept in the house. Thus far in my story it would be well to state to any one; but what is to come, you would not have heard me telling, unless, in the first place, according to the proverb;

Wine, with children, or without,
Does a tale of truth let out;

and in the second place, it seems to me to be unjust in him who comes to praise a person, to leave in obscurity a proud deed of Socrates. Moreover, the suffering of him, who has been bitten by a viper, possesses likewise myself. For they say that the person so suffering is unwilling to tell what it is, except to those who have been bitten, as being alone about to know and to pardon him, should he dare to do and say every thing from excess of pain. I say it then, having been bitten by something still more painful. For it is the most painful of all, by which a person can be bitten, in heart or soul, or whatever else it is meet to call it, bitten and wounded, namely, by discourses in philosophy; which are wont to give out something more acute than that from the viper, when they the discourses lay hold of a young person with a not badly-disposed soul, and cause him to do and say any thing whatever. And looking, moreover, at the Phædruses, Agathos, Eryximachuses, Pausaniases, Aristodemuses, Aristophaneses.—But why need I say, Socrates himself, and whoever forms the rest of the company. For all of you have partaken with me of the madness and Bacchic fury of philosophy; and on this account you shall all hear. For you will pardon what was done then, and is said now. But let the domestics, and if there is any other profane and rude person present, place upon their ears gates of very great size. When therefore the lamp was extinguished, and the servants had gone out, it seemed to me that I ought not to employ words of many meanings towards him, but tell him freely what was in my thoughts. And nudging him I said, Socrates, are you asleep?

Socrates:: Not yet.

Alcibiades:: Do you know then on what I am determined?

Socrates:: What is it particularly?

Alcibiades:: You seem to me, said I, the only lover worthy of myself; and yet you appear to feel a dread to have a recollection towards me. But, as I am thus affected, I think it very silly for me not to gratify you both in this point, and in any thing else of which you may be in want, whether it be my own property, or that of my friends: for nothing is to me of greater moment than to become the best of men: and for this I think there is no person a more competent assister than yourself; and I should feel a much greater shame before the wise, in not gratifying such a man, than before the many and the unwise by gratifying him. Socrates, having heard me, said, very ironically, and very much after his usual manner;

Socrates:: My dear Alcibiades, you seem to be in reality a man of no common mark, if what you say concerning me happens to be true, and there is in me a certain power, through which you can become better. But what boundless beauty could you see in me, and vastly superior to the fine form in yourself, if, on beholding it, you endeavor to have dealings with me, and to exchange beauty for beauty. You have surely an idea of possessing more than I do; for you endeavor to obtain the truth of beautiful things instead of the reputation, and you conceive that you will in reality exchange brass for gold. But, O blessed man, think better of it, nor let me lie hid from you, as being nothing. The power of intellectual vision begins then to see acutely, when that of the eye loses its acme. You however are still far off from this.

Alcibiades:: And I, having heard him, replied, As regards myself the facts are so; of which not one has been stated otherwise than as I conceive myself. But do you counsel me in what you may consider to be best both for you and me.

Socrates:: In this you say well: for in the time to come let us consult together, and we will do what appears to be the best for us, both with respect to these and other matters.

Alcibiades:: Having thus heard and spoken, and sent as it were arrows, I thought that he was wounded; and I rose up, and not suffering him to speak any more, I wrapped myself round with this garment, for it was winter, and lying down under the old cloak of this man, I threw my arms around the truly divine and wonderful man, and lay there the whole night. And in this again, Socrates, you will not say that I am telling a falsehood. But though I acted in this manner, yet he was victorious, and despised, and jeered at, and even insulted my beauty. And yet I fancied it was something, men and judges, for judges you are, of the haughtiness of Socrates. For by the gods and goddesses, rest assured that I rose from Socrates no otherwise than if I had slept with my father, or my elder brother.

What feelings then do you fancy I had after this, on reflecting that I had been dishonored, but yet admiring the nature, and the temperance and fortitude of this man, after I had met with a person such as I never thought I should meet with for prudence and self-control; so that I neither had it in my power to be angry with him, nor though I was deprived of intercourse with him, had I any means of attaching him to myself. For I well knew that he would be on every side more invulnerable to money, than Ajax was to the sword; and that he had escaped me, at the very time when I fancied he would be caught. And thus I was reduced to my wits’ ends, and went about, the slave of this man, as no one else was of any other. For not only did all this occur to me formerly, but after this likewise, during a campaign common to both of us, took place against Potidæa, and there we messed together. And here, in the first place, he not only surpassed myself, but all others, in the labors of the field. But when we were left some where, and compelled, as happens in campaigns, to be greatly without food, the rest were nothing to him for the power of endurance. On the other hand, at our jollifications, he was the only person who could enjoy them; for though he was generally unwilling to drink, yet when forced to do so, he beat all the rest; and what is the most wonderful of all, no one ever saw Socrates intoxicated. But of this it appears to me there will be shortly a confutation. Again, with respect to his endurance in winter, for the winters there are very severe, he performed wonders in other ways, and once also when the frost was most bitter, and all did not go out from their quarters, or if any did so, he clothed himself in wonderfully thick cloaks, had his feet bound and wrapped in felt and sheep-skins, Socrates went out amongst them, wearing just the same clothing as he had been previously accustomed to wear, and marched through the ice without shoes, more easily than others with shoes; and the soldiers had a suspicion that he held them in contempt. And thus much on these points.

"But what this patient man did do and dare," during the campaign there, it is worth while to hear. For while he was thinking of some question from himself, he stood from the dawn investigating it; and, as he did not succeed, he did not desist, but stood still investigating it. It was mid-day, and some persons perceived him, and wondering said, one to the other, that Socrates had been standing from the morning thinking upon something. At length some Ionian soldiers, when it was evening, having supped—for it was then summer—ambush against brought out their ground-litters, and partly slept in the cold and partly kept watch, whether he would stand there all night. And he did stand until the dawn appeared and the sun rose; after which he departed, having first offered a prayer to the sun. And if you are willing to hear, what he was in battle, must not be passed by. For it is surely just to pay him this tribute. For when the battle took place, in which the generals assigned to myself the prize of superior good conduct, no other man rescued me but he, through his being unwilling to leave me when wounded; and he preserved both my arms and myself. And I indeed at that time urged the commanders to give you, Socrates, the prize of good conduct—and for stating this, you will neither blame me, nor say that I am speaking falsely—but the generals, looking to my rank in life, and wishing to give me those rewards, you were more eager for me to receive them than for yourself. Further still, gentlemen, it was well worth while to see Socrates when our army retreated from Delium; for I happened to be present with the cavalry, but Socrates was among the heavy-armed. For when the troops were already scattered, both he and Laches retreated; and I, meeting with and seeing the two, immediately exhorted them to take courage, and said that I would not abandon them. Here then I had a better view of Socrates than at Potidæa; for I was in less fear, because I was on horseback. In the first place then, how greatly did he surpass Laches in his being cautious; and in the next place, he seemed, according to your description, Aristophanes, to carry himself loftily, and to throw his eye on one side, to survey quietly both friends and foes; and it was manifest to every one, and even to a person at a distance, that whoever presumed to touch this man, would be very vigorously repulsed. Hence both he and the other departed in safety; for scarcely any one, who thus conducts himself in war, is touched; but the pursuit is of those who turn and run away. There are many other things for which a person would have it in his power to praise Socrates wondrously. But of his other pursuits, some one may perhaps speak in this way even about another person; but to be like not one, either of the ancients or moderns, this is a thing worthy of all wonder. For such as Achilles was, one might conjecture was Brasidas and others: and again, that, such as Pericles was, were Antenor and Nestor. And there are others likewise; and the rest a person might compare after the same manner. But such a strange character as is this man, both in himself and in his discourses, no one will by searching discover any man approaching near to him, either among those living now or in the olden time; unless indeed some one should compare him to no human being, but to what I have mentioned, Silenuses and Satyrs. For I omitted to state this at first, that his discourses too are very like the Silenuses when opened. For should any one be willing to hear the discourses of Socrates, they will appear to be very ridiculous at first; with such nouns and verbs do they envelop externally, as it were, the hide of a Satyr. For he speaks of panniered asses, and of copper-smiths, and leather-cutters, and tanners, and he appears to be always saying the same things upon the same subjects; so that every man who has neither skill nor sense will laugh at his words. But he who beholds his discourses when opened, and gets within them, will, in the first place, find that they alone of all other discourses possess an internal meaning; and, in the next place, that they are most divine, and hold the most numerous images of virtue, and extend to the farthest point, or rather to every thing, which it is fitting for him to consider, who intends to become a man at once beautiful and good. These then are the reasons, gentlemen, for which I praise Socrates; but on the other hand, for what I blame him, I have mixed up in the recital of the insults he has heaped upon me. Nor has he acted in this manner towards me alone, but also towards Charmides, the son of Glauco, Euthydemus, the son of Diodes, and very many others; whom this man has deceived, as if he were their lover, when, instead of the loving, he is himself the beloved. Hence, I caution you, Agatho, not to be deceived by this man; but, taught by my sufferings, to have a care, and not, according to the proverb, By suffering, like a silly person, knowledge gain.

Apollodorus:: When Alcibiades had thus spoken, there was a general laugh at his freedom of speech, because he appeared to be lovingly disposed towards Socrates; who thereupon observed;

Socrates:: You seem to me, Alcibiades, to be sober; for, otherwise, you would not have attempted in so elegant and circuitous a manner to conceal that, for the sake of which you have said all this; and, as if mentioning something of no consequence, you have cleverly placed at the end that you have said all this on this account, namely, to throw discord between me and Agatho, conceiving that I ought to love you and no other person, and that Agatho ought to be loved by you, and by no one else. But you have not lain hid from me; but this play of yours is plainly a Satyric one and Silenus-like. But, my dear Agatho, let not any thing occur in his favor, but do you prepare yourself so that no one may set you and me at variance.

Agathon:: You seem indeed, Socrates, to be speaking very nearly the truth, and I conjecture that he has been reclining between you and me, that he might keep us apart. There will not, however, occur any thing in his favor from this; for I will come and recline by you.

Socrates:: By all means come hither, and recline below me.

Alcibiades:: O Zeus! How greatly again do I suffer from this man! He fancies he must surpass me in every thing;

but, O wonderful man, if nothing else, suffer at least Agatho to recline between us.

Socrates:: It is impossible: for as you have praised me, it is now necessary for me to praise him, reclining at my right hand. If, therefore, Agatho reclines below you, he will not surely again praise me, before he has been praised by me. Cease, then, thou happy fellow, and do not grudge my being praised by the youth; for I have a great desire to pass an encomium on him.

Agathon:: Ho! ho! there is no reason why I should remain here, but every reason rather that I should change my place, that I may be praised by Socrates.

Alcibiades:: This is as usual. When Socrates is present, it is impossible for any other to share the favors of the beautiful. And now observe how easily he has discovered a persuasive language, so that this youth should recline at his side.

Apollodorus:: After this Agatho rose up, as if about to recline close to Socrates. But on a sudden there came very many revelers to the gates, and, finding them open, in consequence of some one having gone out in an opposite direction, they marched in, and threw themselves on the couches; and the whole place was filled with uproar, and no longer in any order every one was compelled to drink a great quantity of wine. Whereupon Eryximachus and Phædrus, and some others, said Aristodemus, went away, but that sleep laid hold of him; and that he slept for a very long time, as the nights were long, and rose at daybreak while the cocks were crowing; and on getting up he saw that the rest of the guests were asleep, or gone; but that Agatho, Aristophanes, and Socrates were still awake, and drinking out of a great bowl, which they kept passing to the right hand, and that Socrates was discoursing with them;

but he did not recollect, said Aristodemus, what the discourse was in other respects, as he was not present at the beginning of it, and dozing; but the sum of it, he said, was this, that Socrates was compelling them to admit that it was the province of the same person to know how to write comedy and tragedy, and that he, who was by art a tragic poet, was also a comic one; and that when they had been compelled to admit this, they began, as not very well following the argument, to doze; and that Aristophanes fell asleep the first, and when it was now day, Agatho; but that Socrates, having put them to sleep, got up and went away; and that he, Aristodemus, as he was wont, followed; and that he Socrates went to the Lyceum, and, having washed himself as at another time, passed the rest of the day; and having thus passed it till evening, he took his rest at home.

ALCIBIADES.

A TROOP OF REVELERS.

Scene:—The House of Agathon.

Apollodorus:: Concerning the things about which you ask to be informed I believe that I am not ill-prepared with an answer. For the day before yesterday I was coming from my own home at Phalerum to the city, and one of my acquaintance, who had caught a sight of me from behind, calling out playfully in the distance, said:

Glaucon:: Apollodorus, O thou Phalerian man, halt!

Apollodorus:: So I did as I was bid; and then he said;

Glaucon:: I was looking for you, Apollodorus, only just now, that I might ask you about the speeches in praise of love, which were delivered by Socrates, Alcibiades, and others, at Agathon's supper. Phoenix, the son of Philip, told another person who told me of them; his narrative was very indistinct, but he said that you knew, and I wish that you would give me an account of them. Who, if not you, should be the reporter of the words of your friend? And first tell me, were you present at this meeting?

Apollodorus:: Your informant, Glaucon, must have been very indistinct indeed, if you imagine that the occasion was recent; or that I could have been of the party.

Glaucon:: Why, yes, I thought so.

Apollodorus:: Impossible: Are you ignorant that for many years Agathon has not resided at Athens; and not three have elapsed since I became acquainted with Socrates, and have made it my daily business to know all that he says and does. There was a time when I was running about the world, fancying myself to be well employed, but I was really a most wretched being, no better than you are now. I thought that I ought to do anything rather than be a philosopher.

Glaucon:: Well, jesting apart, tell me when the meeting occurred.

Apollodorus:: In our boyhood, when Agathon won the prize with his first tragedy, on the day after that on which he and his chorus offered the sacrifice of victory.

Glaucon:: Then it must have been a long while ago; and who told you—did Socrates?

Apollodorus:: No indeed, but the same person who told Phoenix;—he was a little fellow, who never wore any shoes, Aristodemus, of the deme of Cydathenaeum. He had been at Agathon’s feast; and I think that in those days there was no one who was a more devoted admirer of Socrates. Moreover, I have asked Socrates about the truth of some parts of his narrative, and he confirmed them.

Glaucon:: Then, let us have the tale over again; is not the road to Athens just made for conversation?

Apollodorus:: And so we walked, and talked of the discourses on love; and therefore, as I said at first, I am not ill-prepared to comply with your request, and will have another rehearsal of them if you like. For to speak or to hear others speak of philosophy always gives me the greatest pleasure, to say nothing of the profit. But when I hear another strain, especially that of you rich men and traders, such conversation displeases me; and I pity you who are my companions, because you think that you are doing something when in reality you are doing nothing. And I dare say that you pity me in return, whom you regard as an unhappy creature, and very probably you are right. But I certainly know of you what you only think of me—there is the difference.

Friend:: I see, Apollodorus, that you are just the same—always speaking evil of yourself, and of others; and I do believe that you pity all mankind, with the exception of Socrates, yourself first of all, true in this to your old name, which, however deserved, I know not how you acquired, of Apollodorus the madman; for you are always raging against yourself and everybody but Socrates.

Apollodorus:: Yes, friend, and the reason why I am said to be mad, and out of my wits, is just because I have these notions of myself and you; no other evidence is required.

Friend:: No more of that, Apollodorus; but let me renew my request that you would repeat the conversation.

Apollodorus:: Well, the tale of love was on this wise:—But perhaps I had better begin at the beginning, and endeavor to give you the exact words of Aristodemus:

He said that he met Socrates fresh from the bath and sandaled; and as the sight of the sandals was unusual, he asked him whither he was going that he had been converted into such a beau:—

Socrates:: To a banquet at Agathon's, whose invitation to his sacrifice of victory I refused yesterday, fearing a crowd, but promising that I would come to-day instead; and so I have put on my finery, because he is such a fine man. What say you to going with me unasked?

Aristodemus:: I will do as you bid me.

Socrates:: Follow then, and let us demolish the proverb:—

'To the feasts of inferior men the good unbidden go;'

instead of which our proverb will run:—

'To the feasts of the good the good unbidden go;' and this alteration may be supported by the authority of Homer himself, who not only demolishes but literally outrages the proverb. For, after picturing Agamemnon as the most valiant of men, he makes Menelaus, who is but a fainthearted warrior, come unbidden to the banquet of Agamemnon, who is feasting and offering sacrifices, not the better to the worse, but the worse to the better.

Aristodemus:: I rather fear, Socrates, lest this may still be my case; and that, like Menclaus in Homer, I shall be the inferior person, who

> 'To the feasts of the wise unbidden goes.'

But I shall say that I was bidden of you, and then you will have to make an excuse.

Socrates::

> 'Two going together,'

in Homeric fashion, one or other of them may invent an excuse by the way.

Apollodorus:: This was the style of their conversation as they went along. Socrates dropped behind in a fit of abstraction, and desired Aristodemus, who was waiting, to go on before him. When he reached the house of Agathon he found the doors wide open, and a comical thing happened. A servant coming out met him, and led him at once into the banqueting-hall in which the guests were reclining, for the banquet was about to begin. Welcome, Aristodemus, said Agathon, as soon as he appeared—

Agathon:: You are just in time to sup with us; if you come on any other matter put it off, and make one of us, as I was looking for you yesterday and meant to have asked you, if I could have found you. But what have you done with Socrates?

Aristodemus:: I turned round, but Socrates was nowhere to be seen; and I had to explain that he had been with me a moment before, and that I came by his invitation to the supper.

Agathon:: You were quite right in coming; but where is he himself?

Aristodemus:: He was behind me just now, as I entered, and I cannot think what has become of him.

Agathon:: Go and look for him, boy, and bring him in; and do you, Aristodemus, meanwhile take the place by Eryximachus.

Apollodorus:: The servant then assisted him to wash, and he lay down, and presently another servant came in and reported that our friend Socrates had retired into the portico of the neighboring house.

Boy:: 'There he is fixed and when I call to him he will not stir.'

Agathon:: How strange; then you must call him again, and keep calling him.

Aristodemus:: Let him alone; he has a way of stopping anywhere and losing himself without any reason. I believe that he will soon appear; do not therefore disturb him.

Agathon:: Well, if you think so, I will leave him.

Apollodorus:: And then, turning to the servants, he added;

Agathon:: 'Let us have supper without waiting for him. Serve up whatever you please, for there is no one to give you orders; hitherto I have never left you to yourselves. But on this occasion imagine that you are our hosts, and that I and the company are your guests; treat us well, and then we shall commend you.'

Apollodorus:: After this, supper was served, but still no Socrates; and during the meal Agathon several times expressed a wish to send for him, but Aristodemus objected; and at last when the feast was about half over—for the fit, as usual, was not of long duration—Socrates entered. Agathon, who was reclining alone at the end of the table, begged that he would take the place next to him; that

Agathon:: 'I may touch you, and have the benefit of that wise thought which came into your mind in the portico, and is now in your possession; for I am certain that you would not have come away until you had found what you sought.'

Apollodorus:: Socrates taking his place as he was desired said;

Socrates:: How I wish that wisdom could be infused by touch, out of the fuller into the emptier man, as water runs through wool out of a fuller cup into an emptier one; if that were so, how greatly should I value the privilege of reclining at your side! For you would have filled me full with a stream of wisdom plenteous and fair; whereas my own is of a very mean and questionable sort, no better than a dream. But yours is bright and full of promise, and was manifested forth in all the splendor of youth the day before yesterday, in the presence of more than thirty thousand Hellenes.

Agathon:: You are mocking, Socrates and ere long you and I will have to determine who bears off the palm of wisdom—of this Dionysus shall be the judge; but at present you are better occupied with supper.

Apollodorus:: Socrates took his place on the couch, and supped with the rest; and then libations were offered, and after a hymn had been sung to the god, and there had been the usual ceremonies, they were about to commence drinking, when Pausanias said;

Pausanias:: And now, my friends, how can we drink with least injury to ourselves? I can assure you that I feel severely the effect of yesterday's potations, and must have time to recover; and I suspect that most of you are in the same predicament, for you were of the party yesterday. Consider then: How can the drinking be made easiest?

Aristophanes:: I entirely agree that we should, by all means, avoid hard drinking, for I was myself one of those who were yesterday drowned in drink.

Eryximachus:: I think that you are right; but I should still like to hear one other person speak: Is Agathon able to drink hard?

Agathon:: I am not equal to it.

Eryximachus:: Then the weak heads like myself, Aristodemus, Phaedrus, and others who never can drink, are fortunate in finding that the stronger ones are not in a drinking mood. (I do not include Socrates, who is able either to drink or to abstain, and will not mind, whichever we do.) Well, as none of the company seem disposed to drink much, I may be forgiven for saying, as a physician, that drinking deep is a bad practice, which I never follow, if I can help, and certainly do not recommend to another, least of all to any one who still feels the effects of yesterday's carouse.

Phaedrus:: I always do what you advise, and especially what you prescribe as a physician and the rest of the company, if they are wise, will do the same.

Apollodorus:: It was agreed that drinking was not to be the order of the day, but that they were all to drink only so much as they pleased.

Eryximachus:: Then, as you are all agreed that drinking is to be voluntary, and that there is to be no compulsion, I move, in the next place, that the flute-girl, who has just made her appearance, be told to go away and play to herself, or, if she likes, to the women who are within. To-day let us have conversation instead; and, if you will allow me, I will tell you what sort of conversation.

Apollodorus:: This proposal having been accepted, Eryximachus proceeded as follows:—

Eryximachus:: I will begin after the manner of Melanippe in Euripides;

> 'Not mine the word'

which I am about to speak, but that of Phaedrus. For often he says to me in an indignant tone:—'What a strange thing it is, Eryximachus, that, whereas other gods have poems and hymns made in their honor, the great and glorious god, Love, has no encomiast among all the poets who are so many. There are the worthy sophists too—the excellent Prodicus for example, who have descanted in prose on the virtues of Heracles and other heroes; and, what is still more extraordinary, I have met with a philosophical work in which the utility of salt has been made the theme of an eloquent discourse; and many other like things have had a like honor bestowed upon them. And only to think that there should have been an eager interest created about them, and yet that to this day no one has ever dared worthily to hymn Love's praises! So entirely has this great deity been neglected.' Now in this Phaedrus seems to me to be quite right, and therefore I want to offer him a contribution; also I think that at the present moment we who are here assembled cannot do better than honor the god Love. If you agree with me, there will be no lack of conversation; for I mean to propose that each of us in turn, going from left to right, shall make a speech in honor of Love. Let him give us the best which he can; and Phaedrus, because he is sitting first on the left hand, and because he is the father of the thought, shall begin.

Socrates:: No one will vote against you, Eryximachus. How can I oppose your motion, who profess to understand nothing but matters of love; nor, I presume, will Agathon and Pausanias; and there can be no doubt of Aristophanes, whose whole concern is with Dionysus and Aphrodite; nor will any one disagree of those whom I see around me. The proposal, as I am aware, may seem rather hard upon us whose place is last; but we shall be contented if we hear some good speeches first. Let Phaedrus begin the praise of Love, and good luck to him.

Apollodorus:: All the company expressed their assent, and desired him to do as Socrates bade him. Aristodemus did not recollect all that was said, nor do I recollect all that he related to me; but I will tell you what I thought most worthy of remembrance, and what the chief speakers said.

Phaedrus began by affirming that Love is a mighty god, and wonderful among gods and men, but especially wonderful in his birth.

Phaedrus:: For he is the eldest of the gods, which is an honor to him; and a proof of his claim to this honor is, that of his parents there is no memorial; neither poet nor prose-writer has ever affirmed that he had any. As Hesiod says:—

> ‘First Chaos came, and then broad-bosomed Earth,
> The everlasting seat of all that is,
> And Love.’

In other words, after Chaos, the Earth and Love, these two, came into being. Also Parmenides sings of Generation:

> ‘First in the train of gods, he fashioned Love.’

And Acusilaus agrees with Hesiod. Thus numerous are the witnesses who acknowledge Love to be the eldest of the gods. And not only is he the eldest, he is also the source of the greatest benefits to us. For I know not any greater blessing to a young man who is beginning life than a virtuous lover, or to the lover than a beloved youth. For the principle which ought to be the guide of men who would nobly live—that principle, I say, neither kindred, nor honor, nor wealth, nor any other motive is able to implant so well as love. Of what am I speaking? Of the sense of honor and dishonor, without which neither states nor individuals ever do any good or great work. And I say that a lover who is detected in doing any dishonorable act, or submitting through cowardice when any dishonor is done to him by another, will be more pained at being detected by his beloved than at being seen by his father, or by his companions, or by any one else. The beloved too, when he is found in any disgraceful situation, has the same feeling about his lover. And if there were only some way of contriving that a state or an army should be made up of lovers and their loves, they would be the very best governors of their own city, abstaining from all dishonor, and emulating one another in honor; and when fighting at each other’s side, although a mere handful, they would overcome the world. For what lover would not choose rather to be seen by all mankind than by his beloved, either when abandoning his post or throwing away his arms? He would be ready to die a thousand deaths rather than endure this. Or who would desert his beloved or fail him in the hour of danger? The veriest coward would become an inspired hero, equal to the bravest, at such a time; Love would inspire him. That courage which, as Homer says, the god breathes into the souls of some heroes, Love of his own nature infuses into the lover.

Love will make men dare to die for their beloved—love alone; and women as well as men. Of this, Alcestis, the daughter of Pelias, is a monument to all Hellas; for she was willing to lay down her life on behalf of her husband, when no one else would, although he had a father and mother; but the tenderness of her love so far exceeded theirs, that she made them seem to be strangers in blood to their own son, and in name only related to him; and so noble did this action of hers appear to the gods, as well as to men, that among the many who have done virtuously she is one of the very few to whom, in admiration of her noble action, they have granted the privilege of returning alive to earth; such exceeding honor is paid by the gods to the devotion and virtue of love. But Orpheus, the son of Oeagrus, the harper, they sent empty away, and presented to him an apparition only of her whom he sought, but herself they would not give up, because he showed no spirit; he was only a harp-player, and did not dare like Alcestis to die for love, but was contriving how he might enter Hades alive; moreover, they afterwards caused him to suffer death at the hands of women, as the punishment of his cowardliness. Very different was the reward of the true love of Achilles towards his lover Patroclus—his lover and not his love (the notion that Patroclus was the beloved one is a foolish error into which Aeschylus has fallen, for Achilles was surely the fairer of the two, fairer also than all the other heroes; and, as Homer informs us, he was still beardless, and younger far). And greatly as the gods honor the virtue of love, still the return of love on the part of the beloved to the lover is more admired and valued and rewarded by them, for the lover is more divine; because he is inspired by God. Now Achilles was quite aware, for he had been told by his mother, that he might avoid death and return home, and live to a good old age, if he abstained from slaying Hector. Nevertheless he gave his life to revenge his friend, and dared to die, not only in his defense, but after he was dead. Wherefore the gods honored him even above Alcestis, and sent him to the Islands of the Blest. These are my reasons for affirming that Love is the eldest and noblest and mightiest of the gods, and the chiefest author and giver of virtue in life, and of happiness after death.

Apollodorus:: This, or something like this, was the speech of Phaedrus; and some other speeches followed which Aristodemus did not remember; the next which he repeated was that of Pausanias.

Pausanias:: Phaedrus, the argument has not been set before us, I think, quite in the right form;—we should not be called upon to praise Love in such an indiscriminate manner. If there were only one Love, then what you said would be well enough; but since there are more Loves than one, you should have begun by determining which of them was to be the theme of our praises. I will amend this defect; and first of all I will tell you which Love is deserving of praise, and then try to hymn the praiseworthy one in a manner worthy of him. For we all know that Love is inseparable from Aphrodite, and if there were only one Aphrodite there would be only one Love; but as there are two goddesses there must be two Loves. And am I not right in asserting that there are two goddesses? The elder one, having no mother, who is called the heavenly Aphrodite—she is the daughter of Uranus; the younger, who is the daughter of Zeus and Dione—her we call common; and the Love who is her fellow-worker is rightly named common, as the other love is called heavenly. All the gods ought to have praise given to them, but not without distinction of their natures; and therefore I must try to distinguish the characters of the two Loves. Now actions vary according to the manner of their performance. Take, for example, that which we are now doing, drinking, singing and talking—these actions are not in themselves either good or evil, but they turn out in this or that way according to the mode of performing them; and when well done they are good, and when wrongly done they are evil; and in like manner not every love, but only that which has a noble purpose, is noble and worthy of praise. The Love who is the offspring of the common Aphrodite is essentially common, and has no discrimination, being such as the meaner sort of men feel, and is apt to be of women as well as of youths, and is of the body rather than of the soul—the most foolish beings are the objects of this love which desires only to gain an end, but never thinks of accomplishing the end nobly, and therefore does good and evil quite indiscriminately. The goddess who is his mother is far younger than the other, and she was born of the union of the male and female, and partakes of both. But the offspring of the heavenly Aphrodite is derived from a mother in whose birth the female has no part,—she is from the male only; this is that love which is of youths, and the goddess being older, there is nothing of wantonness in her. Those who are inspired by this love turn to the male, and delight in him who is the more valiant and intelligent nature; any one may recognize the pure enthusiasts in the very character of their attachments. For they love not boys, but intelligent beings whose reason is beginning to be developed, much about the time at which their beards begin to grow. And in choosing young men to be their companions, they mean to be faithful to them, and pass their whole life in company with them, not to take them in their inexperience, and deceive them, and play the fool with them, or run away from one to another of them. But the love of young boys should be forbidden by law, because their future is uncertain; they may turn out good or bad, either in body or soul, and much noble enthusiasm may be thrown away upon them; in this matter the good are a law to themselves, and the coarser sort of lovers ought to be restrained by force, as we restrain or attempt to restrain them from fixing their affections on women of free birth. These are the persons who bring a reproach on love; and some have been led to deny the lawfulness of such attachments because they see the impropriety and evil of them; for surely nothing that is decorously and lawfully done can justly be censured. Now here and in Lacedaemon the rules about love are perplexing, but in most cities they are simple and easily intelligible; in Elis and Boeotia, and in countries having no gifts of eloquence, they are very straightforward; the law is simply in favor of these connections, and no one, whether young or old, has anything to say to their discredit; the reason being, as I suppose, that they are men of few words in those parts, and therefore the lovers do not like the trouble of pleading their suit. In Ionia and other places, and generally in countries which are subject to the barbarians, the custom is held to be dishonorable; loves of youths share the evil repute in which philosophy and gymnastics are held, because they are inimical to tyranny; for the interests of rulers require that their subjects should be poor in spirit, and that there should be no strong bond of friendship or society among them, which love, above all other motives, is likely to inspire, as our Athenian tyrants learned by experience; for the love of Aristogeiton and the constancy of Harmodius had a strength which undid their power. And, therefore, the ill-repute into which these attachments have fallen is to be ascribed to the evil condition of those who make them to be ill-reputed; that is to say, to the self-seeking of the governors and the cowardice of the governed; on the other hand, the indiscriminate honor which is given to them in some countries is attributable to the laziness of those who hold this opinion of them. In our own country a far better principle prevails, but, as I was saying, the explanation of it is rather perplexing. For, observe that open loves are held to be more honorable than secret ones, and that the love of the noblest and highest, even if their persons are less beautiful than others, is especially honorable. Consider, too, how great is the encouragement which all the world gives to the lover; neither is he supposed to be doing anything dishonorable; but if he succeeds he is praised, and if he fail he is blamed. And in the pursuit of his love the custom of mankind allows him to do many strange things, which philosophy would bitterly censure if they were done from any motive of interest, or wish for office or power. He may pray, and entreat, and supplicate, and swear, and lie on a mat at the door, and endure a slavery worse than that of any slave—in any other case friends and enemies would be equally ready to prevent him, but now there is no friend who will be ashamed of him and admonish him, and no enemy will charge him with meanness or flattery; the actions of a lover have a grace which ennobles them; and custom has decided that they are highly commendable and that there is no loss of character in them; and, what is strangest of all, he only may swear and forswear himself (so men say), and the gods will forgive his transgression, for there is no such thing as a lover's oath. Such is the entire liberty which gods and men have allowed the lover, according to the custom which prevails in our part of the world. From this point of view a man fairly argues that in Athens to love and to be loved is held to be a very honorable thing. But when parents forbid their sons to talk with their lovers, and place them under a tutor’s care, who is appointed to see to these things, and their companions and equals cast in their teeth anything of the sort which they may observe, and their elders refuse to silence the reprovers and do not rebuke them—any one who reflects on all this will, on the contrary, think that we hold these practices to be most disgraceful. But, as I was saying at first, the truth as I imagine is, that whether such practices are honorable or whether they are dishonorable is not a simple question; they are honorable to him who follows them honorably, dishonorable to him who follows them dishonorably. There is dishonor in yielding to the evil, or in an evil manner; but there is honor in yielding to the good, or in an honorable manner. Evil is the vulgar lover who loves the body rather than the soul, inasmuch as he is not even stable, because he loves a thing which is in itself unstable, and therefore when the bloom of youth which he was desiring is over, he takes wing and flies away, in spite of all his words and promises; whereas the love of the noble disposition is life-long, for it becomes one with the everlasting. The custom of our country would have both of them proven well and truly, and would have us yield to the one sort of lover and avoid the other, and therefore encourages some to pursue, and others to fly; testing both the lover and beloved in contests and trials, until they show to which of the two classes they respectively belong. And this is the reason why, in the first place, a hasty attachment is held to be dishonorable, because time is the true test of this as of most other things; and secondly there is a dishonor in being overcome by the love of money, or of wealth, or of political power, whether a man is frightened into surrender by the loss of them, or, having experienced the benefits of money and political corruption, is unable to rise above the seductions of them. For none of these things are of a permanent or lasting nature; not to mention that no generous friendship ever sprang from them. There remains, then, only one way of honorable attachment which custom allows in the beloved, and this is the way of virtue; for as we admitted that any service which the lover does to him is not to be accounted flattery or a dishonor to himself, so the beloved has one way only of voluntary service which is not dishonorable and this is virtuous service.

For we have a custom, and according to our custom any one who does service to another under the idea that he will be improved by him either in wisdom, or in some other particular of virtue—such a voluntary service, I say, is not to be regarded as a dishonor, and is not open to the charge of flattery. And these two customs, one the love of youth, and the other the practice of philosophy and virtue in general, ought to meet in one, and then the beloved may honorably indulge the lover. For when the lover and beloved come together, having each of them a law, and the lover thinks that he is right in doing any service which he can to his gracious loving one; and the other that he is right in showing any kindness which he can to him who is making him wise and good; the one capable of communicating wisdom and virtue, the other seeking to acquire them with a view to education and wisdom; when the two laws of love are fulfilled and meet in one—then, and then only, may the beloved yield with honor to the lover. Nor when love is of this disinterested sort is there any disgrace in being deceived, but in every other case there is equal disgrace in being or not being deceived. For he who is gracious to his lover under the impression that he is rich, and is disappointed of his gains because he turns out to be poor, is disgraced all the same: for he has done his best to show that he would give himself up to any one's 'uses base' for the sake of money; but this is not honorable. And on the same principle he who gives himself to a lover because he is a good man, and in the hope that he will be improved by his company, shows himself to be virtuous, even though the object of his affection turn out to be a villain, and to have no virtue; and if he is deceived he has committed a noble error. For he has proved that for his part he will do anything for anybody with a view to virtue and improvement, than which there can be nothing nobler. Thus noble in every case is the acceptance of another for the sake of virtue. This is that love which is the love of the heavenly goddess, and is heavenly, and of great price to individuals and cities, making the lover and the beloved alike eager in the work of their own improvement. But all other loves are the offspring of the other, who is the common goddess. To you, Phaedrus, I offer this my contribution in praise of love, which is as good as I could make extempore.

Apollodorus:: Pāusănĭās cāme tŏ ă pāuse—this is the balanced way in which I have been taught by the wise to speak; and Aristodemus said that the turn of Aristophanes was next, but either he had eaten too much, or from some other cause he had the hiccough, and was obliged to change turns with Eryximachus the physician, who was reclining on the couch below him.

Aristophanes:: Eryximachus, you ought either to stop my hiccough, or to speak in my turn until I have left off.

Eryximachus:: I will do both: I will speak in your turn, and do you speak in mine; and while I am speaking let me recommend you to hold your breath, and if after you have done so for some time the hiccough is no better, then gargle with a little water; and if it still continues, tickle your nose with something and sneeze; and if you sneeze once or twice, even the most violent hiccough is sure to go. I will do as you prescribe, said Aristophanes, and now get on.

Eryximachus:: Seeing that Pausanias made a fair beginning, and but a lame ending, I must endeavor to supply his deficiency. I think that he has rightly distinguished two kinds of love. But my art further informs me that the double love is not merely an affection of the soul of man towards the fair, or towards anything, but is to be found in the bodies of all animals and in productions of the earth, and I may say in all that is; such is the conclusion which I seem to have gathered from my own art of medicine, whence I learn how great and wonderful and universal is the deity of love, whose empire extends over all things, divine as well as human. And from medicine I will begin that I may do honor to my art. There are in the human body these two kinds of love, which are confessedly different and unlike, and being unlike, they have loves and desires which are unlike; and the desire of the healthy is one, and the desire of the diseased is another; and as Pausanias was just now saying that to indulge good men is honorable, and bad men dishonorable:—so too in the body the good and healthy elements are to be indulged, and the bad elements and the elements of disease are not to be indulged, but discouraged. And this is what the physician has to do, and in this the art of medicine consists: for medicine may be regarded generally as the knowledge of the loves and desires of the body, and how to satisfy them or not; and the best physician is he who is able to separate fair love from foul, or to convert one into the other; and he who knows how to eradicate and how to implant love, whichever is required, and can reconcile the most hostile elements in the constitution and make them loving friends, is a skilful practitioner. Now the most hostile are the most opposite, such as hot and cold, bitter and sweet, moist and dry, and the like. And my ancestor, Asclepius, knowing how to implant friendship and accord in these elements, was the creator of our art, as our friends the poets here tell us, and I believe them; and not only medicine in every branch, but the arts of gymnastic and husbandry are under his dominion. Any one who pays the least attention to the subject will also perceive that in music there is the same reconciliation of opposites; and I suppose that this must have been the meaning of Heracleitus, although his words are not accurate; for he says that The One is united by disunion, like the harmony of the bow and the lyre. Now there is an absurdity in saying that harmony is discord or is composed of elements which are still in a state of discord. But what he probably meant was, that harmony is composed of differing notes of higher or lower pitch which disagreed once, but are now reconciled by the art of music; for if the higher and lower notes still disagreed, there could be no harmony,—clearly not. For harmony is a symphony, and symphony is an agreement; but an agreement of disagreements while they disagree there cannot be; you cannot harmonize that which disagrees. In like manner rhythm is compounded of elements short and long, once differing and now in accord; which accordance, as in the former instance, medicine, so in all these other cases, music implants, making love and unison to grow up among them; and thus music, too, is concerned with the principles of love in their application to harmony and rhythm. Again, in the essential nature of harmony and rhythm there is no difficulty in discerning love which has not yet become double. But when you want to use them in actual life, either in the composition of songs or in the correct performance of airs or meters composed already, which latter is called education, then the difficulty begins, and the good artist is needed. Then the old tale has to be repeated of fair and heavenly love—the love of Urania the fair and heavenly muse, and of the duty of accepting the temperate, and those who are as yet intemperate only that they may become temperate, and of preserving their love; and again, of the vulgar Polyhymnia, who must be used with circumspection that the pleasure be enjoyed, but may not generate licentiousness; just as in my own art it is a great matter so to regulate the desires of the epicure that he may gratify his tastes without the attendant evil of disease. Whence I infer that in music, in medicine, in all other things human as well as divine, both loves ought to be noted as far as may be, for they are both present.

The course of the seasons is also full of both these principles; and when, as I was saying, the elements of hot and cold, moist and dry, attain the harmonious love of one another and blend in temperance and harmony, they bring to men, animals, and plants health and plenty, and do them no harm; whereas the wanton love, getting the upper hand and affecting the seasons of the year, is very destructive and injurious, being the source of pestilence, and bringing many other kinds of diseases on animals and plants; for hoar-frost and hail and blight spring from the excesses and disorders of these elements of love, which to know in relation to the revolutions of the heavenly bodies and the seasons of the year is termed astronomy. Furthermore all sacrifices and the whole province of divination, which is the art of communion between gods and men—these, I say, are concerned only with the preservation of the good and the cure of the evil love. For all manner of impiety is likely to ensue if, instead of accepting and honoring and reverencing the harmonious love in all his actions, a man honors the other love, whether in his feelings towards gods or parents, towards the living or the dead. Wherefore the business of divination is to see to these loves and to heal them, and divination is the peacemaker of gods and men, working by a knowledge of the religious or irreligious tendencies which exist in human loves. Such is the great and mighty, or rather omnipotent force of love in general. And the love, more especially, which is concerned with the good, and which is perfected in company with temperance and justice, whether among gods or men, has the greatest power, and is the source of all our happiness and harmony, and makes us friends with the gods who are above us, and with one another. I dare say that I too have omitted several things which might be said in praise of Love, but this was not intentional, and you, Aristophanes, may now supply the omission or take some other line of commendation; for I perceive that you are rid of the hiccough.

Aristophanes:: Yes, the hiccough is gone; not, however, until I applied the sneezing; and I wonder whether the harmony of the body has a love of such noises and ticklings, for I no sooner applied the sneezing than I was cured.

Eryximachus:: Beware, friend Aristophanes, although you are going to speak, you are making fun of me; and I shall have to watch and see whether I cannot have a laugh at your expense, when you might speak in peace.

Aristophanes:: You are quite right. I will unsay my words; but do you please not to watch me, as I fear that in the speech which I am about to make, instead of others laughing with me, which is to the manner born of our muse and would be all the better, I shall only be laughed at by them.

Eryximachus:: Do you expect to shoot your bolt and escape, Aristophanes? Well, perhaps if you are very careful and bear in mind that you will be called to account, I may be induced to let you off.

Apollodorus:: Aristophanes professed to open another vein of discourse; he had a mind to praise Love in another way, unlike that either of Pausanias or Eryximachus.

Aristophanes:: Mankind, judging by their neglect of him, have never, as I think, at all understood the power of Love. For if they had understood him they would surely have built noble temples and altars, and offered solemn sacrifices in his honor; but this is not done, and most certainly ought to be done: since of all the gods he is the best friend of men, the helper and the healer of the ills which are the great impediment to the happiness of the race. I will try to describe his power to you, and you shall teach the rest of the world what I am teaching you. In the first place, let me treat of the nature of man and what has happened to it; for the original human nature was not like the present, but different. The sexes were not two as they are now, but originally three in number; there was man, woman, and the union of the two, having a name corresponding to this double nature, which had once a real existence, but is now lost, and the word 'Androgynous' is only preserved as a term of reproach. In the second place, the primeval man was round, his back and sides forming a circle; and he had four hands and four feet, one head with two faces, looking opposite ways, set on a round neck and precisely alike; also four ears, two privy members, and the remainder to correspond. He could walk upright as men now do, backwards or forwards as he pleased, and he could also roll over and over at a great pace, turning on his four hands and four feet, eight in all, like tumblers going over and over with their legs in the air; this was when he wanted to run fast. Now the sexes were three, and such as I have described them; because the sun, moon, and earth are three; and the man was originally the child of the sun, the woman of the earth, and the man-woman of the moon, which is made up of sun and earth, and they were all round and moved round and round like their parents. Terrible was their might and strength, and the thoughts of their hearts were great, and they made an attack upon the gods; of them is told the tale of Otys and Ephialtes who, as Homer says, dared to scale heaven, and would have laid hands upon the gods. Doubt reigned in the celestial councils. Should they kill them and annihilate the race with thunderbolts, as they had done the giants, then there would be an end of the sacrifices and worship which men offered to them; but, on the other hand, the gods could not suffer their insolence to be unrestrained. At last, after a good deal of reflection, Zeus discovered a way. He said: ‘Methinks I have a plan which will humble their pride and improve their manners; men shall continue to exist, but I will cut them in two and then they will be diminished in strength and increased in numbers; this will have the advantage of making them more profitable to us. They shall walk upright on two legs, and if they continue insolent and will not be quiet, I will split them again and they shall hop about on a single leg.’ He spoke and cut men in two, like a sorb-apple which is halved for pickling, or as you might divide an egg with a hair; and as he cut them one after another, he bade Apollo give the face and the half of the neck a turn in order that the man might contemplate the section of himself: he would thus learn a lesson of humility. Apollo was also bidden to heal their wounds and compose their forms. So he gave a turn to the face and pulled the skin from the sides all over that which in our language is called the belly, like the purses which draw in, and he made one mouth at the centre, which he fastened in a knot (the same which is called the navel); he also molded the breast and took out most of the wrinkles, much as a shoemaker might smooth leather upon a last; he left a few, however, in the region of the belly and navel, as a memorial of the primeval state. After the division the two parts of man, each desiring his other half, came together, and throwing their arms about one another, entwined in mutual embraces, longing to grow into one, they were on the point of dying from hunger and self-neglect, because they did not like to do anything apart; and when one of the halves died and the other survived, the survivor sought another mate, man or woman as we call them,—being the sections of entire men or women,—and clung to that. They were being destroyed, when Zeus in pity of them invented a new plan: he turned the parts of generation round to the front, for this had not been always their position, and they sowed the seed no longer as hitherto like grasshoppers in the ground, but in one another; and after the transposition the male generated in the female in order that by the mutual embraces of man and woman they might breed, and the race might continue; or if man came to man they might be satisfied, and rest, and go their ways to the business of life: so ancient is the desire of one another which is implanted in us, reuniting our original nature, making one of two, and healing the state of man. Each of us when separated, having one side only, like a flat fish, is but the indenture of a man, and he is always looking for his other half. Men who are a section of that double nature which was once called Androgynous are lovers of women; adulterers are generally of this breed, and also adulterous women who lust after men: the women who are a section of the woman do not care for men, but have female attachments; the female companions are of this sort. But they who are a section of the male follow the male, and while they are young, being slices of the original man, they hang about men and embrace them, and they are themselves the best of boys and youths, because they have the most manly nature. Some indeed assert that they are shameless, but this is not true; for they do not act thus from any want of shame, but because they are valiant and manly, and have a manly countenance, and they embrace that which is like them. And these when they grow up become our statesmen, and these only, which is a great proof of the truth of what I am saying. When they reach manhood they are lovers of youth, and are not naturally inclined to marry or beget children,—if at all, they do so only in obedience to the law; but they are satisfied if they may be allowed to live with one another unwedded; and such a nature is prone to love and ready to return love, always embracing that which is akin to him. And when one of them meets with his other half, the actual half of himself, whether he be a lover of youth or a lover of another sort, the pair are lost in an amazement of love and friendship and intimacy, and one will not be out of the other's sight, as I may say, even for a moment: these are the people who pass their whole lives together; yet they could not explain what they desire of one another. For the intense yearning which each of them has towards the other does not appear to be the desire of lover's intercourse, but of something else which the soul of either evidently desires and cannot tell, and of which she has only a dark and doubtful presentiment. Suppose Hephaestus, with his instruments, to come to the pair who are lying side by side and to say to them, 'What do you people want of one another?' they would be unable to explain. And suppose further, that when he saw their perplexity he said: I do you desire to be wholly one; always day and night to be in one another’s company? for if this is what you desire, I am ready to melt you into one and let you grow together, so that being two you shall become one, and while you live live a common life as if you were a single man, and after your death in the world below still be one departed soul instead of two—I ask whether this is what you lovingly desire, and whether you are satisfied to attain this?’—there is not a man of them who when he heard the proposal would deny or would not acknowledge that this meeting and melting into one another, this becoming one instead of two, was the very expression of his ancient need. And the reason is that human nature was originally one and we were a whole, and the desire and pursuit of the whole is called love. There was a time, I say, when we were one, but now because of the wickedness of mankind God has dispersed us, as the Arcadians were dispersed into villages by the Lacedaemonians. And if we are not obedient to the gods, there is a danger that we shall be split up again and go about in basso-relievo, like the profile figures having only half a nose which are sculptured on monuments, and that we shall be like tallies. Wherefore let us exhort all men to piety, that we may avoid evil, and obtain the good, of which Love is to us the lord and minister; and let no one oppose him—he is the enemy of the gods who opposes him. For if we are friends of the God and at peace with him we shall find our own true loves, which rarely happens in this world at present. I am serious, and therefore I must beg Eryximachus not to make fun or to find any allusion in what I am saying to Pausanias and Agathon, who, as I suspect, are both of the manly nature, and belong to the class which I have been describing. But my words have a wider application—they include men and women everywhere; and I believe that if our loves were perfectly accomplished, and each one returning to his primeval nature had his original true love, then our race would be happy. And if this would be best of all, the best in the next degree and under present circumstances must be the nearest approach to such an union; and that will be the attainment of a congenial love. Wherefore, if we would praise him who has given to us the benefit, we must praise the god Love, who is our greatest benefactor, both leading us in this life back to our own nature, and giving us high hopes for the future, for he promises that if we are pious, he will restore us to our original state, and heal us and make us happy and blessed. This, Eryximachus, is my discourse of love, which, although different to yours, I must beg you to leave unassailed by the shafts of your ridicule, in order that each may have his turn; each, or rather either, for Agathon and Socrates are the only ones left.

Eryximachus:: Indeed, I am not going to attack you, for I thought your speech charming, and did I not know that Agathon and Socrates are masters in the art of love, I should be really afraid that they would have nothing to say, after the world of things which have been said already. But, for all that, I am not without hopes.

Socrates:: You played your part well, Eryximachus; but if you were as I am now, or rather as I shall be when Agathon has spoken, you would, indeed, be in a great strait.

Agathon:: You want to cast a spell over me, Socrates, in the hope that I may be disconcerted at the expectation raised among the audience that I shall speak well.

Socrates:: I should be strangely forgetful, Agathon, of the courage and magnanimity which you showed when your own compositions were about to be exhibited, and you came upon the stage with the actors and faced the vast theatre altogether undismayed, if I thought that your nerves could be fluttered at a small party of friends.

Agathon:: Do you think, Socrates, that my head is so full of the theatre as not to know how much more formidable to a man of sense a few good judges are than many fools?

Socrates:: Nay, I should be very wrong in attributing to you, Agathon, that or any other want of refinement. And I am quite aware that if you happened to meet with any whom you thought wise, you would care for their opinion much more than for that of the many. But then we, having been a part of the foolish many in the theatre, cannot be regarded as the select wise; though I know that if you chanced to be in the presence, not of one of ourselves, but of some really wise man, you would be ashamed of disgracing yourself before him—would you not?

Agathon:: Yes.

Socrates:: But before the many you would not be ashamed, if you thought that you were doing something disgraceful in their presence?

Phaedrus:: Do not answer him, my dear Agathon; for if he can only get a partner with whom he can talk, especially a good-looking one, he will no longer care about the completion of our plan. Now I love to hear him talk; but just at present I must not forget the encomium on Love which I ought to receive from him and from every one. When you and he have paid your tribute to the god, then you may talk.

Agathon:: Very good, Phaedrus; I see no reason why I should not proceed with my speech, as I shall have many other opportunities of conversing with Socrates. Let me say first how I ought to speak, and then speak:—
